

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

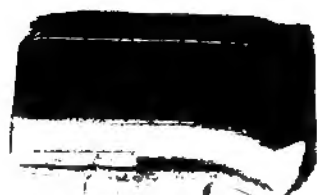

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. CLOAK, SUIT, AND WAIST INDUSTRY.

COMMISSION ON INDUSTRIAL RELATIONS.

NEW YORK CITY, *January 15, 1914.*

Met pursuant to notice at 10 a. m.

Present: Hon. John B. Lennon (chairman), Mrs. J. Borden Harriman, Mr. S. Thruston Ballard, James O'Connell, commissioners.

The CHAIRMAN. Gentlemen, the Commission on Industrial Relations recently created by act of Congress, on appointment of the President, was organized but a short time since. We are authorized under the law to investigate as to the underlying causes of industrial unrest, and to report them to the Congress of the United States. That is the chief fundamental object of the commission. It is, however, specifically authorized and directed to investigate as to the effect upon the relations between employers and employees of collective bargaining of industrial agreements and arbitration and conciliation, and those matters that have entered into the question of solving the differences either temporarily or for a considerable period of time, between employers and employees throughout the country. The commission early decided that it would be necessary to investigate, by the visit of a subcommittee or the full commission, when that was possible, those sections of the country where such joint agreements existed. The one in this city, having to do with the relations between the employers in the ladies' garment industry and the workers in that industry, has probably attracted more attention than any other such agreement that has existed in our country during the past quarter of a century, or possibly, at any time in its history; and it seemed as though, in order to start our duties in these investigations, the proper place to begin was in New York, and in what is known as the protocol in the ladies' garment trade in this city.

I want to say to you now, so that there shall be no misunderstanding, and I want to say it at this time, because this is the first investigation the commission has undertaken, that under the law the Commission on Industrial Relations is neither a conciliation nor an arbitration commission, and we are not here for the prime object of bringing about or attempting to bring about, in so far as we are actually concerned, a settlement of anything that may be at the present time existing in connection with this protocol and the relations between the employers and the employees. I want to say to you, however, in behalf of the members of the commission who are here, that while we are members of the commission, we are also citizens of the United States, and if we can render any assistance to the men and women of this city, or of any other city, where we may be, that will help toward the right kind of industrial peace, as citizens, we are ready to do so, and will be glad if the hearing of this matter in this city shall result in better understanding than has now perhaps existed, and will result in better conditions in the industry generally, not only with the employees in whose interest and behalf I am particularly interested, of course, but in behalf of the entire industry—the men who have their money invested as well as those who only invest their labor.

The members of the commission that are here—Mrs. Harriman, who lives in your city; Mr. Ballard, on the left, from Louisville, Ky., who is on the commission as a representative of the employers' organization—Mrs. Harriman, I should say, is a representative of the public—and Mr. James O'Connell, who is a labor representative, and myself—I think I need no introduction to an audience in New York. My name is Lennon.

May I say before I call any witnesses that we do not propose to be technical as to relevancy or irrelevancy of evidence. We want the people to tell their story as they know it and as they see it, and if they have to say something—whether it be large or small—that perhaps is not directly relevant to the subject, that will make no difference, and they will not be shut off at the cost of doing so.

We ask that the people who have been requested to appear do so from time to time and from meeting to meeting until they have all been heard. We do not wish to issue any subpoenas; we believe that it is not best, nor to the best interest of hearings of this character; we are going to start out with the idea of issuing no subpoenas, but the commission has the power of a court to issue them, and if those that are wanted do not come without them, they will have to come after a summons has been served upon them.

I think, to open the matter, that I will call on Mr. Rosenberg, the president of the ladies' garment workers. Mr. Rosenberg, I think if the witnesses sit up here at the desk the reporters will probably hear better. You can sit down, Mr. Rosenberg, and speak up.

Mr. JULIUS HENBY COHEN. Mr. Chairman, before you proceed, may I state that the representatives of the Dress and Waist Manufacturers' Association are ready to respond to your call, but as they are business men they would like to be relieved from attendance on the commission as much as possible. I am their counsel. May I ask you if any of them will be needed this morning?

The CHAIRMAN. They will not be needed this morning.

Mr. Rosenberg, this subcommittee desires to know from you not only the conditions as they exist under this protocol, but as they existed a year or a year and a half beginning in, say, 1908 and 1909; tell us the conditions in the ladies' garment trade, and we want you to furnish us with a copy of the protocol, and identify it as being a copy, or have some one do it for you. You won't have to do it now necessarily, but tell us this story in your own way.

TESTIMONY OF MR. A. ROSENBERG.

Mr. ROSENBERG. Mr. Chairman, it is absolutely fair to say our condition before 1910; prior to that time there was practically no organization, or there was a small organization, comparatively very small, and all we know of it is that conditions were horrible. The working girls were unlimited; officially they were between 55 and 57, but unofficially the working girls were about 60 or 70. The shops used to keep open seven days in the week, Saturdays and Sundays. As far as wages are concerned, it was much harder to say yet how conditions were at that time. Not being an organization, of course every employer dealt with every individual man and made his own prices; in some shops people used to earn money, but on the other hand in other shops they earned as little as \$10 or \$12 a week in the height of the season; that is, as far as pieceworkers were concerned. In regard to week workers, in my opinion the average wage for cutters was about \$18 in the height of the season. The average wage for pressers also in the height of the season was about \$14, and so forth. It was also a system in the ladies' garment trade, especially in the cloak department, whereby one man was the so-called contractor; for instance, a presser had an agreement with the employer to do all the pressing in the shop, and he was paid by the piece a certain price, and this one presser hired 10, 15, and sometimes as high as 20 pressers, working practically for him, not for the foreman but for the contractor presser; and they so arranged it that they used to employ 2 or 3 pressers and pay them \$16 or \$18 a week, and then downward as low as \$5 or \$6 a week. Of course, our people not having an organization, they were contented with almost anything they could get; they were not in a position to protest against conditions. Some five years ago, or six years ago, rather, a small organization in the city of New York got together and decided to improve the conditions of the workers.

After going over the field we found that it would be impossible for the workers to organize the people shop by shop; that is, to organize them in the usual way as other organizations were doing—calling meetings, agitating to the people and trying to get them to join an organization, and then asking for improvement in the trade. We found that to organize the people in a certain shop, as soon as the people in that certain shop were organized, the employer wanted to get rid of the union people the next morning, and as soon as they got into the shop the next morning the most active man who was noticeable in getting the workers to join that union was discharged; consequently, the small union could not do anything else but order a strike. In a strike, sometimes we won that strike; many times we lost those strikes, but even when we won, before the season was over—and, by the way, I want to inform you that in the ladies' garment trade there is no work all the year round; there are two seasons in the year, the spring season and the fall season; the spring season commences some time in the latter part of January or the beginning of

February and keeps on for 10 weeks, let us say, and after that 10 weeks the season is over. There was very little work in the shops, only a small percentage of the people getting employment, and those people kept on with a little work until about August, but in the month of August the fall season commences, and it also keeps on for 12 or 14 weeks, so that the only time when the union can be successful in enforcing conditions was only the time when the season was there. So we figured that during the fall season, which lasts for about 14 or 16 weeks, the union would not be in a position to organize more than 50 shops. We would probably organize 50 shops more in the industry, or perhaps even 100 shops, but the rest of the shops in the city of New York, which are about between 1,500 and 1,800, will remain unorganized. The consequence of these 50 or 100 shops is that they would have to pay higher wages to the union people and possibly shorter hours, and it could not exist; that is, the people in the shops having a price less than, let us say, 10 per cent on their wages, the result was that the other 1,400 or more shops were always in a condition to compete with the union manufacturers and the union people.

The result was that all those shops which we used to organize were at the beginning of one season dropped out of the union at the end of the season; so we came to the conclusion that the only way to improve conditions in the trade was to make a move on a large scale, to get the entire industry organized, or nothing at all. As I have said before, about six years ago we got together those who were active members of the small unions that we had and we came to the conclusion that the only way to improve conditions in the trade was by making a general agitation for a general organization in the trade, and we felt this, that a general organization in the trade and improving conditions in a general way could not be done unless a general strike should be called in Greater New York, and we worked to that end. We agitated, we made it as popular as we could among our people and told them what advantages they could get by having an organization, organized throughout the entire trade, and we agitated to this end until, I should say, May, 1910—by May, 1910—we had organized in the neighborhood of about 10,000 or 15,000, about 15,000 members already in the union, and we felt that by having about 25 per cent of the workers in the city organized we would be in a position to convince the others, who had not joined the union as yet, to fall in line, and then we could make a general move and ask the manufacturers for shorter hours, higher wages, and also standardize the trade as much as we could.

In July, 1910, after all the preparations for the general strike had been made, we notified our people to leave their shops, to go out on strike, and I should say 100 per cent of the people responded to the call for a general strike. Every shop in the city was out on strike. Officially the strike lasted for about eight weeks and two days—that is, officially; unofficially the strike lasted a week or two longer. After the general agreement had been signed with the manufacturers, it took about two weeks before we adjusted prices for piece-work, and so on. During the strike gentlemen of the various cities, business men, and also men who were interested in the welfare of the general public and also in the welfare of the community of the city of New York, tried to bring us together with the employers, and we then kept on conferring with them for some time, and on one or two occasions we could not reach an agreement until, finally, another group of gentlemen got in and some suggestions were made to alter the former agreements which were submitted to us by the manufacturers, and we finally agreed, and an agreement of that kind was signed with about 150 manufacturers, who constituted an organization, the Cloak & Suit Manufacturers' Protective Association. Outside of 100 or 150 employers who were in the organization, we succeeded in signing up agreements with about 1,200 or 1,300 individual manufacturers in the trade; that is, those 1,300 or 1,200 manufacturers employed at that time about 40 per cent of the workpeople who walked out on strike—between 40 and 50, of course the numbers are pretty hard to tell. The association of employers, the 100, employed the other 40 per cent; so then we had two groups of manufacturers to deal with; we had one group of manufacturers who had signed individual agreements and another group who had signed a collective agreement.

Prior to the signing of the collective agreement with the Cloak & Suit Manufacturers' Protective Association, the agreement signed with the individual concerns called for a scale of wages of about \$1 or \$2 per week more than the actual agreement signed by the association, and also there was a difference in the working hours. We signed with the individual manufacturers for an eight-hour day, for a strict eight-hour day, 40 hours per week, but after the con-

cessions had been given to the protective association, to the Manufacturers' Protective Association, to have our men employed on the basis of 50 hours per week, and also making the scale for week workers a dollar or two dollars a week less, the independent manufacturers, those who had signed independently also got that benefit. That was the understanding with them when they had signed their individual agreement, that any concessions which we might make with any association they should also get the benefit out of it. The gains which we have made on account of that strike, are, of course, very hard to tell, for me. I believe this matter is up before statisticians, and I believe there are some statisticians working on it to-day, who are paid by our union and also paid by the manufacturers' association jointly, and they have probably the record of the improvement in the trade; but as a general rule, I may say that the conditions of the trade on account of that strike and settlement, in my opinion, I believe the conditions of the trade were improved—well, I should say, about 25 per cent. I am not quite sure about it, and as I have said, it is hard to tell, but the statistics will probably show.

We have also gained in another way on account of that strike and settlement. The agreement or protocol signed with the Cloak & Suit Manufacturers' Protective Association also provided for a sanitary board of control, for a board which should see that all the shops were in a sanitary condition and also in a safe condition as regards accidents, fires, etc., and on account of the organization of this board of control, in my opinion, we are absolutely wiped out as regards sweatshops; those so-called sweatshops, as they used to call them in former years, were also abolished, and we also abolished the foot-operating system; our operators who used to work on the machine used to drive by foot power, and that has been abolished and electric power installed instead. We have also abolished the system which existed prior to that union by which every operator was compelled to furnish his own machine. The employees, or the majority of the employees, did not own their own machines.

The CHAIRMAN. You mean under the protocol you abolished that?

Mr. ROSENBERG. Yes; under the protocol, of course. Each operator had a machine of his own, and whenever he lost one job and was compelled to go and look for another job he had to pay 50 cents or \$1 for the expressman to move his machine for him from one shop to another, and the conditions were such in many instances where the operators used to move their machines two or three times a day; for instance, they came up in the morning at a certain shop and the expressman moved his machine to that shop, and he would put up the machine and make a garment, and perhaps the garment was not satisfactory to the employer or the job was not satisfactory to the employee, and he wanted to get his machine out, and he had to go into the street, and he went to the corner and got another job and then brought the expressman again and he moved his machine to the other job; and in many instances, as I have said, the operator used to pay the expressman \$1 and \$1.50 a day for moving his machine, when he might possibly only make \$1 by turning out two or three garments.

As soon as the strike was settled, as soon as the protocol was signed, of course every employer must furnish his people with machines. In many shops, also, the operators had to buy their own needles, too; operators had to buy their own oil to oil their machines, and even in some places there were instances where employers had machines of their own and supplied the machines to the operators, and the operators had to pay for the alterations in the machines when necessary. Whenever the machine got out of order, he could never get the employer to pay for the machinist to do the work of repairing it, because the employer, when he was very busy, did not care whether one or two operators did not work or not. Also, the employer would say: "We will have time next week to fix your machine; we will fix your machine next week," and the operator wanted to earn a livelihood, so he had to get a machinist himself and pay for the repairs out of his own pocket; and since the agreements have been signed and the union became a factor in the trade this has all been abolished. The employers are supposed to furnish machinery to the operators in good order free of charge.

Of course there are many improvements in the trade; it is hard to tell, which I can not myself exactly just now tell, but possibly the next speakers will give you more information about it.

The CHAIRMAN. How has it affected the shop's work?

Mr. ROSENBERG. After the signing of the protocol?

The CHAIRMAN. Yes; compared with what it was before.

Mr. ROSENBERG. I believe, as far as the shops are concerned, I believe none of the protective associations in the Cloak & Suit Manufacturers' Protective Association—the agreement says explicitly there shall be no strikes and lock-out, and possibly during that time we had a few misunderstandings with shops which did not call strikes, but a stoppage of work; but those stoppages of work have never been ordered by the union or by any official of the union. It is simply a case of people getting dissatisfied occasionally in a shop, and they believe their troubles are not being adjusted as quickly as they would like to see them go, and possibly some hard-headed man stands up and says: "Boys, let us stop; let us have a stoppage of work"; but those stoppages of work have always been ended by the union, as far as my knowledge goes. Of course, in many cases stoppages are avoided for more than an hour or two. To my memory we had only serious stoppages of work where the union had all sorts of trouble before sending the people back to work, in possibly half a dozen shops; those stoppages in half a dozen shops lasted for a day, or possibly two days, or say a week. Even in the independent shops—with those shops we do not have any individual agreement with—we have very few strikes, because the union, as well as the employers, are always trying to get together on some basis to prevent strikes. In other words, as far as strikes are concerned, I believe for the last three years and a half they have been out of existence.

The CHAIRMAN. What has been the result of your adjustment of grievances under this protocol?

Mr. ROSENBERG. We will come to that. When the agreement was signed with the Manufacturers' Protective Association we had no machinery; in the beginning we had no machinery to adjust the grievances which were likely to come up in the shops daily. For the first couple of months we had no machinery, and we did not know how to set about it. The protocol provided for a board of grievances; the board of grievances was composed of 5 representatives of the union and 5 representatives of the manufacturers' association; those 10 people used to come together whenever there was any grievance, and we tried to adjust them in the best way we knew how and with the best machinery we had at our disposal. On many occasions, when it was necessary to make an investigation, the board of grievances used to employ one representative of the employers and one representative of the union, and those two used to go up to the shop and investigate, and if they could adjust they did adjust it, and if they could not they brought it to the grievance board, to the board of the grievance committee, and the grievance board acted on the merits of the case, and some decision was made somewhere. But that arrangement was not satisfactory. The board of grievances offhand could not handle so many cases as they had on hand, so there was a whole lot of friction and trouble in the shops, and we finally called upon the board of arbitration to devise ways and means how to adjust grievances in the future quicker than they had been doing, and the board of arbitration got together, if I am not mistaken, in January, 1911.

A VOICE. March.

Mr. ROSENBERG. Or in March, 1911. That was the first time the board of arbitration got together. When the board of arbitration decided to establish a system of clerks, deputy clerks, and whenever each side should have a sufficient number of complaints, one clerk and one general clerk—the general clerk should appoint the number of deputy clerks, as many as the occasion required; and so they did. That was understood—that whenever the two clerks, one clerk representing the association and the other clerk representing the union, go upon a case and make an investigation, if those two clerks agreed upon some proposition how this case should be disposed of, it is final, and each side must obey the order of the clerks—the manufacturer as well as the union must obey the order of the clerks.

But whenever those two deputy clerks disagreed and could not come to a conclusion, then it was submitted to chief clerks on each side; each side has a so-called chief clerk—the manufacturers' association employed one and the union employed one—and those two chief clerks got together and tried to make a disposition of the case. But whenever those two chief clerks disagreed on a case, then it was brought before the board of grievances, and the board of grievances, sitting as a court, used to hear the case; and whenever necessary they called witnesses to testify, and it was the custom that each side had an equal number of members on that grievance committee, so it required one of each side to decide the case one way or the other; for instance, if the union had a complaint against a certain manufacturer, it required one manufacturer to vote with us; and, on the other hand, whenever the manufacturers brought up one

of our people to vote with them, they won the case. It always required six, or a majority, to dispose of a case, and we got along the best way we could, the best way we knew how; and we used to have these agreements, and we used to have a tie vote, where both sides could not agree even on the grievance board; so, on many occasions, where we were ready to appear or the other side was ready to appear before the board of arbitration and submit their side of the case, and on many occasions also on the other side, the case was not so important as to present it before the board of arbitration, and of course we tried to make some disposition of it. But, in a general way, I believe that the board of grievances, with the system of clerks, has made adjustment in almost, I should say, 75 per cent of the cases brought to the attention of the association and the union.

For instance, out of a record of 5,000 or 6,000 cases which have been taken during the life of the protocol, the protective association only—I mean during the life of the protocol during the life of the association, only 160 or 170 cases were tried before the board of grievances; the rest of the cases either were disposed of by the clerks one way or the other, or, in some cases which were dropped—I do not know the reason why they have been dropped, possibly each side will have something to say on that matter, I don't know, because I have not been directly working with the protocol division. But on many occasions we dropped a case because we found the case was too old to take up. For instance, where a complaint has been presented, say this morning, and the number of clerks were limited to each side at about 4 or 5 or 6 clerks, and they could not go to any more than 10 or 15, say 15, cases in one day; during certain days stoppages of work occur, and the rule of the grievance board was that where there was a stoppage of work such cases must be taken up and disposed of first, and those cases got the preference over other cases; so in some case it happened that it took some days before the clerks were in a position to take up a certain case, and either the case was straightened out by itself or the people who made the complaint did not show up again to the office of the union to ask about their complaint, or they left their employment or they did not care to make their complaint any more; that is what we usually call dropped cases, and all the dissatisfaction that has been going on in our organization against the Manufacturers' Protective Association is on account of those dropped cases. They claim that every case must be disposed of one way or the other. I suppose the next speakers will probably give you more information about those dropped cases than I have. I know very little of them; I know only what I heard of them.

I think now I may say that the protocol—well, I would not say it was an absolute first-class instrument to do away with this trouble between capital and labor, I would not like to say it even if the protocol should be an instrument to do away entirely with the struggle between capital and labor—then I personally would not like to see it because that would be throwing the union out of business entirely. [Laughter]. I may say that the strength of the trade-unions is the discontent among the masses. [Laughter.] It is a fact that whenever shops do not have complaints, where the union does not receive complaints from one, two, or three leaders or men, the leaders of the union immediately try and find out what is the matter with that shop, because they know there is something wrong in that shop. The words "union shop" are not expected where there is no complaint, and the best union shops are where there is some complaint; it is some life, some life is injected and there is something going on.

The CHAIRMAN. You ought to have unfavorable conditions of employment in order to keep it alive then?

Mr. ROSENBERG. Not at all. On the other hand, if the people are subjected to slavery they are all the time contented, because slaves are always contented. The Japs and the Russians and the Chinese are contented; they are slaves and they do not protest. But there are some shops where our people, I may say to our sorrow, are not honest enough to demand their rights, and they get together with the employers and make up some bargains behind the backs of the other workers, and everything is fine for them and it works lovely, and in fact those shops when we investigate them we will find the scale of wages in them is not paid, the union hours are not observed, and in fact no protocol conditions exist in those shops at all.

The CHAIRMAN. Mr. Rosenberg, has there been from season to season more or less change in the prices paid for work; has there been a decrease or increase in that respect?

Mr. ROSENBERG. It is very hard to tell, because our people are pieceworkers in manufactories which usually change their styles every season—not every season, but practically every week. If an employer makes up a style or a list of samples in January, when the month of January is over this line of samples is not to be seen in the show room any more. Each style of samples has a different labor to perform, and the prices are usually settled according to the value of the garments. Each shop has a price committee selected by the pieceworkers themselves, and as soon as a designer brings in a new design to the factory the price committee get together with the employer and try to adjust the price and the value of the garments on this particular style.

The CHAIRMAN. I understand Mr. Winslow has been making an investigation on these matters and he can probably testify on them.

Mr. ROSENBERG. I believe Mr. Winslow is merely handling the matters of the week workers. As far as the week workers are concerned, there is a scale provided in the protocol. Since the protocol has been signed the manufacturers are supposed to pay that scale, and I should say in many cases where we found the manufacturers had not paid the scale we brought charges against them and action has been taken by the association.

The CHAIRMAN. Has there been any change in the protocol since it was first signed except in the matter of the power of the clerks to settle differences?

Mr. ROSENBERG. It was changed in regard to the wages for a certain branch in our trade—for the pressers. The scale of wages for pressers was \$21 and \$18 for underpressers, and since the signing of the protocol we submitted our claim to a conference of the manufacturers' association with the union and we demanded an increase of wages for all the week workers, and the board of arbitration sitting on that case came to the conclusion to increase the wages for pressers \$2.50 per week, and for underpressers \$1.50 per week, and they have also decided to leave the other branches of the trade, like the cutters and sample makers, etc., to leave them for another meeting of the board of arbitration which may take place in May or in June; and Mr. Winslow is working now to find out the exact earnings of the people throughout the year in that particular branch of the trade—in the cutting and sample making and so on—and I believe Mr. Winslow will be ready to submit his report to the board of arbitration and I believe as soon as he does the board of arbitration will act on that and decide whether the cutters and the sample makers are to participate in the increase of wages or not.

The CHAIRMAN. Will you tell us as to the present relations right now to-day between the unions and the manufacturers under the protocol?

Mr. ROSENBERG. Well, it is very hard to tell. There are some complicated affairs going on; I don't know whether it is a misunderstanding, as I may call it, but things are not working now as lovely as they did before, as I said. There is something the matter, and to be honest and frank with you gentlemen, I believe the fault of the present difficulty is because, I should say, we have too many lawyers in this proposition. [Laughter.] I said it on many occasions before conferences of the manufacturers and, if I am not mistaken, Mr. Lennon was present with us when we conferred with the manufacturers' association in 1910 during our strike, and I personally asked the manufacturers then to eliminate the lawyers from these conferences; I told them: "Gentlemen, we are cloak makers, we know how to make cloaks, we are manufacturing men, and you are manufacturing men, let us get together and we will talk it over among ourselves without the assistance of lawyers;" and I said: "Then, I am quite sure we will come to an understanding." But we could not get the lawyers out of this proposition. The manufacturers did not care to eliminate their lawyer and, of course, we did not want to eliminate our lawyer. So it is found to-day whenever a conference is held, instead of talking about manufacturing cases, about manufacturing cloaks or suits, we talk about law, about the Supreme Court, and all about decisions of various judges, and I really could not understand how we could ever make any headway. I am a plain worker, and I don't understand that high-type English. Sometimes the lawyers got quarreling among themselves for about three days and on points which did not interest me a bit.

That is my honest opinion, that if the lawyers could be eliminated entirely on either side, I believe we could in some way get together. There is no danger; the only danger is this—I found it in the trade-union movement—the only time when trouble would occur is when either side refuses to have anything to do with the other side—if the employers refuse to meet me as a representative of the union, then there must be trouble, there must be strikes,

and if the representatives of the union refuse to meet the employers there is a lack of unanimity; but as soon as both sides make an attempt to get together, you will always find a desire for conciliation.

The CHAIRMAN. If there is any necessity, you are making that attempt now?

Mr. ROSENBERG. Of course, our negotiations are not broken up, and we don't expect them to be broken up at all. It is merely, as I have said, some misunderstanding, and possibly it will come out all right in the end anyway.

Commissioner O'CONNELL. Has a protocol any tendency to give more steady employment and do away with the seasonal occupation?

Mr. ROSENBERG. It ought to, but that is where the whole fault comes in; and this I may say is not the fault of the protocol, but it is the fault of a good many lawyers who are connected with this association, having signed the protocol. For instance, some employers, members of the association as well as independent manufacturers, have open shops, and in cities outside of Greater New York; either directly or indirectly they have open shops, and those shops in the beginning, they claimed that the protocol had nothing to do with the shops which were operated in New Jersey, in Newark or in another small town on the other side of the river; they claimed it does not apply to shops located outside of Greater New York. After long conferences with the manufacturers' association and also with the union it was expressed by the board of arbitration that the out-of-town shops were to come under the protocol just as well as the New York shops are under the protocol. That was the opinion expressed by Mr. Brandels, who was the chairman of the board of arbitration, and since then the manufacturers considered that all their shops, whether under the supervision outside of the city of New York or not, ought also to come under the same protocol.

But a good many manufacturers I found had another way of getting out of the protocol, and that way was to have the work done cheaper, to some extent. Some of them ceased to manufacture cloaks—at least not all, they did not give up manufacturing, but instead of manufacturing, say, \$100,000 worth of garments in a season in the factory, they arranged to make up 20 per cent of their merchandise inside the factory and the other 80 per cent they bought from the smaller manufacturers, who were called submanufacturers. There are submanufacturers, as they are called in our trade, who want to go in business and have not the money, and they come in and say to Mr. Jones: "Say, Mr. Jones, I know how to manufacture cloaks and suits; you send me in your raw material and linings, and you send me some patterns, and I will do the cutting somewhere else, in my own shop, which does not cost me as much as you pay on Fifth Avenue or on Twenty-fifth Street, and I will make you the same garment \$1 cheaper than you could manufacture it." Of course, the manufacturer goes to work and takes that offer, and he claims he buys it, but they don't buy it; they send the raw material and linings, and they know what the goods cost, and it is only a difference in the labor; for instance, if the manufacturer has to pay \$2 for a garment, and the next man can turn them out for \$1 or \$1.25, the next man makes 50 cents profit, and he can do them that much cheaper; and our men are deprived of making a living in that way.

It is true enough that the protocol conditions and everything have been for good prices, but they only probably make one garment, and instead of making six garments which would net them \$5 or \$6 a day it nets them only \$1. That is where the whole trouble comes in. We have done our best to get together with the manufacturers on that particular point, and we could not find a remedy. I don't know whether it is the fault directly of the manufacturers or whether it is the fault of our union as well as of the manufacturers. These are what we call the leakages. As soon as prices are adjusted in the shops, in the beginning of the season, for a certain price, a manufacturer goes to work and has the work done somewhere else, probably cheaper, and our men have not got enough employment, and that is another dissatisfaction our people have with the protocol. I don't believe there would be any dissatisfaction at all—our men are merely looking to get work enough to support themselves, but what is the use of working under a protocol, no matter how sanitary the shops are? It is true it is better in the shops to-day than it was four or five years ago, but you have to have bread and butter and meat to feed your stomach; the air you get won't feed your stomach. The people go out of a nice clean shop and into the open air, and their stomachs are empty, and they come to the union and say: "Our condition was better prior to the signing of the protocol than it is now. We know it was signed, but some people are

out of work, and we know some people who have been out of work for a long time on account of the arrangement with the other manufacturers."

Commissioner O'CONNELL. They are out of work just as much in the seasonal time as before the protocol was signed, are they not?

Mr. ROSENBERG. Yes. As far as the seasonal occupations are concerned it is very hard to tell, but don't you see, if they should want to remain on the same conditions as did exist prior to the protocol, then there would not be any use for them to stick to it.

Commissioner O'CONNELL. Does not the protocol in any way protect the employers and prevent them from that subcontracting or underbidding each other? Does not the protocol think for that purpose that the employers should pay the same price?

Mr. ROSENBERG. I will explain, Mr. O'Connell, how it is. The union can only protect when there is week work. For instance, we know a cutter has to get \$25 a week; whether that cutter works for Mr. Jones or Mr. Jim, he has got to get \$25 for his labor, whether the shop is located on Forty-second Street or the shop is located somewhere else on the East Side, on Pitt Street, the cutter has to get \$25, and it is the business of the union to go to the shops and investigate whether they actually do get that, and if they find out in some shops where the scale is not paid, of course the union takes action, but you can not do it with piecework. For instance, I work for a certain manufacturer where the workpeople are used to getting, let us say, single garments. Each garment is cut separately. I come in the morning; the foreman gives me a single garment to make. It takes me three hours before I turn that garment out. Then I have to go to the foreman for another garment, which takes me sometimes half an hour before the foreman is ready to give me the other garment, so I lose half an hour. So, when the prices are adjusted in that shop I must figure the time the operator is losing between one garment and the other, and I must also figure the way garments are handled. For instance, when an operator gets a dozen garments at one time, in one cut, together, he can turn out two garments a day more than by making single garments, or each garment separately.

Of course, it may seem news to you, but our people understand it. The cloak makers and also the manufacturers present know it exactly.

We must also figure the place. We must figure who the foreman in the shop is. If we have in our shop a foreman who treats his people right and does not care to bother the men when he wants him, to show him some defects, or a garment that may be fixed, then, if the foreman takes the garment and takes it over to the operator to the machine and tells him: "Check this, and this should be altered," why then the operator does not lose any time. He fixes it, and then he is done with it; but in some shops there are foremen who will never take that garment and carry it to the operator to have it fixed, but they call the operator. The operator has to stand up from his machine and walk down to the foreman's table and has to talk to him 10 or 15 minutes before he explains everything, and at the same time he loses 15 minutes, and it is likely the operator may lose the 15 minutes three or four times a day. The operator must figure exactly when prices are made on certain garments, he must figure the time he loses; but, on the other hand, in the smaller shops the system is absolutely different. The operator comes in in the morning, and he finds near his machine as many as 20 garments at one time, in one cut. Well, I used to work in shops where my employer, when I came in—I usually came in on Monday morning or Sunday morning, whenever we worked—I found near my machine 100 garments, for a whole week, or two weeks, sometimes of one style; and I sat at them for a week or two continually, doing nothing else but the same identical garments, and whenever I needed the trimmings for the garments I did not have to send out and walk sometimes a whole block, from Twenty-second to Twenty-third Streets. The shops are so long that it takes a whole block now, and the foreman's desk is at the Twenty-third Street side, and the operator's place may be on the Twenty-second Street side, so he has got to walk a block, which takes 10 minutes, for a bit of trimming, for a spool of cotton. In the other shops all I had to do was merely to tell the boss to bring me the cotton or trimmings to my machine, and so he did; and when I sat down to work in the morning I knew I was sitting till 6 or 7 o'clock and doing nothing but turning out garments. That is why the people in the other shops can afford to work for ten or fifteen or even a quarter a garment cheaper than they can do it in the Fifth Avenue shops, in the protective association shops.

Even by getting 25 cents less on a garment they are liable sometimes to have more money than in the big shops, where the prices are much higher. That is where the trouble comes in, and that is what the dissatisfaction is about.

The CHAIRMAN. Has that ever created any serious hitch between the unions and the employers?

Mr. ROSENBERG. Sure; this was the cause on a great many occasions of stoppage of work. They sit in the shop for a week, or weeks, rather, and all they do is merely to make the specials and duplicates, or samples, and the stock work is not in the shop; it is made somewhere else. They see there are thousands or hundreds of garments brought into the shop, fixed up and made up, and who made it God knows. Who made it? They did not, and, of course, it is liable that a man should get dissatisfied with such conditions.

Commissioner O'CONNELL. What is the average yearly earnings of a practical man in the trade?

Mr. ROSENBERG. It is very hard to tell, but I believe it may be about \$16 a week.

Commissioner O'CONNELL. Will it average that the year around?

Mr. ROSENBERG. It will average that all the year around.

The CHAIRMAN. That is for the operator?

Mr. ROSENBERG. That is for the operator, and the finishers will be less. The average wage for a finisher will probably be between \$10 and \$12.

Commissioner O'CONNELL. Do the women make the same?

Mr. ROSENBERG. Some women will make more money than the men.

Commissioner O'CONNELL. Generally?

Mr. ROSENBERG. Generally, the men are making more.

Commissioner O'CONNELL. Why?

Mr. ROSENBERG. Because they do a better class of work; the men do.

Commissioner O'CONNELL. Where they do the same work do they get the same pay?

Mr. ROSENBERG. Sure.

Commissioner O'CONNELL. Make the same kind of garment?

Mr. ROSENBERG. The same pay.

Commissioner O'CONNELL. Now, so far as wages are concerned, what brought that about? Was that so years ago?

Mr. ROSENBERG. That was the custom in the trade; in former years it was this way: There was no stipulated price. For instance, the employer used to pay Jack \$1 for a certain garment and Jenny 70 cents and Jim 80 cents. He paid as much as he wanted to. In fact, there was no stipulated price. He paid as much as he felt like.

Commissioner O'CONNELL. Are there any Jims and Jacks in the trade?

Mr. ROSENBERG. Well, yes, there are. But now, after the union got strong, we have decided to prohibit—

Commissioner O'CONNELL. It is surprising to me.

Mr. ROSENBERG. We have decided to prohibit this practically, and whenever there is a price made everybody must keep it, and no agreement could be made unless the price is fixed upon.

Commissioner O'CONNELL. That condition is extraordinary, so far as the general employment is concerned, that women are getting the same as men.

Mr. ROSENBERG. I believe they used to get it all the time; that was the custom of the trade.

Commissioner O'CONNELL. It is not so generally; just why it is in that trade I would like to know.

Mr. ROSENBERG. But in our trade it always goes that way, because, in fact, they prefer women in a good many shops to men.

Commissioner O'CONNELL. Men do the finer class of work?

Mr. ROSENBERG. Yes; but in the cheaper kind of work they prefer women, because the women are faster to do handwork. We have women in our union who make about \$25 or \$30 a week or so.

Commissioner O'CONNELL. Your impression and opinion is that the protocol has brought about an improved and better and more stable condition in the trade?

Mr. ROSENBERG. Absolutely so.

Commissioner O'CONNELL. Is that the general opinion of the men in your organization?

Mr. ROSENBERG. That is the general opinion of the better element of the membership.

Commissioner O'CONNELL. The "better element," what do you mean by that?

Mr. ROSENBERG. The ones who know something.

Commissioner O'CONNELL. Well, the fellows that do not know something, why don't they believe that? Is there some influence working among them in some way?

Mr. ROSENBERG. It is a condition created which we are not responsible for. In fact, as I have said before, in the first place they have very little work on account of the inauguration of submanufacturers, and the results are dissatisfaction for various reasons. For instance, a good many of their members claim that in cases where people are discharged, for instance, and they can not get redress, their cases are not taken up and adjusted, and they can not get a square deal, so that they are under the impression that it is the reason because of the protocol exists, and if the protocol did not exist they would not be discharged—that is their contention. Of course, it is very hard to make the 50,000 men who have not been union men—up till about 1910—to make them understand exactly how far they can go and what rights they have and how far they should not go—that is practically the condition prevailing to-day. I believe the unrest in the trade at the present moment is on account of the slackness in the business. For the last year, or I may say a year and a half, the best members of our organization who used to work in the finest shops on Fifth Avenue have had very little work, and that creates dissatisfaction. Of course there are always outside agencies who are contributing to it, but that is immaterial at the present moment. That would not cut any ice.

Commissioner O'CONNELL. There is not much ice being cut just now.

The CHAIRMAN. All right, Mr. Rosenberg.

Commissioner O'CONNELL. Mr. Ballard wanted to ask what they made in 1910, and what do they make now, on an average.

Commissioner BALLARD. 1910, you spoke of three or four cases which made certain amounts; what do they make now?

Mr. ROSENBERG. I said that prior to the strike of 1910 the pressers, for instance, the average scale for the pressers was about \$16—I may say about \$16—now the average scale is about \$19, or \$20 rather. They have \$23.50 for pressers and \$19.50 for underpressers. That will make about \$21 on an average.

As far as the sample makers are concerned they are also week workers. Their price was also about \$18 or \$19 on an average, and now their scale is \$22 and over. The minimum is \$22. The scale for pressers was officially \$24 prior to the strike, but in 70 per cent of the trade the cutters did not get more than about \$20 a week; the scale now is \$25.

Commissioner O'CONNELL. And that is the result of the protocol conditions, and conciliation, and all that sort of thing?

Mr. ROSENBERG. Yes; and also the result of the union.

The CHAIRMAN. Sure.

Commissioner O'CONNELL. You could not have a protocol without a union?

Mr. ROSENBERG. That is right.

The CHAIRMAN. What has been the effect of the protocol as to making shops union shops?

Mr. ROSENBERG. As to making shops I do not believe the protocol had anything to do with it. We have practically had 95 per cent organized before our people went back to the shops, but we had very few of nonunion people when they returned after the strike, and since then, the manufacturers cooperated with us in carrying out the protocol, in letter, if not in spirit, trying to inform their people that whenever they desired the benefits of the union, they must share their burdens. That practically means that the people who do not pay dues to the union, and do not contribute to the maintenance of the union have no business to work in a protocol shop.

The CHAIRMAN. You have heard no serious contentions on that?

Mr. ROSENBERG. Not at all; we straightened this matter out amongst ourselves. After the strike we had a few hundred—the so-called strike breakers, or scabs, and as soon as the agreements with the employers expired, we got together with the manufacturers' association and we made provisions for them to join the union and paid in certain dues to the union and there was no trouble at all on account of that.

The CHAIRMAN. Do you want to ask Mr. Rosenberg any more questions, Mrs. Harriman?

Commissioner HARRIMAN. No.

The CHAIRMAN. We will call Secretary Dyche. Now, Brother Dyche, you are the hardest man in the United States for stenographers to take notes from.

There is no man equal to you that I know of, and you will have to be as slow as possible. Incorporate in a brief way what you find necessary to add to Mr. Rosenberg's statements, but do not go entirely over the same grounds.

TESTIMONY OF MR. JOHN A. DYCHE.

Mr. DYCHE. If you will permit me, Mr. Chairman, I will relate a few incidents of what I consider to be typical, which will give an idea how the conditions existed prior to the great strike of 1910, and how they exist to-day. I will state my own experience as a worker in the shops. When I was working in the shop, I had a man, his name was James, who had a steady job for me, and this was to pull my machine from some place to another, and carry my machine from place to place. When taking a job, we said, we move to a place, and when we left the employment, among ourselves we used to say, "We moved from that place. You work for Mr. Smith? Yes; I have now moved from Mr. Smith's"; and in my experience I remember one day I had to move to three places, because I was very hard up for a job, and I tried to get in all these places. The price was so low in one case the employer was not satisfied with my work, and the price was out in another, and I was not satisfied to make one agreement, and then I left it.

Just five years ago, about this time, we had a strike in a shop which I adjusted. The foreman is now out of the business—but that is unnecessary information. Talking to the employer he said, "Those people earn quite good wages?" He showed me his books, and on an average the people made from \$17, \$18, or \$19 a week, and he said, "I think this is first-class wages for skirt makers." But these people work five days in the week, two nights overtime, Monday, Tuesday, Wednesday, Thursday, Friday until 8 o'clock, and Sunday half a day; that is 62 hours. He considers this to be satisfactory wages. He says, "It is true my shop is not a first-class shop, but on an average I am as good as anybody else in the trade." I will not exaggerate in saying that the average skirt maker in an average shop earns more by working only 50 hours. Just the summer before the strike, I was on Fourteenth Street, and Fourteenth Street Square Park, and I overheard a conversation between two pressers. One asked the other—I do not know his name, it was not Smith, but Moses—he says: "What are you doing?" "I am out of work." "How long?" He says, "I am out of work now for several weeks." That was in the month of July or August. He says, "Well, do you want a job?" He said, "I want very much the job." He says, "You know I am a contractor." "Yes," I says, "I know." He says, "Will you go to work for me?" I said, "Yes, I will." He says, "But one thing I want to tell you, do not talk about hours of work. You will work as many hours as I will tell you. Are you satisfied?" He says, "Yes." "And then do not talk about wages I will pay you." "About wages, I want to know what I am going to get." He says, "Oh, well, if you will work well," he says, "I will pay you \$8 a week." I said, "Well, \$8 a week? I used to work in the season for \$16." "Do you know," he says, "I am an old presser, and one of the best in town, and even if you want me to work indefinite hours for \$8, I do not know whether I can do it." Now he says, "You have been out for six or seven weeks, and you have not earned a cent, and you can be out another week, and it is true if you will work for me, you will get \$7, and now you can not pick up \$8 in the street." So I do not know whether they finally agreed upon the point of going to work, but this was the trend of the conversation.

Another incident during our general strike. We prepared the text of an agreement for independent manufacturers stipulating conditions. Mr. Rosenberg wrote down the text. I was writing it, and he was dictating it. He just told me. He kept on dictating. In one of the clauses it said that a piece of work should be calculated at the rate of 75 cents an hour. That is, if a garment takes two hours, it should be a dollar and a half. If it takes only an hour, it should be calculated at 75 cents. There was a group of men there, all the general strike committee present, and one of them said to Mr. Rosenberg, he said, "You are greedy, did you want to stipulate 75 cents an hour. If you stipulate 50 cents an hour, it will be given, and it will be more than we expect." Rosenberg says, "Never mind," he said, "You think the rate was foolish, so you say, and think we should ask for 50 cents an hour, why, we will get 25 or 30 cents, but if I say 75, we get a chance of getting 50 cents."

I am speaking to-day—I can not say I know it from my own personal experience, but I am telling of the business agents, that in most shops the calculation gives it as a dollar an hour. That, of course, does not mean that if you work 50 hours you earn \$50; only calculating the price of a garment at a dollar an hour the chances are you will earn \$25 or \$30 a week, which means during the season you may work the year around at the rate of \$16 or \$17 a week, because the cloak trade is very complicated. The styles change so much, and when you get garments you have to go for trimmings, as Mr. Rosenberg told you, and so on. There is attached a great deal of waste, so that if you calculate a garment at a dollar an hour, at the end of the week you would probably get \$25 or \$30 for 50 hours.

Commissioner O'CONNELL. How has the protocol brought about that increase?

Mr. DYCHE. The general strike of 1910 brought about this condition.

Commissioner O'CONNELL. Go into the protocol; what has been your experience of that?

Mr. DYCHE. Another incident, I will incorporate what Mr. Rosenberg said about the difficulty with the lawyers. It was about last year, at this time, we had a difficulty with the manufacturers on the question of out-of-town shops. There was a fight between both lawyers as to what should be done; how it should be written and what kind of letters should be exchanged between the manufacturers and the union, and for two weeks our executive board could transact no business. We were always discussing the text of some letter to be written to the employers, and our lawyer said it must be written one way, the "t" must be crossed in a particular way, and the lawyers of the association disagreed—and we thought if we could meet one day in the office of the association, and I suggested to Mr. Silverman, the president, I said, "Mr. Silverman, if you will give your lawyer a couple of weeks' vacation, and we will give ours the same, we will adjust it." I do not know whether the lawyers got a vacation, but I know we came together, and got along, and the out-of-town shops were dealt with in spite of the lawyers. I believe, Mr. Chairman, that if we could induce our people and the manufacturers to give their lawyers a couple of weeks' vacation and forget to call them back we would get along nicely.

Commissioner O'CONNELL. Is there not some present disturbance in connection with the protocol?

Mr. DYCHE. Yes; and that is due——

Commissioner O'CONNELL. Are the lawyers responsible for that?

Mr. DYCHE. It is true, because we have been fortunate enough to try to run our relations with the union, without the lawyers' protection, on the question of what they call abstract rights. The reason why, Mr. Chairman, I say the lawyers are a hindrance and not a help to that, is not because I have a prejudice against lawyers. Some of them I like very much, when they attend to their own union affairs, and that is when the lawyers speak of the rights, and those rights which have been established by law. Unions have absolutely no legal rights. With the union itself, it is largely a question of might. You can not bring a union into existence except by having—this protocol was created through a big struggle. In the union all the rights that the working people can get anywhere are largely through having strikes, and whenever they cease struggling for their existence no amount of lawyers and legal technicalities will give them anything, and because the lawyers are trained in the defending of rights only, that is where the trouble comes in.

Some of you at this time are trade-unionists, and you know what I am talking about; and another thing I have noted that lawyers have a great contempt as a rule for trade-unions and trade-union followers and methods, and we can not run our relations with the manufacturers, except on well-defined policies and methods, which the lawyers are either ignorant of or they have a contempt for.

Commissioner O'CONNELL. Does the protocol provide in any way for the adjustment of the thing that now seems to be in dispute, that is causing a sort of unrest among the people in the trade?

Mr. DYCHE. The protocol provides this, that before calling a strike or a lockout, matters of difference should be given over to a board of arbitration. Of course, I want to say this—I want to illustrate one of the difficulties that we have with the protocol, and that is this: The reason why there is so much unrest among the people is for 27 or 28 years we have been trying to organize the cloak makers in this industry, and we have always failed. That is, our organization was temporary. We succeeded in organizing sometimes a dozen,

sometimes two dozen, sometimes 100 shops, but this industry has to-day about 2,000 shops, and at the end of the season it melts. You could not get along. During this time there has been a constant struggle between us and the manufacturers, but it has resulted in no tangible improvement.

This protocol is conceived on the basis that it is to the interest of the manufacturers and the interest of the union to maintain standards. That requires the cooperation of the manufacturers and also the cooperation of the union to maintain those standards. The reason why this protocol exists to-day is because it is as much in the interest of the manufacturer as it is in the interest of the union to maintain it. The manufacturer is just as much benefited by the protocol as is the union.

To illustrate this I will give you an illustration that I had not long since with two manufacturers. One was a clothing manufacturer and the other was a cloak manufacturer. This clothing manufacturer asked me, he said, "Mr. Dyche, I see that you are a sensible man, tell me in truth, between man and man, what has this general strike done for anybody?" Before I replied the cloak manufacturer said, "I will tell you what it has done for me. Prior to the cloak strike, at the height of the season, I was in the factory from 7 a. m. until 10 o'clock at night, Saturdays and Sundays included. I was an absolute slave to my factory. Since this strike, on Saturday at 1 o'clock, my machine is waiting for me. I go into the machine and go home, and I do not see my factory until Monday morning. That is what the strike has done for me. The strike has put a stop to the chaotic conditions which existed in the city."

There is no industry in the world, perhaps, or very few, where the difference in prices and the earnings between one factory and another existed so much as it did in the cloak industry prior to the strike of 1910.

We have had some shops where the conditions were pretty fair I should say. The hours were 52 or 54. There were shops where there was no Sunday work. There were shops—well, I do not know any shops where there was no home work, but I want to say one of the great blessings which the general strike of 1910 brought out was the abolition of home work. Mr. Rosenberg spoke about this, and I think this is the greatest thing that the strike has inaugurated. Up to July 7, 1910, in spite of all the agitation carried on by all sorts of reformers, politicians, and settlement workers, and clergymen and good people generally, against sweating, in home work, home work existed more than ever until July 7, 1910, the day when the strike was called.

After 6 or 7 o'clock in the evening, when people left their shops on Fifth Avenue, you could see those people carrying bundles home, and some of them had two machines. One machine they had in the factory and one machine they would have at home, and when they went home they carried the bundles and they would sit at home and work there, their wives and children helping them Saturdays and Sundays.

I want to say that the respectable manufacturers close their shops on Sunday, but some of them do have them open and—as the result of this strike—I should say that all that has been abolished.

Commissioner O'CONNELL. What is your general impression of the protocol, how it has worked, your experience, and your opinion of it?

Mr. DYCHE. My experience is that this protocol is an improvement upon what we had. Of course, I have my ideas. Of course, every one has his ideas of its working. I know its weaknesses, and I know it has to go on improving. It must make for improvement; but the reason why I am such a stanch believer in the protocol and would do everything possible to maintain it is this: That I have had 27 years of hard, laborious work in trying to organize the people of my craft, and I have suffered, I mean physically suffered, in all sorts of ways. I do not want to tell you what I have suffered, or what my colleagues have suffered, I mean Mr. Rosenberg and a few more, and we have seen no end to it except through the protocol. When I say protocol I say a collective agreement between the union and the association of employers. I do not believe that we can maintain our association in New York City without having a collective agreement with the employers. We have tried for 25 years to have agreements between individual employers, and it was an absolute failure.

Commissioner O'CONNELL. You are familiar with the proposition. We want to know the strong points and the weak points throughout the country generally.

Mr. DYCHE. The weakness is this: In the first place, it is hard for our people to be reconciled with the idea that the union should go and make a compact with the employers, people who have been trained for years, who have been engaged for years in a life-and-death struggle with the manufacturers, and, then, all of a sudden become confronted with the proposition that the union should cooperate with the association of manufacturers.

Commissioner O'CONNELL. They believe that they should have a right to make individual contracts?

Mr. DYCHE. I wanted to explain—the psychology of the people who have been engaged for years: We have been engaged for years in struggling, because we have always had trouble. It is not a quiet industry. Now, people are not like people who come here and accept anything. This industry has been a ceaseless struggle and strife between the employer and the manufacturer and unfortunately it led to nothing, and after all is said and done, they have been confronted with this situation—that the union has entered into an agreement—into a compact—to help the manufacturers' association and the employers' association to help the union. That is something they can not swallow. It is very easy for any demagogue to come in and tell the people: "You see you need us," and there is hell—excuse me for the expression, but that is exactly what we get. That is one of the troubles. I believe we will get over it.

Commissioner O'CONNELL. You think the working people, as far as you see them, are opposed to the employers being organized in an association?

Mr. DYCHE. What I say is this: That the great mass of the people can not believe that it is possible for their organization to act in cooperation with an organization of employers. They think that every attempt in that direction is what I should call treachery on the part—I should say a large number of our people—and it requires an intelligent man to give expression to these sentiments which are largely in vogue, and we, therefore, get into hot water. That is one of the difficulties.

Commissioner O'CONNELL. That is the weakness of the protocol, then?

Mr. DYCHE. It is the weakness of the conditions.

The CHAIRMAN. The psychological conditions?

Mr. DYCHE. Yes. It is enough for any man of intelligence to come and give vent to this feeling of the masses; but it is foolish to think of a man, who has devoted his life to the cause, that he could become a traitor to the cause and should join the employers' association. That is one of the weaknesses, and, excuse me, in order to maintain the protocol, you must have people in whom the other people have confidence; but if a demagogue comes and tells the people that those people who have been trying to maintain the protocol are the friends of the bosses, then, of course, the protocol falls to pieces.

Commissioner O'CONNELL. They are in favor, generally, of making agreements covering the trade?

Mr. DYCHE. Individual units?

Commissioner O'CONNELL. With the employer or employers, either individually or collectively?

Mr. DYCHE. Yes.

Commissioner O'CONNELL. Or with their direct employer, for their personal employment?

Mr. DYCHE. Yes. There is another difficulty in adjusting this.

Commissioner O'CONNELL. Somebody ought to go down and tell those people that the days of individualism, so far as the industrial world is concerned, are past.

Mr. DYCHE. I would like to give you that job, just now, and you would see how you would look.

Commissioner O'CONNELL. I am afraid, though, they would not understand my Irish.

Mr. DYCHE. If you spoke French they would not understand you.

The CHAIRMAN. Mr. Dyche, can you furnish the commission with a copy of the protocol?

Mr. DYCHE. Yes, sir.

The CHAIRMAN. And show who are the signers of it. This book here is published, that does not show the signatures of the parties who signed it, and who are responsible for it. Who are the responsible parties for the carrying out of this agreement?

Mr. DYCHE. When the agreement was signed it was signed by the officers of the international union. The strike was called by an order of the interna-

tional union. At a vote of the convention of the international union held in Boston it was signed, but there was no distinction then as to who are the parties. We then were in this position, of course, not being lawyers, the cloak makers' union, acting through the board, and the international officers, were one body, but fortunately we had a lawyer come into the situation, and the first thing he did was to come before the manufacturers' association and raised the question as to who were the parties with whom we had to deal, and then there was a hullabaloo about it, and the question of whether the international union was to deal, or a joint board of the cloak makers, and we had wrangles, and we had fights up to to-day.

Commissioner O'CONNELL. Is there any possibility of the protocol arrangement being broken off at all? I ask you that, because a gentleman in the hotel told me there was a possibility of the whole thing ending in a day or two, that it might be broken up.

Mr. DYCHE. Everything is possible in this world.

Commissioner O'CONNELL. I do not mean in that sense, but there is the liability.

Mr. DYCHE. There are influences at work, and there is an agitation carried on in the newspapers by certain parties that the protocol is a farce, that it is a bad proposition, that it is all for the employers, and this is done as much as everything else, to bring about that great dissatisfaction with the protocol which exists at the present time, and to which Mr. Rosenberg referred.

Commissioner O'CONNELL. Well, in your opinion, what is there behind that desire to break that off; is there any justifiable reason or is it a whim of somebody?

Mr. DYCHE. No; absolutely.

Commissioner O'CONNELL. I do not want to put you in an embarrassing position by asking these questions.

Mr. DYCHE. I do not know.

Commissioner O'CONNELL. It is not compulsory on you to answer it.

Mr. DYCHE. I would say that the protocol is based on the idea of conciliation. I do not want to bring in personalities, but I believe the whole trouble is caused by a certain person whom the union was unfortunate enough to import into this situation. And he, in my opinion, is incapable of performing his function of mediation, but he wants to mediate, and, of course, they have the mass with him. And I understand the manufacturers refuse to deal with him, and there is the possibility of this protocol being broken.

Commissioner O'CONNELL. The personal opinion is that along the lines of the predecessor the protocol has been of service to all parties concerned, employer and employed, and is still possible in that respect?

Mr. DYCHE. It is full of errors and mistakes and troubles, but it is still an improvement over the one we had, and that is all we expect.

Commissioner BALLARD. I would like to ask you this question: The wages of the present pressers and cutters, what are they? About how long does it take a person of ordinary intelligence and reasonably young to learn any one of these trades?

Mr. DYCHE. The presser—you see there are various grades in the industry; some of the lower grades one can do pressing in a couple of weeks, but in the highest grade it requires years. It applies to almost every branch of it.

The CHAIRMAN. Is there anything more which you claim to be of interest, Mr. Dyche, that you care to submit? Do you want to say anything about the effect of this protocol on sanitation?

Mr. DYCHE. If you care to listen to what I have to say in the way of improving the protocol, if you think it would be of any use, I would express my opinion.

The CHAIRMAN. Yes; I would like to hear about that.

Mr. DYCHE. I think one of the weaknesses of the protocol is that it is indefinite. I believe the union should enter into an agreement with the manufacturers for a specified date—two or three years. Under the present existing conditions it is indefinite; any person or officer who is engaged in performing his functions under the protocol, or who is qualifying for the job, all he has to do is to raise a rumpus and tell them, "You are the slaves of the protocol." There is no stability to the protocol. If we had an agreement which has a specified time, say three years, then we would know there could be no agitation for a general strike. That is to say, during three years we would have a rest, and the trade would not go to other cities, as there is always a danger when there is an agitation against the protocol, to carry the spasmodic agitation among our

members, and the trade of New York City is injured by it. Buyers are pledged to supply orders, but if it specified for three years and the giving the parties three months' notice, if they want to change, to negotiate different terms, then at least we would be free from this constant agitation among our people by certain disgruntled parties, and there are always disgruntled parties in any organization of 50,000 or 60,000 people, against this organization.

Commissioner O'CONNELL. You talk of taking the trade out of the city. Has the protocol resulted in having that effect?

Mr. DYCHE. Not yet; but I have seen it go on for this last five or six weeks, and it certainly will have.

Commissioner O'CONNELL. Are the New York rates under your agreement or protocol higher than the rates outside of New York?

Mr. DYCHE. Most decidedly.

Commissioner O'CONNELL. The employer who ordinarily worked under open-shop conditions a year or years ago, does he now, under the protocol, send his goods over to New Jersey?

Mr. DYCHE. Yes.

Commissioner O'CONNELL. Does the protocol protect the other manufacturers in any way that a member shall not do the same sort of thing—that the union provides that its members should not go in and work under the rate?

Mr. DYCHE. You mean all the out-of-town shops?

Commissioner O'CONNELL. Supposing you and I are employers, we enter into a contract to pay so much. We would pay on the same basis, but I would slip out quietly and go to Philadelphia and have them made quietly.

Mr. DYCHE. If you did it quietly, the protocol does not provide for Philadelphia.

Commissioner O'CONNELL. Does it prohibit a manufacturer who is under the protocol and paying a price in New York from taking his goods to Jersey and having them made for a dollar or fifty cents?

Mr. DYCHE. Through an opinion expressed by the board of arbitration, an employer can not do it.

Commissioner O'CONNELL. And what do they do with him if he does?

Mr. DYCHE. They fine or expel him from the association.

Commissioner O'CONNELL. The reason I ask is that Mr. Rosenberg spoke about it.

Mr. DYCHE. There are two other points from which we suffered before 1910 which have been abolished, and one is the need of giving security for a job. Prior to 1910 in order to keep a job we had to give the employer security, and another evil which we were working under was the irregularity in the payment of wages. I will give you an illustration of my case. I was working for one of the largest houses in the United States, doing a large catalogue trade, and advertising their goods in various magazine, and so on, and there besides getting badly paid we were required to wait sometimes three or four days before we got our pay. We would be told, for instance, that pay day would be on Tuesday. We would come on Tuesday and would wait half an hour, and then we were told that the pay was not made out, and "You should go home and come to-morrow." On Wednesday we wait until sometimes 8 o'clock, and then my turn would not come. They would not pay any more. So 100 or 200 would be left, or 50 would have to wait for Thursday. Sometimes on Thursday, as it happened, the superintendent stated he had no time. So we would come on Friday, and I had to wait several times, four evenings, four nights in the week waiting for my pay. After the strike of 1910, under the protocol, the union has abolished it. We get our pay regularly fixed, and that is one of the great advantages with our people.

Commissioner O'CONNELL. And I understand, Mr. Dyche, that practically your opinion of the whole situation is that the fact that you have not had probably still better results from the protocol is because of the interference of certain parties and the democratic ideas of others and the fear that the officials of the union, by coming in contact with the employers, become contaminated in some way. There may be some possibilities of that.

Mr. DYCHE. Yes.

Commissioner O'CONNELL. But it is hardly possible, and with the probability of extending the protocol in certain lines, and the improvement of it in certain lines, it can be made still better than it is?

Mr. DYCHE. About extending the protocol, I wanted to tell you we have just now had a strike in Philadelphia. That strike was lost. During the

strike one of the representatives of the Government, or at least outside of that, several parties tried to intervene, and proposed the protocol, and they said, "What is the use of signing the protocol? Why, in New York City the protocol is going to be broken, and we have refused," and they said "The protocol is a bad thing; it gives them no stability, and it always threatens strikes, and as a matter of being ruined we would rather be ruined by having the union than have a protocol."

Commissioner O'CONNELL. Has the word "protocol" a peculiar taste in the employer's mouth? Does the word mislead them? "Protocol" instead of an "agreement" or a "contract." Would not they understand that better?

Mr. DYCHE. Probably the manufacturers' side will tell you all about my idea, because I believe I am accused of being in the pay of the manufacturers.

Commissioner HARRIMAN. You said "employers"; were you speaking of the employees?

Commissioner O'CONNELL. The word itself is in a way misleading; are they kind of suspicious of the word?

Mr. DYCHE. Through this constant agitation which has lately been carried on against the protocol it has become very obnoxious.

Commissioner O'CONNELL. And the word itself—lots of people ask what does "protocol" mean? They do not seem to understand. They are ordinary people who are not familiar with the English language. Those in the trade would have some idea it was misleading or deceiving or something—the word itself. It would not be so plain to them probably as the word "contract" or "agreement."

Mr. DYCHE. I do not suppose the word itself—

Commissioner BALLARD. I understood you to say that about 2,000 manufacturers are in the business in New York.

Mr. DYCHE. Two thousand shops.

Commissioner BALLARD. In New York City proper?

Mr. DYCHE. Yes.

Commissioner BALLARD. How many employees?

Mr. DYCHE. Fifty thousand, probably.

Commissioner BALLARD. What about these persons whom you say can learn to be cutters and pressers in about two weeks?

Mr. DYCHE. They start as helpers.

Commissioner BALLARD. And when they become cutters do they all receive the same wages?

Mr. DYCHE. Some of them get above the scale—those who are extra efficient; the extra efficient get above the scale, but the scale is the minimum.

Commissioner BALLARD. It is supposed to be a minimum, and the employer can pay more if he wishes.

Mr. DYCHE. In the cutting trade they have a law which requires three years of apprenticeship; before that he is simply a helper, and gets less than the scale.

The CHAIRMAN. It is the wish of the members of the commission present that they will hear Mr. Hourwich first after they reassemble.

Mr. DYCHE. Can I go?

The CHAIRMAN. I thought you were through. Excuse me.

Mr. DYCHE. I am simply asking you if you have any more questions?

The CHAIRMAN. I thought you were through, and I was going to adjourn.

Commissioner O'CONNELL. There are no more questions.

Mr. DYCHE. Have you any more questions?

The CHAIRMAN. It is hardly worth while to take up any more now.

The commission will take a recess until 2 o'clock. Mr. Hourwich will be here then, please.

(Whereupon, at 12.20, the commission adjourned until 2 o'clock p. m.)

AFTERNOON SESSION.

Met pursuant to adjournment at 2 p. m.

The CHAIRMAN. Gentlemen, I think we can start, although there are only two representatives of the commission present, but it is all a matter of record, and what they do not hear they can get from the record. I want to call Mr. Dyche back to the witness stand for a few minutes. Mr. Dyche, will you take the stand?

TESTIMONY OF MR. JOHN A. DYCHE—Continued.

The CHAIRMAN. Mr. Dyche, on your testimony regarding the matter of attorneys in connection with the protocol and in connection with the whole matter that has to do with the relations between the manufacturers and the ladies' garment workers, the statement you made was very general in character, and I thought I would ask you if you desired to add anything to it or to make any additional statement regarding that phase of your testimony?

Mr. DYCHE. When I was speaking of the difficulty that we had in dealing with the manufacturers by reason of the intervention of lawyers, of course, I was alluding to the difficulties which I should say, 99 per cent of them, were trade difficulties, and so the lawyer did not understand them; he does not understand the nature of the trade, he does not understand the psychology of the people with whom he deals, and therefore he does not understand the method of adjustment, and he injects always the question of arbitration rights, and in that way complicates the situation. Of course, when the question comes before a court of arbitration where finally it is boiled down to a matter of rights, as sometimes it does, then, of course, the lawyer may be helpful; but this is an exception. As I said, 99 per cent of our difficulties are trade difficulties and what I would call psychological difficulties. You know we are engaged in manufacturing ladies' garments. It is a very troublesome industry, because we are making garments for women and everything pertaining to women is full of trouble and strife and difficulty, and we found that the injection of lawyers has been a hindrance rather than a help.

The CHAIRMAN. Let me say right here, that if in the testimony of any witness there appears something that anyone here considers, directly or indirectly, in any way a reflection upon himself or upon his profession or anything of that kind, if he will let the chairman know, he will be given an opportunity to be heard. I want to ask Mr. Dyche another question: What effect does that immigration into the port of New York have upon the continuity of favorable relations under this protocol between your organization and that of the manufacturers?

Mr. DYCHE. In this way, that it results in what I would call a shifty population. The large influx of immigrants makes the problem of the union so much larger to absorb them and to train them to American methods. The great majority of them come from Russia; a large number of them have been engaged at home in fighting autocracy, in fighting ukases of the Czar, and to a great many of them even obeying an order, even though the order comes from the union, is repugnant to them. Some of them make no distinction between an order of a business agent and the order of gendarme; people engaged in fighting obedience to the Czar are not ready to adjust themselves to have to obey a union law, because to them all laws—at least, they have been at home engaged in fighting laws and all of a sudden they must obey union laws, and I say this complicates the problem of making work and carrying on the problem with so much more difficulty. Of course, difficulties are not insurmountable, because most of the people are amenable to reason and they are ready to listen to the advice of the leaders, provided they have faith in the leaders. Of course, if a situation arises where the honesty and good faith of the leaders is attacked, naturally the opportunity of getting discipline at all is almost impossible.

The CHAIRMAN. Shortly after their arrival, how are they toward standing for the price fixed by your organization?

Mr. DYCHE. Well, most of them do stand for the prices.

Mr. LAUCK. With regard to these immigrants, are they not usually willing to work for half, or less than the rate fixed by the protocol?

Mr. DYCHE. Not as a rule.

Mr. LAUCK. Do any serious difficulties occur in that particular feature?

Mr. DYCHE. No; we have found them at least a class of immigrants that were very ready to organize and insisting upon standards being maintained.

The CHAIRMAN. Mr. Dyche, do you wish to add anything further?

Mr. DYCHE. May I add to some of my testimony as to the nature of the difficulties we are working under with the protocol?

The CHAIRMAN. Go ahead.

Mr. DYCHE. Our people are suffering from a good many evils, but I should say that most of them are not due to the protocol, but it is quite outside, from other causes. Many people come to me and tell me about the suffering they have and undergo in the protocol shops, and when I ask them, Are the condi-

tions in the nonprotocol shops, independent manufacturers, any better, they admit that they are not; they say it is not so; in fact, so far I have not heard it stated by anybody that the conditions in nonprotocol houses are any better.

This confirms my contention that a great many of the evils we are suffering are outside of the protocol, and no amount of tinkering with the protocol will alter it. It is due to the nature of the industry itself, seasonal fluctuations, etc., but the great defect of the protocol to my mind is that 80 per cent of our people are pieceworkers, and the protocol makes no standards for pieceworkers. We have standards for week workers, and the fact is we have but very little trouble in adjusting difficulties with week workers; but when you come to pieceworkers—you have heard about these complaints, about these constant changes of styles, that require constant adjustments of prices, and there is consequently constant friction in the shops. There is to-day more or less adjustment, and this adjustment is a great cause—I should say of at least 90 per cent of the trouble we have with the manufacturers is due to the fact that the protocol left no provisions for any standards of piecework. We have this also: A manufacturer very often sees for a particular garment that he has to pay \$5 for the making, whereas his next-door neighbor can get it out for \$4 or \$3, and the result is that he goes to work and tries to get his work done cheaper outside. As it is, it is left to each shop price committee, and the manufacturer comes to the conclusion that the price committee has been too stubborn with the prices, and the moment the manufacturer finds out that his next-door neighbor can get a similar garment done cheaper he tries in every possible way to get it done cheaper, and very often he succeeds in getting rid of those people who have tried to maintain higher prices.

The result is we have a great deal of what I should call discrimination with some of them, which no amount of tinkering with the protocol will settle. Manufacturers will find ways and means, and you can not stop them by getting rid of these people who want higher prices. These people will naturally use discrimination, and it is not possible at times to find it out when it is used. I am perfectly satisfied that so long as you have a condition of affairs where one manufacturer can get his work done 20 to 25 per cent cheaper than another for his garments he will get it.

The CHAIRMAN. Do I understand that if there are two firms on Fifth Avenue of exactly the same class—I mean in the same class as to quality of goods turned out—that there has been no centralized effort to secure practically a uniform price for piecework in those two firms?

Mr. ROSENBERG. My conviction is that you can not get it; that it is physically impossible to get it. There has been some effort made in standardization lately, I understand; some method has been adopted of trying to adjust it, but my impression is that it will be futile work. My contention is that you, until you can get the cloak trade on week-work basis will have this trouble whatever you do. Our trade is too complicated, and the amount of labor you put in one garment and another, although outwardly it looks very much alike, yet the mechanic would soon find out the differences.

The CHAIRMAN. It is regulated in some trades; for instance, in Mr. O'Connell's trade. Supposing there are two pieceworkers working on machine work of the same class, on piecework, the same kind and class, they are paid the same price?

Mr. DYCHE. In the same factory?

The CHAIRMAN. Yes.

Mr. DYCHE. Yes.

The CHAIRMAN. And the same in my trade.

Mr. DYCHE. Yes. But if two manufacturers working, different firms making the same garment, in one factory an operator will get 10 of the same kind at the same time, but in the next factory he will only get perhaps 5 of the same kind, and the result is that the man who gets 10 of one kind will make 30 per cent more than the other, the price being the same.

The CHAIRMAN. The difficulty comes in the output, then?

Mr. DYCHE. Yes. But when the price committee calls to make the price they don't know how many of this particular garment they are going to get in; usually they get 10 in a bundle, and if there are only 3 in a bundle they will only get perhaps \$1 or \$1.50 a day, whereas with 10 in a bundle they can make \$3 a day.

The CHAIRMAN. Is that all, Mr. Dyche? Anything else you want to offer?

Mr. DYCHE. No; nothing else at present.

The CHAIRMAN. Now, the commission desires to call some of the members of the joint board representing the union. A number of names have been submitted to me and several different lists, and they are not marked, and the chairman is uncertain who belongs to that joint board and who do not. I have here G. M. Wishnesic. Is he a member of the joint board?

A VOICE. No.

The CHAIRMAN. Is Sam Martin?

A VOICE. No.

Mr. HOURWICH. I am chief worker and secretary of the union. May I make a suggestion, Mr. Chairman, that you call upon Mr. Cotler, who is a clerk of the union?

The CHAIRMAN. All right, we will call upon Mr. Cotler.

TESTIMONY OF MR. PEREZ COTLER.

The CHAIRMAN. Mr. Cotler, what is your position in the union?

Mr. COTLER. Recording secretary, Local No. 1, Operators' Union.

The CHAIRMAN. Are you a member of this joint board?

Mr. COTLER. No; I am not a member of the joint board.

The CHAIRMAN. I do not know whether you were or not. What do you know regarding this protocol and its work in connection with the union, and give us your story just as you want to give it yourself?

Mr. COTLER. I can say a lot about the protocol and about the effect on the relations between the union and the manufacturers.

Commissioner O'CONNELL. Just go ahead in your own way and tell us the entire story in your own way.

Mr. COTLER. I know that the protocol in general should be good if it would be workable, but the position they put it in is unworkable altogether. It is unworkable because they do not give us an answer to our troubles, to our complaints. If the conditions in the trade are now better than they were before, it is not on account of the protocol, but it is on account of the general strike that we had. The general strike bettered the conditions, but the protocol did not at all.

The CHAIRMAN. Talk more that way, Mr. Cotler. We can hear you here, but the people out there can not. Turn your face in their direction.

Mr. COTLER. The object of the protocol was that the conditions of the contentions should be fought out any time and the strike should be maintained always as long as the protocol will exist, unless the protocol can prevent it, and the protocol failed to do that, and after three years and a half since we have had the protocol we have had four victims of the protocol; we had four clerks, and all of them were victims of the protocol and none of them would stand it any longer. And we will have the victims on one side or the other side, because the protocol the way it works now no clerk will be successful if the protocol be not amended. The function of the protocol is that no discrimination on the part of the working people—that is, against the working people—shall happen, but in fact the protocol protects the manufacturer when he wants to discriminate against the people, and it never protects the people when they are discriminated against. I will give you just one story and you will see how it works.

There is a firm by the name of Stratton. It happened that they had for a foreman there one who was formerly a scab agent, a scab, and so on; he was the foreman there. His habit was to insult the people and insult them very badly; so it happened that the people made complaint to the firm about him before, and the firm had never paid any attention to it; but once the people stopped their work it was different. And when the people stopped their work the firm did not complain to the union and did not complain to their association of their stoppage of work, but they promised them that if the foreman did not behave in the firm in the future they would send him away. Well, a few days later the foreman insulted a girl so badly that she got hysterics. The people went to the firm and asked them to live up to their promise and send away their foreman, and the firm would not listen to it, and they stopped work; and when they stopped work they were discharged; and after they were discharged none were taken back except those the firm selected. They selected a few—the people who did not complain and who were satisfied with any price given to them. The fact is that when the foreman insulted people no action was taken against him to protect the people, but when the people took a stand they were all discharged. And knowing that they are all Italians and that they are very

hasty, instead of trying for a few days to keep them, and have a meeting, and tell them the matter could be straightened out, they did not give them that chance. Instead of that, they give them until to-morrow afternoon, and they must sit down to work, and then they will have a complaint; and they had the experience as soon as they sat down to work, they had the experience that they would never get respect, because it will come before the board of grievances, and they would never have a chance; and so the thing remained as it was before.

Now, here is another case: According to the protocol our people do not have to strike; they do not have to stop from their work; if they do so, the union must instruct them to go to work, and if not the manufacturer discharges them. It happened in one place that there were 8 operators and 9 cutters, 1 a machine cutter. They had work for 100 to 120 machinists; and they asked them, "How much do you want for a jacket?" And they said, "90 cents." The manufacturer asked would they take 50 cents; and if they would not take 50 cents he would send outside. Well, they did not give them work for two weeks, and the 9 cutters were cutting steady and the work was sent out. And according to the laws and regulations you say all the contractors should be registered, but at the same time they send work outside to people that we never know, because all the contractors are not registered; and the moment we want to find out if a manufacturer is registered they make it difficult for us to find it out. So it seemed that our people were for two weeks without work; they were not giving them a piece of work; they were cutting work and sending it out outside, and our people were locked out for two weeks of their wages, and the protocol did not protect them a bit.

The CHAIRMAN. How was the protocol to blame for that?

Mr. COTLER. I will tell you. When we come to the board of grievances we always had a tie vote, and the manufacturer always votes for their side, and our people always vote for our side, and the situation remains the same as before. We are always the complainants—we always complain—and we remain with the complainants; and they are always satisfied, because the manufacturer, if he wants to get his satisfaction, he simply fires the men out; he gets his satisfaction when we are looking for our rights, and we don't know where to get them in the board of grievances. We know we can never get justice, and we never did get justice. When our clerk and the clerk of the association agreed in the shop that the men shall sit down to work, even in that case we did not get justice; but when our clerk told them, "If this is the case, I will go out through the public and see about it," even in that case, when your own representative admitted that we were right, in that case you did not give us justice, when this argument was brought to them by the decision of their own clerk; and if we want to apply to the board of arbitration we can never get them. The board of arbitration meets once in a year or once in two years; so our complaints have been piled up and have piled up little by little, and now we are in the face of a big mountain, and we can not jump over it.

A statement was made before this morning that the better class of our people are in favor of a protocol. I say it is not so. I say that the most intelligent people of our union are against the protocol, but they are agitating to maintain the protocol because they believe that there is coming a time when all our people will understand what is good in the protocol and what is not good, and then they will go out and demand that the protocol shall be amended. The best of our people believe, and they find out and they feel that the protocol gives no protection to them but it always gives protection to the manufacturer.

Here is another case which I will tell you. I was at the time I speak of in a shop where the manufacturer had 127 machinists inside, and he had work for the 127 machines inside, and they had never had to send out work outside, and still he had his force of cutters, and he began to work and send the goods outside, and his machinists not working, and still they did not give a chance to work inside and all the work was sent outside at that time. When he was asked why he did so he said he got the work outside done cheaper. We never were able to locate where that work was sent out. And once he brought in specials; he said he had an order and he wanted to settle the price of a garment, and we told him the price of the garment would be 75 cents, and he said he would only pay 55 cents, and we said we would not take it. The next day he comes, and says: "Boys, I have a special here, a special order, and you must make it up for it is a special," because it is a special we must make it. They said: "You told us we must take all the specials, and if we had any complaint we can go before the board of grievances." When he brought in the gar-

ment I saw it was the same garment he had the day before, and he wanted to settle it as a special, and I said: "If this is the case, when you are sending out the stock, send out that special, we don't want to make that special"; so we were called to our union and the union ordered us that we must make that garment, because if we did not the manufacturer would lose a customer; and that was the last day of November, the last day for me to touch work.

Another time was after not having a stitch of work inside of two weeks, we were compelled to do that work, and as soon as we did that he took off 100 machines in order to get rid of these people, and left in about 20 machines and picked out some men of his own, and when we wanted to stop work to compel him not to make this special order, in order to give us the other work, we were compelled by the union to do it. Well, I was on the work, I was sergeant, the man with the big stick, and I said to them: "Boys, we must work because it is the order of the union," and when they asked me afterwards what will be done with us, what can happen afterwards, because they make nothing, well, I had nothing to answer them, and I don't know what to answer the people when they come to me and ask me the same question, because I know this situation has created a dissatisfaction since the strike up till now. The first winter after the strike the conditions were better, but since that time the conditions are getting worse and worse, and I don't know where we will get. We had the first time, the first work after the protocol, was a man in our ranks that we had full confidence in, Mr. Sam Polycarp—he is a tailor by trade, understands it all right, but he is not a lawyer, so he did not study the protocol as far as I did, so he tried to do his best, but when he felt some harm was being done to our people, and he did not have any legal arguments to use, so he cried. He said: "You are doing us harm, and I don't know where it is;" so they did not want him, they said he was unpolite. You see he is only a tailor, and if he is a tailor we can not get rid of him. He used the methods of a tailor and not the words of a lawyer; he used the language of a tailor and I suppose he was very excited and I presume they did not want him.

When we had the next clerk he read up on the protocol and he said: "Why, the protocol protects us as much as the employer. The only thing is the protocol shall be made workable," and he showed us the protocol has leakages and he wanted to patch them up; so the manufacturers said they did not want him. They said that the protocol would be good; the only thing was it had leakages, and they ought to be fixed here and there; so they refused to have anything to do with him and he was sent away.

The third one was Mr. Dyche, our general secretary, and he had that job of the Stratton case and some others. He believes that mediation is the best. We don't believe in it, because we have had mediation enough; we have had mediation to an extent so that our people are going out by the thousands into the street, and the best of our people are discriminated against; so, before the protocol, if a good man was kicked out of a shop, he had a chance to go to the next place and get a position, but now the manufacturers are against him; and if a man is said to make trouble, although he claims he has not been making trouble, if he is working for a price and if he is protecting his work, if he is protecting a presser, or whoever it is, that this is the case about, if a shop journeyman wants to protect the people in the shop he is kicked out and he can not get another position, because they telephone from one to the other about him, and they ask who he is and they tell each other, and he can not get a position; and we have thousands of people who can not get positions because they are blackmailed. Of course, if we can show he is blackmailed, it is all right, and the clerks will assist us to put him back in his place; but you know the telephone company has no records to show. Take, for instance, when a man has been sick, and he is going out to work and he has been to a place and asked for a position, and he is told: "Come next day and you will get it," and next day he comes and he is told there is not any vacancy, and we know what it means. We feel it; all of us.

The CHAIRMAN. I understood Mr. Rosenberg to say this morning that you have about 4,000 cases that have come up in one form or another, a large number. How, in the main, have those cases been settled?

Mr. COTLER. I will tell you. As soon as we know—the trouble comes out before the case comes up before the board of grievances, or before it is adjusted, a week or two, say, in the height of the season, the man loses a week or two before it comes up in the board of grievances, and when it comes up we don't know whether he will win it or not. Our clerks know it, and they know that if one of our men loses his position two weeks in a season, and the

season lasts seven or eight weeks, if he loses two week of his living, it seems they know the effect. They settle in the shop, or wherever it is; they don't care whether it is justice or injustice, they try that the man shall remain in the place, and they give in to anything, because they know they can not get justice higher. On the other hand the clerks of the association know it, too; they know they want to have on record not that we win cases, but to have on record cases that we were right does not suit. You see it does not do for them to show we were right on this case and in this other case we were right; they don't want to have that on record. So, as soon as they see that one of our people is right and he will come before the board of grievances, where we will get justice and we will go on record that we are right, they will not let it get to the board of grievances, and instead you will see marked on record, "Case adjusted." That means that they did not want it before the board of grievances and did not want to have it on record.

The CHAIRMAN. Well, do you mean to inform us that the clerk representing the union and the clerk representing the employers are desirous of keeping these cases away from the board of grievances?

Mr. COTLER. No; I say our people, our clerks, are compelled—if our people would not be human beings, and we would think that the protocol is the last word of importance to settle trouble between capital and labor, we would say our people are only figures in the movement, and we don't care for that. Let us get the sufferers, so that they will have statistical cases, and they don't want them. If they would take the policy to have our people suffer in order to get proofs against how the protocol is working, we would have piles and piles, all the cases we would have for proofs; but our people are human beings and they want to make a living, and we can not have them suffer on account of the protocol. I can not think the protocol is the best work.

Commissioner BALLARD. Does your protocol provide that if a man or a woman is discharged unjustly they shall be compensated?

Mr. COTLER. We tried once to have it, and I think a rule was accepted that if a man has been discharged, and he is in the right, he shall be paid for it; but we waived this rule for the manufacturer to have to pay for lost time. If we insisted on the manufacturer paying for lost time we would never win a case.

The CHAIRMAN. You say you will never win a case?

Mr. COTLER. No; he would never give in if he would have to pay for it.

The CHAIRMAN. Do you mean by that you never win a case because of the protocol?

Mr. COTLER. I wish we did; but I say it is black on white all the time. The man is not in a position to help himself. It happened last time, when both clerks agreed, it means both clerks agreed that the workmen had the right. What does that mean? It means that even the clerk of the association agreed, and he found out that the man was right, and then they decided, both clerks decided that the man was right, and he must go back to work, and even that time the manufacturer appealed from the decision, and when it was brought before the board of grievances, they were arguing five hours, and then our clerk used this argument: "Even now when your clerk admitted that we are right, if even now you will not admit, you will go out to the public and say nothing doing any more." Then after five hours' arguing they agreed, both clerks agreed.

The CHAIRMAN. That last presentation would seem to indicate to us that you feel that the manufacturers are not living up to the protocol?

Mr. COTLER. Absolutely.

The CHAIRMAN. How have most of these, the large number of cases, been disposed of; have they been disposed of so it was reasonably satisfactory?

Mr. COTLER. I think I explained it before. Our clerks tried to agree on each and every thing because they know if they will not agree, our people will suffer, so they must agree and must take care, because our people are human beings and must live, and so they must agree. But if every case would come up before an impartial man the cases would look different.

The CHAIRMAN. Well, what would you recommend to eliminate this trouble?

Mr. COTLER. I would recommend that the board of grievances shall be amended and that in order that we shall get justice, whenever we have a grievance—because when the manufacturer has a grievance he uses up his rights, the only thing he does, he discharges his man, or he sends his work outside, and he keeps our people on starvation wages, so he has satisfaction, he has no grievance; if he has a grievance he does it himself, he is his own prosecutor,

he is the judge, he is the district attorney, and everything; but we have no board of grievances and nobody, and in fact, we have no board of arbitration. The board of arbitration is to the effect that in future he shall not look for his rights; our union consists of individuals, we consider every man as an individual, and if every one of our people was five or six weeks in a place and did not get work, and waited for the season to come when he could get work, and he is used to that place, and when there is a price committee and he wants a certain price, and he is discharged it means he has lost everything, and he has to go now and look for another place—and you must remember that our work is not like the work of builders; for instance, in the building trade a man may work one day on a building on Fifth Avenue, and the next day he may work on a building on Cherry Street, it is the same work—a different class of work, perhaps, but the work is the same; and then on the same day he may work half a day in one building, and the next half a day in another building. But it is not so with our people. Sometimes it takes our people weeks and sometimes a season to get used to a place, and if he is thrown out in the beginning of a season he loses that season.

The CHAIRMAN. Has there been any more discrimination since the protocol than there was prior to that time?

Mr. COTLER. Prior to the protocol, the manufacturer never fired a man [laughter], he never fired the whole shop I mean; he fired the men. He might fire a man but he found a new place.

Commissioner BALLARD. You want to convey the idea that now under this system when a man is discharged he is practically blacklisted?

Mr. COTLER. Yes.

Commissioner BALLARD. Don't you think manufacturers without a protocol, with a sort of adjusting agreement, could carry on the same system practically?

Mr. COTLER. Before we were not and now we are.

Commissioner BALLARD. I suppose you did not notice it so much before?

Mr. COTLER. Before we were not organized and they were not.

Commissioner BALLARD. Then, when a fellow was discharged and went about his business he had nobody to complain of.

Mr. COTLER. No; he was discharged and went out and got work; but I don't know whether we shall accomplish as much as in a strike, and the idea of the protocol was that everything we got in a strike should be maintained.

Commissioner O'CONNELL. How do you propose to amend the protocol?

Mr. COTLER. We want an impartial man, who shall adjust our differences.

Commissioner O'CONNELL. You don't catch the idea. Suppose you wanted to amend it; if you gave notice of six months or a year can you do so?

Mr. COTLER. The first thing is to amend the board of grievances, and to amend the board of grievances to the effect that there shall be an impartial man there.

The CHAIRMAN. Suppose you wanted to change the prices for the cutters; how would you go about that?

Mr. COTLER. I think, now, and this is not a foolish thing to say for the protocol, it is old—that is, it is without any limitation of time; it means that the way the standard is now it ought to remain for always, and it happened that the pressers said that the prices that they had three years ago they can not live on now, and we must have in the protocol that it shall be for a certain time, or there shall be a clause in the protocol that from time to time we shall come and ask for amendments or ask for improvements, or it shall be for a certain time. We don't know whether it is for 10 years; they can prepare this and we can prepare this and see if we can get along.

The CHAIRMAN. Who is there here that can tell us how they propose to amend the protocol?

Mr. JULIUS HENRY COHEN. I can state that.

The CHAIRMAN. Will you do so?

Mr. COHEN. The rules adopted by the board of arbitration in 1911, a copy of which you have in book of reports 98, provides for requests for conferences by each side. The union can at any time request a conference. Last May the union requested a conference for some 14 amendments to the protocol. These amendments were discussed for nearly three weeks in sessions that covered two or three volumes in the record. Upon some of the points an agreement was reached and the protocol is now amended as a result of that agreement. Among some of those points is a system of trying to standardize these prices you have heard about to-day. If the points in controversy with a party are deadlocked

an appeal lies to the board of arbitration, and there is now pending before the board of arbitration several of the amendments, some of which involve increases in wages, and some changes in machinery. The further matter you have heard spoken of here to-day, the very question of an impartial chairman, is now pending before the board of arbitration, and the board of arbitration appointed Mr. Winslow as an impartial person to investigate as to the board of grievances and Dr. Wilder and one of his members to make a statistical inquiry. That work is not yet completed. I would suggest to the committee that instead of hearing about isolated case, if they would examine the results of the careful statistical inquiry that has been made, they will get at the matter more quickly.

Mr. COTLER. In regard to what Mr. Cohen has spoken of now as to the conference here is the result. We complain that we can not get justice at the board of grievances, and we wanted to have a remedy. Of course, we know that as soon as our people find out that they can not get any answer on the question of their grievances, the prices fall down and down on the piecework; first, the week workers are able to give a statistic of how much they earn. Well, they can not do it for pieceworkers up to now. We did not have it, and we are not in a position to bring it up to the board of arbitration. Besides with the week workers, the pressers, they can not make a living with the wages they are getting or with the wages they got five and a half years ago, and they decided that they must get a raise in wages at the same time. I believe that the standard of living for pieceworkers is higher now than it was three years ago, just as it is for the week workers, and at the same time if we wanted to get a remedy in order that our prices should fall down they did not help us. And you know what they are doing now about the standardizing of prices? Yes; we see it. They are trying to take off or set down 30 per cent of what they paid before on the pieceworkers; they are trying systematically in the shops, and every shop, to get off the price for the pieceworkers since they resisted the prices for the week workers, and if they can not do it inside they will send the work outside.

The CHAIRMAN. Those are things the people feel, but in regard to the big question of the protocol, in regard to avoiding strikes, etc., does that appeal to you?

Mr. COTLER. Yes; if it be workable, but it has no handlers to carry it.

Commissioner O'CONNELL. Well, if we put handles on it?

Mr. COTLER. I think so.

Commissioner O'CONNELL. Two or three?

Mr. COTLER. Two is enough.

Commissioner O'CONNELL. You believe that handles can be put on?

Mr. COTLER. The trouble is that as soon as a man comes to understand the business and he sees here and there a leakage, then that man is no good.

Commissioner O'CONNELL. Who says he is no good?

Mr. COTLER. The other side says he is no good.

Commissioner O'CONNELL. But you are equally represented, aren't you?

Mr. COTLER. Yes; but they are always the prosecutors and we are always the complainants.

Commissioner O'CONNELL. In that case, if that be the case that you are always the complainers, you have the same power that they have.

Mr. COTLER. The only power is to stop their work and this is provided by the protocol.

Commissioner O'CONNELL. And the only power they have is to close the shop down or send their work somewhere else?

Mr. COTLER. It seems the protocol up to now—that the association has gone up; they have doubled the number of members; and, although there are independent manufacturers, it seems it pays them to be in the association.

Commissioner O'CONNELL. One of the gentlemen spoke about going back to the individual with the employer. Do you find that?

Mr. COTLER. No, sir; our people will never go back. I say the trade can not go back to the old condition of their bodies as they were without the protocol; our people will die for it.

Commissioner O'CONNELL. They will have a contract?

Mr. COTLER. Even with a contract you can not get them to work longer than they do now.

Commissioner O'CONNELL. They are now educated up.

Mr. COTLER. They are now educated up, but we have now another element more than we had before. Years ago we had another element, and now we have another. Our element now is as soon as they claim they have something

you can not get it back again. Then it is theirs, and you can not take it away until you kill them first. Now, our people won't work after 6 o'clock; they will not carry bundles home, with or without the protocol; they will remain the same, even in one place or in another place; it will not make any difference; they remain the same; it don't amount to anything.

The CHAIRMAN. How many hours did they work before 1910?

Mr. COTLER. In some places as much as now and in some places more; they worked more at that time, but now they feel they are not used to work as long as they worked before; and you know it is much easier to get used to an easier life than it is to go back to a worse condition.

Commissioner O'CONNELL. What do you believe about this general talk that has been going around the city and in the newspapers that there is going to be a breaking off?

Mr. COTLER. If they go even as far as you tell us, who shall represent us? This is, I believe, the element—I made a remark before that we had four clerks, and all of them were victims of the protocol. I believe now that everyone who will try to carry it out will be the victim if he will stand for our side, and if he tries to get for our people everything under the protocol that is coming to us he will be a victim on the part of the other side.

Commissioner O'CONNELL. Do you mean to say your employers are now trying to say who shall represent you?

Mr. COTLER. You see we have had four clerks victims already—three of them by the association and one of them by our own people, because he has a different opinion from the opinion of our people, from the opinion that they have now, and that is our secretary, Mr. Dyche. Our people did not want him, and the association did not want him. You see the situation is the men can not have anyone. Even if you bring the best man in the world, he would be a victim to one side or the other.

Commissioner O'CONNELL. Whom do you mean by "our people"?

Mr. COTLER. The working people.

The CHAIRMAN. What has this protocol done for you in the way of sanitation? What improvement has it made in that direction, if any?

Mr. COTLER. Well, it made good; but I don't believe this is the only cause of the protocol. Of course we are installed, and we have now more sanitation in the individual shops. Not only the protocol—the protocol shops are sanitary already, but they are not union shops. The Union Suit & Cloak Co., I don't believe there is a better sanitary establishment in the trade, but there are union conditions there. What is the good of the sanitary conditions if there are no union conditions? Sanitary conditions would not give us bread.

The CHAIRMAN. All right, Mr. Cotler, I want to hear from the president of the joint board, Mr. Alpine, I think his name is. Is the gentleman here who was called?

A VOICE. He is not here, Mr. Chairman.

The CHAIRMAN. Then, if he is not here I am going to call Mr. Winslow, if he is here.

Mr. WINSLOW. Mr. Chairman, I have sent for the records and they will be here shortly.

The CHAIRMAN. Are you going to have them here in a short time?

Mr. WINSLOW. Yes, sir; I have sent for them.

The CHAIRMAN. Is Mr. Perlstein here?

Mr. PERLSTEIN. Yes, sir.

The CHAIRMAN. Will you take the stand, Mr. Perlstein?

TESTIMONY OF MR. MEYER PERLSTEIN.

The CHAIRMAN. Before you start in, Mr. Perlstein, we have raised no question about the gentlemen wandering far afield, but I wish you would endeavor to explain to the commission the workings of the protocol as well as you can; your experience in carrying it out, as a member of the joint board; its effects on the trade as to wages, hours, and conditions of labor; and what appears to you to have been the result of the adoption of that protocol, so far as the interests of the people you represent are concerned. You are secretary of the joint board, are you not?

Mr. PERLSTEIN. Yes, sir. I believe that the protocol signed in 1910 has brought or helped to bring about better conditions in this trade. I believe that the protocol has helped the manufacturer better to understand the union man, and the union man better to understand the manufacturers. It brought about

that both sides should be able to come together and to settle their daily troubles, avoiding strikes and lockouts. It is true that the protocol has some faults that ought to be amended, but you must understand the situations in our trade. We have in our trade 2,000 manufacturers and 50,000 workingmen. Our trade is a season trade, and every season prices ought to be settled in the different shops, and the controversies in the shops should be avoided where in some shops the same garment can be settled at a dollar and in other shops the same garment and style can be settled at 80 cents, because the manufacturer who gets better union men, men who are trying to get the better classes, if he knows his neighbor is trying to get the better of these union men, who will settle his prices at a cheaper rate, it makes trouble. These are the main troubles in the trade. The protocol brought about in the second year of its work, the manufacturers and the workers should come together and they should try to come to some understanding and to work out some plan how these things can be avoided, and I think if this thing should be avoided we would not have so many discrimination cases as my friend Brother Cotler spoke about.

There is another thing. There are some manufacturers in the association, and also independent manufacturers, who would try to get rid of the union, with the association of the protocol, and this is the same trouble; but the protocol as a rule, I believe, is a very good instrument, as far as the working of the union with the manufacturers is concerned.

The CHAIRMAN. Do you find the conditions as to the earnings of the members as good or better now than they were before this agreement was had?

Mr. PERLSTEIN. I believe they are now much better than before.

Commissioner O'CONNELL. Do you think there is any steadier plan of employment under this plan than the old plan? Are the people earning greater—are the total earnings greater?

Mr. PERLSTEIN. Well, I don't think so; I think it is on the same basis as before.

The CHAIRMAN. That is, as far as steadiness is concerned?

Commissioner O'CONNELL. Yes.

The CHAIRMAN. What are the particular things as to which you believe this protocol could be changed?

Mr. PERLSTEIN. The trouble comes in sometimes that we have cases for adjustment, and we have deputy clerks and also a board of grievances. It happens that sometimes the clerks can not agree on some case, and the case is brought before the board of grievances, and the board of grievances sometimes disagree. It is true that in some instances the board of grievances gives an answer on the troubles; but in other instances the board of grievances disagrees, and I think if we had some impartial man who would decide the disagreement most of the troubles would be avoided.

The CHAIRMAN. What are the duties of the joint board that you are secretary of? How do they have relation to this grievance board?

Mr. PERLSTEIN. Well, according to the explanation of the arbitrators, they are the real party to the protocol, and the international union are the guarantors of it.

The CHAIRMAN. They represent whom—this joint board?

Mr. PERLSTEIN. They represent the 50,000 workers affiliated in the different local unions.

The CHAIRMAN. That is, they are elected from each local union?

Mr. PERLSTEIN. Yes; five men from each local union.

Commissioner O'CONNELL. Are they elected by general vote of the membership?

Mr. PERLSTEIN. Yes; some elected by the membership and some the local union sends as delegates to the joint board.

Commissioner O'CONNELL. Have you had many cases that have come up to the board that you have disapproved of yourself and would not take up, and that you thought it was not warranted taking them up?

Mr. PERLSTEIN. Yes; I want to mention one case that the previous speaker mentioned; that is the case of J. C. Stratton. I believe the trouble with J. C. Stratton happened that neither the firm nor the union men agreed to the rules of the board—of the protocol. Mr. J. C. Stratton was one of the employers who tried to avoid some trouble in his shop by going into individual agreements with his employees. It happened also that people in the shop were discharged. It happened about three weeks before the people stopped work, and according to the rules of the board of grievances, it is not permitted, and the firm not agreeing, I think the two clerks of the association tried to adjust this matter,

and they settled that their employees should sit down to work. The second time they stopped, and the union came to them and told them to sit down to work, and they refused to obey the union, thinking that the firm would settle the trouble individually.

Commissioner O'CONNELL. That is merely a local case; both parties might have been in the wrong in not accepting the protocol.

Mr. PERLSTEIN. No, sir; the protocol as a rule has nothing to do with these small cases.

Commissioner O'CONNELL. Do you think you have as many or less cases now since you have had the protocol than you have had before?

Mr. PERLSTEIN. We have had more cases. The general strike was prior to the protocol, and before the general strike we had no organization—or we had an organization, but it was very small and we had no trouble; we had no members and we had no trouble.

Commissioner O'CONNELL. That is easily understood. Is it not a fact, however, that you have now an organization and have got a protocol and that the men feel more justified, and hence they come forward with the grievances now?

Mr. PERLSTEIN. Possibly.

Commissioner O'CONNELL. Hence the protocol has built them up?

Mr. PERLSTEIN. Positively. The union has brought them up to this stage that any trouble in the shop comes to the union.

The CHAIRMAN. How long have you been in work here?

Mr. PERLSTEIN. In New York?

The CHAIRMAN. Yes. How long have you been in the trade here?

Mr. PERLSTEIN. About 11 years.

The CHAIRMAN. Now take these matters of the discharging of men or women, whether there were more reinstatements when you were unorganized or had shop rights promiscuously than there are now, or whether there are more now than then?

Mr. PERLSTEIN. Before the strike, when a manufacturer discharged a man he had to go and look for a cloak job and he had no one to complain to, and now he has found an opportunity to complain, and now there are more complaints. Before that strike, where there was no union, a manufacturer used to give his men 50 cents for a garment which was worth a dollar, and if he did not like it he told him to go for another job. Now, when the workman demands a dollar for a garment and the manufacturer wants to give him 50 cents, and he won't work for it, the manufacturer has no right to discharge him on account of that. But before the strike the manufacturer had a right to hire and discharge him any time he pleased, and there was no one to complain to or to take care of those workers.

Commissioner O'CONNELL. Then you have standardized the prices now; at least, you are doing so gradually, if not entirely so under the protocol, which it was not possible for you to do under the other situation of affairs?

Mr. PERLSTEIN. It is positively now better.

Mr. LAUCK. You said sometimes the manufacturer wanted to pay 50 cents where the workman wanted a dollar?

Mr. PERLSTEIN. Yes.

Mr. LAUCK. Who decided the prices?

Mr. PERLSTEIN. The way the thing stands now it ought to be decided.

Mr. LAUCK. Is there a board?

Mr. PERLSTEIN. No; there is no board; we are trying to establish who shall settle, one on the part of the union and one on the part of the men.

Commissioner O'CONNELL. If a manufacturer fixed the price of the hobble skirt that is coming up, and he fixed the price at \$2, and the man wanted \$4 for it, if the manufacturer said: "I won't pay any more," would he have to take the price under this condition?

Mr. PERLSTEIN. No; the people are not working, and the employer did not make his orders. It is true some of the employers have tried to send out their work to another place to be done cheaper, and in most instances the employer does not make the garment, and sometimes he gets the people together to settle it. The truth of the matter is when the employer needs to send out his orders, he would not care for 5 or 10 cents, he will come together with his men then; also his people want to make a dollar, and they are trying to come together in some way; but a better machinery ought to be established for the settlement of prices.

The CHAIRMAN. Can you give us an idea in a case like this: Suppose there are 100 people working in a shop, and the percentage comes under the weekly

scale that is worked by your protocol, can you give us an idea what percentage comes under the piecework for which the protocol makes no provision?

Mr. PERLSTEIN. Seventy per cent piecework and 30 per cent week workers.

Commissioner O'CONNELL. There is an agreement for the pieceworker to be paid by the piece, isn't there?

Mr. PERLSTEIN. There is an agreement for week workers, but not for pieceworkers.

Commissioner O'CONNELL. No amount for pieceworkers?

Mr. PERLSTEIN. No. In slop shops they are making as much as \$20 a week, and in other slop shops they are making as much as \$5 a week.

Commissioner O'CONNELL. Do you have much complaint over that?

Mr. PERLSTEIN. Yes, sir; and very much discrimination over that. I mean discrimination not from the association as a whole but from the individual manufacturers.

The CHAIRMAN. Are you ready, Mr. Winslow, now? Is Mr. Winslow there? What other representative of the joint board is here? We are willing to hear these men—we are willing to hear them, but if there is no one here to answer for them we will go on; that is all.

Mr. HOUWICH. Mr. Chairman, may I be permitted—

The CHAIRMAN. No, sir; not now. You will be given all the opportunity you want to be heard. Are there any members of the joint board here?

Mr. LEADER. Mr. Chairman, I know about the joint board.

The CHAIRMAN. All right; we will hear what you have to say about it. Will you take the stand?

What is your position, Mr. Leader?

TESTIMONY OF MR. MORRIS G. LEADER.

Mr. LEADER. Mr. Chairman, I am the manager of the Children's Cloak & Reefer Makers' Association.

The CHAIRMAN. Now, give us your experience with carrying on the organization under this joint agreement—this protocol, so called.

Mr. LEADER. Well, the protocol as a whole, in fact, has improved the conditions, and it is such that it has eliminated strikes. It gives the opportunity to organize the trade; only the individual members have suffered a good deal through the fussing about the protocol. In other words, unfair manufacturers, unscrupulous manufacturers—and there are quite a number of them—which take advantage of being members of the Cloak & Suit Manufacturers' Protective Association, and discriminating and discharging, and not having the whip of a strike, and therefore individual members, many of them, have suffered a great deal for the last three and a half years, and this is the main trouble we have now.

The CHAIRMAN. Have they suffered because of the existence of the protocol?

Mr. LEADER. They have by settling prices; and if they were very active to get a fair price for the work—we have had a fair price list—no work, no money; the individuals were entirely discharged, and, consequently, a man with a little will power had to give up the job to be an active member of the price committee; and, in fact, in many cases the union had a hard job to get members on the price committee, because a man when he takes the job on the price committee it is considered that he takes also his job in his hand.

Commissioner O'CONNELL. And you have a committee in your union that adjusts prices?

Mr. LEADER. Until now we have not. My organization, the Children's Cloak & Reefer Makers' Union, have not fully 10 per cent working in protocol shops. The balance are working in independent shops, where the union sends direct a man to settle prices, and consequently there is no discrimination, because the people are not so active in settling prices, and there is no prejudice from the employer to the employee because the representative of the union is enforcing and standardizing the prices and endeavoring to succeed in having a standard of prices. In other words, the 10 per cent of the shops at these 6 factories they employ about 500 members, the standard of prices in the protocol shops in some cases are lower, because here the employers are stronger. The employee is the one who has to sell his hands for bread and butter, and he is afraid he will lose his job. Consequently, the prices in these 6 factories that I mentioned before—the prices are lower than in the independent shops.

Possibly if we would have people direct from the union settling prices, just as a lawyer represents his client, we would not have the bad blood that we have now, and this is the remedy I suggest. It is true that on the grievance board, which I happen to be a member of, in some cases we are at a deadlock, actually a deadlock. The employer—it took him weeks to find out he lost the case, and this is the main reason that organization is now in effect in the hands of those people, and it has accumulated for three and a half years, so this is not sudden.

I am of the opinion the protective association are fair men, and they have a number of manufacturers who are unfair, unscrupulous, just as we have bad people, too. Only all bad people are not able to do as much to make the conditions worse, like the employer.

The Protective Cloak & Suit Manufacturers' Association have members with it who have affiliated with the protocol. The fact is this: From 150 members of the association at the time we signed the agreement, of 120, I believe, they have now about 300. That is quite a good protection for the employers joining the association, and this is no strike; and if the people are active in settling prices and try to get a fair price. By the way, gentlemen, I want to call your attention to the fact that our trade constitutes 80 to 85 per cent piecework, 20 to 15, week work, and consequently it is constantly a bargaining between the operator and the employers. There are so many styles, and actually they made the men so disgusted that you find after three and a half years of the operation of the protocol that a number of people have an idea, probably, why, I do not know, that they would be better off at least if they could express their feelings and stop from work, and now they are not in a position to do it.

A number of manufacturers are not dealing in good faith with the union. They used to call our attention to the fact that their prices are lower. In these outside factories we used to try to standardize, on the one side, and on the other they were creating them. That there was a game in which the employer had the best of it in my opinion, because I am able to judge, having 90 per cent of the people working in independent shops, union people and 10 per cent under protocol conditions, and I know what I am talking about. The unfair employers brought about unfair conditions; in other words, it would be better that the protocol should be out of existence. You find to-day, gentlemen, more submanufacturers' contractors than we had prior to 1910, and they were created in bad faith by the employers.

The CHAIRMAN. Is there more work made under the contractor system now than there was before 1910?

Mr. LEADER. A great deal. Every one of them is cutting down his plant. You take, for instance, the cloak industry. If I am not mistaken, we have here \$200,000,000, by no means less, still every factory site is decreasing their plant, out of town and Brooklyn, downtown, where the sanitary conditions are gross compared to the Fifth Avenue shops, and this is the charge I make as to the unfair employers. They are protected, and the other people can not strike to protect themselves. We compel them; we have to tolerate it. There is no work; we have other prices. The bundles are going into the other factories.

Commissioner BALLARD. Is the work in the other factories done cheaper?

Mr. LEADER. It is done cheaper. I will explain how. A certain house, having two or three styles, they are in a position to cut larger bundles, where the workingman, as a rule, is not making smaller wages, only the employer gets him to work cheaper; it is through the keen competition created. As regards the employers of the association, and I know many of them personally, if they are very sincere, it is their business during the three and a half years, instead of increasing the evil, to decrease it.

Commissioner O'CONNELL. Were you one of the gentlemen who were interested in the drawing up of the protocol?

Mr. LEADER. No, sir; I was not. I was a member of the general strike committee, and I was not a member of the drawing up of the protocol.

Commissioner O'CONNELL. When the question came up there of having a board for the purpose of adjusting wage disputes and adjusting the prices, was that question never brought up and put into the protocol?

Mr. LEADER. Yes; it was brought up many times. It was discussed many times. I want to call your attention to the fact the protocol was drawn up and at the time of the strike it was a restless time. Even in the Constitution of the United States, there is room enough in that for a number of

amendments. There is room enough for many amendments, not one, but five or six, and we are handicapped all around.

Commissioner O'CONNELL. Under the present machinery of the protocol itself, do you imagine it can be amended?

Mr. LEADER. Oh, yes.

Commissioner O'CONNELL. Under its own construction?

Mr. LEADER. Oh, yes; provided the employer will act in good faith.

Commissioner O'CONNELL. That is a measure you can not figure in figures upon, but the protocol itself will permit of a proper amendment to bring about proper working conditions, as you describe?

Mr. LEADER. In my opinion.

Commissioner O'CONNELL. We will take it for granted that the employers will be as fair in the matter as the unions; if not, there ought to be means to punish them, the same as the members who violate it.

Mr. LEADER. But at present it is not provided. The employers have not disciplined their bad members as we have—they have not.

Commissioner O'CONNELL. Have you had members reinstated by them, and when you found it was a just case, they were reinstated?

Mr. LEADER. I was not personally dealing with that. I was only a member of the grievance committee for nearly a year's time, and as an officer of the joint board, I know all of the details.

Commissioner O'CONNELL. Do you know of many cases like that?

Mr. LEADER. Reinstating? Well, of course. There were a number of reinstatements, but that is not a question of the job. It is bread and butter. Sometimes even the man was reinstated.

Commissioner O'CONNELL. I am going to follow it up. If they were reinstated, were they paid for the lost time?

Mr. LEADER. I do not remember. I do not know really if they were paid or not.

Commissioner HARRIMAN. Mr. Leader, you say the employees were handicapped in trying to get amendments; how do you mean they were handicapped?

Mr. LEADER. In getting to the grievance board. In fact, the most important cases were deadlocked. Here is the idea. The employer discharges a few men. His business was on. The few men were out. There were no wages and we were not in a position to call a strike, because this would be a violation of the protocol. In many cases the employer discharged six, and three were to be reinstated, and three to be discharged, and consequently three have suffered, and three have lost the job altogether; and in this industry, as in any other industry, if a man is accustomed to a shop, it takes him some time to get used to another, and then, in making these styles, if he makes a certain garment, he makes it in half the time of the first one. By losing the job, if he gets another one it means almost ruin. It is not like a bricklayer or a carpenter making a garment. It takes some time to be an expert, and each factory has certain styles, and by losing the job, it means losing the season's trade—his season's.

We have a fall season and a spring season, and the seasons are very short.

Commissioner BALLARD. I understood there were about 2,000 employers in the trade in New York, is it, and you say 300 to the manufacturers' association and about 50,000 employees, and how many belong to the association?

Mr. LEADER. To my knowledge the association employers—they employ from 50 to 55 per cent.

Commissioner BALLARD. Why don't those employers belong to the manufacturers' association?

Mr. LEADER. In some cases the employers will not accept them and some are too poor to pay the initiation fee and the dues, \$350 or \$400.

Commissioner BALLARD. As a general thing, do these 300 employers who belong to the manufacturers' association treat your union as well as the others who do not belong to the manufacturers' association?

Mr. LEADER. They are treated as well, but if it comes to discrimination, they are not treated as well as by the independent shops, because the independent manufacturer is afraid of a strike, and therefore he will not appear to discriminate, whereas the man in the association is afraid.

Commissioner BALLARD. So, take it all in all, you do not see much difference?

Mr. LEADER. The difference is this: by not having strikes it gives the chance to the independent manufacturers, who are compelled to behave themselves, having that 50 or 55 per cent; in other words, all the important manufacturers

in the trade are going hand in hand with the union and the independent manufacturers, they must be good.

Commissioner BALLARD. Are these 300 the largest ones, as a rule?

Mr. LEADER. The largest; yes, sir.

The CHAIRMAN. Let me ask a question which none of you touched upon directly: What effect does the protocol have upon the maintenance of organization by the workingmen?

Mr. LEADER. In my opinion very favorable, because they do not occupy our time in having so many strikes, and they are able to work our organization, and the machinery of the union is more at peace, and they are able to conduct organization work, and prior to the time we had a protocol they were all that time being busy in strikes and lockouts, and the organization was all the time restless, and now we have peace.

Commissioner BALLARD. So the protocol, though imperfect, is a good thing?

Mr. LEADER. Oh, yes, there is no question about it. I am a great believer in the protocol.

The CHAIRMAN. Do you want to ask any questions?

Commissioner HARRIMAN. What do you consider the weakest points about the protocol?

Mr. LEADER. The discriminating between people and bad faith, by creating submanufacturers, who give out the work down town or out of town.

Commissioner HARRIMAN. Discrimination of what?

Mr. LEADER. Discrimination, or discharging the people, or having the people in the factory and not giving them work, because 85 or 80 per cent are piece-workers, and it is constant bargaining, even in the beginning of the season, and while they do settle our prices every week, we have new styles. If an employer will see that a man is very active trying to get his rights, and getting a good price, that man or a group of men will not stay very long in a factory, and then again, opening shops, direct or indirectly, where the goods are going in to other factories and people are waiting in the factory, and they have a printed price list, and there are no bundles going out of the shops.

Commissioner O'CONNELL. The opposite of that is a very strong side, it prevents strikes and lockouts?

Mr. LEADER. Sure.

Commissioner O'CONNELL. There ought to be a happy hunting ground between there to settle the differences?

Mr. LEADER. Yes, sir; I agree.

Commissioner BALLARD. You say it takes so long to get to the committee on grievances?

Mr. LEADER. Yes; and not the only thing, but from my knowledge of important things there there is a deadlock—5 and 5. The manufacturers were firm and the representatives of the union were firm.

Commissioner HARRIMAN. What percentage of the grievances get up to the board of arbitration?

Commissioner BALLARD. I am not in the position. I was a member, I believe. You will have a chance to hear our chief clerk. He will give you the percentage.

The CHAIRMAN. That is all, Mr. Leader, unless you want to ask any more questions. Has Mr. Winslow returned?

Mr. WINSLOW. Yes, sir.

TESTIMONY OF MR. CHARLES H. WINSLOW.

The CHAIRMAN. Mr. Winslow, what position are you in as regards the cloak-manufacturing business in the city as regards the manufacturers and the employees?

Mr. WINSLOW. Mr. Chairman, I was asked to conduct an investigation of the conditions in the industry with reference to the wages and grievances.

The CHAIRMAN. And you have made that investigation up to a considerable degree, have you, entirely?

Mr. WINSLOW. You mean with reference to the grievance-board workings?

The CHAIRMAN. Yes, sir.

Mr. WINSLOW. Yes; very nearly completed.

The CHAIRMAN. Will you tell us the number of the cases and the classes of the cases and what has become of them and such matters as may be helpful to us, and the rules and regulations that govern the board?

Mr. WINSLOW. Yes, sir. There is a set of rules and regulations governing the board of grievances, adopted in April, 1911. Those are included in the Bureau of Labor Bulletin 98.

The CHAIRMAN. Those are in there [indicating book in Mr. Winslow's hand]?

Mr. WINSLOW. Yes, sir. There have been 7,556 cases adjusted from April 15, 1911, to October 13, 1913. Of that number 179 cases have been before the board of grievances. The number referred to the board of arbitration was 20. However, that means that in the Columbus Day case, so called, there were 12 cases, 12 firms involved, making only 1 case. That is the number, sir.

The CHAIRMAN. Have you a classification to say a certain number goes to unfair discharge or alleged unfair discharge? The number for bad conduct, for instance; the number for other things; is it all classified?

Mr. WINSLOW. Yes, sir; there is a very full classification.

The CHAIRMAN. I suppose you can not give us each one separately?

Mr. WINSLOW. I could if time permitted, Mr. Chairman.

The CHAIRMAN. What?

Mr. WINSLOW. I could, sir, if time permitted.

The CHAIRMAN. All right.

Mr. WINSLOW. They are divided into a great number of classes, some 28 classes or more.

The CHAIRMAN. Let us have them.

Mr. WINSLOW. You mean those that have been before the board of grievances?

The CHAIRMAN. Yes.

Mr. WINSLOW. The classification of grievances on the part of the unions that have been considered by the board of grievances were: Discrimination against individuals, 27; alleged wrongful discharge, 21; nonpayment for legal charges, 13; paying under agreed scale of wages, 13; nonprotocol conditions in shops, 9; claim for wages due, 8; dispute in price making, 6; inside subcontracting, 3; duplicates made by the week, 3; irregular price settlement, 3; shop lockout, 2; nonpayment for Jewish holidays, 2; changing piece prices during the season, 2; noncompliance with the terms of the adjustment, 2; cutters working by the hour, 2; illtreatment of employees, 2; unequal distribution of work, 1; week worker discharged in the middle of the week, 1; samples made by piece, 1; unregistered contract shop, 1.

Those are all on the part of the union.

On the part of the association: Shop strike, which is known as a stoppage of the work, 43; interference with conduct and discipline in factory, 4; complaint against shop treatment, 4; dispute in price making, 3; week worker leaving in the middle of the week, 1; union refusing to apprentice cutter, 1; noncompliance with terms of adjustment, 1.

Making a total of 179 cases.

The CHAIRMAN. Does your investigation show in a way how a large number of cases that did not go to the grievance board were disposed of? Did you go into that at all?

Mr. WINSLOW. I have not yet stated the cases that were disposed of by the clerks. That is a very large study.

The CHAIRMAN. Yes.

Mr. WINSLOW. Out of those 179 cases, Mr. Chairman, there were 9 disagreements. Those were, of course, taken to the board of arbitration.

Commissioner O'CONNELL. How many cases went up to the board of arbitration?

Mr. WINSLOW. Nine disagreement cases.

Commissioner O'CONNELL. Out of a total of—

Mr. WINSLOW. Of 179.

Commissioner O'CONNELL. One hundred and seventy-nine?

Mr. WINSLOW. Yes, sir.

Commissioner O'CONNELL. How long is that since the protocol has been in existence?

Mr. WINSLOW. That is since the establishment of a board of grievances. Prior to April 15, 1911, there was a committee on grievances, but the records are wholly inadequate to get the material. This record is from that time to the 31st of October, 1913.

Commissioner O'CONNELL. And you are now making an investigation as to the wages paid, and the seasonal occupation, and so on, in the branches of the industry. Will you give us the benefit of that?

Mr. WINSLOW. The material for that, Mr. Chairman, so far as the field work is concerned, is about completed, but the compilation of the matter is not completed. I could not offer any testimony with reference to that.

Mr. JULIUS H. COHEN. Mr. Chairman, may I ask Mr. O'Connell to ask the witness to tell what that is.

Mr. WINSLOW. Nine cases were, and what they involved?

Commissioner O'CONNELL. Yes. Will you answer that, Mr. Winslow?

Mr. WINSLOW. You mean the names of the firms?

Mr. COHEN. The record of the cases, the nature of the cases.

Commissioner O'CONNELL. The record of the cases; what the cases were.

Mr. WINSLOW. Eliminating the Columbus Day controversy, the board of grievances deadlock, only in matters of great importance. The nature of the grievance was as follows:

Stoppage of work and lockout, 4; discrimination and wrongful discharge, 2; irregular price, 2. There were 2 cases known as Jaffe and Katz; the records are so involved—they relate there were 9 cases, but the records show 8 cases; but the records are so involved on this that this other case must be included.

The CHAIRMAN. How often does the board of grievances meet?

Mr. WINSLOW. Well, Mr. Chairman, the board of grievances, in accordance with sections 7 and 8 of the rules of procedure, is to meet as follows:

"The board shall meet regularly as designated, and at appointed times and places once a week. The meetings may be postponed by mutual consent, and records of such postponement shall be recorded on the minutes. Special meetings of the board shall be called only in cases of emergency, or where prompt or immediate action is necessary, and may be called by the chairman of either side."

Prior to the month of February, 1912, the board of grievances met at irregular intervals; the chief clerks on either side whenever a contingency arose could demand the board to meet immediately or within 48 hours.

The CHAIRMAN. Do you think that rule is ample to cover——

Mr. WINSLOW. There have been some 40 meetings of the board of grievances.

The CHAIRMAN. Do you think that rule is ample to cover the necessary work of that board?

Mr. WINSLOW. It would seem to so indicate.

Commissioner O'CONNELL. You have heard some of the gentlemen who have appeared before us criticize the inactivity of this board, and the slowness of this machinery to move, and so on?

Mr. WINSLOW. Yes, sir.

Commissioner O'CONNELL. What is your impression of that criticism, or that feature of it?

Mr. WINSLOW. It would seem to me, Mr. Chairman, that there was no necessity for regular meetings, inasmuch as the board could be called together in 48 hours.

The CHAIRMAN. How long has a case been pending before that board; have you that?

Mr. WINSLOW. How long have they been pending?

The CHAIRMAN. Yes.

Mr. WINSLOW. Some of the deadlock cases have been pending for weeks.

The CHAIRMAN. How long since the Columbus Day, 1912?

Mr. WINSLOW. 1912?

The CHAIRMAN. Is that still pending or is that settled?

Mr. WINSLOW. That is settled, sir.

Commissioner O'CONNELL. How long will it take, for instance, if a man were discharged in a shop to-morrow, and in 48 hours would they get this board together—get it ready?

Mr. WINSLOW. They have the right to get them together in 48 hours.

Commissioner O'CONNELL. How long ordinarily does it take to get the case adjusted?

Mr. WINSLOW. It does not usually go to the board of grievances. It goes to the clerks. The clerks settle those cases whenever possible. However, the procedure for the settlement of grievances comprehends stoppages of work, and price settlements take precedence over other cases. A man may complain of discrimination this morning, and his case may be put over until to-morrow or next day. It is very difficult to get at the time consumed in the settlement of cases. Many cases are settled as of to-day, and the records are not made for weeks. The cases are not assigned by the clerks before a week, hence it is difficult to find out how long.

Commissioner O'CONNELL. As a maximum how much time could they kill—everybody if they wanted to and get through—in accordance with the protocol?

Mr. WINSLOW. That is a very difficult question to answer.

Commissioner O'CONNELL. You say the committee is allowed 48 hours there. Go along and tell us how long it will take to get the case off their hands?

Mr. WINSLOW. The usual machinery is that the complaint is registered in the morning at the office of the manufacturer and the clerks are designated to take up that case immediately, and they go out to the scene of action and endeavor to settle the case. If they fail, the case then goes to the chief clerks of the board of grievances and they endeavor to settle the case. That might take another day. If they fail to settle the case, the case goes to the board of grievances itself. Now, the machinery there means that they might designate two of either side to reinvestigate the case. If they reinvestigate the case and disagree, it could go to the board of arbitration, and then it is a matter of some days before the board of arbitration can be gotten together; in general, that is the machinery.

Commissioner O'CONNELL. It is a matter of some days; how many days can they hold off there without getting the case through?

Mr. WINSLOW. Going clear to the board of arbitration?

Commissioner O'CONNELL. The whole machinery. I wanted to see whether the hobble skirt has gone out of existence while we are getting through all this machinery. [Laughter.]

Mr. WINSLOW. I should say four or five days, Mr. Chairman, going up to the board of arbitration.

Commissioner O'CONNELL. Going up to the board of arbitration and getting through would take two weeks; if they were waiting to kill everybody, it would take a couple of weeks to get up there. That is the general complaint of the men, that there is no action on their cases; and the men get discouraged and they are afraid to bring up their cases because of delay, and so on, and would rather forget about it and go off and get another job. What I want to get at is, is their complaint real? If it is, the protocol ought to be so arranged, or the machinery ought to be got closer together or new cogs put in the wheel, or make it move faster—another gear put in or one taken out, if there are too many.

Mr. WINSLOW. I could venture nothing of that sort, Mr. Chairman.

Commissioner O'CONNELL. Or another high-speed one put in?

The CHAIRMAN. From investigations of the decisions rendered by the grievance board, does it appear that the issue was squarely met and decided, or is it a matter of compromise; do you care to answer that?

Mr. WINSLOW. There is never a disagreement on fact, Mr. Chairman—the cases that come up to the board of arbitration, if that is what you are getting at. The testimony has been deduced which shows that there has never been any question as to the facts before the arbitration board.

The CHAIRMAN. The people indicate, from what they have stated here, that the decisions are not satisfactory; what is the matter with them? From your study, have you discovered anything fundamentally the matter with them?

Mr. WINSLOW. I have no knowledge, Mr. Chairman, of the dissatisfaction, any further than the records show. The records, of course, would not show any dissatisfaction?

Commissioner O'CONNELL. Any disagreement, when it comes up to the board finally as a disagreement, what becomes of it then?

Mr. WINSLOW. It goes to the board of arbitration.

Commissioner O'CONNELL. Goes back again?

Mr. WINSLOW. The disagreement comes first to the board of grievances, and then goes to the board of arbitration, and it is settled by the board of arbitration.

Commissioner O'CONNELL. That is the finality of it, probably?

Mr. WINSLOW. Yes.

Commissioner O'CONNELL. Who is the board of arbitration?

Mr. WINSLOW. Mr. Brandeis, Dr. Wild, Mr. Hope.

Commissioner O'CONNELL. They are provided for there—a standing board of arbitration?

Mr. WINSLOW. Yes, sir.

Commissioner O'CONNELL. In all cases?

Mr. WINSLOW. Yes, sir.

Commissioner O'CONNELL. How much time can they occupy in the final—is there any limit of time?

Mr. WINSLOW. No limit to their time at all.

Commissioner O'CONNELL. No limit to their time at all.

The CHAIRMAN. Under the rules, how often can they be called in to pass on grievances?

Mr. WINSLOW. The board of arbitration?

Commissioner O'CONNELL. Yes.

Mr. WINSLOW. At any time, as I understand it.

The CHAIRMAN. For instance, could they pass upon any subject matter that had not gone through the hands of the clerks and then through the board of grievances; it must go through those channels before it can go to them?

Mr. WINSLOW. Yes, sir.

The CHAIRMAN. Would they ever have the handling of matters like the fixing of prices for piecework; would that kind of a question under any circumstances be able to get to them?

Mr. WINSLOW. Under the provisions of the protocol the committee's price is fixed in the shop, by collective bargaining, between the manufacturer and his group of workers, the workers being represented by the price committee.

The CHAIRMAN. Yes; and that is not a question that goes out of the shop?

Mr. WINSLOW. Usually not.

The CHAIRMAN. As your investigation would indicate?

Mr. WINSLOW. Usually not.

Commissioner O'CONNELL. From what I understand this morning, the employer has a right to dicker with the individual?

The CHAIRMAN. No; I think you are mistaken; that is the shop committee, I think.

Commissioner O'CONNELL. I was of the impression that there was a committee.

The CHAIRMAN. When you found the records of the deadlock in the grievance board, what seemed to have caused that deadlock?

Mr. WINSLOW. Of the nine cases, Mr. Chairman, I should say it was more or less the question of motive rather than the question of fact.

Commissioner O'CONNELL. Have you any knowledge of this fact? The men that we had this morning claim the discrimination by men who were active on this committee?

Mr. WINSLOW. I would not know of those cases, and have not made any study recently of the cases.

Commissioner O'CONNELL. You would not know whether that fear of discrimination or discharge made a sort of inactive condition on the part of the scale committee; wage committee, would you call it?

Mr. WINSLOW. I would not know, not with this study, Mr. Chairman.

The CHAIRMAN. Have you discovered anything to lead you to a conclusion that cases have arisen which should have gone to the board of arbitration, and that for some reason or another they have been shoved to one side and have not gone there?

Mr. WINSLOW. No, sir.

The CHAIRMAN. Are you willing to give the commission your views as an investigator as to the workings of the protocol, whether they are favorable or unfavorable to the industry?

Mr. WINSLOW. That would be a matter of opinion, and I should not like to be examined on that question at this time.

The CHAIRMAN. I do not know of any questions I desire to ask. Mr. Cohen, would you like—I am not asking you because you are an attorney, mind you, under the circumstances, but would you like to ask Mr. Winslow a few questions?

Mr. COHEN. I should like to ask him one or two, which, I think, would aid the commission to understand the problem.

Mr. WINSLOW. I understood you to say that there was no disagreement as to facts before the board of grievances.

Mr. WINSLOW. Yes, sir.

Mr. COHEN. So that the cases that went to the board of arbitration were of what character?

Mr. WINSLOW. Questions of principle.

Mr. COHEN. I mean, in general, were they questions of principle or large questions of policy, what one might call questions of protocol law?

Mr. WINSLOW. Yes.

Mr. COHEN. That could only be determined in the last instance by the board of arbitration?

Mr. WINSLOW. As I recall them, sir.

Mr. COHEN. And those cases involved, you say, the Columbus Day cases—those 20 cases—where as to whether or not the Sunday following Columbus Day could be observed by the Jewish workers and paid for; is that correct?

Mr. WINSLOW. That is correct.

Mr. COHEN. And that question could only be passed upon by the board of arbitration?

Mr. WINSLOW. Absolutely.

Mr. COHEN. Now, Mr. Winslow, I think you said under the rule a case had to go through the board of grievances before it went to the board of arbitration; now, suppose there was a hitch in the workings of the board of grievances, is not there a rule which gives the parties a right to directly appeal to the board of arbitration?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. And has not such an appeal been taken before?

Mr. WINSLOW. Yes; I think the Jaffe and Katz case.

Mr. COHEN. And is it not a fact also that where either party has a complaint with regard to the operation of the board of grievances that party has a right to appeal direct to the board of arbitration?

Mr. WINSLOW. So I understand, sir; through the rules.

Mr. COHEN. Is it not the duty under the rules of the clerks of the board of grievances to obey the decision of the board of arbitration and the board of grievances?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. Have not some cases gone to the board of arbitration—some of those eight which involved charges of the employers—that the clerks of the board of grievances had failed to perform that duty in the Jaffe and Katz case.

Mr. WINSLOW. I would not state without going back to the record.

Mr. COHEN. You remember the circumstances of the Jaffe and Katz case?

Mr. WINSLOW. Not that I could repeat them before the commission.

Mr. COHEN. Do you remember the case where the board of grievances was charged for having defended picketing?

Mr. WINSLOW. I recall it.

Mr. COHEN. And you recall that the record filed with the board of arbitration in that case showed the clerk was charged with having condoned and permitted picketing?

Mr. WINSLOW. I remember reading that record.

Mr. COHEN. And you remember the board of arbitration in that case?

Mr. WINSLOW. Yes; that they should have been taken up by the clerk himself, and he had no right to issue an order for picketing.

Mr. COHEN. He had no right to defend picketing?

Mr. WINSLOW. No right to defend picketing.

Mr. COHEN. And another case of a clerk who acted as the editor of the official organ, and in that organ called union men scabs. Do you remember such a case?

Mr. WINSLOW. I recall reading it, but I could not testify to it at this time.

Mr. COHEN. You remember such a case went to the board of arbitration?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. You remember what the board of arbitration is?

Mr. WINSLOW. I can not recall without the record.

Mr. COHEN. Now, Mr. Winslow, as to a time that it takes for a case to reach the board of arbitration, do you recall that in one of those cases the board was convened by telegram within 48 hours after the prices rose?

Mr. WINSLOW. I do.

Mr. COHEN. Is that a fact?

Mr. WINSLOW. I so understand.

Mr. COHEN. I understood you to say, also, Mr. Winslow, that out of the 7,556 cases, all but 179 were adjusted by the clerks?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. Now, for the aid of the commission, will you be good enough to tell what the method is that the clerks employ for getting at the facts of a particular controversy?

Mr. WINSLOW. Go through the steps?

Mr. COHEN. Yes, sir.

Mr. WINSLOW. I thought that I had done that.

Mr. COHEN. Well, do it again; will you, please? I want to ask you some questions based upon that.

Mr. WINSLOW. The complaint is registered usually with the association in the morning.

Mr. COHEN. No; I do not mean the method of procedure. That, you explained. That is that the complaint is registered the first thing in the morning, and the deputies go out and adjust the difficulty. Now, when they get to the shop, what do they do in the shop, with a view of deciding the case? Do they act like judges, or arbitrators, or negotiators and conciliators?

Mr. WINSLOW. Negotiators and conciliators.

Mr. COHEN. What is their primary function in the shop?

Mr. WINSLOW. To get the parties together, to get the manufacturer or the complainant in the case, and try to get at the facts, and get from either side all the testimony that is possible, and upon the effective data endeavor to make a settlement.

Mr. COHEN. Well, do they try the case, as we lawyers try a case in court? Is it a lawyer's job or a mediator's job?

Mr. WINSLOW. It is a mediator's job.

Mr. COHEN. Now, is there any element of temperament that enters into the work of the mediator? Has it got to be a man——

Mr. WINSLOW. Specially provided for that sort of work.

Mr. COHEN. He has got to be specially equipped for that kind of work?

Mr. WINSLOW. Especially equipped.

Mr. COHEN. Suppose he is not especially equipped for the job of mediator and conciliator, what happens, as you have found from your examination?

Mr. WINSLOW. Well, there is usually more or less turmoil. The case goes back, and the chief clerks undertake the settlement.

Mr. COHEN. Suppose the chief clerk should be a person who did not himself act as mediator or conciliator, what would happen?

Mr. WINSLOW. I think it is perfectly evident what would happen.

Mr. COHEN. What would happen?

Mr. WINSLOW. It would go to the board of grievances.

Mr. COHEN. Yes; and if the chief clerk were not a mediator or a conciliator there would be some cases before the board of grievances, would there not?

Mr. WINSLOW. That would be the natural deduction.

Mr. COHEN. And more cases for the board of arbitration?

Mr. WINSLOW. True.

Mr. COHEN. Now, if a man approached that situation, from your judgment and knowledge of the situation, Mr. Winslow, if a man approached that machinery with the desire to treat it as a lawyer, to treat it as a proceeding in court all the time, or he was to fight in court like an advocate, would he help the machinery or hurt it?

Mr. WINSLOW. Those are usually human questions and not legal questions.

Mr. COHEN. What is that?

Mr. WINSLOW. The psychology of the worker must be understood in order to adjust the grievance.

Mr. COHEN. Now, Mr. Dyche said something to-day about lawyers having other rights all the time, and if they could get rid of the lawyers the thing would be all right. Suppose you had a lawyer——

The CHAIRMAN. That is not bearing on the testimony that Mr. Winslow is giving.

Mr. COHEN. I understand. I am not asking that as a lawyer, Mr. Chairman, because in this situation I have never been charged with being a lawyer. Now, Mr. Winslow, there are other protocols, are there not, besides the cloak and suit and vest and waist?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. And will you name what other protocols there are?

Mr. WINSLOW. The dress-waist industry, the kimonos and wrappers, children's dresses, and the white goods. A so-called agreement, not a protocol, in the two Boston agreements—protocol agreements.

Mr. COHEN. In the dress and waist situation since the last year has the same machinery been employed in adjusting grievances?

Mr. WINSLOW. In which?

Mr. COHEN. The dresses and waists machinery.

Mr. WINSLOW. Not exactly the same machinery.

Mr. COHEN. In what respect do they differ?

Mr. WINSLOW. The board of grievances in the dress and waist world is a negligible quantity. They have not been as active in the board of grievances

as in the cloaks and suits. There has been a board known as the "immediate-action board."

Mr. COHEN. How many cases in the rough, not exactly—how many cases in the rough since the signing of the protocol in the dress and waist industry in 1910 have been disposed of, either by clerks or this committee of "immediate action"?

Mr. WINSLOW. I have the figures, but not here.

Mr. COHEN. Well, give us your best recollection of them.

Mr. WINSLOW. Some five or six thousand cases.

Mr. COHEN. Since the middle of January, 1913?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. That is, about a year?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. What was your position in the Department of Labor, Mr. Winslow?

Mr. WINSLOW. An investigator and special agent.

Mr. COHEN. Were you employed specially to investigate systems of conciliation and arbitration and mediation?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. And you examined such systems?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. Will you please state for the record precisely what your experience has been in that record?

Mr. WINSLOW. I undertook the study of the building-trades arbitration scheme. Prior to that the study of the scheme of Hart, Schaffner & Marx, Chicago.

Mr. COHEN. What would you say from your experience as an investigator of such situations, would you say that this method of adjusting grievances by conciliation worked or did not work?

Mr. WINSLOW. I should say it worked.

Mr. COHEN. Another question. Under the rules——

Mr. WINSLOW. Is this the last one?

Mr. COHEN. I hope so, Mr. Winslow; you are a very fertile witness. Under the rules of the board of grievances is there a definite machinery for improving the machinery of the protocol?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. What is that procedure?

Mr. WINSLOW. The procedure is to ask the manufacturer to go into conference.

Mr. COHEN. Yes.

Mr. WINSLOW. And if the conference breaks down they can go to the board of arbitration.

Mr. COHEN. Has that procedure been followed?

Mr. WINSLOW. It has.

Mr. COHEN. In the cloak situation?

Mr. WINSLOW. It has.

Mr. COHEN. And recently?

Mr. WINSLOW. Yes, sir.

Mr. COHEN. And is your work as head of the bureau of statistics to the board of arbitration—is part of the work being done for the purpose of considering the revision of the protocol?

Mr. WINSLOW. It is.

Mr. COHEN. Do you recall that one of the propositions proposed for the amendment of the protocol was this suggestion of an impartial chairman?

Mr. WINSLOW. I do.

Mr. COHEN. And that suggestion is being considered by the board of arbitration now?

Mr. WINSLOW. So I understand.

Mr. COHEN. And no decision has been reached upon that point, has there?

Mr. WINSLOW. No; they were open-minded, according to the record.

Mr. COHEN. And they were waiting for the result of your examination of the workings of the board of grievances before making up their minds, were they not?

Mr. WINSLOW. I so understand it.

Mr. COHEN. So at the present time this matter is now pending before the board of arbitration?

Mr. WINSLOW. It is.

Mr. COHEN. And the complaint of the representatives of the union here that amendment is necessary is a complaint that something is now being considered by the board of arbitration which should no longer be considered by the board of arbitration, but should be granted without further inquiry?

Mr. WINSLOW. That may be true.

Mr. HOURWICH. Let me ask a question; may I be permitted?

The CHAIRMAN. The Chair will see directly. Is Mr. Rosenberg here?

A VOICE. No.

The CHAIRMAN. Is Mr. Dyche here?

Mr. DYCHE. Yes.

The CHAIRMAN. Do you desire to ask Mr. Winslow any questions?

Mr. DYCHE. No.

The CHAIRMAN. You may ask your question, Mr. Hourwich. You may keep your seat there.

Mr. HOURWICH. I want to know whether Mr. Winslow has classified the cases before the board of arbitration by years?

Mr. WINSLOW. Yes, sir.

Mr. HOURWICH. Can you tell me how many cases were before the board of grievances in the year 1913?

Mr. WINSLOW. From the records that we have here—it is to October 31, 1913—the record we have here shows 13.

Mr. HOURWICH. Consequently, the other cases, 166 cases, were before the board of arbitration from April, 1911, to December 31, 1912; do I understand you correctly?

Mr. WINSLOW. Correctly.

Mr. HOURWICH. That is all.

The CHAIRMAN. That is all unless Mr. Dyche wishes to ask any questions.

Mr. DYCHE. Mr. Winslow, will you tell me of these 179 cases before the board of grievances, what percentage was decided in favor of the union and what percentage was decided in favor of the association?

(Mr. Winslow refers to record.)

Mr. WINSLOW. 68.2 in favor of the union and 31.8 in favor of the association.

Commissioner O'CONNELL. That is 68 cases?

Mr. WINSLOW. There were 120 cases. No, I am wrong. The cases that were filed were——

Commissioner O'CONNELL. The stenographer had better correct that record so there will be no mistake.

Mr. WINSLOW. I can furnish it to you later, Mr. Chairman, but I can not furnish that information to you just now.

The CHAIRMAN. Was that all you wanted, Mr. Dyche?

Mr. DYCHE. Yes, sir.

The CHAIRMAN. Then you can give that to the stenographer before you go, or whenever you are ready with it.

Mr. DYCHE. If you can not give us the exact figures, have you any idea of the percentage?

Mr. WINSLOW. I would not wish to state, Mr. Dyche, at present.

The CHAIRMAN. You can furnish it, perhaps, this evening or to-morrow morning?

Mr. WINSLOW. Probably in half an hour.

(Shortly thereafter Mr. Winslow furnished the following information in reply to Mr. Dyche's question:)

Mr. WINSLOW. The board of grievances had 179 cases before them; 12 of those cases were the Columbus Day cases, which were only equal to 1 case. The disposition of these cases was as follows: Discrimination, 9 cases, 5.3 per cent. In favor of the association, 22 cases, or 13.10. In favor of the union, 32 cases, or 19.04. Dropped or withdrawn, 52 cases, 30.94. Compromised, 53 cases, 31.56. Total, 168 cases.

The CHAIRMAN. Is Mr. Martin here?

TESTIMONY OF MR. SAMUEL MARTIN.

The CHAIRMAN. Mr. Martin, what branch of the trade of cloak workers do you work at?

Mr. MARTIN. The cutting department, sir.

The CHAIRMAN. Tell us, will you, what has occurred, so far as the cutters are concerned, in the way of changes of wages or hours, either for the better or worse since the adoption of the protocol?

Mr. MARTIN. At the time of the adoption of the protocol, the hours of work agreed upon were 50 hours, where prior to the protocol being adopted the general run of hours was 54, excluding the three months in the summer time; and prior to the signing of the protocol the hours of overtime were most any old time; in the fair manufacturers' houses they simply worked two and one-half hours overtime. The wage of the cutter prior to the signing of the protocol, in the fair manufacturers' employ, was \$24; since the signing of the protocol, the minimum rate of \$25 was established. It is being paid in what are termed the fair manufacturers' houses, and we sometimes have to look after it in the fellow that we would call unfair, the fellow who tries to beat around the bush, as the common expression is used; the overtime is paid for at the rate of double time, which existed prior to the signing of the protocol, and since the signing of the protocol we observe what is known as the 10 legal holidays, for which we receive pay, where prior to the signing of the protocol we only observed, I dare say, 9, for which we received pay for some in what I term the fair manufacturers' employ. Since the signing of the protocol, we have eliminated the working of overtime at certain hours of the year. There is no overtime permitted between the 15th day of November and the 15th day of January, neither in the months of June or July, where prior to the signing of the protocol the men used to work at any time—to work at any time of the year—when called upon. Those are practically the principal features I can recall at the present moment.

The CHAIRMAN. What is the sentiment of the cutters toward the protocol?

Mr. MARTIN. The sentiment of the cutters toward the protocol is this: They feel that it has worked to the better welfare of the men, but still they feel that in the signing of it they did not gain much over the conditions they were working under prior to the signing of it, except that the decrease in hours is the main feature; that they can't get away from.

The CHAIRMAN. How about organization? Say, in 1910 and now, is your organization larger now or smaller, or how is it?

Mr. MARTIN. Well, the organization prior to signing—well, I might be more explicit, in this way, by using the term "prior to the strike"; prior to the strike the membership in our cloak division—you know our organization covers six departments, and prior to the call of the general strike we had, I would say, general supervision of the control over the cloak and suit departments and we had a membership of some 1,200, roughly speaking. Since the signing of the protocol we estimated our numerical strength to be about 3,600. Now, we have been gradually decreasing that membership in this way, that wherever we found nonunion men working in the cloak shops we insisted upon their application being filed with us.

The CHAIRMAN. Do you desire to ask him any questions, Mr. O'Connell?

Commissioner O'CONNELL. I was going to ask if the protocol has an influence favorable toward the organization or unfavorable?

Mr. MARTIN. From a general point of view it has a favorable impression upon the men. The features that they look upon with a little bit of distrust, I might say, are twofold; one is the question of the preferential clause. The preferential clause was inserted in the protocol, and it had never been defined in detail, I might say, to a committee of both sides, so that both sides would understand the accurate meaning of what the preferential meant, so that in case of dispute they would understand the situation thoroughly. There have been complaints filed by the cutters' organization on the question of nonunion men being given the preference over union men, and the fact of the matter is that the adjusters deferred every question. But nevertheless, the matter was adjusted in time, but there was a lot of unnecessary argument just the same, and I attribute it, and in fact the rank and file of our organization attribute it, to the fact that it was never clearly defined to the representatives of both sides. The other questions that the men seem to be a little bit weary about is the question of discrimination. You know the cutter's doctrine is that a cutter is employed from Monday to Saturday. That is his contract. We do not allow time contracts between cutters and employers, and the fact that the employers know that they can dispense with a cutter's services on a Saturday, if they should happen to find out—when I say the employers I mean an element of them—if they should find out that the cutter had filed a complaint, he goes eventually—and "eventually" means with two weeks' time, the idea being that some of them are smart enough to realize that if they lay them off on Saturday the complaint is good; the complaint of discrimination will be filed against the house, and they will have to reinstate them, and by tolerating them another

week they get away from that stain of discrimination. Now, while the rate of percentage was not so big, nevertheless it seems to have happened to an element of men who have cried against it quite loudly, and you might say some more radical have taken it up, to some extent.

Commissioner O'CONNELL. Your cutters work by the week?

Mr. MARTIN. Yes, sir.

Commissioner O'CONNELL. Is that generally so, that cutters work by the week, as much as by piece?

Mr. MARTIN. No, sir; always by the week. Such a condition existed prior to the strike in some houses; cutters would work by the week in one place, and they would take a position in some small shop at night, and work piecework there.

Commissioner O'CONNELL. Is there any difference in the rate of the cutter who cuts by machine, the electrical cutter, and the cutter who cuts one piece of cloth?

Mr. MARTIN. No, sir. The man recognized as a journeyman mechanic receives \$25 a week. We have two divisions, one the canvas cutter, who receives \$12 a week, and some who are quite proficient receive as high as \$16 to \$17, but there are very few; but the man where he cuts with the machine, 10 at a time, receives his \$25 per week.

Mr. COHEN. For the purpose of bringing out the machinery, will you ask Mr. Martin about the recent suggestions that the cutters made for amendments to the protocol and the method of procedure with reference to it?

The CHAIRMAN. Mr. Martin, can you answer that?

Mr. MARTIN. The cutters, since the signing of the protocol, have been suffering severely, owing to the fact that learners were being taken in the employ of the manufacturers, whereby, when the slack season would come on, the mechanic would be laid off and the learner would be kept on. This has been going on since the signing of the protocol to such a degree that the officers of the cutters' union put their heads together to try and find some ways and means of relieving the situation, to the extent that about 14 months ago the question of calling the conferences between the manufacturers of the protective association and the cutters' union was thought of and was brought to an issue, whereby the question of the apprentices should be taken up.

Now, it seemed that after this first conference had taken place that there was not enough time to go through all the details of it, and one or two questions had created a sort of hitch in the discussion of it, whereby they could not come to an amicable discussion; therefore it was postponed.

Now, the officers of the cutters' union went through this proposition to the extent that they were successful in arranging for another conference some three or four weeks ago, and there were, I believe, five representatives on both sides, where the cutters' organization had submitted seven points to be considered by both the manufacturers' representatives and the cutters' representatives, to the extent that we had argued three and covered five practically, leaving two open for discussion.

In the meantime the cutters' representatives had come in contact with Mr. Winslow's office, Mr. Winslow having called upon us in the course of his investigating the conditions under which the cutters were working; we have taken up the matter of formulating the plan to govern the entire apprenticeship system in the cutting industry; that is, so far as the cloak trade is concerned, to the extent that I believe it was yesterday afternoon—at least prior to yesterday afternoon—the cutters' union had written the manufacturers to meet on the question of the apprentices, and we met last night in joint session, and, owing to this investigation going on and the manufacturers having troubles, and we also having our own, the matter was postponed. But it seems to me we are going to come to a definite understanding, which is going to be satisfactory to both sides, covering the question of the apprentices.

The CHAIRMAN. Are you through, Mr. Martin?

Mr. MARTIN. Yes, sir.

The CHAIRMAN. We will not undertake to hear any more to-day, but I would like, Mr. Cohen, to have you notify three of the employers, or such as they desire; we are not particular as to that, and we would like to have them here to-morrow; and, Mr. Hourwich, you will be here to-morrow to proceed?

Mr. HOURWICH. I shall be here; what time do you wish me to be here?

The CHAIRMAN. In the morning, I would say; I think we will hear the manufacturers first, probably—I would not state that positively, as we have not consulted about it—but I think that is likely. Try and be here in the morning.

Mr. HOURWICH. I shall, Mr. Chairman; but may I ask you will there be any limit of time to my testimony, or may I take as much time as the necessities of the case require?

The CHAIRMAN. You shall have all the time you want, provided there is a reasonable limitation to such things, of course.

Mr. HOURWICH. I will try and be brief.

The CHAIRMAN. You will notice that there has not been anybody called down and we have not asked anybody to leave the stand, and to-morrow morning we will hold our conference in the hall at the other end of the building there, the aldermanic chamber, at 10 o'clock to-morrow morning.

(Whereupon, at 4.45 p. m., the hearing was adjourned until to-morrow, January 16, 1914, at 10 o'clock.)

JANUARY 16, 1914.

Met pursuant to adjournment at 10 a. m., in the aldermanic chamber, City Hall, New York City.

Present: Mr. John B. Lennon (chairman), Mrs. J. Borden Harriman, Mr. S. Thruston Ballard, commissioners.

The chairman called the meeting to order at 10 minutes past 10 o'clock.

The CHAIRMAN. I think we will start. The other members of the commission will be here shortly, and it is a matter of record anyhow. Is Mr. Wishnak here this morning, one of the assistant clerks?

A VOICE. He is not here yet.

The CHAIRMAN. Is Mr. Cossack here?

A VOICE. He is not here yet.

The CHAIRMAN. Are any one of those clerks here this morning?

Mr. ZUCKER. Yes; here is one, Henry Zucker, a deputy clerk.

The CHAIRMAN. Is Mr. Zucker here?

Mr. ZUCKER. Yes, sir.

The CHAIRMAN. Just take that chair, Mr. Zucker.

TESTIMONY OF MR. HENRY ZUCKER.

The CHAIRMAN. You have been one of the deputy clerks, haven't you, Mr. Zucker?

Mr. ZUCKER. Yes, sir.

The CHAIRMAN. I want you to tell us regarding the procedure of these clerks, and I want you particularly to tell us about a matter that seems to me is not yet clearly in the record. I want to know what these dropped cases are that we have heard about here. I want that stated clearly, what kind of cases they were, in the main, and why they were dropped.

Mr. ZUCKER. You just want the idea of the whole case?

The CHAIRMAN. You do not need to relate the cases.

Mr. ZUCKER. Simply to specify a case of that kind, when we got a complaint and one of the deputy clerks of the union and one of the deputy clerks of the association comes into the shop to investigate the complaint, in many cases we find that the case has been adjusted before the arrival of the clerks. A case of this kind is dropped, or in many other cases there is insufficient evidence so as to get to the facts of the case, and the case is dropped. Then we have cases that are withdrawn; we get complaints, and before the case is investigated, the man who made the complaint reports to the office that the matter has been adjusted. Before the clerk can go on the case it has been adjusted, we are informed, and we therefore withdraw that case. All of the rest of the cases are either adjusted or found to be in favor of the union or found to be not correct, in favor of the association, or if it is a violation of the protocol on either side, either of the people, of the workers, or of the employers, it is referred to the board of grievances for discipline. That is about the whole amount of the cases.

The CHAIRMAN. Tell us how the cases reach the clerk. That has been told once, but I am not very clear upon it.

Mr. ZUCKER. A man who has a complaint against any injustice done him reports to the office of the union at the complaint clerk's window, and makes his complaint there. His complaint is then filed and a letter sent to the association, of which the deputy clerks get copies of those letters. The deputy clerks arrive at the shop, and they call the shop chairman, who calls the man who made the complaint, they call in all witnesses necessary for the case, and the

deputy clerks try to get to some adjustment, to agree between themselves. Whatever the deputy clerks agree on the manufacturers or the workers have to carry out the adjustment agreed upon by the deputy clerks. Should the manufacturer or the people refuse to carry out any adjustment of the deputy clerks, either of them are called up for discipline; the manufacturer to the board of grievances, and the workingmen to the board of grievances of the union. If the deputy clerks happen to disagree on the case, both deputy clerks make out their reports and their contention of the case, and that is submitted to the chief clerks. Both chief clerks then go up and reinvestigate the case, and try to come to some conclusion. Should they disagree, the case then goes to the board of grievances, and I believe you heard here yesterday about the board of grievances. If they disagree, it goes to the board of arbitration.

The CHAIRMAN. Well, if the deputy clerks agree as to the settlement of a grievance brought before them, has either side a right to appeal from that decision, or, as I understand you now, is their decision final?

Mr. ZUCKER. Either side has a right to appeal from the decision, but the adjustment made by the deputy clerks must be carried out until that appeal has been decided by a higher body.

The CHAIRMAN. Well, then, can you throw any further light on this subject that we have been investigating? First, Mr. Ballard wants to ask you a question.

Commissioner BALLARD. After this complaint is filed, how long is it before that complaint gets to the deputy clerk?

Mr. ZUCKER. The complaint is filed, say, between 9 in the morning and 4 or 5 or 6 o'clock in the afternoon, and the complaint goes to the deputy clerk next morning.

Commissioner BALLARD. How long after the deputy clerk gets the complaint is it that they go to the shop and try to adjust matters?

Mr. ZUCKER. If he has no cases of the day before on hand, he goes on the complaint the same day, and if he has cases that have been filed the day before he generally goes on the cases that have been filed the day before, but the longest it can take is two days; most of them are attended to within 24 hours.

The CHAIRMAN. Do you want to state anything further?

Mr. ZUCKER. I want to state that there has been so much said about the protocol yesterday and about the working with this protocol. As a deputy clerk, I believe the protocol is about the best instrument that has ever been established between labor and capital. This protocol that was made in 1910 has covered and done a great deal of benefit for the workers and the manufacturers, although during those three and a half years' time there has been proved to be many leakages that need repairing—not patching, because if any leakage is patched it generally falls off in a short time—but I don't believe in any patching or any repairing; if the protocol would be at its best now, that would satisfy both parties, for certain grounds. In 1910, when the protocol was made and signed, the people in that year were satisfied with it; the manufacturers were satisfied with it; the sole reason being that a slow operator at that time, if he made four or five garments a day it was a sufficient day's work; he worked from 8 in the morning until 6 o'clock, and sometimes had to make overtime to make 5 or 6 garments every day. A presser had cloaks; and a presser on cloaks used to press from 12 to 15 garments a day; that was a sufficient day's work.

The CHAIRMAN. What does he press now?

Mr. ZUCKER. I will come to that. And a skirt maker used to make from 7 to 10 skirts a day; now an operator makes from 10 to 15 jackets a day, instead of 4 or 5. The style being now so simple, the presser presses from 25 to 30 a day, where he was used to pressing from 12 to 15. As a matter of fact, the production in the market is not so much more this year than it has been three years ago. This is alone a cause for protection of labor. Thousands of people walk the streets and try in vain to get jobs, and it is impossible for them to get employment. Manufacturers who have had 40 and 50 machines at the beginning of the spring season, or in the month of December, rather, have reduced their plants to half, and some of them less than that, and have discharged more than half of their people. The union does not allow the producer to reduce his plant, but to divide the work among the people—the larger interest of the people earning \$30 or \$35 a week. The union is satisfied that the people should earn \$15 and \$20 a week, so they should be in the shop. But the protocol does not prohibit the manufacturer from reducing his plant should it seem necessary. Now, there are a great many complaints about unequal distribution of work, which takes up most of the time of the deputy clerks of the union and of the

manufacturers. The manufacturers in the protective association have seen that they have a great deal of trouble trying to divide the work equally among the people that they have, and in order not to have so much trouble over it with the deputy clerks they either reduce their plants, which causes thousands of people to walk the streets, and it is impossible for them to get a job, because the other manufacturers do not need any more people.

These thousands of people are actually starving, although those on the job who can earn a day's work can earn double the amount they should, and the manufacturers tell us if they are going to have 50 machines in their shops and everyone will have to make a living there; whether they have enough work for them or not, they will try and boost up the prices so as to have a good week's wages, and the manufacturer says: "Why should I have 50 when I can do with 20 or 25 and give them 60 hours' work a week with overtime?" And then he says they won't ask such large prices. With the small plants there will not be so much trouble in dividing the work; but the people outside can't get any job, and they are starving, and they don't know who is at fault. They say they are members of the union, they have to make a living, and they would like to work, and the whole trouble now is in the great competition between one workingman and the other workingman—not so much in prices, but trying to get the work—and this causes all this unrest that we have been hearing so much about. If there should be the best protocol that could be presented at the present time, as long as there is no solution at this time, when the styles are so simple, when there is no solution that will enable the manufacturer to keep all the people under employment and divide the work equally among all; if there will not be a standardized price in the industry for the different styles of work, and some arrangement whereby a manufacturer should not have to pay a very small price for a certain class of work and another manufacturer a very high price for that particular work, nothing in the world will be able to help the situation at the present time. As a matter of fact, any man could go to these hungry men and tell them the protocol is at the fault of everything, and the man is hungry, he does not want to consider anything; he knows the man in the shop is earning \$30 a week, and he would like to go into that shop and get \$20, and he can't get that job. The main party at fault is the union, or the protocol, in his mind. Of course, in the independent shops the manufacturers are not allowed to reduce their plants in these dull seasons, or when these plain styles are being made; and I believe it is the whole thing that is causing the unrest. Any man can come to the people and tell them they are being treated wrongly, and they will believe them. One man can come to the people and tell them this thing is causing the trouble; they will not believe them because they are hungry, and anyone that will tell them unions are bad will be an idol before the public. I believe that if the manufacturers would consider that 5,000 or 6,000 or 7,000 people will be going around starving and can not get employment, and that those 5,000 or 6,000 or 7,000 people will in the long run pull down the rest of the shops into a strike—if they will consider what they are doing in reducing their plants and keeping those people as they are—they will see things differently. Maybe next season the styles will be much harder; it will not always stay at the simple style of work, like the simple tight skirt that they are having now, where a presser can now press 40 or 50 garments. If some solution could come to them, I believe this unrest that is causing this industry so much trouble now will not be so bad.

The CHAIRMAN. That is interesting but not responsive to what I ask; that is, some parts of it are not exceedingly pertinent. I want to ask you, do you know whether the union, through the channels prescribed by the protocol, or outside the channels prescribed in the protocol, have endeavored to secure a division of the work in the factories—I mean in the protocol factories—so that all would be very sure of work; has there been any effort made to bring that about?

Mr. ZUCKER. There have been many efforts made, but not officially. Deputy clerks get complaints; we simply get a complaint that reads this way—we have many of them:

"Cloak, Suit & Skirt Manufacturers' Protective Association. Gentlemen: The employees of the above-named firm complain that work is not equally distributed among the operators. Please consider this matter and take such action as may be proper."

The CHAIRMAN. That may or may not mean what I am asking about; that might simply mean that if there are 20 operators working in a shop that they did not get the work properly divided. What I mean is: Suppose there is a

force of 60 operators that are supposed to work for a house; has an effort been made to secure, not simply a proper division among the 20 in the shops, but among those who are temporarily outside without work?

Mr. ZUCKER. No effort has been made for that yet.

Commissioner BALLARD. Are there more members now than there were a year ago?

Mr. ZUCKER. Yes; we have an open union—a preferential union shop. At the time of the general strike there were 40,000 or 45,000 workers. The manufacturer has the right to hire nonunion help as well as union help, and we have an open union. If a man comes up to work as a nonunion man, we do not tell the man—his employer—to discharge him, but simply ask the man to join our union, and during that time I believe our union has increased from 8,000 to 10,000 members.

Commissioner BALLARD. You have much more members and less work?

Mr. ZUCKER. We have much more members and less work; yes.

The CHAIRMAN. That is all. I would like to call Mr. Paul Abelson, if he is here.

TESTIMONY OF MR. PAUL ABELSON.

The CHAIRMAN. Mr. Abelson, what position do you occupy of an official character under the protocol; what is your work in connection with it?

Mr. ABELSON. I am clerk of the board of grievances, chosen by the manufacturers.

The CHAIRMAN. Now, if there is any difference at all between you and the young man that we saw ahead of you, will you cover the ground of the work of the clerks?

Mr. ABELSON. Well, what this other gentleman said is about correct. He omitted to state that the practice as it is formulated in the report to the United States Government—

Mr. COHEN. Please ask the witness to raise his voice, Mr. Chairman, we can not hear him.

The CHAIRMAN. Talk up, so that the people out there can hear you.

Mr. ABELSON. The practice as it is written out in the Bureau of Labor—

The CHAIRMAN. Talk that way and I will hear you.

Mr. ABELSON. The purpose of the report, as it is written out in the Bureau of Labor, states that the idea is that, in the first instance, the people, if they have any complaints of any kind, or differences, or misunderstandings, shall, in the first instance, approach the representative of the firm in the shop—the superintendent or the foreman or the employer himself—through their spokesman, the shop chairman. That is, if there is some difficulty in the shop the chairman goes to the employer and presents the matter to him, or if the employer has something, to the effect that the men interfere in some way with the conduct of the factory, or somehow or other, he speaks to the chairman. Only after they are unable to get together does the union or the representative of the manufacturers go to the manufacturers. Then they exchange formal complaints and the clerks go and investigate the case and try to interpret the point of view of one to the other. They go as mediators and, if there is any rule governing the proposition in question, they, of course, are expounders of the law—that is, they act in the triple capacity. It is, however, exacting, and a difficult position, requiring a great deal of tact and judgment. The union man is supposed to represent to the employer the point of view of the workers; and the manufacturers' representative is supposed to represent the point of view of the employer to the union man in that particular difficulty.

They are supposed to use their best judgment, common sense, and ingenuity to straighten out that particular difficulty, and to make peace in the shop, and after that difficulty has been straightened out these men have to be in the shop and work together.

It is not like lawyers; when they have decided the case the lawyers go out and have lunch, and they do not care what happens to the litigants. These fellows have to go and make cloaks the next morning, so they try to find a way out of the difficulty.

Now, there are hundreds and thousands of relationships that arise. It is a human problem and no amount of protocol, or rules and regulations, or the Revised Statutes of the United States, or the State laws could cover the difficulties that arise there. They have to use their ingenuity to find a way out.

Of course, there are some questions that the protocol specifically covers, or the rules of the board of grievances. They are simply expounders of the law. They say to one side or the other, "This is the law." Now, that is the work in 90 per cent of the difficulties, and those the deputy clerks in the first instance handle—those difficulties.

The CHAIRMAN. Can you tell us about those dropped cases?

Mr. ABELSON. Now, the word "dropped" has been an unfortunate one.

The CHAIRMAN. In part it is; I see that. You go ahead and explain.

Mr. ABELSON. The term "dropped" was introduced by the union. I have been trying to find out how that comes in. The nearest approach to it I find is Mr. Sidney Webb's history of trade-unionism, where he states that a union considers a case dropped when they have received satisfaction. Now, the ordinary man does not consider that "dropped," but this term has been used—has been introduced to imply the sense that this matter is disposed of. Now, when you analyze the word "dropped"—

The CHAIRMAN. I want to get that in the record just as you people see it. Do I understand that a case is called by you "dropped" if, for instance, it is not in any way disposed of; if these deputy clerks find insufficient evidence, you will say, and they dropped it themselves; have they the power to drop it, the deputy clerks?

Mr. ABELSON. Yes; in many cases the evidence is against them, but here is where the work of the mediator, in the psychology, comes in.

Here they come on a complaint. Now, it is the most natural thing in the world that the representative in the union should be predisposed to think that there is a basis for that complaint, or what I suppose people would call a presumptive basis. Now, with that impression, as a man, he goes on that case. They discover no tangible evidence such as would hold water, and yet that man may say, "Well, there must be something in it," and he hates to say that this case is absolutely wrong from the beginning to the end. He hates to say that the case is in favor of the manufacturer, because there is no evidence; but he says, "Well, we will discontinue this case; we can not prove this case. I am not ready to say that the manufacturer is absolutely right there, but I see we have no case, and the other man concedes to him that amount of satisfaction, and if so, we will drop the case, or discontinue the case, or we will draw the case."

On the other hand, many times they mark the case "dropped" when it is decided in favor of the man. There have been a great many absurdities in the manner of signing cases. I may say that Dr. Hourwich himself was the first one to call attention to this absurdity of his own clerks. He came once at a meeting of the clerks and pointed out, "Here is a case where it reads 'Dropped,' and they read in the back of the complaint 'Assigned.'" He said, "It is absurd. You call this 'dropped' and at the back it is in favor of the union or in favor of the manufacturer."

An analysis has been made and submitted by the manufacturers of some 1,200 dropped cases. I have not the figures here with me and the statistics of what they mean. This is one of the things the board of arbitration bureau was supposed to go through.

I should not ask you to accept the statistics that I had prepared on this subject, but the fact is that the nomenclature of the disposition of the cases does not talk with the facts, and since these men have been adjudicating difficulties instead of creating difficulties they were not particularly anxious how they were going to write it up, although it was read on the back of the complaint here that a man was discharged, no discrimination, no discrimination for union activity at all. It is the basis of the protocol, and yet they find in their judgment that it is all right, and the world is not going to cave in if this man gets another chance; so they right on the back, "Man will get another chance," and in front they write, "This case is dropped."

If you are going to go through it strictly and logically, the man would not get a job, because you have to write up the case in favor of the union, and that would not suit, but they try this illogical way to solve a human problem; it is not how they sign it up, but they have disposed of the difficulty.

The CHAIRMAN. Is there anything further you want to submit?

Mr. ABELSON. No; I have not my papers with me, and I do not know. Maybe, later on, or some other time, I may.

The CHAIRMAN. All right.

Mr. COHEN. Mr. Chairman, I think Dr. Abelson can aid the commission further by explaining the difficulties of the work of conciliation, and the type of work that has to be done, and I will ask him to do that.

The CHAIRMAN. All right; if he can say anything that will give us any further information, go ahead. We will hear everybody before we get through, and everybody who has anything to tell.

Mr. ABELSON. Well, I do not know, gentlemen, where to begin.

The CHAIRMAN. I can not tell you where to begin.

Mr. COHEN. If you will permit me to ask him questions I think I can help.

The CHAIRMAN. No, sir; I can not do that. Go on. Have you been the chief clerk representing the employers?

Mr. ABELSON. Yes, sir.

The CHAIRMAN. Well, you must have handled practically all these cases that have gone above the deputy clerks?

Mr. ABELSON. Yes, sir; and have handled every one.

The CHAIRMAN. Well, then, tell us how you have handled them and the difficulties of handling them?

Mr. ABELSON. Well—

The CHAIRMAN. That is, I understand what you want to get out, Mr. Cohen?

Mr. COHEN. Yes.

Mr. ABELSON. In order to understand the work of the clerks and the difficulties that they have to meet with, you really have got to understand the underlying situation in this problem. You have here a relationship between some 50,000 workers and some 260 and odd or 270 manufacturers.

Now, neither of these two sides have had experience in collective bargaining. You heard Mr. Rosenberg tell you yesterday that the union agrees, not as your journeyman tailors' union agrees, or Mr. O'Connell's trade-union agrees, from the bottom up, but rather from the top down.

Now, you can understand when you organize 50,000 workmen and begin with a general strike, instead of disciplining them for a decade into the principles of trade-unionism, that like the advance agent of the salesman, you have to promise the people, agitate them, and arouse them to the principle of collective action, and you must promise them a great deal, and naturally, after they go through a strike there comes a period of disillusionment, when they find that they have won everything, that they still did not win one thing—that there are still bosses alive.

Now, you have a temper there of people who have not been disciplined and trained in union action. Precisely the same thing, gentlemen, is true of the employer class; they never had collective action and discipline and so your fundamental problem, when you have got to work on the job, is to first discipline and organize the two respective sides. Also, with any question that comes up, you must absolutely overlook the individual's particular difficulty in this particular case, which may look often like a mistake or an error for the greater good of the principle and the integrity of the two respective organizations.

Now, when this agreement was signed, fortunately a great many things were left in abeyance, and that as the board of arbitration has expressed itself once, so perhaps the advantage of the agreement is that it left room for development and growth. It was unfortunate on the fundamental problem of collective bargaining, and one advantage that can be given, one argument that can be made to an employer in favor of collective bargaining, is that labor is eliminated from the competition process, and it is not there. Seventy-five per cent of the work is done by piecework, and for piecework you have 2,000 unions instead of one union. Each shop has a union and changes its policy every week, because the price committee changes around, and the union that does not have to go into conference once in six months or once in a year with collective bargaining, but every day in the year, so that you have 2,000 unions changing every week, bargaining every day. That is the condition, a condition of chaos and turmoil, in an industry that you find here to-day, and you can not—

The CHAIRMAN. What efforts have been made by the parties to the protocol to get rid of that condition? Go on in your own way.

Mr. ABELSON. Now, this is the fundamental difficulty; now, consequently, you have there an agreement which the employers have been fighting for, and as I say, there is one thing they will not give up; they will not give up the right to discharge a man, that is the right they call the conduct of the factory. You have on the other side a mass of 50,000 people, who conceive that the very act of discharging is discrimination, because in itself it is not a question of union activity, as you would understand it, but it is the temper of these people. And now, in place of that situation, here you have a man who is discharged.

Now, you go and talk about law. The protocol does not give them the right to discharge the union man; he has to prove discrimination; but the men in the shop feel that if this man is discharged the whole union is going under.

Now, you have to get down to the proposition as a human problem. Very often it is a question of relations and ignorance and spite and suspicion, and all those human frailties, which people of a certain type of mind and certain training, and certain environment, and certain experiences, and certain industries—say, the tailoring industry, and things of that kind—you have to approach this question from the point of view of the realities of the situation.

Now, it is rather strange, gentlemen, that the representatives of the union were all radicals, in so far as their political professions are concerned, or economic views. They are all extremists. When they get down on the job, and go on the cases, it does not take a year, and they are called terrible men—conservatives. It is simply because it is facing the situation.

Now, by a process of mediation you say this: Since there are so many difficulties and perplexities here, and since every little question can be raised into an issue on which you can fight and fight to the last ditch, it is more wise to lay aside abstract rights and abstract principles, and get down to the realities of that particular problem. I settled a problem the day before yesterday, scolding the manufacturer and the workman, and in the case when this very man testified before me, and that is the way we solved the problem, and it was beautiful, too; and it is like the most intricate case, you can make six profound issues out of it, and have five sessions of the board of arbitration on that, and we solved the problem by scolding both sides. Now, mediators can do that, because you are acquainted with the situation. You get into it and solve it as a human problem. Now, that is the work of 90 per cent of the cases.

These men, of course, can not sacrifice their principles, because they have to find a way out. They overlook the issue, and instead of making it into a problem, as concerning the whole industry, they grapple with it, as a problem in that particular shape. As time goes on, some of these solutions that they devised become precedents. Time after time, as soon as they solve a particular difficulty in a certain way, and an analogous difficulty is solved in the same way in another shape, and by and by we have a series of practices which we are all fond of, equaling the development of a kind of common law in the industry.

By the meetings of the mind, by each side trying to understand the difficulty the other is working out, and finding a way out under these circumstances, that is the way. Now, for instance—well, I would not like to go into individual instances—now, this feature, this 90 per cent of the cases which are handled by the clerks, leaves 10 per cent of the cases which present no disagreement on them at all, but difficulties.

For instance, there are certain hard problems that come up, that only the chief clerk on either side can handle. It gets into a difficulty where the deputy clerks can not solve the problem and the union leader can not solve the problem. Well, they take that up. Now, I do not know what percentage of the cases, but I think it was read here yesterday. In a large number of these cases, 7 or 8 per cent, the chief clerks themselves solve that difficulty, and then there is left that small residuum of cases where you get to a point where you have exhausted the limits of your ingenuity and resources and where the issue has got to be met, or a more responsible body must find a way out, and there is the human element, but because the chief clerks are not saints, they sometimes may get into a hitch, and when you get to a board of grievances, and five men on both sides, we thrash the matter out, it is ventilated, and in nearly every other case the way is found. The situation is looked on in its larger aspect and you will find very often they appoint a committee and the committee will solve the problem and the next week it is reported solved, and they see a way out. Now, that is the way the thing is worked.

The CHAIRMAN. Can you, from your experience, give expressions of your views as to the suggestions made here by several witnesses as to the adding of a permanent chairman to the grievance board?

Mr. ABELSON. A permanent chairman of the grievance board would absolutely change the entire structure of the protocol. It would absolutely give up the idea of mediation and conciliation. I can tell you, if you give them an impartial chairman, you would absolutely rewrite the protocol, and make it in the form of a contract, black and white, specifying everything, so that there is not the slightest doubt about it. For instance, if you should say "Discharge," the manufacturers will never, could not, under the circumstances, agree, the

way the factories are run here, with the changes in styles and designs, when men keep shifting from shop to shop—give up the right of discharge. What would you have to do? You would have to say, "Yes; for union activity a man shall be reinstated." They could never leave it as if it were a court of law; it becomes an ironclad contract, such as bricklayers would have. Here is a man with respect to whom the agreement reads that if the man comes at 9 o'clock he has got to be paid for two hours; then, the only question which our man can decide is whether he was working two or two and a half hours. But in all these difficulties we have to find a way of living together and making them a society, because the society would be continuous arbitration instead of conciliation and mediation. It is often asked why would we conciliate the 95 per cent and arbitrate the other 5; simply because nobody will want to conciliate the other 95 when he has a chance to have arbitration.

Under the present conditions, which side carries on it the responsibility of the collective principle? Say there is a case when I in my judgment—there is no rule governing that—but in my judgment and experience I go with a union man, and come to the conclusion that such and such ought to be done, and the man says, "Why, no; I want this case tried to the limits." I say to him, "It is the policy of the association, and I represent that policy, and this is the way it has not to be tried out." He would win that principle, if he went the limit, but we tell him you have to do it in this way. In the individual case the man from the union will tell him, "This is the union policy; now, you have got to subordinate yourself to the policy of the entire organization," and that is where the difficulty comes in.

Now, the clerk of the manufacturers has had to submit to a great deal of criticism.

The CHAIRMAN. That is good for his health.

Mr. ABELSON. Yes. Now, the manufacturers' association has found a remedy for that, not by having the manufacturers' representative go to the masses, at a mass meeting, and make a speech to them so that they should vote him a vote of confidence, but they remove him a peg further. The manufacturers have a chairman and a vice chairman on the board of grievances. In the rare cases where his influence can not get the manufacturer to do what he thinks in his judgment—it is not a question of law, a question of the judgment of the mediator—he says, "Now, we will put it up to these two men; if they say you will do that, we will not go to the board of grievances to fight and formulate an issue on that, but this is a proposition in your shop," and of course a manufacturer is disposed to listen, and does, because we make an appointment and they come at a certain time and the proposition is presented to them, and they say, "Why, we would not fight for you in the board of grievances for that"; so he comes in.

The union man is the difficulty; he is elected by the people, the business agent. And in a great many times, among the responsible union men, there has been the strong discussion that the clerks of the board of grievances should not be elected, because you can see the situation.

He is elected and he goes there to act as a judge.

These men are not trained and disciplined in the sense of union policy, and this is give and take—that you can get that if the union has strength—he can get everything; and if they can not, this man is either inefficient or dishonest.

Now, it is an open secret, and it is unfortunate, that you gentlemen have a public hearing, because that degree of candor which you would get from certain people can not be gotten here.

It is an open secret that the only reason why an impartial chairman is wanted is because the pressure on the business agent is that they are criticized. Now, they are simply destroying the fabric of mediation, because there are some people who can not or have not backbone enough to stand it and resent the criticism, or to educate the mass that they can not get everything they want. The situation that you have is this: It is as if every judge was going to run for reelection only by the votes of the litigants who lost their cases before him. How much chance of reelection would that man have? A man who has a grievance adjusted is peacefully at home. His case was won and he has nothing to say; and the man who has lost his case, he is the one who goes to the meetings and raises a rumpus about the time it takes to nominate the business agent and things of that kind.

An ambassador can not be elected by the people; that is a relationship between two nations; and if they are elected by the people, why, of course, it won't work, and the situation ought to be reversed. Now, the manufacturers

have been able to solve that problem, and even then you have to have a man with some backbone.

The CHAIRMAN. How do they elect their clerks?

Mr. ABELSON. There is a committee of ways and means, of selection; that is all. The executive board approve in the first instance. The committee is organized to find a man who understands—I mean the second man on the job, by the way, not the first.

The CHAIRMAN. Yes; I know that.

Mr. ABELSON. They were instructed to find a man who had certain qualifications. Those are the qualifications of understanding the trade problem and understanding the nature of the people; and I am a social worker myself, so I can understand the situation; and by the support of these people who are responsible for the policy in the agreement, the clerk can go on and do his work and stand all the criticism that is passed across. He could not do it if he had to be elected by the mass of the manufacturers.

The CHAIRMAN. I want to ask another question. I have listened very carefully to the evidence submitted, and you have been where you have had the opportunity to see the workings of the protocol in every direction. What, in your opinion, is the possibility of devising some plan either to take the place of the present plan of fixing piece prices or having some supervising control over them? What possibility is there for solving that problem?

Mr. ABELSON. My conviction is, that it is very strange, gentlemen, that on these fundamental problems anyone should disagree, and it does not make any difference on what side he is, because, strictly speaking, we represent the idea of collective agreement between a body of manufacturers and a union, where the object is to standardize the industry for the benefit of the entire industry. Now, those who are really conversant with the situation have come to the final conclusion that there is no help out of this situation unless you introduce a system of home work, but you can not.

Now, some people fear that, because there will be an element of sabotage introduced; they feel that with this principle of syndicalism prevailing that there might be sabotage introduced. You say the scale is \$25 for a cutter, but I have never heard a cutter say my man shirks. The cutters are, to some extent, a different type. The tailors go into their trade as adults. There has been the syndicalist idea prevailing, although there was no union. There was a shop strike in the height of the season without any union at all. There was always a nucleus of a union. Certain people think if they get a strike that after the strike was over a union would not be needed any more. That spirit has prevailed all the time; and now they have a union; they have the same idea that they could eat their cake and have it, too, and have a strike union, and have the syndicalist idea; and the worst thing that could be conceived by them was for anybody to say that there are men in this room who say it is the existence of the manufacturers' association which saves the union from itself. By that they mean in very truth that the spirit of lack of organization would be so strong that they would bust themselves; but that check helps that. You can see how irksome it becomes for them to say, "You can not have this agreement and have that restraint." Fundamentally, every difficulty we have had has been either from the spirit of some leader or the mass who resist certain action which was for the good of the organization of the union.

The CHAIRMAN. A gentleman informs me that certain people have been shut out of this room, on the committee of recreation. I do not know what kind of recreation is to meet downstairs, but it is immediately in room 12. If there is anyone here that is anxious to attend that meeting, it is to be held downstairs right away.

Mr. ABELSON. Now, every difficulty that we have had has been either because some leader or some shop had insisted on the assertion of the individual feeling of that particular shop against the interest of the entire organization. Now, without going into difficulties, take the one example that you heard Mr. Cotler give yesterday—about a shop in which the union had a life-and-death struggle, and the manufacturers cooperated against the anarchical tendencies of one group in the union. That shop consisted entirely of a minority nationality; and these men run away with the organization and made private agreements under the protocol twice with the manufacturer, and he fell for it, because at the height of the season they struck, and got him to sign an agreement; and this was one of the agreements that he signed, without reference to the rules or regulations or orders; and when it came to the third time the union said, "No; these men must abrogate that and obey orders or lose their jobs"; and the manufacturer lost \$25,000 by discharging these men. He did not

gain anything by it; but the union and the association together had to stand, because if in the height of the season these men are going to strike, why, then, of course, the thing falls to the ground naturally, and that could spread like wildfire; if one shop got away with it, all the others would. Now, that is a principle of organization.

The CHAIRMAN. Your answer to my question as to the solution of this problem of fixing prices is week work?

Mr. ABELSON. A system of week work carefully worked out, which would meet any problem which might arise. There are certain local prejudices against that which are not well founded. For instance, there is a tradition in the trade that twenty-odd years ago there was a strike, and they wanted week work, and because they lost that strike they say that week work would be an ill omen, or something of that kind; but there are some classes of manufacturers who are not in accord with that; and I mean those who have really given serious thought to the problem have come to the conclusion that this is the only way out of it, because otherwise you would have that collective principle. There does not seem to be any rational way of standardizing the price, because there are so many styles. There sits a man here who makes 8,000 styles in one year. Every one has to be bargained for, because this lapel is changed, and they have a right to refuse that work until the adjustment is made. Now, that is an extreme case.

The CHAIRMAN. All right, Mr. Abelson. Is Mr. Rosenfeld, the president of the operators' organization, present?

Mr. ROSENFELD. You say, of the operators?

The CHAIRMAN. The manufacturers, I intended to say.

Mr. ROSENFELD. I am Mr. Rosenfeld, and I am president of the manufacturers' association.

TESTIMONY OF MR. L. E. ROSENFELD.

The CHAIRMAN. Mr. Rosenfeld, would you tell us, regarding the workings of the protocol, what has been your opinion of the results of its adoption to the trade—whether or not there are any serious difficulties in connection with it, with any suggestions you feel like offering for solving them. Tell the story your own way.

Mr. ROSENFELD. All right, Mr. Chairman and madam, I am a thorough believer in the protocol.

Mr. COHEN. Speak up, Mr. Rosenfeld, please.

Mr. ROSENFELD. I believe in the protocol. If the workings of it are followed in the sense that it means, it is the best piece of machinery that ever capital and labor thought of. The principal idea is mediation and conciliation.

No idea should exist at all on the lines of dictation from either side. We must give all credit to the labor leaders that organized the cloak makers in 1910. It brought to their senses the manufacturers. It brought forward the fact that the manufacturers in no way, manner, shape, or form considered what an organization to them would mean. Many of the manufacturers have been at peace with their working people all through their business career; other manufacturers were continually having trouble with their employees. There was a strike here and a strike there, and things really did not run like a nice oiled piece of machinery, and the organizing of the unions brought together the manufacturers. When the protocol was signed in September, 1910, of course, it was all new. The machinery was not in working order. There was a desire of the manufacturers to get to work as quickly as possible, and work up materials that they had on hand and get as many employees as they could, and the little detail which would make the protocol effective was overlooked.

I am the original chairman of the grievance board for the manufacturers. I served in that capacity.

Mr. COHEN. Mr. Rosenfeld, we can not hear you here.

Mr. ROSENFELD. I served in that capacity for two and a half years. The grievance board, to start with, was a very poor piece of machinery. It did not amount to anything. Here is where the lawyers showed their efficiency.

The lawyer for our side and the lawyer for the other side got together, and they drew up certain rules for the working of the grievance board. Gradually that grievance board became a nice-working proposition; it worked very smoothly. The gentlemen on the other side were rather radical. Some of the very important labor leaders served on the grievance board, and they did not quite realize the fact that they had not won a victory over the manu-

facturers. They still had that idea in their minds that they had beaten the manufacturers to a frazzle. They forgot the fact that the good advices of prominent men in this community had brought about the signing of the protocol for the interest of the community at large. These certain important men were the men who brought capital and labor together, and it took some time to get the other side to realize that fact.

We had some very hot sessions, very warm arguments, and then the prominent leaders on the other side that I speak of finally began to see that mediation and conciliation was the fundamental point and the exact meaning of the protocol.

The great trouble at the present time is the wisdom tooth is not through. The protocol is just in its infancy. It is like a child with its teeth coming through, and it seems as if people think that in three years and four months something can be done that is an absolute impossibility, particularly when conciliation and mediation is eliminated, and in place of that a dictatorial proposition presented.

The idea of the grievance board meets with a presentation of "I have come here to get so-and-so, to tell you what you must do," which is absolutely the death of a proposition between capital and labor, which, as I stated before, is the greatest thing I ever knew of.

Now, the unions certainly did a wonderful thing when they brought about the arrangement between the manufacturers and the working people in eliminating so many hours of work and in getting for them that condition of safety that they were entitled to, for getting for them that sanitary condition which is so essential to health, and for eliminating the taking home of work each night; all of these points the manufacturers saw and felt were absolutely the proper thing.

There never was a point brought forward that showed any sense at all that the manufacturers did not concede at once. The problem of price making in the various factories of their industry is a problem that has brought about great dissension. It would seem the points that are being worked upon now by the manufacturers and the points that are before the board of arbitration are in regard to a piece-price committee, whereby if there is any disagreement between the employer and the pieceworker, that an expert will come in from each side, and they will decide what the proper price for making that garment should be. Now, for instance, the manufacturer, he pays his price on the garment and perhaps he does not agree with the price that the chairman of the price committee presents. The expert from the manufacturers' side and the expert from the other side will put a price down, not knowing what the other will do. In a great many cases there is a difference of say 50 cents between the manufacturer and the workingman, but there is a difference of about \$1.75 between the medium price, striking an average between the manufacturer and the workingman. Now, that brings about the fact that has been discussed here and a great deal of dissension and turmoil.

The CHAIRMAN. That is fixing the piece price?

Mr. ROSENFELD. That is fixing the piece price. Now, the price committees of the various factories, in my opinion, are badly advised. They are advised in a way that is detrimental to them, as well as to the manufacturers. A lot of the work that they could obtain is denied them from the fact of their desire to get something right on the spot, which is going to work against them eventually.

If a reasonable proposition in the way of price making is obtained, which we believe will be, by this price committee, it will no doubt lessen a great many of the conditions that have arisen and have caused distress not only to the manufacturer but to the working people.

The point of the joint board being represented by a clerk elected—and Dr. Abelson went over that pretty carefully—of course, I am very much against that, for the reason that their chief clerk should be engaged in the same way as our chief clerk; it seems that the international, who is the guarantor of our protocol, has withdrawn as a guarantor, which will make it for us an impossibility to continue the protocol; for this reason, that in regard to important points that may arise we have no one to look to——

Mr. COHEN. What are you saying? I think you want all of us to hear.

Mr. ROSENFELD. Can not you hear it?

Mr. COHEN. I wish you would go over the thing that you said before and say it a little louder.

Mr. ROSENFELD. I will try and do my best. The point that has been brought up here in regard to the manufacturers not punishing their members is a point which I wish to state is well taken care of by the manufacturers in every case where any of the manufacturers have done something that was against the rules of the manufacturers' association, and the punishment that should be meted out to them was. Now, without the backing of the international, what chance have we to know that the union will mete out that punishment to their people that should be done, where they have offended?

The working of the protocol has entailed a tremendous amount of expense, not only in a financial way, but in the energy of the manufacturers given to that work. The manufacturers that have been interested in the success of the protocol have been continually giving their time, and giving it freely, for the reason that they believe that no better condition could exist than mediation and conciliation between capital and labor.

I believe that that would be about all the points that I could give you.

The CHAIRMAN. You must know exactly from your side of the case at any rate. What has been the outcome under the protocol of the question of wages, not only by the piece, but as to the earnings of the people employed?

Mr. ROSENFELD. Well, the point was brought forward in regard to the cutters. The cutters are receiving to-day about the same pay, \$1 per week more, than they received from the ordinary merchant; that is, the average merchant. That was all gone over with; the price to-day is 25½ cents; they are week workers. I do not know what they—

The CHAIRMAN. What were they paid before 1910?

Mr. ROSENFELD. The pressers?

The CHAIRMAN. Yes.

Mr. ROSENFELD. That was gone over yesterday. It was a contract proposition. A man employed a certain number of men and paid them about, I should say, \$14 a week would be about the average price. The sample hand before the protocol got \$14 or \$15 a week on an average; to-day he gets in the neighborhood of \$22. Some of them get \$24, \$26, or \$28. I believe \$22 is the protocol price.

The CHAIRMAN. What is the situation as to what is known in the trade as contractors now, compared to what it was before 1910?

Mr. ROSENFELD. You see the contractors are about the same to-day as they were before 1910, but the employees of the contractor, their condition, is much better. That is brought about through the sanitary conditions, etc. But a point was brought out yesterday, Mr. Chairman, in regard to the sub-manufacturers. I do not recognize any such thing as a submanufacturer; I do not know what they mean. The point brought out here—submanufacturer—I do not recognize that there is such a thing as a submanufacturer.

You know one of the great questions to-day, and a point that is absolutely against the law, is restraint of trade. Now, if a man comes to me and presents to me a garment, and his price is \$10, and I can not produce that garment for less than \$13.50, it is certainly my privilege to buy that garment. Now, that was brought forward yesterday in regard to submanufacturers.

If a man can manufacture cheaper than I can, it is certainly in my province to buy from that man, but the great point is to get down to where it is possible for that man to manufacture cheaper than I can manufacture, where the protocol calls for a stipulated salary for each weekly employee.

Now, in many cases I have seen with regard to garments, whereby I would have to eliminate the price of labor entirely, and I could not manufacture as cheaply as it was presented to me.

Now, there is something wrong. There is some screw loose. The machinery in general is not as perfect as it should be.

Those are the points that I meant when I said the protocol was in its infancy, and that the perfection of detail had not been reached.

Commissioner BALLARD. You mean that the garment that these people will sell you is the same as you have, and you can sell it cheaper than you can buy the materials alone for?

Mr. ROSENFELD. Not the materials alone; eliminating the labor.

Commissioner BALLARD. Yes.

Mr. ROSENFELD. That is, the sewing of the coat, etc.; the same garment exactly; there are many cases of that kind.

The CHAIRMAN. I suppose there has been some investigation made to find the reasons for that. Surely a man would not be in business without doing that?

Mr. ROSENFELD. There have been investigations made and I have made them, and the other members of the association have made them, and we are yet unable to solve the proposition.

The CHAIRMAN. Do you desire to submit anything further?

Mr. ROSENFELD. I have nothing more. If there are any questions you would like to ask, I would be glad to answer.

The CHAIRMAN. You might tell us—well, I am going to ask another gentleman to cover it more specifically, but tell us as to the changes that have been brought about under the protocol in the way of sanitation and better facilities for working, and that kind of thing.

Mr. ROSENFELD. Well, I think that is one of the best things that has ever been done in this community. I think the conditions that exist to-day are so much better than they were three and a half years ago—there is no comparison. I think they were brought about as I explained in my early remarks. The condition is very, very much improved. In the early days of the protocol I was asked by the other side to accompany them through the East Side, along in the section of the Williamsburg Bridge.

I knew that neighborhood from passing through there, but I had never gone into it in detail and I did that day. The gentleman that I went with is in the room and was here yesterday—Mr. Polakoff—it was through his request I did this. The conditions over there were deplorable, and I am sure at the present time, under the existence of the protocol, that improvement has been very, very appreciable. Everybody in our industry knows how much the condition has improved.

The CHAIRMAN. How would you suggest, if it was put upon you to do so, that the protocol should be improved to increase perhaps a little more rapidly than a gradual development the good will and good feeling between the employees and the manufacturers under it?

Mr. ROSENFELD. Well, I will tell you, Mr. Chairman, personally I think there is good will between the manufacturers and the employees. The contention at the present time is on one point only. It is the dictatorial presentation of the grievances on the other side. That is something we can not tolerate. We want it understood that when we come into a grievance board meeting that the presentations are for mediation and conciliation and not for dictatorship. We do not want to be told we must do this, we must do that, or we must do the other; we want to work in harmony; we want to work the best way we can. We always have on every proposition that has come forward given the best we could; we can't give what is wrong, but we can give what is right. If we are deadlocked, the board of arbitration is there to settle the question, and when we first went to the board of arbitration the rulings proved conclusively that the manufacturers in every way, manner, shape, and form lived up to the agreements that they signed.

The CHAIRMAN. I think your answer signifies that you believe the protocol, lived up to in spirit as well as in fact, is practically sufficient to continue peace in the industry and work to the betterment of the trade generally.

Mr. ROSENFELD. I can say it frankly and honestly, Mr. Chairman, that the protocol, lived up to, is the greatest vehicle that capital and labor have ever had before; but there are so many little things that come up, such points as I have brought out here, that must be lived up to to the letter. We are willing to do it, we want to do it, and we have done it; there has never been a case brought in to that grievance board that was not given the consideration it was entitled to. There was never a case decided against the other side by our side where it should not have been so decided; wherever there was an opportunity to conciliate, where there was a chance to do so, and to do so honorably, it was done, and it will be done as long as the manufacturers' association is in existence; and we have always protected the other side, where it was possible for us to do so, in the manner set down by the rules and regulations of the grievance board.

The CHAIRMAN. What is your view of the question that was before us a few minutes ago of substituting week work for piecework in the departments where it does not exist now?

Mr. ROSENFELD. Well, week work would certainly do away with a great deal of the haggling, and do away with a great deal of the mistaken ideas that are existing to-day between the members of the committees of the manufacturers and the union; that would eliminate a great deal of that. But whether it would solve the question is open for serious discussion. One of the best things that I know of, if it can be perpetuated, is the piece-price commissions and

standardizing the various classes of our industry, the operating price, the quality, the class of manufacture—to make that price a standard rate throughout the industry.

The CHAIRMAN. That is being considered, is it?

Mr. ROSENFELD. That is being considered, and it is being worked on to-day. In many cases the experts on the other side and the experts on our side go into the manufacturer's factory, and they have brought about a positive adjustment where there have been arguments.

The CHAIRMAN. All right. That is all I have to ask you. The chairman feels that it is only right that he should say a word or two in the nature of a statement. I came here without personal acquaintance—so did the other members of the commission—with people here, except to a very limited extent. I have had names handed to me of people who ought to be heard by the score, actually, and it is really amazing, and most of them without any indication of where they belong, whether they were manufacturers or whether they were employees or what they were. Now, the commission desires to give the fullest possible hearing to this subject, so that when we do come to study it from the record we can say to the people of the United States what we believe it shows and what we believe it has done in the industry in the city of New York. I want to call and hear, and every member of the commission is willing to hear, everyone that has something to give that has not already been given and that has not already been corroborated by more than one person; and I will call, as best as I can, the names piled up on the one side and on the other together. I say one side, I do not mean that in a way that anyone can take offense, because of the fact that I don't know where all the gentlemen belong, so far as their affiliations are concerned, whose names have been given to me; but if there have been some missed who have something to say that has not been said by more than one person, we are perfectly willing to hear a repetition, but if it has been said by two or three the chairman will ask them to desist until later on. I believe that is fair, and I do not think anybody will say to-day that they object to it. Now I will call upon Mr. Silberman. I think he is also one of the manufacturers in this case; I know that he is.

TESTIMONY OF MR. MORRIS SILBERMAN.

The CHAIRMAN. Mr. Silberman, there have been some complaints by the people sitting in the audience that they can not hear, and they are all interested, and if the witnesses will try to make them hear we will be obliged to them.

Mr. SILBERMAN. Mr. Chairman, I will begin by stating what a member has to do in order to get membership, or rather what an applicant for membership in the association has to do in order to become a member.

The CHAIRMAN. That is, the manufacturers' association?

Mr. SILBERMAN. The first thing for him to do is that he must file an application, and after having had it passed upon, the most essential thing is that he must receive a certificate from the board of sanitary control; that is, that his factory and side plants are investigated and have been found sanitary; and after that has been done a certificate is issued to him, and in that way he can become a member. Now, that is only one of the things. After he has become a member, among the benefits he receives is the insurance against strikes or stoppages of work.

The CHAIRMAN. What do you mean by insurance? Make that plain as you go along.

Mr. SILBERMAN. That is to the effect that the manufacturers' association protects him so far if the people in his employ stop temporarily or for any length of time. The arrangement of the protocol that is in existence between the union and the manufacturers' association prevents that; but before that he is penalized, and I say that unreservedly, because in becoming a member of the manufacturers' association he must pay standard wages, he must have a sanitary shop, he must not work his employees more than a certain number of hours a week, he can not work them nights more than a prescribed time. The strength of the association is about 175 members. Now, there are a lot of nonprotocol shops which are classed as those not working under the wings of the protective association. Now, we know from experience, and we know from investigation that a great mass of these do not live under the protocol provision; that is why they do not work on a scale; they do not work the prescribed number of hours; they do not pay for legal holidays; and upon investigation, when unions are notified, on investigation they have no books of record to show, or they claim

they have no books of record, and in that way the member of the association is penalized, because he is forced to live up to the different standards; and it causes a great deal of competition.

Now, the protocol is all right. There may be things that are wrong in it; there may be things in it, but I understand—in fact, I know—the board of arbitration has been in session, and that statistical reports are being prepared, and no doubt recommendations will be made, and I am sure that if they are feasible and practicable the manufacturers, on their side, will carry out any such recommendations.

Now, the machinery of the protocol is all right. But the trouble is that some foreign substances get into that machinery and clog the machinery. Now, what has happened? The machinery must be clean; it must be put in working order.

Now, the only thing, or the only machinist, that can do that, in my opinion, is the international; they are the chief mechanics to deal with that. Now, they must see that that machinery is cleaned out, and if the statement of the international that they will resign as guarantors from the protocol is made it means only one thing, and that is that there must be an abrogation of the protocol, because if you have no responsible parties to deal with, if you have no substantial agents to go to, we can not continue the business. The 60,000 men in the unions not having any head become 60,000 individuals, and in that way it becomes an irresponsible mob, and it is natural that one association can only deal with another association if there is to be collective bargaining; and if you take away the leaders or the guarantor, why, the thing must fall to the ground.

The CHAIRMAN. Before you leave that point, Mr. Silberman, I was just going to ask you, or I think Mrs. Harriman wants to ask you, a question.

Commissioner HARRIMAN. Has the international given specific reasons for wishing to get out or wishing to resign as guarantors?

Mr. SILBERMAN. Well, the reason they give is that they recommend certain things to the joint board, certain policies to the joint board to follow; the joint board refuses to follow the reasons given. It is a similar situation as if the United States, being made of so many States in the Union, if the same thing occurs with respect to that. Now, it is reasonable to suppose that every State has a perfect right to make its own rules and laws; it is also understood that no State can make any rule or law which conflicts with the national, or Federal, law. Now, if the United States Government would suggest to any State in the Union that a certain law pending in that particular State would be against the law of the United States I should think it would be up to that particular State to follow the suggestion made by the United States Government and not pass laws contrary to the laws of the United States. We have had a similar situation lately, or not so very long ago, in California, where they tried to pass certain laws which would be in conflict with the laws of the United States. What happened? The President sent his Secretary of State to that State of California to notify them and to see if they could not change and keep the rules of the United States Government, and I presume the situation now is exactly the same. The locals are made up of each branch of the industry; each local represents a certain branch. Now, these locals send their representatives to the joint board; the joint board again sends its representatives to the international; the international, as I understand, is made up of all locals in the United States. Now, if the international—which is the parent body, supposedly—if the international, which is the certain legislation to each of the various locals, and if each of the locals will tell the international, or the parent body, that they will not stand for any such suggestion, but that they are going to do things their own way and as they see fit and just as they please, the natural consequence is that there will be no international, and instead of a federation it will be an individual government of States.

The CHAIRMAN. Is it only just lately that the international has taken that stand?

Mr. SILBERMAN. It is only recently; it is only after we have notified the international to that effect.

The CHAIRMAN. Whom have you been doing business with—representatives of the international or representatives of the local unions, or both?

Mr. SILBERMAN. The protocol was entered into by the Cloak Manufacturers' Association and the joint board together with the international as guarantors. Our method of procedure is that when a complaint is filed—and that has only been done after a hearing before the board of arbitration, which board of arbitration has decided that it must be done, then a complaint is filed with the joint board and a similar complaint is filed with the international. In this way

if the joint board refuses to act on that complaint, why, we look to the international as guarantors to enforce that complaint or to enforce action on that complaint. Now, if the international can not bring about action on that complaint, why, our remedy lies then with the board of arbitration. The international has come out with a statement from the general executive board. I don't know that I would care to read it, but it could be offered to the commission as evidence, if you please.

The CHAIRMAN. It could be offered as evidence?

Mr. SILBERMAN. Yes.

The CHAIRMAN. Then put it in at that point. The stenographers need not translate the latter part of the document, however.

Mr. Silberman offers the following statement, which is ordered spread on the record:

RE THE HOURWICH AFFAIR—A STATEMENT FROM THE GENERAL EXECUTIVE BOARD OF THE INTERNATIONAL LADIES' GARMENT WORKERS.

EXECUTIVE OFFICES,

32 Union Square, New York, January 5, 1914.

To the officers and members of the cloak, skirt, and reefer makers' locals affiliated with the I. L. G. W. U.

GENTLEMEN: Since the locals affiliated with the joint board of the cloak and skirt makers' unions decided to submit the question of the election of Prof. Hourwich to the office of chief clerk on the board of grievances to a referendum vote the general executive board met several times to discuss the situation, but could come to no conclusion and could arrive at no unanimous decision as to what course it should take in view of the impending complications which would arise out of the election of Prof. Hourwich as chief clerk. Inasmuch as the consensus of opinion of the members of the G. E. B. is that in view of the continuous attack on the international union and its officers by Prof. Hourwich any statement published by the general executive board at this time would aggravate instead of relieve the situation.

On the 16th of December we received the following communication from the manufacturers' association:

"Mr. Abraham Rosenberg, president, Mr. John A. Dyche, secretary, the International Garment Workers' Union; and Mr. J. Halprin, president, Mr. M. Perlstein, secretary, the joint board of the Cloak and Skirt Makers' Union.

GENTLEMEN: We are informed that Dr. Isaac Hourwich is to continue to represent the joint board in the dealings with our association under the protocol. We regret to be obliged to ask you to designate some one else with whom we may have official relations. Dr. Hourwich has publicly charged our association with having offered him an inducement to work for the association; has publicly charged us with having connived to warp the statistical inquiry of the board of arbitration, the board of grievances, your international officers and your joint board, and stated in the presence of the board of arbitration that in view of its recent decisions he could not work in harmony either with the board or with us. We recognize fully the right of each party to the protocol freely to select its own agents, but since it is of the essence of the protocol that there shall be mutual respect in the daily dealings of the parties it is obvious that neither parties can have dealings with a representative of the other whose deliberate purpose is to create distrust and ultimately destroy the protocol. Since we desire fully to perform our part of the duty of upholding the protocol and abiding by the decisions of the board of arbitration we prefer not to be obliged to deal with one who has both insulted and assumed an attitude of dictatorship in the industry. We regret exceedingly, therefore, to be obliged to ask you to designate some one with whom we may continue business relations, so that the daily business may be conducted without more friction.

"Very truly, yours,

"(Signed) L. E. ROSENFELD,
"Chairman Executive Committee."

To this communication the general secretary-treasurer replied that the contents of the letter would be submitted to the next meeting of the general executive board, which is to take place on November 29.

Since, however, we knew the opinion of the members of the board of Prof. Hourwich, namely, that his undoubted abilities are of destructive and disruptive nature; that the moment he entered our organization he began with an attack upon the international union and its officers, and finished up his campaign of destruction with throwing suspicion and mistrust against every responsible officer in the organization; that under his influence and leadership the organization must go to pieces; and that his elimination from the union must take place in order that our organization may continue to exist. The mere fact that the manufacturers object to deal with him would not alter their opinion and can not justify the members of the board to take such a stand as would force such an impossible person upon the manufacturers for no other reason except the manufacturers' objection. The members of the board were also of the opinion that under his leadership and guidance the international union can not be a party to the protocol and guarantee for the joint board in its dealings with the manufacturers' association.

Taking all this into consideration, the only reply we could give to the manufacturers is that under the present circumstances the international union must withdraw its guaranty to the protocol.

Since, however, such a reply to the manufacturers' association may lead to the abrogation of the protocol, we thought it best to call a conference of representative trade-unionists of this country for the purpose of hearing their opinion as to what is the proper course for the officers of the international union to take. Accordingly, such a conference took place on Saturday, December 27, at which the officers of the international union stated their position before the conferees and asked the opinion of the conference. The conference, however, under the guidance and direction of President Gompers, of the A. F. of L., thought that merely to advise the members of the G. E. B. would not be enough, but that they could serve a much more useful purpose if they would use their influence to eliminate Prof. Hourwich as chief clerk. The result of the deliberation of this conference, which received the unanimous consent of everybody present with the exception of the delegates of Local No. 1, who stated that they had no instructions from the organization to vote one way or the other. Following is the statement of the conference:

" DECEMBER 29, 1913.

"To the officers of the I. L. G. W. U. and joint board of the cloak and skirt makers' unions of New York and the affiliated locals.

"GENTLEMEN: Under date of December 16, the officers of the International Ladies' Garment Workers' Union and the officers of your joint board received a communication from the officers of the manufacturers' association in which they say that while they 'recognize fully the right of each party to the protocol freely to select its own agents, but since it is of the essence of the protocol that there shall be mutual respect in the daily dealings of the parties, it is obvious that neither parties can have dealings with a representative of the other whose deliberate purpose is to create distrust and ultimately destroy the protocol. Since we desire fully to perform our part of the duty of upholding the protocol and abiding by the decisions of the board of arbitration, we prefer not to be obliged to deal with one who has both insulted and assumed an attitude of dictatorship in the industry. We regret exceedingly to be obliged to ask you to designate some one with whom we may continue business relations, so that daily business may be conducted without more friction.'

"Upon receipt of this communication the officers of the International Ladies' Garment Workers' Union, believing a crisis had arisen which threatened the destruction of the union, and being anxious to have counsel and advice from men experienced in the labor movement and interested in the welfare of all those engaged in the cloak and skirt making industry, decided to invite representatives of the American Federation of Labor, the Central Federated Union of New York, the United Hebrew Trades, the United Brotherhood of Tailors, the United Cap Makers, the United Garment Workers of Chicago, and also representatives of the Workmen's Circle, to meet in the city of New York with the representatives of the International Ladies' Garment Workers' Union and the joint board of the cloak and skirt makers' locals of New York and representatives of some of its affiliated locals, for the purpose of considering the conditions that had arisen, and, if possible, to devise means by which the crisis might be averted and the stability of the organization insured.

"In accordance therewith a conference was held at the offices of the wage-scale board on Saturday afternoon, December 27, which was attended by repre-

representatives of all associations referred to above and which was presided over by Samuel Gompers, president of the American Federation of Labor. The situation which exists in the cloak and skirt making industry was fully discussed and carefully considered. By special invitation Dr. Hourwich attended one session of our committee and participated in the discussion. It developed during the discussion that the machinery provided for in the protocol for the adjustment of grievances and the transaction of business between the manufacturers' association and the local unions of the joint board of the cloak and skirt makers' union had come to a stop and that it was imperative to take some action in order to maintain the advantages gained by the cloak and skirt makers' unions.

"In order to fully understand the situation which confronted us it is necessary here to review some of the events which led up to the present situation. In the latter part of November the joint board of the Cloak and Skirt Makers' Union of New York, acting upon the authority vested in it, decided that the interests of the members of the union required that Dr. Isaac Hourwich should not be reelected to the position of chief clerk of the board of grievances. Acting upon this decision Dr. I. Hourwich was not reelected by that board. However, deferring to the wishes of some of the members of the union, the action of the joint board in refusing to reelect Dr. Hourwich to the position of chief clerk was submitted to a referendum vote of the members of the local unions. The names of no other candidates were submitted for election to this office, with the result that about 6,500 votes were cast for Dr. Hourwich, thus electing him chief clerk for the period of one year.

"We are informed by the members of your joint board that among their reasons for refusing to reelect Dr. Hourwich was the fact that his methods of administering the affairs of his office were not in harmony with the ideas of the joint board and not calculated to protect the best interests of the members of the unions.

"It is further necessary to say that the International Union of the Ladies' Garment Workers, which is the guarantor of the protocol, is responsible for the faithful maintenance of the agreement.

"Dr. Hourwich, during his incumbency as chief clerk, refused to consult with the officers of the international union, refused to recognize the authority vested in them by the constitution of the international union, thus making it impossible for them to fulfill the obligation imposed upon them as signatories to the protocol.

"From a statement made at the conference it was perfectly clear to us that a very serious situation had arisen—a situation which demanded such action as would protect the interest of the members of the union and preserve the integrity of the organization. With this situation and these circumstances before us it was the consensus of opinion that the following suggestions and recommendations should be made to the joint board, with the request that those statements and those recommendations be given careful consideration:

"1. We have considered both the merits and defects of the protocol. We are united in declaring that the protocol should be maintained in order that the advantages gained by the workers which were secured in the past as a result of the great strike of 1910 should not be placed in jeopardy, and in order that reasonable opportunity for further improvements may not be lost. To this end we recommend that your board declare itself to be in favor of the maintenance of honorable industrial peace through the continuance of the protocol.

"2. In making this recommendation we are not unmindful of the fact that the protocol does not provide sufficient machinery for the speedy and final adjustment of questions which the workers feel to be of vital interest to them. There has grown up in the minds of the members of the union a conviction that the board of grievances should have its authority extended and that upon it additional duties should be imposed. It is not necessary to state here in detail the nature of these complaints. It is sufficient to say that the proper execution of the obligations imposed upon the parties to the protocol demands that there shall be machinery for the prompt adjustment of every dispute which is brought before the board and which affects the relations of the parties to the agreement. In order that this prevailing dissatisfaction may be removed and confidence restored, we recommend that immediate overtures be made by the representatives of the unions to secure a conference with the manufacturers' association, the purpose of the conference being to provide either for a supplemental agreement or such modification of the present agreement as will provide for a disinterested person to act as chairman of the board of griev-

ance and whose function it shall be to decide any dispute that has not been or can not be decided by the grievance board itself.

"3. As stated above, we invited Dr. Hourwich to attend one session of our committee and requested him to give us an expression of his views. Dr. Hourwich did attend and gave us a lengthy statement of his position and of the views he entertained in regard to the protocol and the administration of the unions' affairs. From his own attitude and his own expressions, to say nothing of the information given to us by the representatives of the unions, we are fully convinced that the interests of the members of the union would be best conserved if Dr. Hourwich would withdraw from the position of chief clerk of the unions on the board of grievances.

"It is our judgment that the chief clerk should be a man who is familiar with trade-union policies and who is acquainted with the trade affairs of the industry, a man whose chief interest it is to promote the progress of the union and the welfare of its members, and who has such practical experience in trade-union affairs as would make him tactful in the administration of matters intrusted to him and at the same time determined to secure for the workers all they are entitled to under the terms of the agreement. We feel that Dr. Hourwich does not possess the necessary qualifications which would enable him to perform properly the functions of the office of chief clerk, and this notwithstanding any qualifications he may have in the literary and legal field.

"Being convinced of this, we recommend that your joint board request Dr. Hourwich to tender his resignation as chief clerk, and we further recommend that you elect to this position a man having the necessary qualifications.

"As an evidence of the interest of the trade-unionists of this country in the development of organization among the workers in the ladies' garment industry, we are authorized to say that the American trade-union movement will place at your service an experienced trade-unionist who will act in an advisory capacity to the chief clerk, who will render such aid as he can to the officers of your union. This service will be rendered without any compensation.

"The undersigned have been authorized by the conference to formulate this statement and to transmit this document to the proper officers.

"(Signed) JOHN MITCHELL,
Chairman.

"JOHN F. PIERCE."

On December 30, the general executive board passed the following resolution:
"To the officers and members of the joint board of the cloak and skirt makers' unions of New York:

"GENTLEMEN: At the sixth quarterly meeting of the general executive board held in the city of New York, December 30, the following resolution has been adopted:

"Whereas in accordance with the decision of the board of arbitration rendered February 3-4, the international union has been made the guarantor for the joint board in its dealings with the manufacturers' association through the instrumentality of the protocol; and

"Whereas upon further decision of the board of arbitration on October 4 last, this guaranty implies a joint responsibility and joint cooperation of the officers of the international union with the representatives of the joint board in carrying out the provisions of the protocol; and,

"Whereas the present chief clerk, Dr. Isaac A. Hourwich, who since he attached his signature to this arrangement made by the joint board of arbitration has persistently and systematically attacked the policies of the international union and openly denounced its officers as the agents of the manufacturers' association, and has in every way tried to discredit them before our members and thus brought about a condition of affairs whereby he has made it impossible for the international officers to work in cooperation and harmony with him; and

"Whereas his policies are radically and fundamentally opposed to the policies and methods hereto pursued by the international officers; and

"Whereas it is the firm belief of the G. E. B. that the methods pursued by Dr. Isaac Hourwich are detrimental to the best interests of the members of our organization: Therefore be it

"*Resolved*, That the joint board of the cloak and skirt makers' unions be informed that under the clerkship and guidance of Dr. Hourwich the international union can not remain the guarantor for the protocol.'

"Subsequently on January 2, 1914, the G. E. B. decided to submit to the members at large the recommendation of the conference committee as well as the resolution of the G. E. B., and to notify the locals that unless the terms of the resolution are complied with by January 15, the international union will be compelled to notify the manufacturers' association that they are unable to be the guarantor to the protocol in accordance with the decisions of the board of arbitration.

"The members of the affiliated locals of the joint board are therefore requested to act promptly on this matter and let us have a definite reply.

" (Signed)

(Here follows a Hebrew translation of the foregoing:)

MR. SILBERMAN. Now, we might take up the matter of the grievance board workings. The grievance board is made up of an equal number on each side, and we sit as mediators and not as judges. We are, of course, to judge the question of right and wrong, but we do not sit there as judges. You say that the law is so-and-so, and the defendant is found guilty and must receive the minimum or the maximum sentence, as the case may be; but we try to mediate on all questions. We have had cases where I have been placed in the unique position of being the prosecuting attorney and also the attorney for the defendant at the same time. It was merely to bring out the workers when they got into that condition that they did not fear that they would lose their places by testifying, and I have interpreted for the board of grievances to get at the real facts of the case and the real facts that they wanted to get at. What we are trying to do is to try and get at the facts; we do not recognize the workingman, we do not recognize the manufacturer, we do not recognize whether he is a large manufacturer or whether he is a small manufacturer; we recognize simply that justice must be meted out blindfolded. Now, the great trouble is that they magnify their troubles. If a manufacturer wishes to take a machine from one window, say from window No. 3 and put it at window No. 5, they immediately think that that means he is going to try and get rid of that operator, instead of thinking that probably it is to the advantage of certain conditions to make that change; and they have such trivial complaints to make all the time. It was brought out yesterday that the year of 1913 there were only 17 complaints brought before the board of grievances.

Now, to my mind that shows that great progress and improvement has been made, because we used to have 70 in one day when we first started. It was more like a quarreling affair than an affair for a board of grievances. It was a case of simply talking across the table; a case where each one insisted upon his rights and where each one considered the other to be in the wrong, and they all set there and looked at each other across the table and accused each other with a certain amount of acrimony, and looked at each other with a certain amount of distrust. But what has happened? The simple matter of education has been going on during this time, perhaps not as much as we wanted it to do, but it has been going on, and a great mass of the cases have been disposed of by methods of conciliation by the clerks. The board of grievances is composed of manufacturers and of union people, the union people are paid for their work, and the manufacturers are not, and they must give up a great deal of time gratuitously and unstintingly to the work. We used to be pestered with a great deal of matter that should not have been

brought there, and finally we instructed the clerks that before they brought the matter before the board of grievances that they should agree upon a statement of facts, and if possible, to settle the matter, that they should do so; but before coming to the board of grievances they must agree upon a statement of facts, and in that way we could decide the legal part of it by a framed protocol law. Cases that come before the board of grievances are really more particularly cases where a precedent should be established, and they were mostly all cases where once a case had been decided in a certain manner it was always followed.

Now, as to the disciplinary action. From the manufacturer's side, we certainly have been very severe. Where a complaint has been filed and the board of grievances found that the manufacturer was guilty of violating any part of that protocol, our system has been that if it was a mild violation, a reprimand should be given; if it was a little more violent in its violation, a fine was imposed, and we have fined our members in numerous cases as high as \$500 for a breach of the protocol; and our records are open to this commission, where we have an accurate record of those cases, and we have always meted out the various punishments to every offending member. Now, what about the union? One of the customs is for each side to report what action has been taken in disciplinary matters. Why our answers ninety-nine times out of one hundred show that they can not find the man, or they can't find the place, or he has been punished enough because he lost his job. Now, if they would, on the other hand, discipline every man that violates the protocol, that would have meant that they would have had to discipline so many that they really would not have had any union left, because the discipline would be very severe in that case.

Now, I heard something said about a black list. There is no such thing as a black list in the manufacturers' association. Personally, I don't remember in the entire membership that there are 10 who even take the time to learn or know who are working in their factory. There may be probably 10 high-class houses who need extremely efficient help, who might ask for a reference for a worker, and who would call somebody else up, but in the other shops I am positive there is no record kept; we have even gone so far, and I know it personally, where our clerks have taken men out of one shop who have created trouble, and not wishing them to be without work have placed them in other shops. Now, certainly, that does not show a black list in existence. On the contrary, it shows that we try to do everything that is possible to favor and settle matters without coming to any controversy with the men. Now, the question of the pay prior to the protocol and since. With regard to that, why if it is true that cutters have only been increased \$1, that only covers a certain few standard shapes; the certain few standard shapes have received \$24 a week for the workers prior to the signing of the protocol, but the great masses of the cutters receive \$12, \$14, and I think \$18 would be the maximum. In fact, I think there is a statement by one of the officials of the cutters' union that the increase has been at least 33 per cent since the signing of the protocol to what it was prior to the protocol.

Now, the pressers, under the old system they were working under a subcontractor and received very little pay, and to-day they must receive the minimum of \$22.

The great trouble in the operating department is that before the protocol each operator had a sort of submanufacturing system of his own. In other words, he had two, three, or four helpers, and he farmed out the work that he received; he received so much pay for the garment and then paid his helpers as little as he could, and in a great many shops that had a great deal of work those operators made as high as \$100 and \$125 a week. Now, since the signing of the protocol, that is not permissible, but each operator can only have one helper, and only one, and, naturally, when he can not farm out labor and has to work himself, he can not earn this big pay that he did earn formerly:

The CHAIRMAN. But he still pays his one helper?

Mr. SILBERMAN. One helper he still pays; but you can easily see that when he has two or three or four or five helpers working for him he is really not a laborer, but a manufacturer, only in a smaller way; and the great unrest, I think, in that branch of the business, of the industry—and it is the biggest unrest—is caused by that condition, that where formerly he did make enormous sums of money, now he can not make those amounts, and, as the first witness to-day said, the conditions and the styles changing does not permit it.

Now, we have the wage-scale board.

The CHAIRMAN. That is a pending idea, of the wage-scale board. It is not in existence, I understand?

Mr. SILBERMAN. It is in existence. I know it is in existence, because I had an experience with it the other day.

The CHAIRMAN. I want you to state it clearly, because I think it is in the record in a rather doubtful shape.

Mr. SILBERMAN. No; it is in working order; it has always been in working order, only not lovely. It is what the clerks used to do and is now recognized as part of the board of grievances. We had a little difficulty in settling certain prices, and I called for the wage-scale board. That consists of a representative of the association who is supposed to be an expert and a representative of the union, who is also supposed to be an expert. Now, what happened was this: A garment is shown; the union's representative is supposed to look at the garment and put down his figures for operating and finishing, and the association's representative is supposed to look at that garment and put down his figures for operating and finishing; then they are supposed to compare notes and see if they compare. Now, the trouble is that the representative of the association will put down the minimum, while the representative of the union will put down the maximum, so it will frequently appear that there is a great big gap between the two.

Now, if the board were clothed—or, rather, they are clothed—with power, but that what they say shall be final power; of course, the manufacturers' being of the higher. I would not say "higher," but being placed in the position where he knows he must abide by the decision of the workingmen, as they frequently do say that they are not bound by any such decision; why, a case happened in this way: The expert or clerk for the union put down \$2.75 for finishing a garment and the expert for the manufacturers put down \$2.50 for finishing a garment; they compared notes, and the expert from the manufacturers came to me and said: "What do you think of that?" "Why," I said, "I think you are a little bit too low; you can meet him and decide the question." They both agreed then; that is, the expert for the manufacturers agreed to the price that was put down by the expert for the union; and that should really end the matter, and it is supposed to be expert testimony. Then the expert for the union goes over to the people he represents and asks them what would they want for the garment. Now, you can see the inconsistency of it. If the expert, so called, does not rely on his own knowledge, but has to ask the workers what do they think of it and then he changes his mind, then there can not be that amicable arrangement which we supposed this would solve. Now, even after they changed their price from \$2.75—and our calculation was really \$3, because we figured rather liberally—and we told them that we would pay them \$3, and the expert says: "Three dollars, boys; that is what you are going to take." And one will say, "How do you dare to ask me to take \$3 for a garment?" Now, we must educate the masses to meet a situation like that; we must ask the masses to abide by the decision of the expert, or else what is the use of experts? And that is the great trouble, or one of the great troubles that we have to contend with.

The CHAIRMAN. How do these men get their experience as experts? Are they men that work in the business?

Mr. SILBERMAN. Undoubtedly. They have not alone been workers, but they have gone through the various grades and have been foremen. The weekly scale would do away with the haggling, and do away with a great many of the difficulties that we have to contend with. I have tried the weekly scale myself, although it is supposed to be contrary to the rules. During election week, I think it was—I am sure it was—being the end of the season, we desired to cut up a lot of material and not caring to haggle over the making of the price, I asked the operators what they considered a fair week's work now at that time of the year, the end of the season, should be. They said, "Give us \$20 a week and we will be tickled to death." I said, "All right. Sit down; you are all going to get \$20 for this week." Then they told me, "It is going to be election day," and that had slipped my memory, but I said: "Never mind, as long as the arrangement is made, we will pay you what I said, including election day." The next day they changed their minds. I got down at 9 o'clock that morning and the foreman sent for me, and the men were not working; they were ordered by the officers of the union, as they claimed, that they can't work on week work; they must settle the price. I told them that irrespective of the union, irrespective of what the union did or did not tell them to do, they were going to work by the week, and they did not want to work by the week,

and we said if they did not want to work by the week we would have somebody else work by the week in their place. They started to work in a half-hearted way, and in the afternoon they stopped again. Finally, we got them to work, and this is what happened. The first operator made that week, after taking the election day out, which is one day, and Friday they did not work but half a day, and they lost three hours besides before they proceeded to work, the first man made 21 garments that week; the second man made 21 garments that week; the third man, who does not work on Saturday, made 19 garments that week; the fourth man made 21 garments that week; the fifth man made 21 garments that week; the sixth man made 21 garments that week; the seventh man made 20 garments, he does not work Saturdays; the eighth man made 21 garments that week; the ninth man made 21 garments that week; the tenth man made 21 garments that week; the eleventh man made 20 garments, and he does not work Saturdays. It simply was, by a strange coincidence, that all made the same amount of work, and even then we were benefited at that.

The CHAIRMAN. That was what I was going to ask you.

Mr. SILBERMAN. We were benefited by it at that, because what we wanted to pay for that garment, and if we had offered them that price, we knew they would refuse it, and still after soldiering on the job, which they did, and after the election day, and the half day on Friday, on which they did not work, and Saturday being half a day, they hardly worked then, they still made out their wages, what we paid them, what we would figure at a very low figure.

The CHAIRMAN. On piece price?

Mr. SILBERMAN. Yes; on piece price. Even though they made what we paid them—so to me that is conclusive evidence that the piecework system introduced, even if they did soldier on the job——

Mr. J. H. COHEN. You mean week-work system, don't you?

Mr. SILBERMAN. I mean week-work system, and it is natural they will not work as fast working by the week as they would work if they worked by the piece, and yet it still would pay. I think there certainly could not be an unanimous opinion either by the manufacturer or by the workers whether that would or would not pay, but I think it is an experiment that is very well worth trying.

Now, we have another matter here, the contracting shop and the manufacturers. The contracting system to-day is almost at nil. What has taken place has been changing from the contracting system to the manufacturing system, for this reason. The rules of the association and of the union on the piece-price plan are as follows: That where you make a garment inside, and you make a garment outside, the same garment, the price for the garment outside must be paid the same as for the garment inside. Now, it is reasonable to argue, then, that if you have to pay the same price outside as you have to pay inside, and you have to pay a foreman outside to oversee that work, and to pay the rent for that, it will cost you more to make the same garment outside than it will cost you to make the same garment inside. So, what follows? The contracting has been practically abolished and the manufacturing system has taken its place. A contract manufacturer will buy his cloth or will get his cloth from the manufacturer. He employs a cutter and produces that garment in the finished state and offers it to the manufacturer at a certain figure. Now, as that manufacturer is under, or is supposed to be under, union control—in fact I doubt very much if there is 1 per cent of the workers to-day that is not union—how is it? Why, that the workers there will make those garments at a figure at which they can be produced at less than the manufacturer in the uptown districts can do it; how is that? It is only reasonable to suppose, then, that they must work for less money there.

Now, if there are union men, and as I understand, and in fact am positive that the prices are made in these shops with a delegate of the union being present, and if the prices are agreeable to the union, why should not the same prices be satisfactory to the workers in the uptown shops? Because a tailor works on Fifth Avenue and does the same kind of work, why should he be paid more? Now, the remedy lies in their own hands. If the work is not being properly paid for in the downtown shops, why don't they remedy it and increase it? But that is not the case. The pay downtown is satisfactory because they do earn a living wage, in fact they earn as much and in many cases more than they earn uptown, because they do not haggle; and that has caused the contractors situation to be eliminated, or the so-called submanufacturers, which we do not recognize. He is a manufacturer only on a smaller scale;

he does a great deal of work himself. Then the social conditions in those shops are different; they have a sort of family group, and they work for less money—there is no doubt about that, and if they are investigated, they claim they are getting the scale, even if they are wrong—they claim they are getting a certain price for garments, and even books are prepared, which will show that those prices are being paid, when the fact is we know they are not being paid. I have investigated several of those conditions myself, and I know of my own knowledge they are not being paid. Consequently, if they are not being paid, still the prices on their books presumably show they are being paid, and there can not be any remedy because the social conditions in those shops are such that you can not get at it, and it is only as those shops get larger and are spread out and a new situation arises that it comes up, and then complaints come in.

The CHAIRMAN. As a matter of unrest among the members of the union, does this condition work to the creation of unrest—that is, the subcontractors' shops or submanufacturers, and the difference in the prices paid?

Mr. SILBERMAN. It does cause unrest. That is one of the conditions. The problem is, for instance, a manufacturer has 50 machines going. Now, he can buy his garments for less than he can produce them, or at the same figure that he can produce it. The conditions have become so irksome that they don't want to assume the responsibility, they would sooner have somebody else assume that responsibility, and they simply curtail their inside plants and buy the merchandise outside, and when it is curtailed that naturally throws a certain number of employees out; but on the other hand, those employees find employment in other shops. But the worker who has been in the habit of working in an artistic shop thinks it beneath his dignity to work in an East Side shop, where he has been working, for instance, in a Fifth Avenue shop.

The CHAIRMAN. I have been in that condition myself.

Mr. SILBERMAN. Then you realize what it is. The unrest is not alone caused—the protocol can not create work; the seasonal conditions have been bad. We had an idea that by curtailing the hours and by curtailing the night work, that would prolong the season, but that has proved to be a fallacy, it can not prolong the season. When we have proper seasonal conditions, we have conditions which are better. In this season, where it has been an open winter, for instance, until the present time the season is bad, it naturally is bad, and no instrument that can be drawn by human hands can make a situation or change the conditions of climatic changes. We must have seasonal weather to have seasonal seasons. And I think a good deal of unrest has been caused this year by that and by the general conditions all through the country, all over, in all branches of business as much as in this industry, but there is hardly a business in existence that has not suffered from the time that we have been having. I think I have about covered everything I can say now unless the chairman wishes to ask some questions.

The CHAIRMAN. Mr. Silberman, can you tell us what proportion of the labor employed in the skirt and cloak industry in the city work for the protocol shops? Of course, if you know that, we can tell what number work for the non-protocol shops. Do you know that?

Mr. SILBERMAN. I do not know offhand, but the statistics we have been gathering ought to furnish that information.

Commissioner BALLARD. You say the trouble there has been in the protocol shops comes before this grievance committee. How are the complaints in the other shops settled?

Mr. SILBERMAN. They have no complaints in the other shops; that is, any complaints that they might make, as I understand it, is not even listened to. They are absolutely under union control, and the manufacturer has absolutely no voice in the matter.

The CHAIRMAN. The union probably would send a committee; you may know that or not.

Mr. SILBERMAN. I understand a complaint can be filed, and a delegate goes down there and listens to the evidence, and probably will render a Scotch verdict of "not proven."

The CHAIRMAN. All right, Mr. Silberman, if that is all you desire to submit. It lacks about six minutes of the time to adjourn for lunch, and we will adjourn and meet again at 2 o'clock in the room where we met yesterday (board of estimate and apportionment chamber), and we will adjourn until 2 o'clock.

(Whereupon, at 12.30 p. m., the commission adjourned, to meet again at 2 p. m. in the room of the board of estimate and apportionment.)

AFTER RECESS—2 O'CLOCK P. M.

(Here Mrs. J. Borden Harriman took the chair.)

Commissioner HARRIMAN. Will the meeting come to order? The commission would like to call upon Mr. Hourwich to give his testimony now.

TESTIMONY OF DR. ISAAC A. HOURWICH.

The CHAIRMAN. Would you be good enough to tell us first your relations under the protocol and what the relations are?

Mr. HOURWICH. I am the chief clerk and counsel to the Cloakmakers' Union of New York, which are represented in the joint board under the protocol.

The CHAIRMAN. How long have you been in that position?

Mr. HOURWICH. Since January 15, 1913; that is to say, to be more correct, I was formerly chief clerk from January 15, 1913, until midnight of January 14, 1914. Since yesterday, since midnight January 15, 1914, I have become chief clerk and counsel under the protocol.

The CHAIRMAN. Will you proceed now with your testimony?

Mr. HOURWICH. Yes.

Madam President and gentlemen of the commission, you have heard here various opinions as to the causes of the unrest which prevails at present in the cloak industry, in spite of the protocol. One of the causes—in fact, the only cause perhaps that has been assigned—is that there are demagogues, or, to be more correct, there is a demagogue, who is put into the situation, having been imported directly from Washington, and he has stirred up trouble, and there are some sensational newspapers who have helped him to stir up trouble.

Now, that explanation is very familiar. You will usually find that when there is any labor disturbance employers usually allege that the disturbance is due to demagogues and sensational newspapers, and that the good men are contented, and it is only the bad men who yield to the temptation and allurements of the demagogue.

Moreover, since it has been mentioned here that a great many of our people engaged in this trade have come from Russia, I might say that this notion is imported from Russia. The Russian Government also maintains that everything is all right in Russia, and everything would be all right. The people are contented, and would be contented but for a few demagogues and the newspapers that are stirring up trouble.

Well, I am not going to criticize that version of it. I will proceed immediately with the discussion of what I regard to be the offices of the union.

It has been stated here parenthetically perhaps that our union lives on trouble, and if there were no troubles there would be no need for a union. I do not take that view. A union is the necessary outgrowth of our modern civilization, just as a manufacturers' association is a necessary association of a budding industry, just as probably industrial combinations and so-called trusts, and are a necessary and inevitable step in our development.

The union is necessary not only where we deal with an association of employers who are engaged in business for profit—a union is necessary, and unions do exist in industries which are conducted by the Government, not for profit but for the common good.

We have got a very efficient union, the typographical union in the Government Printing Office, and why is it necessary? Not because there are demagogues who stir up trouble, and because there is always unrest, but for the very simple reason whether the employer is an individual, or whether it is an association of individuals, or it is a public institution like the Federal Government, or a State government, or a municipality, there is always some relation of employer and employed, and there might always be a conflict of interests, where the employer or the public employer, the Government, thinks that certain things ought to be required of the employee, and the employees think that they ought to have certain advantages and certain benefits which the general public does not realize are due to them. We have got that at present, for example, even in the Government service. The question has been raised in Congress relative to an increase in the wages or salaries of the Government clerks. That question has been before the public, especially in Washington, for some time.

It has been proved that Uncle Sam is not a fair employer, that Uncle Sam has not raised the wages of his wage earners for the last 50 years. Certainly nobody suspects Uncle Sam of trying to beat down his employees, but there

are two sides even to that controversy, and that is why I say a union does not thrive on conflicts. A union is necessary to represent two sides of the contract, no matter who the employer might be.

Another fault has been found with the working of the protocol, and that is that there are too many lawyers in the case.

Too many lawyers make trouble. Probably if there were only one lawyer the representative of the association alone, there would probably be no trouble, if the union had no lawyer at all. Now, I will say that that is an old-fashioned notion. I am a lawyer, and I am not trying to defend my profession. I have not been practicing law for a good many years. I have been engaged as a statistician by the Government, and I am quite fair to my profession. I know its faults, and I also know its advantages. A conscientious lawyer has certain duties toward his client, and he feels those duties, and performs those duties to the best of his understanding, which can not always be said of a layman, in a position of trust.

Now, that is an old-fashioned notion. When there was no protocol, no collective agreement, when there were individual agreements between one employer and one set of workers, then, of course, it did not pay them to go to court, because to go to court with an agreement means two or three years of litigation, and that, of course, does not mean anything. I was counsel for the very same union from 1897 to 1900. We had individual agreements. I brought a few suits on those individual agreements, more for the purpose of establishing the validity of the agreement than for the purpose of accomplishing results.

The fact is that it does not pay the litigant, but where a union deals with an individual employer, it does not have to have lawyers. When the individual employer does not perform his part of the contract, according to the view of the union, the union can simply quit work. They can go out on a strike, and that is the reason they can do very well without lawyers. I am not either a chairman of a picket committee, no matter what may have been said that I have been sending pickets out, which is not true. I can not go on the picket line; that is not my business. I do not know how to do it, and I would not do it. But what I can do is defend the rights of the organization in a written contract, under a written contract which has been written by lawyers, and which has been interpreted and administered by lawyers. The chairman of our board of arbitration is a very eminent lawyer, and consequently in a question of rights, when it comes up, you have got to have lawyers to interpret those rights, and the rights of the union.

Now, let me show you—of course there has been some slight reference about insisting upon rights. Now, let me show you how that works out in practice.

One of the witnesses yesterday referred to the case of J. C. Stratton & Co.

There was a stoppage of work—or, let us be plain about it, there was a strike—in the factory of J. C. Stratton Co. for the following reasons: There was a foreman there who was rather abusive toward all the employees, and on one day he insulted a 17-year-old girl, and insulted her in the grossest way. The girl became hysterical. The men in the shop were all Italians and became excited and quit work immediately and demanded the removal of the foreman. The association, of course, insisted upon its right; that they had no right to strike; that if a foreman abuses an innocent girl by insulting remarks, why, "you have to sit at your machine and file a complaint, and the clerk for the union and the clerk for the association will come, and they will probably render justice"; but men with red human blood may not be able to reason that way under sudden provocation.

When Mr. Dyche, who was at that time clerk, came to the factory to tell the men that they had to sit down to work, because the protocol would not permit them to stop work, that was a strike, and he took out his watch, and he told them, "I give you five minutes to sit down to work. If you do not sit down to work you will be discharged"; and he held his watch in his hand, and when the five minutes were up he told the employer, "Discharge those men," and 500 men were discharged. Later on some were reengaged.

That created a commotion in the union. It was law, of course. It was the protocol. It was trade-union discipline. It was all of that. He wanted to show that the union was faithful in the performance of its agreement with the association. As I understand—I may be wrong about it—he advertised even in the newspapers that there was no strike there, and everybody was at liberty to come and take the places of those people who had been discharged. The fact was that nobody wanted to take their places, because the news spread like wildfire, and what was the results? The general secretary of the International

Ladies' Garment Workers' Union secured a contractor to fill the orders of that firm while the men were out. That was the work of a man who thinks he is a trade-unionist.

Now, let us see how a lawyer proceeds in that case. My first entrance into this situation was on the 23d or 24th of January, 1913. I was called on a long-distance telephone from Washington. I found a very peculiar situation. Mr. Silberman, the president of the manufacturers' association; Dr. Abelson, the clerk for the manufacturers; and the deputy clerks went on strike. They went on strike; I mean it. They declined that they would deal with the union, because there was a stoppage of work in one factory; and therefore they said, "Until you will send those men to work we are not going to deal with you," and what was the result? The result was, of course, I was called in.

Now, I looked into that situation, and I said, "No; you have no right to do that. If you have a grievance against one shop, against the workers of one shop, bring it before your board of grievance. If necessary, and the board of grievance fails to give you justice, bring it before the board of arbitration; but you have no right to take the law into your own hands. You have no right to go on strike. You have no right to stop the machinery of the protocol in 499 shops, which are in no way involved and whose employees are in no way responsible for the transgression of the people of that one shop."

Of course, I was immediately referred to precedents established by the former chief clerk, by Mr. Dyche, on December 6. On December 6 I was told that is on record, while there was a stoppage of work and the association stopped up the machinery, and then when work was resumed, why again they resumed the operation of the protocol. On December 17 a similar state of affairs occurred. There was a stoppage of work in one shop, and when the stoppage of work discontinued, why, they stopped up the machinery. Of course, they said they stopped up the machinery, and then the machinery was set in motion again when the men went back to work.

Now, I said, "You are wrong. This is anarchy"; and over that matter, of course, we disagreed before the board of grievances. The board of grievances, or course, was presided over—or one of the members of the board of grievances was Mr. Silberman himself. This question then came before the board of arbitration. We did not ask for a meeting of the board of arbitration; the other side called the board of arbitration, and I will read to you what Mr. Brandeis said about that:

"It seems to us entirely clear that the action of the stopping of the machinery was an action which was in violation of the protocol, and that the contention that was made that by reason of the failure to observe—I mean the performance by reason of improper stoppage of work and the failure of individual officers to assert their authority, such as they had, to compel men to go back to work; failure of the policemen, as it were, to do their duty—did not amount to automatic suspension of the agreement. It seems to us that, while Mr. Silberman's action as a layman was not unnatural, under the provocation, as he understood it, it can not be legally justified, and that the proposition of law that was laid down in those various letters that it automatically put an end to or suspended the operation of the machinery which had been devised is unsound as a principle of law, and if we were called upon to act as arbitrators in passing upon it we should so declare unhesitatingly and emphatically."

That was my first entrance into this situation.

I found a condition of lawlessness, in which Mr. Silberman, then chairman of the executive committee of the manufacturers' association, and the whole of the machinery of the protocol on the other side, were engaged.

That extract was quoted, of course, was quoted from the stenographic minutes.

That was the work of the lawyer.

The layman said: "All right, stop up the machinery, we shall try to send the men back to work." Meanwhile 499 shops would have their complaint, and the complaints would get no redress and be uninvestigated. Because there is one obstreperous shop that does not want to observe the discipline, therefore 499 shops must suffer. I said, "Now, 499 shops shall suffer because some one in one shop committed a transgression of the protocol," and I was sustained on that proposition.

This was the work of the lawyer.

Now, I want, gentlemen, to make it perfectly clear that I have not been, in fact, a conciliator at all. I am accused of not having been a conciliator. The fact is that that was not my office. While in name I was chief clerk, by order

of the board of directors the work was divided between my assistant and myself in the following manner: All cases in which conciliation was to be engaged in were assigned to him. If he and his chief clerk on the other side could not agree, in other words, if the conciliation failed, then those cases were referred to me, not for conciliation any more, because whatever efforts at conciliation could be made had been made, but for the purpose of bringing that matter before the board of grievances, and eventually before the board of arbitration.

As I characterized it once, the situation was this: We had a secretary of state and a secretary of war. The secretary of state was my assistant; he was to use diplomacy, conciliation, and mediation. My office was to go to work, and naturally when I went to work I fought with all the vigor that I have.

There were only very few cases where I was called in to try conciliation, and I shall presently relate my experience on them; but I want first to make reference to one statistical figure. You heard Mr. Winslow here yesterday testify to the number of cases that were referred to the board of grievances, and as you understand, cases are referred to the board of grievances only when the clerks who are the peace officers and mediators have failed to accomplish results.

Now, during the first 2 years or, say, 21 months, from about the 1st of April, 1911, to December 31, 1912, there were 166 cases before the board of grievances, on an average 8 cases a month. During my incumbency—during the nine months of my incumbency, or, to be more correct, during the first 8 months of my incumbency, as I came in the latter part of January, there were 13 cases—one and a half a month.

Now, if we are to judge by the number of cases referred to the board of arbitration by the pugnacity and temperament of the chief conciliator, I think I have made a fairly good record.

Now, let us go next to the essence of the protocol. What is really the protocol? The protocol is an agreement that differs from other agreements in this respect: That in substance it substitutes arbitration in lieu of strikes. Conciliation, of course, is the first stage and arbitration is the next stage.

I believe that this is a sound principle. I believe that the protocol as it was framed, with all these imperfections, for which, of course, we must allow in every human document, was a good document. Let me read to you what are the functions of the board of arbitration under the protocol. The second paragraph of section 16 reads:

“To such board shall be submitted any differences hereafter arising between the parties hereto or between any of the members of the manufacturers' association and any of the members of the union.”

The provision is very clear. It makes no distinction between questions affecting the whole organization on the one side and the whole organization on the other side, and questions that may affect one employer, and the employees of one shop, or even one employee of one shop. Both classes of cases come within the jurisdiction of the board of arbitration.

In other words, if conciliation fails in the case of one employer and one employee, if the board of grievances can not agree, because there may be a question of principle involved, in that case an appeal may be taken to the board of arbitration. In practice we have not had any arbitration of individual disputes. The board of arbitration has been in session only six times. The first time it was in session was in March, 1911, to devise some improvements in the machinery of the protocol. At that time the clerks were created. After that there was no session of the board of arbitration until February 3, 1913—for nearly two years.

I was the one who introduced the custom, or rather reintroduced the custom of calling the board of arbitration, and even I have not succeeded yet in getting the board of arbitration to consider individual disputes.

The next session of the board of arbitration was in February—late in February or early in March—upon the question of legal holidays, again a general question, not a question affecting one particular shop or the dispute in one particular shop.

Then, again, the next session was in August, 1913. Then, again, there was a session in the early part of October, I think the 4th, 5th, or 6th, if I am not mistaken. The dates are here, gentlemen, and if I am in error as to dates that can easily be corrected later on.

Then, the last session was on October 12 and 13, and in all those cases only broad, general questions were considered, which affected both organizations as

such, and did not affect any individual disputes. These would, of course, have affected individual disputes so far as general legislation may affect the welfare or rights of individuals, but they did not settle any individual disputes.

Now, what is the reason for it? I take it there are two reasons for it. One is the personnel of our board of arbitration. I said at one of the sessions of the conference that we had that we have justices of the Supreme Court, but we need justices of the peace; and it would be, of course, out of place to expect Chief Justice White to sit down to try a small case which is within the jurisdiction of the justice of the peace, for the very same reason considering that Mr. Brandeis and Mr. Holt and Mr. Hillquit, our three arbitrators, are busy men, who can not give their time to all our individual squabbles—we never call upon them.

I said Mr. Hillquit. I want to say that our principal arbitrator is Mr. Hillquit, but when he fell sick last year and left for Europe, and we did not know how soon he would return, we succeeded in obtaining the services of Dr. Weyl, who, of course, like the other arbitrators, gives his time free, as a substitute for Mr. Hillquit, and I made that perfectly plain before the conference which was held last July between the manufacturers and the unions.

Now, these three gentlemen give their time freely and, of course, you can not drive a willing horse to death, as they say. But, at the same time, that is no advantage to us, as we have outlived that period when we had to call upon public charity. Public charity is too expensive.

I can give you one illustration: We had a good many complaints that the wages which are stipulated in the protocol are not paid. It is all right to stipulate wages in the protocol. It is all right to grant an increase of wages, but you have got to see that these wages are paid, and there are a number of employers who do not pay those wages. What can we do? Of course, we can complain, and I must say that I do not know of a single case where the board of grievances—in fact, it never comes to the board of grievances—I do not know a single case where the chief clerk on the other side, or the deputy clerk for that matter, should not decide to pay those wages and to force the manufacturer to pay those wages; that is faithfully done by the association, but there is a colored gentleman in the woodpile.

That fact is this: That an arrangement was made two years ago—between two and a half years ago—between the manufacturers' association and the unions at the board of grievances that wages should be collected only for that week for which complaint has been made. The theory of it is this: That the manufacturer who does not pay according to the scale and the workmen who accept payment below the scale are both equally guilty of a breach of the protocol and, being equally guilty, neither of them should have recourse to law—to the protocol law, of course; but if he comes and makes the complaint he gets reduction for that last week. Now, I will say that is a proposition of law which is unsound, and it is unsound for the following reason: While the workman is punished for having worked possibly half an hour without reporting to the union, the manufacturer is not punished at all; he pockets the money.

Now, I say if that matter were to go before a court of law, I claim that I could win that case for the workman for the full time for the following reasons: The protocol provides certain rates of wages. It provides that any one who belongs to the union, and works in a union shop, is working under the protocol, and consequently the rates of wages are stipulated by the protocol. Moreover, the protocol provides specifically that no individual agreements between the employers and the employees are permitted. Consequently it could not be objected in defense of the manufacturer that the workman, by accepting lower wages than the stipulated rate, waived his right or acquiesced in a new rate.

That would not hold. If he is entitled to twenty-three and a half dollars, and he gets seventeen, that means he has received seventeen on account, and six and a half dollars are coming to him. And if he went to law, he would collect it; but we have stipulated that we shall not go to law. But the manufacturer who transgresses the protocol pockets the money and the workman goes without. Now, the question is, why does not the workman complain immediately? It is for a very simple reason. He usually complains when he expects to quit the job, because he knows that if he does not some reason will be found to get rid of him, and the union will be unable to protect him, because in order to protect him, of course, we shall have to prove discrimination for union activity. The burden of proof will be on us. The manufacturer, under the

protocol, has the right to discharge a workman any time, without any cause. That is the right of the manufacturer. We have not abridged that right of the protocol, except for one cause—a man must not be discharged for union activity.

This is called unfair discrimination in the protocol, and consequently we have got to prove, and it is not always an easy matter to prove to the satisfaction of the manufacturers that there was unfair discrimination, and that the man was not dismissed simply for incompetency, or because there was no room for him in the factory, because the manufacturer wanted to reduce his staff.

Now, that being the case, of course, we might go before the board of arbitration, but the board of arbitration does not arbitrate, and what can we do? Then, really, the man has no redress; and having no redress, he does not want to complain, and for this reason we know that in a good many shops the wages stipulated by the protocol are not paid, and if you desire proof I shall immediately cite it. We have had a statistical investigation. That statistical investigation brought out the following facts:

There were canvas cutters; in fact they average \$16 a week, the protocol rate is \$12 a week.

Now, that was very singular. While the manufacturers are obliged to pay only \$12 a week to canvas cutters, who are really apprentices, they pay them \$4 above the scale, 33½ per cent above the scale, whereas the regular cutters, mechanics, skilled men, asked for an increase from \$25 to \$30; that is to say, \$5, or 20 per cent, and they could not get it.

Now, is it not singular that a manufacturer should refuse four or five dollars to a skilled mechanic and give it voluntarily to an apprentice, while they did not even ask for an increase? Now, the fact is very plain: Those men were not canvas cutters at all. They were regular mechanics who were paid under the scale.

Now, that is a fact, statistically demonstrated. Now, you see, then, that one of the first fundamental principles of the protocol is not observed. The wages stipulated by the protocol are not paid. I should not say that they are never paid, but in a good many cases they are not paid, and why? They are not paid because we have no remedy to compel the payment of the wages and at the same time to protect the claimant against discharge. That is why we want to insist upon our rights.

Now, I said that the first thing was the absenteeism of our board of arbitration. Now, this question was submitted to the board of arbitration last August; it has been before them since that time, and they have not found the time, as yet, to consider this question. It could have been disposed of in probably an hour or so, but they have not found the time to consider this question up to the present date. That means four or five months, and during those five months people were underpaid. I do not know how much they were underpaid, but I fancy it would pay us to engage arbitrators on a salary, and we would still be in. We would still have a balance left for the benefit of our men. The theory is that they are in parte delicto—to use a legal phrase; they are equally at fault, because one accepts lower wages, and the other pays lower wages, but it is certainly not fair to say that a workingman who has a family to support and who is threatened with dismissal if he will not consent to lower wages, that that man is equally at fault with the manufacturer, who can dismiss him at any time, and wait until the board of arbitration will find him guilty of unfair discrimination.

Madam President and gentlemen of this board, you have heard here to-day the case of the president of the manufacturers' association. A member of the board of grievances told you that he told his men, "I want you to work by the week, although the protocol provides that you are to work by the piece," and when he was told that under the protocol they had no right to do so, he told them, "Right or no right, you have to work, or else I will find others." That was said by the member of the board of grievances, by the ex-chairman of the manufacturers' association. Now, if a member of the board of grievances, who more than once presided at the board of grievances, can tell that to his workmen, you can very well see why a workman will accept a rate which is not in conformity with the protocol rate.

Now, I spoke of the absenteeism of the board of arbitration as a question of a fact, but there is also a theory of law, and I will read to you that theory of law:

Pages 395 and 396 of the minutes of the session of October 13, 1913, of the board of arbitration says: "For the proper working out of this scheme of

getting a result, which is to be mutually reasonably satisfactory to both parties, the thought has got to be a great deal more upon duty than upon rights, and every one must recognize, as he does in the ordinary affairs of life, that if he is all the time endeavoring to exact to the uttermost penny, and to the uttermost limit, full performance from the other person instead of considering whether he is giving full performance there is not only going to be a great deal of friction, but the best results will not be attained.

"That seems to us to be an absolute essential of the working out of the protocol. It never was intended to be and it can not accomplish the results of a court of justice."

The theory, then, is that the protocol can not accomplish the results of a court of justice. When a man is underpaid he ought not to demand his pay to the uttermost penny, but ought to see whether he is giving full performance and look toward his duty, and then, if he will insist upon getting all that he is entitled to the best results will not be accomplished, because the manufacturer who will have to pay up will be displeased, and the amicable relations between the manufacturer and his employees will be disturbed.

Now, I must say, with all due respect to our board of arbitration, as a citizen I dissent from that statement. I say that this is a misconstruction of the plan of the plain provision of the protocol. I do not know what was intended by anybody. I know what was said in the protocol, and when the 50,000 workmen went back to work they were told they should not strike, but they will be given redress of all the grievances between any members of the manufacturers and any members of the unions. That has not been given to them. That is a denial of justice, and that denial of justice I lay at the door of the board of arbitration.

Now, there is a great deal to be said about the situation. Some people have already covered it. Mr. Bisno will follow me, and I hope he will make clear a good many of the trade questions for you. I will say, by way of introducing the testimony of Mr. Bisno, which I regard as part of my case, because the telegram which was sent by Mrs. Harriman asked me to bring others of my associates who could help me by their testimony, and upon the strength of this request I asked Mr. Bisno to appear here.

Now, Mr. Bisno, I will say by way of introduction, was formerly chief clerk of the union. He was given his passports, to use a phrase that was used by the counsel for the manufacturers' association, before the board of arbitration last February a year ago—he was given his passports because he was a jingo. Now, I want to say I have known Mr. Bisno for 20 years. Mr. Bisno, I will say without exaggeration, is a Christlike man. I have observed Mr. Bisno showered on by insults for two or three hours. My temperament, Madam President, would not have stood that. But that man stood placidly and did not say a word. Finally, a reference was made to the way in which he proposed to his wife some 20 years ago. Then he said very calmly: "Here I draw the line."

That man who will never answer by a word of abuse to hours of insult; that man was called a jingo; that man was temperamentally unfit for the work of conciliation; that man was forced out of the situation by the demand of the manufacturers' association. They said, if this man is going to be the chief clerk, why, the protocol will be broken. Of course you can see by my voice that I am a violent sort of wild-eyed anarchist, but he was very placid, and you will hear him talk.

Now, this man has been a tradesman, after that, for four years he was deputy factory inspector under Mrs. Kelly, and she seemed to have managed him quite well. Subsequent to that he was a special agent of the Bureau of Labor in the investigation of women and child labor. I have never heard that there was any trouble there. As far as I know, from people who have met him, he was held by everybody in high esteem, but when he came into this situation, why, he became a jingo. He had to be fired in order that the protocol might continue to the satisfaction of the manufacturers' association.

Now, he will tell you a great deal about trade-union questions, but I want to say only this: We have got a great many troubles. We have a system of piece-work where we have got continuous bargaining. In that process there are about half a dozen men in every shop that have to do the bargaining for the rest of the shop. They are in the firing line. There are 500 association shops. That is to say, about 250 inside shops and about 250 so-called outside shops. There are, in other words, about 3,000 men, who are in the vanguard of this union, and none of those 3,000 men is secure from discharge.

Of course, I do not claim that every one of them would be discharged, but it is not necessary to discharge every man. If one man is discharged, or discriminated against, in other words, he is not given work—and there are many ways to kill a dog—if he does not get his due share, then the union can not protect him, because there is no machinery of law, because the board of arbitration says, "Look on your duties; do not look to your rights. If you are fired, you ought to be satisfied that the best results will not be attained if you are not fired, or if you will complain."

Now, under those conditions there is no wonder, as one of the witnesses testified here, Mr. Leader, who, by the way, is not my superior; he is on the other side of the fence—as Mr. Leader testified that in association jobs they are not getting as good wages as they are getting in nonassociation shops. Now, I shall not go into this question any further, because I have a good many other things that I want to cover.

Now, let us go to the work of the board of grievances. The records of the board of grievances previous to my coming here are very fragmentary and imperfect. It is not boasting, but I have simply introduced a rule that at every session of the board of grievances we must have a stenographer, and we have stenographic minutes. Previous to that, to my knowledge there was only one conference, late in December, 1912, at which there was a stenographer. There may have been one or two more of which I have no knowledge. I have not seen those minutes, but as a rule the minutes were kept by the clerks, or the secretaries on each side, and those minutes are so fragmentary that when I engaged a professor of the University of Pennsylvania to look them over he told me he could not make head or tail out of them. Now, those minutes have been, we are told, classified by the statistician of the board of arbitration. Now, here I want to say something about the statistician. I want to say that I am from Missouri—"I want to be shown." I shall submit to you a transcript of all the minutes of last year, so that this commission may judge for itself whether the conclusions of the statistician are correct. That is to say, it is one thing to state a fact and another thing to state a conclusion—to arrive at a conclusion from certain facts.

I have been a statistician for a good many years, and I want to see the original material and the methods by which these conclusions have been arrived at before I will subscribe to the statement that, practically speaking, there were no disagreements on the board of grievances.

You have heard here the statement of Mr. Leader, who for a year was one of the members of the board of grievances, and he told you that there were constant deadlocks. I have seen myself a number of deadlocks before, and I have heard from others that there were constant deadlocks, and now the statistician comes and tells us that there were practically only nine deadlocks, and inasmuch as they occurred during the year 1913, when I was there, it means that I made all the deadlocks, and that previous to my advent into this situation there were no deadlocks. I will simply say that I am not going to subscribe to that until I am shown; but, moreover, I want to make the following statement: There are a good many very estimable gentlemen, men of very high character, in this community who are not statisticians, and therefore it will be no disparagement of Mr. Winslow if I show he is not a statistician.

Mr. Winslow never received any theoretical training as a statistician, neither has he ever had any experience as a statistician until Mr. Brandeis made him a statistician.

Mr. Winslow was never employed by the Government as a statistician; and I say this is one of the complaints that I have against the board of arbitration, that an investigation which involves the interests of possibly 20,000 people has been placed in charge of a man who does not know anything about statistics; he has never been a statistician.

I regret to be obliged to say that here; but when the statistics are paraded before us, to the detriment of the workmen I represent, it is my duty to be plain-spoken. I was trying to be as polite as possible, when Mr. Brandeis, all of a sudden, espying in the audience Mr. Winslow, said: "Well, we are happy to have Mr. Winslow with us, and want him to be the statistician." Mr. Brandeis is a champion of efficiency. Mr. Brandeis has told the railways of this country that he could show them how to save \$300,000,000 a year by efficiency. Now, this was the first illustration. There was a job to be given to a statistician. What would a business house do? When Mr. Abraham Straus, of the department store of this city, needed a statistician he advertised. When the Government needs a statistician it announces a civil-service examination. Nothing

of that kind was done. Mr. Brandeis himself is not a statistician and no judge of statisticians. Why, we have another branch of this industry of the ladies' garment workers' union, a statistical bureau which was established in April, which is in charge of a man who has a national reputation as a statistician. It would have been plain courtesy to have asked him whether he could not undertake this job or whether he could not recommend somebody else.

When the protocol in the ladies' dress and waist industry was signed they provided for a joint board of sanitary control. Did they make a new joint board of sanitary control? Why, no. They asked Dr. Price, an eminent specialist in sanitation, who is in charge of our joint board of sanitary control, to enlarge the scope of his activity and take in also the dress and waist industry. When a board of arbitration was to be provided, did they look for new arbitrators? Why, no. The same board of arbitration which has been provided for the cloak industry was asked also to act as arbitrators in the waist and dress industry and other industries; but here was a statistical investigation, and we had a statistical division in the international union; and not a word was said, but Mr. Brandeis made Mr. Winslow his statistician in the same way as the King of England might make Mr. Winslow a peer.

According to the directions that were given by Mr. Brandeis, we were to co-operate with Mr. Winslow in it. It is the first time that I saw that these statistics have been prepared. I never had a chance to look into them before they were presented to this commission, and I must say that I am a statistician. I have held some responsible positions under the Government as a statistician, and I was at least entitled to look at them. If I am not a statistician, I might find some statistician who would look into those figures and tell me whether they correctly represent conclusions from the original data or not.

Now, I shall leave that, and I shall come next to the question of the relations of the international with these unions.

It is said that there was a lawyer, and that that lawyer raised the question of jurisdiction, and that was me. Yes; a lawyer raised the question of jurisdiction, but it was not I; it was another lawyer who did that; and I must say that I am pained to be obliged to refer to this matter every time it comes up. This question has been thrown at me more than once, in face of the stenographic minutes, which show exactly what was done. When I came before the board of grievances for the first time after the correspondence which I referred to, in which I told the manufacturers' association that it had no right to engage in anarchy, we had considerable discussion there, at that meeting, on January 27, 1913, and the following incident occurred. I said:

"We have agreed upon a plan to settle these controversies in a civilized way, and this is what we want to do: You gentlemen can not deal with me individually; I am nothing but an employee or an officer of this organization; I am simply carrying out the decisions of the organization. If you claim that anyone has done something in violation of the protocol, you have your machinery for taking the matter up, and it is possible that the board of grievances may have to settle the matter. What I contend is, so long as we are to live in peace the protocol can not be suspended automatically. Particular cases should go before the board of grievances or the board of arbitration, as necessity may require.

"Now, I want to make one correction here. There seems to be a little misunderstanding as to our organization—as to the situation of our organization. This protocol was made between the Cloak, Suit & Skirt Manufacturers' Protective Association and the following locals of the International Ladies' Garment Workers' Union"—and here I was interrupted by Mr. Cohen.

Mr. Cohen said: "That is not the case. The protocol was ratified by the International Ladies' Garment Workers' Union. At first it was drawn up between the locals, and then we insisted upon the international, refusing to deal with the locals. We hold the international responsible for the protocol."

And that was like a thunderbolt from the clear sky. I was absolutely unprepared for that because of the correspondence for two years previous, and the correspondence in relation to this was addressed to the joint board which I represented. The letters were quoted from, and the letters are here, and can be referred to, if necessary.

I replied to that: "That is a position, so far as I can see, that is not in agreement with the wording of the protocol."

Mr. Cohen then said: "If that is the issue, I must protest right now against any statement that our dealings are with the joint board in this protocol. In the first case, we have had cases before the board of arbitration, and the cases have been in litigation between the international and the association

under this protocol. They ratified the protocol; besides the signatures of its officers appear upon it. If you are going to take the position that we must be bound by the attitude of the joint board of locals, then the protocol has been utterly misconceived on their side, or it is high time that the joint board should instruct you, and the executive board should instruct you, that this is the situation. This is not a matter that our board will discuss at all—it is not open for discussion."

I replied then: "If that is not a question for determination, I move that we adjourn. All our letters have been sent on letterheads of the joint board. I will fully agree that you may have misconceived the situation, but we can not change the constitution of our union in order to meet with the views of the manufacturers' association. The protocol is between the Cloak, Suit & Skirt Manufacturers' Protective Association and the following locals of the International Garment Union, and they are enumerated." I then referred to the document. Mr. Silberman said: "I still claim that we are not dealing with the joint board, and do not care to go into any controversy with your board. Our counsel has made it quite clear that we are not dealing with the joint board, but with the International Garment Workers, and that is the only terms that we can take."

To this I replied: "This conference can not continue. I have nothing to do with the International Ladies' Garment Workers' Union. I am not an official of it, and I have no authority to speak in their behalf. Consequently, you may continue your negotiations with that body. Possibly you may be right about it. I am quite sure you are wrong, but you may be right. If you are, I am here without authority—I represent the joint board, and I am not an official of the international."

Now, I leave it to any fair-minded man, or to any body of men who are fair-minded, and wouldn't you say it was the lawyer imported from Washington that raised the question of jurisdiction—would you say it was the lawyer from Washington that raised the question of jurisdiction, or was it the joint board that raised the question of jurisdiction?

Now, this question, of course, came up at the meeting of the board of arbitration; it was really not a meeting of the board, but it was a conference at which two of the members of the board were present, and in which two of the members of the board participated, and that question was settled by the arbitrators, and their opinion was acquiesced in by us, and that is what they said. Now, this is what Mr. Brandeis said at the conference held February 3 and 4, 1913:

"Now, there is one other matter that has been discussed, and perhaps it is the root of the whole situation, and that is, the relation of the international. I think it is the opinion of Mr. Holt and myself that the real situation was that this agreement was made by the locals, the joint board, and those local unions, through the officers of the international; that is was primarily, therefore, legally, an obligation of the joint board, and that the international was bound by its constitution, and bound through its relations to the whole transaction, and also bound to the association, practically or substantially as guarantor that the agreement should be observed in all particulars. That is, it was to use the fullness of its influence and power to see to it that the joint board performed its obligations."

Mr. Brandeis went on to say further: "Now, I think that that substantially was what Mr. London stated his view of the situation to be. I don't think it is very important to discuss carefully what the legal effect of that is, but it seemed to us that as a practical matter this course can be pursued in any matters of moment—of course, most matters are disposed of through the deputy clerk and the deputies—but in any matters of moment, if the complaint is made to the joint board and addressed to the joint board, notice might be sent of a copy of that complaint to the international board, much as a man who had a guarantor on a contract would send to the guarantor a copy of his notice to the other party to the contract, so that he might be advised as to what the claim was, and that all rights, whatever they are, should be preserved."

And then further Mr. Brandeis said: "Our idea, I think, is exactly the same as yours, Mr. Hourwich. Nothing should be referred for action by the international until there has been a failure to act by the joint board; that is, the international should be strictly the guarantor of the due performance by the joint board, and the suggestion of sending these notices was that the international might at all times, and as promptly as possible, be advised of any claim on the part of the association that the joint board or some of its officers or agents or

members had not fully performed their obligations. That is the purpose of at once giving notice or sending a copy of any complaint or any requests in the nature of a complaint—communications generally—as you have stated. But that being the primary obligation of the joint board, there should be an equally extensive secondary obligation on the part of the international to see to the performance of that agreement.”

And then Mr. Brandeis dictated the following letter, which the international was to sign, with the consent of the joint board, and with the approval of the joint board, and sent to the association:

“We have been requested by you to state the nature of our guaranty of the performance of the protocol and, with the approval of the joint board, to state as follows:

“‘We guarantee the due performance by the joint board of all of the provisions of the protocol. With a view to securing prompt action, we suggest that any complaint, request, or similar communication that you may have occasion to send to the joint board, that copies be mailed at the same time to us in order that we may duly confer, so far as this may seem to be necessary, with the members of the joint board in relation thereto.’”

This is all there is of that so-called guaranty with the international officers, that the international officers should duly confer with us, and that they should exercise their authority under the constitution to see to it that we performed properly. We signed it, of course, because we did not consider this was a matter we thought worth quibbling about.

I will say here that this led to two conflicts between the joint board and the international—two conflicts which have very much aggravated this situation. I had thought at the time that Mr. Brandeis sought to pacify the association for the defeat that they had suffered in regard to the question of the suspension of the machinery of the protocol, and also in regard to the question of the authority of the joint board, and to make peace in the family he made that suggestion; but, unfortunately, it has resulted in this: That Mr. Brandeis has placed the international in the position where it is claimed to have authority over the protocol, and there were constant conflicts between the international and the joint board, which have ultimately come to a very serious condition within the union itself. So much for this question of jurisdiction.

Now, let me go further to the question of conciliation. I have tried my hand at conciliation twice, and let me tell you with what result: Some time in March, if I am not mistaken—in February or in March—when I was in the most angelic mood, having just come from Washington, where everything is so placid, and having still maintained my habit of going to Washington, having maintained my connection with Washington, and running over to Washington once in a while to take a rest from this turmoil here, a shop strike occurred in the factory of H. Samuelson, I think. The men there went out and did a good many things against the protocol; and if I did not give them notice that there was a strike, I would immediately have sent them back to work; but Dr. Abelson did not give me notice, and it was not an oversight, nor was it dereliction of his duty to his association either, as he understood it to be; it was a policy. Dr. Abelson claimed that it was optional with the association either to call upon the machinery of the protocol to send a man back to work or simply to discharge the men without calling upon us.

That was stated in a letter that was part of the case of Jaffe & Katz, later on. In that letter he claimed, as I say, the right of the association either to avail itself of the machinery of the protocol or to discharge the men. I hold that is absolutely contrary to the protocol. I shall have occasion to show presently that, under the protocol, the procedure is as follows: That whenever there is a strike it is the duty of the association to call upon the clerk of the union to send the men back to work, and then we do send everybody back to work. If he wants to discriminate among them, if he wants to discharge some of them, which of course we would not stand for, then the best thing is not to call upon us. At that time I was racking my head thinking over some relief, some remedy—and if I am not fired from the union I think I shall find a remedy by and by—but at this time I confess I thought I was powerless, so instead of looking to law I looked to conciliation. I do not quarrel with Dr. Abelson, and I did not quarrel with Dr. Abelson; I invited Dr. Abelson to dinner, which is usually accepted as a sign of good fellowship, and we had a very pleasant evening together. We sat in the Café Boulevard—which is a very good place, by the way; I recommend it to anyone who wants to go there; that is a free

advertisement—we sat there from 8 o'clock to about 2 o'clock in the morning; until some one reminded Dr. Abelson that he had a wife in Yonkers.

I had lived at that time 53 years in the world, and consequently I had a great deal to tell, and he was pumping me, and we were both Progressives, and we had a good many points in common, and so we were talking over matters in a very friendly way. But, if you will remember, there is a comedy by Moliere, where a creditor comes to a nobleman and wants to collect his debt, and the nobleman showers courtesies on the creditor so that the creditor does not feel like asking for his money; but once in a while he just injects a little question: "How about that note of yours, your highness?" So I, pursuing the same policy, I would switch off from the discussion on questions relating to Siberia and other places and questions of interest in the Progressive Party and the Socialistic Union, and come back to the question of H. Samuelson's strike and was asking him to do something for those strikers. I said, "I admit they are wrong, but they humbly beg the manufacturer to let them go back," and any manufacturer who wants to live at peace with his men, and when they come hat in hand and want to be taken back after a two weeks' strike, it is probably policy on his part to take them back; and I told him that, moreover, the manufacturer told me he was willing to take them back, but was afraid of the discipline of the association, and he said Dr. Abelson would not let him take them back. So I was talking to him every now and then for seven hours, but Dr. Abelson did not see it, and he said it would be better for everybody that they should not go back to work. So 75 families were thrown out of work.

Is this conciliation? Is that a spirit of conciliation? Is that the temperament that is conducive to conciliation? Or is this autocracy? I must say that after that experiment I stopped meddling with conciliation and left it to my assistant, whose duty it is. My duty is to fight. A lawyer who appears in court is not expected to conciliate; when he is trying a case he is not expected to conciliate. Conciliation precedes the trying of the case, and if the parties could not come to a peaceful agreement it is not the lawyer's duty to placate the defendant; it is his duty to fight the defendant; and that is what I have been doing with all my might; and that is why I am called temperamentally unfit. It is not because I am temperamentally unfit, as they say, that they want to get rid of me, but because I insist on my rights. I can assure you I can put on my evening clothes and be as sociable as anybody, but when I have got to fight I put on my fighting clothes.

Now, there was another case, as I say; a second experiment where I tried my hand at conciliation. In that case it was forced upon me. Let me tell you the substance of that case. There is a universal custom in the cloak trade during dull times—and, as you have heard here, there are plenty of dull times there—every operator is permitted to use his machine for the purpose of sewing a dress for his wife or his sister or his daughter or his sweetheart. The power is there and nobody really considers it; it is a custom, and every operator thinks it is right, because it has been sanctioned by custom.

In one shop, that of S. Marcus, an operator—No. 3—he was known only by number, so he could not be blacklisted—operator No. 3 committed an offense, and the offense was as follows: The manufacturer gave orders that no one should sew his own work at the machines. Now, that was done after everybody had bought remnants of that same manufacturer for dresses for his family, to be made for Passover, and he expected to make those dresses right there in the shop on the machine. Of course, I admit the manufacturer had a right to do that; the machine is his property; the shop is his, the power is his, and he has a perfect right to tell the workmen not to work on those machines. Whether he was fair is a different proposition; but the protocol does not compel the manufacturer to be fair, and I can't enforce fairness. All I can enforce is right, and I am satisfied with right. Now, under those conditions, the man sat down and he was about to start sewing, and he put the dress into the machine. Right there he was caught in the act, and like a schoolboy, he said, "It is not me, it was him," pointing to somebody else. He said, "I was not sewing the dress, I was only spreading that dress." Of course, that was only an excuse. It is not everyone who remembers to think like the late Chief of Police Devery, who said, "Unless you are caught with the goods, it is all right, but if you are caught with the goods, you are all wrong"; and the man was discharged.

Of course, there was a disagreement. On the complaint, my assistant came to me and told me about that case, and the man ought not to be discharged; I

said: "You can't find that case, the man has no right, the manufacturer had a right to discharge him, and the man has no right." Now, that was the opinion of the lawyer, and that tailor was not satisfied. The man wanted to sew a dress for his wife, and he could not see the distinction between laws and rights; he did not know that there could be laws and also rights; he did not understand like his lawyer; possibly he does not understand the meaning of the protocol. He came to the joint board. Our joint board are also tailors, they don't understand the protocol, either, and everyone there was unanimous, because every one of them is sewing dresses for their wives, or their sisters, and so forth, and everyone thought if that right was to be taken away in one shop it would be taken away in all shops, and, tailorlike, they told me to go ahead and fight that case. Well, I had to go ahead and fight that case, when I knew under the law I could accomplish absolutely nothing; and I knew as far as conciliation was concerned, it had failed. Now, let me tell you what occurred. I read from the record of the grievance board's minutes of May 15, 1913, the case of Operator No. 3 against S. Marcus.

Mr. JULIUS H. COHEN. How long do you intend to sit, Mr. Chairman? I ask because there are a number of manufacturers here who do not want to remain unless their presence is needed.

Commissioner LENNON. They can go for the afternoon, except yourself.

The CHAIRMAN (Commissioner Harriman). We expect to sit until 5 o'clock, and Mr. Hourwich will close at 4 o'clock.

Mr. HOURWICH. I read from the record of the S. Marcus case as follows:

"Dr. ABELSON. There is a disagreement in this case. There are supposed to be written reports on both sides.

"(Dr. Abelson reads the report of the representative of the association.)

"Mr. HOURWICH. I am sorry I have not got the original statement of Mr. Zucker. It is on file in the office. But the facts as presented by Mr. Zucker show that this report [just read], is not quite complete.

"The CHAIRMAN. Couldn't you send and get his report?

"Mr. HOURWICH. Possibly, but it might delay matters. I will tell you in substance the same thing."

Then I proceeded and told the substance of it, and then Mr. Lefcourt, one of the members of the board of grievances, interposed and said:

"Mr. LEFCOURT. In view of the fact that we have no written report on the part of Mr. Hourwich, I do not think that we ought to proceed until that written report is presented."

That was a technicality. I read:

"Mr. HOURWICH. I will waive that report. I will agree to go on upon the report presented by Mr. Geld. It is not really material.

"Mr. LEFCOURT. I still think we have a right not to proceed with this case until the report in writing is in."

Then Mr. Julius Henry Cohen said:

"I think it might be better to let Mr. Hourwich finish his statement first."

The laymen stood on technicalities; my opponent did not wish to stand on technicalities, but wanted to go to the root of the case. Then I proceeded with the following statement:

"Mr. HOURWICH. I do not claim that the employer had no right to order his men not to do any work but his work; he was perfectly within his right, and he had a perfect right to order that no such work should be done. Furthermore, he had a perfect right to discipline any man who disobeyed the order. I don't dispute that. The main point is this, that it is a sort of usage in the trade, an unwritten custom, not a law, it is a custom that operators, when there is no work in the factory, are permitted to do their own work. As I say, I can not claim it is a law, but you know in our Jewish parlance there is a saying that a custom overrides a law.

"So you see, while not standing upon any legal ground in this case at all—I know that I have no leg to stand on if I am to make any legal demand—but without standing on the law, I simply say it is a custom. And the order was given. And if it is true that in this particular case the order was given—and I don't doubt that that was the object—if it is true that the order was given for the purpose of preventing the operators from doing their own work when the manufacturer was busy; and if it is further true that at that particular time the factory was not busy, I can conceive of the operator taking—well, the order was given for the purpose of attending to the business of the manufacturer, of the factory; but when there is no work there is no harm if I make a garment for my wife. So that I can see that it is quite possible that

he did not mean to disobey the rule as he understood the object of the rule. What he simply meant was, of course, when the factory was busy he should not do any work, but if the factory was not busy, and he had nothing to do, he might just as well sit down and sew a garment for Easter, for Passover, for his wife instead of sitting idle there.

"Now, that is the way I take it. And as I say, without raising any legal questions, conceding that in law the employer has a perfect right to discharge him, and under the protocol, he had a perfect right to discharge him—I say, just in fairness, talking as men to men, what was the offense of that man? He wanted to sew a dress or a suit for his wife for Passover, and there was no work in the factory that would really interfere, that would result in any interference on his part, with the billing of orders, and that is why he did it. Assuming that he ought to be disciplined, even for a technical disobedience of the order of the manufacturer, I will grant that. Well, he has been punished. He has been out for several weeks. He has been out during Passover, and you know that when a man is out of a job he has not a very good holiday at home. I really call upon the mercy of the court, rather than upon any questions of law, just for the sake of good feeling I submit to the board that this man ought to be reinstated. I say I have no case in law; I admitted that in the beginning."

Dr. Abelson replied as follows: "I regret exceedingly to be obliged to take a position against Dr. Hourwich, especially in view of the fact that he puts it on the question of good will. It is really a very difficult case. I have prepared here some statistics, not thinking they would come up in connection with this case, about reinstatement; and I would not be anxious to pass them around to the manufacturers of the association, because I think there might be some criticism against me. Wherever there is a question of really good will, where it does not dissipate the discipline in the shop, the reinstatements come before they get here. In this particular case it had developed into a question of veracity between Mr. Marcus and the operator. The garment was spread out on the machine, and Mr. Marcus says that he saw the man working on the machine. The man says he did not sew, but he had the garment spread out, and it developed into a question of veracity, and that is really only the reason why good offices and good will were not used. I really think it would be unfortunate to reinstate him, and I regret exceedingly that I must take a stand against your request for good will."

Then one of the members of the joint board, one of the manufacturers, Mr. Joseph H. Cohen, said:

"I am always in favor of being lenient with workingmen who break the rules. I believe it is unjust to the manufacturer for us to tell him—it is an easy thing for us to say take the man back, but the question is, What effect will that have upon the manufacturer's factory?"

I said: "I have no fault to find with the disposition, from a legal point of view. What I claim is this, that the punishment was excessive; and I appeal to this body, not as I would to a court of law but as to a pardoning board, to put it in legal phraseology."

"Mr. JOSEPH H. COHEN. This board has no right to pardon at the expense of some one else."

Then I replied: "I would say that this board should not give an order to the manufacturer—I would not ask that—but the board could recommend to Mr. Marcus that in view of the fact that this operator has been sufficiently punished for the transgression of which he was guilty by being idle several weeks the ends of justice have been served, and therefore the board recommends that he be reinstated. I think that would not be offensive. I am meeting the objection that you do not want to break the discipline of the factory. In this case you do not break the discipline after all; if you recommend, you do not order. There is a difference between a recommendation and an order. If you recommend, of course, he is at liberty not to accept your recommendation."

"Mr. JOSEPH H. COHEN. A manufacturer who on being recommended by this board to take back a workingman and who does not do it will always feel that he has offended this board, and it is not fair for us to place a manufacturer in a position where he will feel that way."

Then I continued: "Take the other side. Take the position the man is in. He has done something which is a violation of discipline. Very well. But you know there are different grades of punishment. A violation of a certain rule may be punished by fine, imprisonment, a term in the penitentiary, and capital punishment. Now, I claim that this is not a capital offense. It is a misde-

meanor, and four weeks out of a job is tantamount to a fine of \$100. You know that our city magistrates will hesitate before imposing a fine of \$100 upon a man for a minor misdemeanor. So I think he has been amply punished. And I think that Mr. Marcus, if that matter is presented to him in the proper form, will see that we do not want to override his authority; we simply ask him to be satisfied with the punishment that has already been inflicted."

"Mr. LEFCOURT. In this particular case I really am pleased to see the manner in which Dr. Hourwich presented it. It is really gratifying to see them come in here, as well as this board, and admit that the discharge was justified. That practically settles that case."

And, further, Mr. Lefcourt said: "I do not think, under the circumstances, that we really ought to suggest to Mr. Marcus, and aggravate the case, maybe, more, to reinstate that particular man."

"The CHAIRMAN. The foundation of this whole case is discipline. It would be the nicest thing in the world if this board could recommend the firm to take this man back, but the case would never have been presented here if it was a possibility. It would have been done by our representative and your representative. And as I see it, there is only one thing for us to do, drop the case just where it is. We could not recommend Mr. Marcus to take back this man."

Then the outcome of that case was that Dr. Abelson and myself were appointed a committee to go and see Mr. Marcus, and, of course, there was no use doing that. That was simply a formality.

Now, it shows conclusively that in the only case I tried to conciliate I was unfit to conciliate; I was temperamentally unfit to conciliate. A man must have a temperament for conciliation to be able to conciliate; I have not got that temperament.

The next case was a unique one, on which we agreed; there was one case, I will say, on which both sides agreed, and I think it will be interesting to this commission to know how we agreed. That is the case of Sperling & Sperling. In that case an operator was discharged. The clerks went to the shop and had the man reinstated. Under the rules, if an order is given by the clerks, it is binding upon both sides. Each side may appeal to the board of grievances, but pending the appeal the decision is binding. Mr. Sperling simply disregarded the order of the clerks and would not reinstate the man, and Dr. Abelson, in order to sustain the discipline in the association, placed the case on the calendar for the purpose of forcing the manufacturer to obey the order of the association—for disciplining the manufacturer. When we came there, there was an appeal from Mr. Sperling—and, by the way, the manufacturer took his own sweet time about appealing that case; for about three weeks he did not appeal—and I said until that appeal was determined the man was entitled to work in the factory, and compensation, since it was a disobedience of the order of the clerk. The manufacturers wrangled with me through 88 typewritten pages, which I think it took about four hours to speak, on the subject. Then, finally, I made the following statement:

"Let me be perfectly frank. I am privileged to state that if we disagree on this case I want to have the case determined by the board of arbitration. That is the real truth of it."

And then further: "I believe in conciliation. Here was a case of conciliation. The two clerks conciliated, and the firm became obstreperous and failed to abide by that conciliation. We seldom have had a clear case like this, where the representatives of both sides agreed, and if even then we can not get the firm to abide by the decision, then conciliation has proved a failure. It is not a minor case; it is not this particular offense. I want to bring before the board of arbitration a case showing clearly, better than statistics, that even when there is an agreement between the clerks——"

I did not have to continue further. There was an agreement on that case. The order of the clerk for the association, assented to by the clerk for the union, was sustained by the association, and I had to fight for it. That is called "bullying"—that I had been bullying the association.

Now, let me tell you of another case, of a stoppage of work. I shall probably be about two-thirds through, Madam Chairman, when my time arrives, but relying on the promise of Mr. Lennon I will continue to-morrow, or I will continue to-night, as you choose.

The CHAIRMAN. Mr. Hourwich, I think the commission will want to ask some questions. Would you prefer to go right ahead, or have some questions asked before the time is up?

Dr. HOURWICH. I shall then conclude with just one case now that I want to quote, and I will leave the balance for to-morrow, and then I will be ready to answer questions immediately. Of course, I reserve the balance until to-morrow, because I have not really closed the matter.

Now, there was a case of a shop strike, or a stoppage of work really, I would not call it a strike, in the factory of Vogel—L. B. Vogel. That factory had just moved to a new building, and there was one freight elevator out of order, and the other had a sign opposite: "Not responsible for accidents," and that was a passenger elevator. The building was not full yet. I think two floors were occupied. When the operators came and saw that sign, "Not responsible for accidents," they refused to ride on the elevator to the tenth floor; they were afraid. A telephone was received by me from Dr. Abelson to send them back to work, after they had gone out, and I said I refused to send them back. I did not want to be responsible if these people were killed. I did not want an accident to happen like the Ashe Building. I said: "Let us send our joint board of sanitary control to investigate the condition of the elevator, and if they say the elevator is safe, I will order the men back to work, but I draw the line right here, I will send the men back to work under ordinary circumstances, but not when their lives or limbs are jeopardized."

Well, that was done, and the elevator was found to be in good order, and they returned to work, and the whole thing was settled in two or three hours. This case was brought up in a letter addressed to us by the joint board in another controversy of Jaffe & Katz, from which I quote as follows:

"It is very regrettable that the position taken by your office in the recent case of the people of the firm of L. B. Vogel, who claimed that the elevator was not safe, is being duplicated here. In that case we were informed that it was humanely impossible to get the people back to work because their feared that their lives were in danger, and that therefore an investigation by the joint board of sanitary control should be made before the people went back to work. We had then called your attention to the logic of this position—that workmen could at any time claim that the working conditions in a factory endangered their lives and stop work. What we foresaw in the case of L. B. Vogel has happened in the case of Jaffe & Katz."

That was signed: "Paul Abelson, manager labor department."

I say the protocol is not abolished, but the rule of safety comes first, and if I am to be on the job safety first will be the method of my administration of this job. This may be "bullying," but it is my duty to do that.

I shall now conclude the first part of my testimony and leave the other matters for to-morrow, and I shall now be glad to answer such questions as the commission may require.

Mr. DYCHE. Madam Chairman, I desire to be heard on a question.

The CHAIRMAN. Not yet.

Mr. DYCHE. Madam Chairman, may I ask Dr. Hourwich one question about a statement he made?

The CHAIRMAN. If you will restrain yourself for a moment, you may be heard. Will you permit the interruption, Dr. Hourwich?

Dr. HOURWICH. Certainly.

Mr. DYCHE. I want to ask you, Dr. Hourwich, are you positive of your assertion that during a recent trouble I pulled out my watch and gave the workers just five minutes to return to work; that I went to Stratton's and gave them five minutes' time to return to work. Are you positive about that statement?

Dr. HOURWICH. I have read that statement in an official statement of Local No. 1 of the International Ladies' Garment Workers' Union. That statement was made by me on the official authority of one of the officials of the union.

Mr. DYCHE. Will you apologize if I show you your statement is false, Dr. Hourwich?

Dr. HOURWICH. If that statement is not correct I am not responsible for it.

Mr. DYCHE. Is it not correct that I wrote the following day to the newspaper and denied it in toto?

Dr. HOURWICH. I regret to say that I have not read it.

Mr. DYCHE. Will you apologize to me if that is incorrect.

Dr. HOURWICH. I have nothing to apologize for. If the statement is wrong, I am not responsible for it. If I am told that statement is incorrect, shall not repeat it any more, of course.

Mr. DYCHE. It is absolutely false, and with your permission, Madam Chairman, I will tell you the circumstances of the case; I think it is very important when a statement of that kind is made against an officer of the union—

The CHAIRMAN. I think that will be corrected, Mr. Hourwich.

Dr. HOURWICH. I have said before, Madam President, that I have quoted from an official statement; relying on the authority of that local, I made the statement; if it is incorrect, it is incorrect. I can't say I have any personal knowledge of the fact.

The CHAIRMAN. Mr. Hourwich, I would like to ask you, are you opposed to the protocol as a whole?

Dr. HOURWICH. I am not opposed to the protocol.

The CHAIRMAN. Do you think the machinery of the protocol is defective?

Dr. HOURWICH. I do.

The CHAIRMAN. Entirely defective?

Dr. HOURWICH. Well, not entirely defective. It has one serious defect that ought to be corrected.

The CHAIRMAN. In what respect do you think it is defective?

Dr. HOURWICH. I think the most important defect is that there is no real board of arbitration. We want a board of arbitration that will arbitrate, and I believe the only way to do business in peace is to have a salaried board of arbitration. Moreover, in my own opinion, it would be a good idea, I think, to have a chairman for the board of grievances, what we call technically an impartial chairman or umpire. That would probably be a great improvement. That has been tried in other industries; for instance, it has been tried in Hart, Schaffner & Marx, in Chicago, and I am told it has worked very well; I am told by Mr. Hillman, who is the representative of the union, that the scheme has worked to his satisfaction and to the satisfaction of all parties concerned.

I will further say that there has been a conference held by labor leaders in this city for the purpose of ousting me from my job, and the conference decided that while I ought to be fired, an impartial chairman ought to be provided because it is an absolute necessity.

The CHAIRMAN. You have spoken of deadlocks in the board of grievances; have you any suggestion to make to overcome the deadlocks in the board of grievances?

Dr. HOURWICH. The impartial chairman would overcome it. I would say, furthermore, in reality the board of grievances has now become a sort of appendix, and you know, Madam Chairman, an appendix is a thing that ought to be cut out; if we could do it in every case it would be well—that is what the surgeons tell us, that it is an organ that has become atrophied. They provided in the first place a board of grievances with two representatives on each side; then when they saw that unfit manufacturers swamped the business, they provided the institution of clerks, and the clerks are really doing the business for which the board of grievances was originally created. To make matters worse, they increased that board to five on each side, and the body has become more unwieldy than it was before. Of course, it is not easy to get five manufacturers to drop their business and come down and hear a complaint by men or by a man who has made—it applies both ways; I don't blame them. So I think this whole board of grievances ought to be abolished; there ought to be only the clerks as conciliators, and if they fail then there ought to be a salaried board of arbitration.

The CHAIRMAN. Do you consider matters have improved since 1910, since the protocol has been working?

Dr. HOURWICH. That is a question that it is very difficult to give a definite answer to. First of all, with regard to the question of whether wages have increased. Now, we have a system of piecework prevailing in the industry, and in order to ascertain what are the wages of the pieceworkers, a statistical investigation would be necessary. Nobody can tell that conditions have improved or not improved; those that say that they have improved, probably judge from a few cases or are actuated or swayed by their own predilection; those who say the conditions have not improved will probably be swayed by their prejudices the other way. But one thing is certain, that the protocol has broken down the spirit of unionism, the spirit of solidarity in the shop. People are intimidated; they are afraid to be union men—and let me tell you, you have to drive them into the price committee very often, as they drive soldiers into the army in Russia; the people do not want to go. There are numbers of cases where we have to force people on the price committee.

The CHAIRMAN. Has the membership of the unions increased?

Dr. HOURWICH. Even that can not be answered definitely. We have the data that can throw light on this proposition, because the number of people paying dues can be ascertained; but I assume the number has increased, be-

cause the manufacturers have got us to force people to pay the dues. We could not control the discipline in the shop if some of them were nonunion men—and let me tell you, the general reputation of the men is that they are first-class strikers, but poor union men, and if I was working all the time to send them back to work, what would they tell me? They would probably tell me that I should mind my own business. But when they are members of the union, and I can fire them from the union, they have to mind me. So there is a consideration for forcing the people to work in the shop—that in consideration of my forcing the men not to strike, whether they have grievances or not, in consideration of my becoming a strike breaker, the association forces everybody to pay dues to me—the strike-breaking agent.

The CHAIRMAN. Then, in other words, has not the protocol helped to strengthen the union?

Dr. HOURWICH. In this way that it has forced people to belong to the union; but whether they are willing to stand up for the rights of the unions or not is a question. We are told that the spirit in the association shop is a spirit of slavery; it is not the same independent spirit that you will find in the independent shops. There they may go to the other extreme, and they may strike on the least provocation, but here they will be afraid to stand up for their rights under the protocol.

The CHAIRMAN. Do you think that continuous arbitration in industrial disputes is practicable?

Dr. HOURWICH. It is; the question is answered when you answer the question What is continuous arbitration? Is continuous arbitration in the courts practicable? It is. And here, where we have several thousand cases, we have to have a trade court. They have it in Chicago, and it is practicable, and it will be practicable here. We will not have so many cases if we have a court to which we can have recourse, because then the clerks will know that unless they agree the case will go to a place where they can have a decision, and there will be more adjustments. The board of grievances will then render judgments immediately, more frequently, and the fact that there is a court of law in this city will keep a good many people from breaking their agreements. It is not everybody that will break their agreement, but when there is no law court the employer can tell them: "You will have to do this work."

The CHAIRMAN. Don't you consider it necessary to exhaust methods of conciliation before arbitration is resorted to?

Dr. HOURWICH. Certainly. We do that to our exhaustion. The clerks do that. But we must have a board of arbitration—that must be the supreme arbitrator—so that the board of grievances will know that if they do not agree there will be a board of arbitration which will force them to a decision.

The CHAIRMAN. Compared with previous arrangements, has not the protocol given you a more effectual outlet for your discontent, and so forth, than there was prior to 1910?

Dr. HOURWICH. I was not in this situation between 1900 and 1910. I was counsel for the union from 1897 to 1900, which is an appointment in Washington; but I take it that a comparison with previous conditions is really unfair, for the simple reason that there was no union at that time. The union was a negligible quantity, and any comparison—the union being organized in the strike, any comparison between the union and the organized concern would only concede—really, the only comparison to be made is between the protocol shop and the nonprotocol shop; and the fact that the members of the manufacturers' association have increased from 123 to over 250 to-day indicates that the manufacturers are seeking shelter in the manufacturers' association. I know on the other side, where there is no protocol—I will be candid to admit that—our people are sometimes overdoing the thing. There the manufacturer is, perhaps, often at the mercy of his men in the height of the season, when they can threaten a strike. Here the men are at the mercy of the manufacturer at any time.

Commissioner LENNON. Dr. Hourwich, if the protocol for any reason should be set aside, what will happen to the union, in your judgment?

Dr. HOURWICH. Well, I am not a prophet nor a son of a prophet. I really don't know. I believe that the union will live without the protocol, as it has lived under the protocol. Moreover, I believe that this is not going to happen, because the protocol is an agreement which is to the advantage of the manufacturer, and while there may be a few members of the manufacturers' association, the executive committee, who may think that it would be best either to terminate the protocol, unless they can lord it over us, I am under

the impression that the rank and file of the manufacturers' association do not want any strife, they do wish to maintain the protocol, and they will not consent to have the protocol terminated on flimsy pretexts.

The CHAIRMAN. Some of the statements which you have made this afternoon lead me to ask you this question, Dr. Hourwich: Do you feel that it is impossible to work with the protocol because of the defective machinery, or is it because of the personalities now in the protocol?

Dr. HOURWICH. I do not desire to indulge in personalities.

The CHAIRMAN. It is because you mentioned several that I have asked you that question.

Dr. HOURWICH. Of course things are done by living men and women, and that is why I mentioned names. I personally do not blame Dr. Abelson at all, although I have made several references to him; neither do I blame any one of the members of the manufacturers' association; they are within their rights. I take it here that the protocol has not brought about a Utopia where everybody loves everybody else; the protocol has attempted to create a machinery for a civilized method of settling disputes instead of resorting to warfare, instead of standing on the street and begging and losing time; instead of doing that we come together and reason. One hundred years or so ago if anybody had a claim against anybody else he would go and fight for it. Now we have courts for that purpose. Courts have not abolished litigation, but they have abolished fighting. So I say the protocol has abolished fighting. I do not blame the manufacturer when he has had issues, when he is at issue with his men at times; even if he is wrong, from his point of view he is right; and those who are agents of the manufacturers have got to stand on the rights of the manufacturers, just as we have to stand on the rights of the union. I had occasion once to represent an employer with his employees in a strike—that was a theatrical manager. I was always with the laborer, but nevertheless I had to stand out for the rights of the theatrical manager, and I tell you I do not blame anybody for standing up for their rights, but they have to be settled by some sort of machinery.

The CHAIRMAN. I think that is all.

Dr. HOURWICH. At what time will you want me to be heard to-morrow?

Commissioner BALLARD. The first case you spoke of was the case of this young girl who had been insulted by a foreman, and thereupon the people went out on strike and were taken back.

Dr. HOURWICH. Yes.

Commissioner BALLARD. Were not those men able to protect this young woman in any other way than by striking?

Dr. HOURWICH. Take it from another point of view. Here is a brutal man who comes to a 17-year-old girl with an insulting remark. Put yourself in his place and see what you would do.

Commissioner BALLARD. In Kentucky, where I come from, they do things more summarily. We would have caught him by the throat and broken his head down there. Why didn't they get up and knock the brute down until he was nearly dead instead of merely remonstrating with him and threatening to call a strike?

Dr. HOURWICH. They jumped up and wanted to have that man removed.

Commissioner BALLARD. They don't do it that way in Kentucky. Now, Doctor, you spoke of the association shops, of the shop which gave full work to men if they were union cutters, but they put them on the pay roll as canvas cutters at a lower rate of wages.

Dr. HOURWICH. Yes.

Commissioner BALLARD. Would that be likely to continue any length of time, or would that come before the board of grievances in a short time?

Dr. HOURWICH. Evidently it did not come before the board of grievances, because two statistical agents examined the books of 45 firms at that time, and they compiled these statistics from the books, which meant that this was a secret agreement known to the union, and for the reasons I have given.

(At this point Dr. Hourwich leaves the stand.)

TESTIMONY OF MR. JULIUS HENRY COHEN.

The CHAIRMAN. Mr. Cohen, will you tell us in what relation you stand to the protocol?

Mr. JULIUS HENRY COHEN. Madam Chairman, I am at present the counsel for the manufacturers' association in the cloak industry, and also counsel for the dress and waist manufacturers' association; but I should prefer, if I am called

upon here, not to testify as a lawyer, but rather as one familiar with the situation, so that I may give my testimony freely.

The CHAIRMAN. Certainly; we understand that.

Mr. COHEN. I want, Madam Chairman, to avoid any personalities, because I sympathize with the purposes of this investigation. I understand the general purpose of this investigation is not to try any person, whether he is a lawyer or a statistician or a labor leader or a manufacturer, but that you are desirous of ascertaining scientifically the basis of the difficulties and how far this method, that is known as the protocol system, is a desirable method to be extended throughout the country.

The CHAIRMAN. Exactly.

Mr. COHEN. At the very outset, let me point out the fact that you are already aware of the fact that this is the most difficult industry in the world in which to try conciliation and mediation, for the reason as the last witness stated. The people in this industry are good strikers, but not good union men. He stated that as a fact, and in his experience here evidently he has learned that. In addition to that, you have been advised that there are inherent difficulties in this industry; that the haggling over piece prices in the shops takes place over every garment and makes for disturbance, and since there are no standards to go by there is nothing to discipline upon, and in addition to that that there is competition between the workers themselves for the work.

That you have been told. Now, introduce into such an industry the most perfect piece of machinery that has ever been devised, and that is not proven by any manner of means, and you will have difficulty; but if you add to it a single man, who occupies the position of counsel for the union and clerk for the union and leader for the union, who publicly says that the board of arbitration does not know its business, who attacks the officers of the international with whom he has to cooperate, and who has been found by the board of arbitration to have miseducated the people instead of educating them, and of course the protocol can not work.

Now, you have several times asked what is the present difficulty, and you have not had a definite answer. The present difficulty arises from this situation: When the protocol was entered into it was entered into in good faith with certain individuals who represented the union and certain individuals who represented the manufacturers. They did learn to believe in each other's word and in each other's good faith. One of those individuals was the lawyer, Mr. London, and the other was Abraham Rosenberg, the president of the international, and the third was Mr. John Dyche, the secretary of the international, and for three and a half years, or for rather two and a half years, we worked with those men, and they have learned to trust us and we learned to trust them. Now, they have been called traitors and agents for the manufacturers, and they have been thrown out of the window by the new counsel for the union.

Now, that being the situation, the manufacturers have been deprived of the moral support of the union with which they dealt when the strike was settled. They have been deprived of the moral support of the people who understood what was being attempted when the protocol was signed, and they have received notice from the international that if the situation is not changed so that these international officers can perform their obligations they will withdraw from their guaranty, the guaranty which was signed not only by the international but by the joint board, of which the previous witness is the leader.

Now, when that guarantee is withdrawn the protocol is without support, and if in addition to that the board of arbitration, which is the final tribunal in this situation, is discredited in the public eye by the attacks of a defeated litigant before it, of course the machinery of the protocol goes to pieces, and it requires no formal notice of termination from the employers. That is the present situation. Now, all of that is due to his principles, not to overzealousness, but to the fundamental conception of the purposes of the machinery of the protocol, the fundamental misconception of the function of the lawyer in this situation. The last witness was good enough to point out that in my capacity as counsel for the association I had cut out technicalities and gotten to the root of the matter. That is the secret of the protocol, to cut out technicalities and get to the root of the matter, and the clerks of the board of grievances are there for that purpose, not merely to make peace in the sense in which all conflicts between employers and employees shall be terminated. No power on earth would make for eternal peace, and it would be a bad thing if it did. There must be controversy and there will be controversy, but it should be done in an orderly fashion, and when the witness speaks of substituting industrial courts for war and

selects himself as the secretary of war he omits to state the fact that the protocol never provided for the office of secretary of war, and when that office is created in the union the protocol dies of itself.

That is the present situation—that there is a secretary of war in a situation that calls only for secretaries of state. The protocol does not fit the present incumbent, so the protocol has got to be cut to fit him. That is the present situation.

Now, you have heard from both sides—from the men who have worked right in the shops for the union and for the manufacturers—that conciliation in the shops is the only way.

Now, if my colleague had continued the practice of the law instead of getting into this angelic mood at Washington he would have discovered that the attitude of the lawyer has changed toward the efficiency of the courts in administering justice.

We know to-day, those of us who have studied the problem, that our methods of administering the law in the courts are unsatisfactory, because they are inefficient. We can not get at all the truth by calling witnesses to the witness stand and presenting documents and having rules, such as is sought to be invoked in this situation. The argument is founded upon the theory that by going to the seat of difficulty you can get at the facts, and if you proceeded as one would proceed in a court of law, with questions and answers and objections, and all that sort of thing, you would not get as much information as you are getting now.

It is because the methods of administering justice in the courts have broken down that the methods of the protocol are superior and in advance of the methods of a court of justice, and the fundamental conception of any closet philosopher, who has theorized in his study at Washington and has not lived with this situation as others have, is in assuming that you can create an industrial court that will settle and solve all these problems. Well, it must be assumed, then, that you can get the evidence of the most subtle things—the fact whether or not the employer has a grouch against this particular man, or whether or not this man is telling the truth; whether or not the shop discipline is being observed—those facts can not be obtained in the usual advocacy method of the lawyer, and that is the difficulty of this situation. The protocol has been turned upside down by the assumption that the only way to make it workable is to create a new industrial court, with paid arbitrators, to sit in judgment every day on particular cases.

And I regard it as most unfair to the men who have given their services gratuitously to quote a single or two sentences from their decisions as indicating an attitude which is fundamentally different in their decision read as a whole. What Mr. Brandeis says was that the work of the clerks and the work of the board of grievances had to be broader than the work of the everyday court, because they had to do more than settle the particular controversy by giving just the judgment in favor of one and against another, but they had to realize, as Dr. Abelsen told you this morning, that those people in that shop have to live there after the verdict of the jury and the judge's decision comes in, and so they have to do more than to stand up for the rights of each one; they have to find some way by which those people can live. The relationship in the shop is not the same as the relationship between husband and wife, but no court of law ever yet invented a method by which husband and wife can live together while determining from day to day what their rights are, and the method of getting people in a shop to work with their employers and the only method is by going to the shop, seeing what the difficulty is and adjusting that difficulty from day to day, and when before we had this great idea of having an industrial court to take the place of strikes, before we had that idea, you have observed that all of these cases, 90 per cent of them, were disposed of by this method of conciliation and mediation in the shops.

Now, what does it mean, to substitute for that court an industrial court, with a permanent and paid chairman; that means that all the technicalities and all the vigor and strength of advocacy comes into the administration of industrial affairs. Now, if the people of this country are so well satisfied with their administration of justice ordinarily, as efficiently as it is done, and I have only the highest respect for our judges and courts, if they are satisfied that that is the last word on the subject, then we had better put that into the industrial field, but if we have something which the courts of justice have not, by reason of the want of experience in the industrial field, we should not throw out of the window the thing that we have learned by actual experience here.

Even the courts are coming to conciliation; in the municipal courts of Cleveland, and the municipal courts of Chicago, there is a conciliation docket, and now in this city here, where the requirements in our municipal courts are being considered, they are intending to create a docket of conciliation in the smaller causes, because the courts have awakened to the fact that our cumbersome process of getting at the truth, and our complicated arrangement of getting at the truth, is always behind the times, and any man who has lived and practiced law in this community for the last 15 years has learned that lesson, if he was a trial lawyer, and my principal work in the board has been that of trying cases, and I say without hesitancy, and as a man who ought to know, that the methods of settling disputes under this protocol, by the method of conciliation and mediation are 100 times more efficient than our methods of trying cases in court to-day.

Now, of course, you have to have particular qualifications for the position of conciliator and mediator. The witness gave a number of instances where he failed. Well, in the world of common affairs the fact that a person fails as a conciliator is usually taken to be the best evidence in the world that he does not possess the arts of a conciliator. Conciliation requires consideration for the rights of the other man, knowledge of the other man's feelings, absolute frankness and candor, no garbling of the facts, and no distortion of the imagination, no misrepresentations for the purpose of gaining your point, because the moment the man you are working with discovers that you are seeking to get advantage of him by some other process than fairness, the conciliation ends.

Now, when the board of grievances converted into a trial court—you heard the gentleman say that he insisted on having stenographic records—whoever heard of conciliation by way of stenographic records? When people have got to speak for the record, they speak guardedly. They speak with regard to their rights, and to protect their rights, but when people want to conciliate, they go off in the corner of the room and talk in a fashion of man to man, and whenever that has been tried that has been successful. When the stenographic minute method is tried, it wont work and it has not worked.

Now, a good deal of information has been given about particular cases, and Mr. Ballard, some reference was made to the statistics with regard to cutters. The statistical report made by Mr. Winslow, with a corps of assistants under the direction of Dr. Walter Weyl, one of the members of the board of arbitration, show by an actual examination of the books of the manufacturers' association that the underpayment of the scale was less than one quarter of 1 per cent.

Now, to come here and make the charge that canvas cutters are being used in place of cutters, without having tried out that charge in the tribunal where it should be tried, is not only an indictment of Local No. 10, the cutters' union, which is charged with the duty of protecting its own members, but is an indictment of the international and all the other officers of the union as well.

Think of it! For three and a half years, if the charge be true, which we deny absolutely, that canvas cutters have been used as cutters all of this while, we have waited for the Industrial Relations Commission to come from Washington, and to have that charge made.

Now, a good deal of emphasis was put in the last witness' reference to something that Mr. Silberman mentioned this morning.

Mr. Silberman was trying an experiment in his shop for the purpose of seeing whether week workers could earn as much or more than pieceworkers on the same work, assuming that he paid them the rate per piece that would be fair.

He demonstrated absolutely that if they worked even with some loafing they would make more money under the week-work system.

The people in his shop said that was not provided for in the protocol, and it was not, but it was not a violation of the protocol, because there is not anything in the protocol that compels piecework in departments where week work might be introduced. That is a question that has never been settled as protocol law, and Mr. Silberman had a perfect right to take that position until that question was settled and to say that he broke the protocol is an unwarranted assumption.

Now, it has been said here by the last witness that Mr. Winslow's report is utterly valueless. Where does he get his information that there were no deadlocks on questions of fact? Well, I will tell you where I got my information—from the records before the board of arbitration, in which the last witness admitted that there never was any difficulty in getting an agreement upon facts.

I want to submit to this commission, if they will receive them, the extracts from his statement before the board which he now attacks, in which he stated that he did not approve of this impartial chairman idea for the need of settling disputed questions of fact, but what he wanted was to add to the board of arbitration to decide great, big questions of principle; and I want to quote from the record to show that the cases that have gone to the board of arbitration are great, big questions of principle, such as the right of any clerk of the grievance board to condone shop strikes, or to approve of picketing, or himself to write articles in the official organ defending picketing or calling union men scabs who took the place of union men who have been discharged for violating union rules.

Mr. Lennon, the present crisis in the cloak industry comes about between what is known as syndicalism and trade-unionism. In the shops in this industry the shop discipline has been broken down, and has been broken down because of the feeling on the part of the people in the shop that they were so powerful that they could make the boss do what they wanted him to do. The result of that is that the industry has been in trouble; it is not this very moment, because the employer can not turn out his product as he must turn it out. He has been willing to substitute for some of the discipline in the shop ordinary trade-unionism discipline, and he has not been able to get it from the international, and he has not been able to get it from the joint board, and he has reached the point where he is obliged to say, in self-defense, that if the trade-unionism principle is destroyed in this ladies' garment-working industry and syndicalism is coming in, the sooner the protocol goes the better.

That is the present crisis—syndicalism versus trade-unionism. The manufacturers' association has no quarrel with trade-unions. It believes that the trade-union has done much for the industry. It believes that it can do more through the wage-scale boards, through boards of sanitary control, and through the apprenticeship agreements with the cutters such as you heard Mr. Martin explain yesterday. It can do more through statistical investigations; but when the time comes, when the man who is the spokesman for his people, instead of going to them and telling them what this protocol can do and what it can not do, publicly, as I am prepared to prove by quotations from his interviews, charges every responsible official of the union, charges every responsible member of the joint board, and everyone who has worked on the union side to build up those institutions from the strike of 1910 until to-day; charges the men who led the Philadelphia strike, the Cleveland and St. Louis strikes with being agents for the manufacturers, and attacks the very statistical inquiry which he himself invokes, and calls everybody the friend of the manufacturers, he destroys the protocol by creating that very distrust; and if at the time he comes out with those public statements there happens to be unemployment and natural unrest and syndicalism in the air, he is just the match that sets the tinder on fire. It is a responsibility that no human individual ought to take.

If this protocol is workable, if it contains within itself the possibility of improvement; if, as you have heard, it has changed the conditions of the shops in this city; if it provides for methods of conciliation that have been disposed of in the cloak industry of 8,000 grievances, and in the waist and dress industry in one year 5,000 grievances, is it to be destroyed because the litigant who came before the board of arbitration damns the court? It always was the privilege of the lawyer to go to the nearest tavern and curse the court that decided against him, but this is the first time in the history of industrial organization that a defeated litigant has come before a public investigating body and attacked the efficiency and good faith of the members of the board of arbitration, because in his sneers against Mr. Brandeis's appointment of Mr. Winslow I can not read anything except the implication of bad faith. Now, to confirm that, just to show how critical the present situation is, just remember that the international has served notice upon the manufacturers in that pamphlet which Mr. Silberman handed you this morning that if by the 15th this man is not removed they will withdraw from their guarantee. If they withdraw their guarantee and the support of the men who have built up the protocol is gone from the protocol, the protocol will fall of its own weight.

The gentleman seemed to think that the manufacturers did not desire the termination of the protocol because it is so good. Let me say this, as one who knows the attitude of the manufacturers: When the manufacturers are face to face with a proposition of turning over this industry to the management of a single individual whose life has been spent in a statistical bureau, they will terminate any instrument that stands in its way, and their attitude to-day is that if the board of arbitration is no longer respected, if the machinery of the

protocol is no longer respected, if the leaders of the union, who have given all their life blood for this industry, are no longer respected, the protocol will terminate itself, do what they will; and so the board of arbitration has summoned us to appear before it on Sunday next. The manufacturers, the international officers, are ready to go and state the situation, but the gentleman has given out a public statement in the Daily Vorwaerts of January 14, in which he says this very session of the board of arbitration is proof positive of a conspiracy between the international officers and our association, and he says: "The real reason for the move on the part of the international and of the association is the fact that the board of arbitration is hostile to me and will decide to recall me."

In other words, he has gone in advance of any hearing of the board of arbitration and announced to the people who look to him for guidance and advice that this board of arbitration intends to recall him, and therefore he can not go before this arbitration. Now, when that happens, Mr. Ballard, this protocol can not work. You might take the finest and most delicate piece of machinery that was ever devised and throw a monkey wrench into it and you will destroy the machinery, and you know what the phrase of the bull in the china shop means—the most delicate china won't stand before the horns of a bull; and if this protocol is good for anything, it has got to be amended, if it requires amendment, but the procedure of the protocol and the respect of the parties for each other must be observed.

Now, let me point out another thing. There is an attitude on the part of the workers in nonassociation shops, such as the last witness described, of overdoing things. Now, you know perfectly well, any employer of labor knows that a group of workmen during the height of the season can cost him thousands and thousands of dollars by stopping work. In the nonconciliation shops, where they have no machinery or provision for adjusting differences, they simply stop the machines and the boss has to do what they ask him to do.

Now, when they get into association shops, they try the same sort of thing, and the only thing that saves the manufacturer is the discipline of the union, because the union leader has to say to these people, "You can not be on strike without the word of the union. You can not break the law any more than the law of New York City. The police are there for the purpose of protecting the law. We will try your case, but go back to work," and then when people stay out for days and do not go back to work it causes the machinery of the shop to be destroyed and the work to be stopped, and then if you hire other people in the place of those who left, the previous witness calls that a lockout, and I am prepared to demonstrate to the satisfaction of this commission that there is no other basis for his use of the term "lockout," except his use of it in the Jaffe & Katz case, when the people were discharged after they refused to go back to work on the order of their own union representatives, and because they were discharged, he calls that a lockout.

How else could the manufacturer run his business except to give the opportunity to the people to go back to work, and if they won't obey their own leader, then to put some other people in their places.

Now, Dr. Hourwich told you, or the previous witness told you, that when he first came into the situation the machinery of the protocol was suspended by the president of the manufacturers' association. The facts were that prior to his arrival upon the scene there had been a series of articles in the official organ of the joint board, in which the manufacturers' association were being attacked and their good faith impugned and the working of the board of grievances attacked.

The experience under the protocol shows, and we have graphic charts that will show it, that every time the official organ publishes things of that sort it results in destroying the confidence of the people in the advice of their leaders, and always a number of shop strikes jump up. By February, 1912, there had been so many shop strikes that when the chief clerk for the board of grievances refused to stop a shop strike in the shop of Goldfield & Lachman, the president of the association said: "Since it is the rule of the board of grievances that the stopping of shop strikes takes the preferences over all other cases, and since you refuse to carry out the rules, we won't go on any other cases until you stop those shop strikes." The appeal was immediately taken to the board of arbitration.

The board of arbitration upon that point decided that it did not lay in the power of the president to stop the clerks from performing their duty; that the remedy was by appeal to the board of arbitration or by terminating the protocol.

Now, you can see, Madam Chairman, that if the association has no other remedy for stopping shop strikes, after appealing to the officers of the union, than to terminate the protocol, the recurrence of shop strikes means the termination of the protocol.

If there is no other way of relieving the situation, it means the termination of the protocol. Now, when shop strikes occur frequently it is the business of the clerk of the board of grievances, representing the union, to tell the people that it is a violation of the union rules, and so the board of arbitration found. They found that the shop strikes were unconstitutional under the union. It also found that this shop-strike business was destroying the discipline of the union. People said in their shops, "We do not care for the union, and we are going to do as we please." Now, if you have no protocol, Mr. Ballard, you discharge such people; but when you have a protocol you have to complain to their union, and when any man that is put there for the purpose of enforcing the law says, "Mr. Smith, I am not here for that purpose; I am secretary of war; it is my business to fight," what is the attitude of the manufacturers to be? What can they do under those circumstances? Either abrogate the protocol or make a protest.

Now, for a month we have made the protest, and not only the international, Madam Chairman, but every important labor leader in this country, having examined the situation and gone over it, found that the present incumbent of the office of clerk was a person who, in the language of the report, was a "destructionist and a disrupter"; that is the verdict of experienced trade-unionists. That is what the association has said.

Now, since the association has said that, since the trade-unionists have stated, ergo, proof positive, that every trade-unionist who has said so is an agent of the manufacturers, and bribed by the manufacturer.

Now, you must understand that this great mass of people, as Mr. Dyche and Mr. Rosenberg pointed out, come from countries where opposition to government is part of the rule of the day, and so when they come here it is extremely difficult for them to understand the nature of the discipline of a trade-union. And when their own spokesman comes to them and tells them these things they are only too ready to believe that all of these men have become converted and become employees of the manufacturers' association; and every man of influence in this situation at the present time, including the members of the board of arbitration, who have given their services gratuitously, has been discredited with the mass of the people at this very moment, because they are being charged with bad faith and dishonesty by this present occupant.

More than that, we have crises which have taken place in the cloak industry before. We have had them over and over again. This Stratton situation caused one of them. We know we have emotional people to deal with. We know we must give them time to overcome the heat and excitement of the moment, but when the clerks of the board of grievances fail to get together on the situation there was still the method you have heard about, before going to the board of arbitration, and that is that the lawyer for the association and the lawyer for the union would hold a private conference together and see what could be done to relieve the tension and to relieve the situation.

By reason of this campaign of discrediting the lawyer for the union, who understood the protocol and worked on it for three and a half years, and helped to build it up, and gave all his best life to it, he has been driven out of the field by attacks upon his honor and good faith. And so the lawyer for the manufacturer has not got anybody to-day, except a secretary of war, to deal with, and a secretary of state of one nation never communicates diplomatically with the secretary of war of another.

The present situation is that by combining the office of clerk, counsel, and leader there has been substituted for this machinery of the protocol a single attitude of "Do my will or the thing will break," because in closet philosophizing this great dream of an industrial court was never in the minds of those who framed the protocol, where a man could be a great advocate for the rights of labor and another man could be a great advocate for the rights of the employer. That is not quite true of the industrial court, and since it is not quite true the protocol has got to be smashed.

Now, that is the situation at this moment. Now, when you come to look at it scientifically, is it not absurd? What has happened here? After a bitter strike, that costs thousands and thousands of dollars, that cost bitter suffering, the worst kind of suffering, people have been elevated up to a certain standard.

You heard from President Rosenberg, and he knows more about the fight for trade-unionism than any other person—than any other witness you have heard; you have heard for 28 years they have tried to build up the union through the method of shop strikes, and it failed, and they could not build it up, and they could not get results unless they could make them general over a locality, and they have tried in Philadelphia and Cleveland and St. Louis by striking.

They found a group of employers in New York who said they were willing to do all they could to help lift up this industry. They were willing to pay the highest wages, but they wanted these shop strikes stopped. They wanted a real trade-union to deal with, that could maintain discipline among those people and so they signed this protocol, and for three and a half years patiently these men have given of their nights and days on both sides. They have been trying to build up in this complex, subtle industry, full of all the problems that come from our complex civilization; full of the problems of educating the man who is "agin" the law; full of problems of this piecework system, when a new gown is invented every minute, with yet no standard devised for equalizing the cost of labor; full of all these complexities; without discipline in the shop, both sides have been trying to build up a union that would make for discipline, and every night that union is destroyed by a call of treachery against the men who performed the service.

In that situation the employers are helpless. They do not want to see the protocol destroyed; not that it is better for them, as you have heard, because it has not yet succeeded in fairly equalizing competition; it can not, because in the nonassociation shop where the union gets what it wants by striking all the time—it gets something on one day, but on the other day the employer wins; and the result is that the average standard is below the normal, and that is one of the reasons why garments are being made and sold at a lower cost of production in the nonunion shops than they are being sold in the association shops.

Of course, that can be done away with when you get standards and more supervision of the nonassociation shops, when you introduce a system of inspection of association shops under the auspices of the union and of the association.

Matters are now under consideration, matters that will strengthen the protocol, so as to bring in the consumer to help in this complicated situation, in the competition of the unskilled manufacturer against the skilled manufacturer. All of those things have to be built up like the legislation in our political life, that we are carefully devising, but here come some of the people who having dreamed of a different constitution for our Government than the present Constitution, and not waiting for the slow processes of legislation, they think they can destroy the Constitution itself, and since the Constitution is not 100 per cent efficient, kill it.

That is the program: Kill the Constitution. Let us go back to what we had before there was a Constitution; do not amend it, do not improve it—kill it. I do not say that that is the announced program; that is the effect, because every sane man knows that the moment you go out and attack the motive of the very men who are to do the improving, the very men of experience, you make it impossible to do anything—that is the present situation.

Now, you have heard, and it is a complete admission, that the gentleman who now occupies the office of chief clerk does not consider temperamentally that he is a conciliator, and yet you have heard by the testimony of both sides that the principal work to be done under this protocol is the work of conciliation.

Now, with any man filling the office of conciliator to-day, and remember that there are disputes every day in the shops, you have a situation where fires are breaking out in every building and no fire department to put them out. How long is that situation to last? The office of clerk to-day is vacant, the office of union representative is vacant, because there is no person there who regards himself as charged with the duty of going to the shops and conciliating.

The gentleman tells you he was retained for the purpose of fighting.

Well, now, up to the time he came we endeavored to reform things not by fighting but by understanding, by study, and when he came and substituted the Secretary of War idea, well, how could you conciliate? Shake your fist in my face, and I am not prone to help you to get what you want.

Now, the fact that he is not a conciliator is not a fact that the manufacturers approve. It is not approved by sane people. In the articles in the Jewish press the men who last year were members of the joint board, over their own signatures, and I will give you the copies marked, which say, "This man gets

us into hot water; he does not know how to get us out," and in the official communication from the international to the joint board it says that since this man put his signature to the guaranty we have been unable to perform our duty, and therefore we call upon the joint board to relieve us of the responsibility.

Now, it is an unpleasant thing to discuss personalities. We do not want to discuss personalities. I think there are a great many admirable qualities that the gentleman possesses, but we are not all fit for the jobs that we are assigned to. I think there is a great deal in what Mr. Rosenberg and Mr. Dyche have to say. The lawyer has a very simple part to play in this work, very small. He only comes in when there is something to be put in writing; he only comes in in so far as he is not a lawyer at all. It is his business to help his people on his side to understand facts. It is his business to learn the facts himself and to express them, but the business of the lawyer in the sense of advocacy of fighting—of being a litigant all the time—that has no place in this kind of a system, because we have not yet reached that day where an industrial court, with taking evidence day by day, with battling before the court, dramatically, so that the people may see that you are fighting for your rights—we have not reached that day, where it will do any good in the industrial situation. You must go to the shops to help the people to earn a living and to work, and the man who talks discontent and unrest and utilizes it as a means for creating more disturbance through litigation is not a benefactor at all. I have a number of points here, but I understand that you want to adjourn at 5 o'clock, and I will stop at that point.

The CHAIRMAN. You have 12 minutes more.

Mr. COHEN. I would rather have the opportunity of arranging my notes for to-morrow and presenting the thing. I merely intended this time to meet several definite things that the last witness told you; just as he was corrected, in fact, by one of the gentlemen from the floor, the records will correct him in a great many other misrepresentations of fact, and there are a number of misrepresentations of fact, but the fundamental difficulty with his understanding of this situation is that he does not understand what institutions were to be met under this protocol.

The CHAIRMAN. Have you any questions?

Commissioner LENNON. Mr. Cohen, would you undertake to answer the question from your viewpoint that I asked Dr. Hourwich as to the probabilities of the life of the union, as it becomes manifest, if the protocol was broken down? I know that is prophesying, but we can do that sometimes.

Mr. COHEN. Mr. Chairman, I think it would be most indelicate for a man who occupies the position of counsel for the manufacturers to be put in the position of prophesying as to what will happen to the union if the protocol is broken, but if you will permit me I will say this: I am a believer in trade-unionism, as you know. I do not believe any trade-unionism can exist for any length of time among people who are temperamentally individualists; it can not exist where people believe more in shop discipline among themselves than they do in their own union discipline, and my belief is that if it were not for the present union shop, at this time, as Mr. Abelson said, we would have 2,000 unions instead of 1. The real difficulty of this situation is that even under the protocol, while we have nominally 1 union, we are really dealing with 2,000 unions.

Commissioner LENNON. What I wanted to draw out was, how it appeared to you the preferential idea in the protocol had affected the organizations of the shops. I should not have asked you that in that way probably.

Mr. COHEN. The preferential union shop has resulted in this: That since the man in the shop knows that his employer is under obligation to give the preference to a union man, he joins the union. That has been shown to be so in this association, and undoubtedly that has resulted in strengthening the union, because, as has been pointed out, new people are coming into this industry every day, and with an open union and a shop in which preferences are given to union men, the union is strengthened automatically. That was the purpose of it; but the difficulty is that the people, as soon as they join the union, expect that that act is going to bring the millenium for them. He expects the union to supply work where there is none; he expects the union to give the most vociferous union man the more work, and that interferes with the wheels of industry, as they go on. And in some cases, Mr. Lennon, it has given the impression that the employer feels sort of weak by recognizing the union and you can do with him everything you like. There never was a greater mistake in

the world, because, if it was not for fact that the manufacturers in this association are desirous of acting in good faith, there would be no protocol at all.

Mr. DYCHE. May I ask him a question?

The CHAIRMAN. Yes.

Mr. DYCHE. He spoke of the guaranty of the international union; what I would like to know is what is the guaranty of the manufacturers' association; who guarantees for them?

Mr. COHEN. The association.

Mr. DYCHE. It does?

Mr. COHEN. And it has made good by paying every award the board of grievances has made, and by disciplining its own members when they fail to observe—

Mr. DYCHE. Another question. Mr. Cohen, you will remember when we first called the attention of the manufacturers to their members who open shops out of town, the reasons why he objected to our extending the protocol on out-of-town shops was because he contended that they signed an agreement with a Manhattan organization. Is that true?

Mr. COHEN. I said at that time, if you will recall, that the proposition as it appears in the minutes was that the manufacturers are willing to deal with the union as fast as it succeeded in organizing the industries out of New York; but the manufacturers dealt, as you know, Mr. Dyche, with Mr. Rosenberg and Mr. Polakoff and with officers of the international, and you know, too, that we have in our possession the resolution adopted by the general executive board of the international even a few days after the signing of the protocol, ratifying it, and confirming it as the act of the international.

Commissioner LENNON. I have no more questions. The session for this afternoon will adjourn at this time, or in a minute; do not be in a hurry, now. The commission will have to end this hearing to-morrow because of engagements that we must fill on Monday in Washington. Now, we are going to be here to-morrow, and we are going to try to hear the people who believe they have something yet to say. I think no one will be able to say that we have left here and that we have not tried to hear every phase of this case, and we are going to try to do it to-morrow; but we must close the hearing, and certainly for this time, with to-morrow's session.

We will meet to-morrow morning at 10 o'clock in this room.

(Whereupon, at 5 o'clock p. m., the hearing was adjourned until to-morrow at 10 o'clock a. m.)

NEW YORK, *January 17, 1914.*

Present: John B. Lennon (chairman), Mrs. J. Borden Harriman, S. Thruston Ballard.

The board met pursuant to adjournment at 10 minutes past 10 a. m.

The CHAIRMAN. Now, the members of the commission present have taken into consideration the best possible way to give a hearing that will be at least as satisfactory as it can be under the circumstances. We have to leave this afternoon, as you were told yesterday. There is no question about it. My engagements are absolute, and I must be in Washington to-night.

If it is desired, we can come back here a little later and hear from you again. We want to hear this morning at least four more witnesses. We think the situation demands that they be heard.

We want to hear Mr. Cohen finish his address, and Dr. Hourwich, and Mr. Bisno, and Mr. Polakoff.

Now, Mr. Dyche asks for a minute before we start in, and then the chairman will announce the next.

You have all heard what I have stated, and we are going to have a continuous session until we adjourn.

(Here Mrs. J. Borden Harriman took the chair.)

The CHAIRMAN. Mr. Dyche is going to speak now, in answer to a statement which was made by Dr. Hourwich yesterday, and we asked him to postpone his answer until this morning.

TESTIMONY OF MR. JOHN A. DYCHE—Recalled.

Mr. DYCHE. Since I have tried, in the case to Stratton, to say that the union should be able to fulfill its obligations, namely, to get people back to work, I have been attacked by quite a number of people, because the work of the destruction of the protocol began prior to the appearance of Prof. Hourwich,

and was attacked by a gentleman who was described here as a second edition of Jesus Christ.

This report was prepared for me in the Nineteenth Street office on October 26. It is as follows:

"On October 6 the association filed a complaint protesting against the action of the shop chairman, L. Morrelli, who refused to permit the settlement of prices by the price committee for the reason that the work is not equally distributed. We called the shop chairman to our office, and he admitted that he is not permitting the people to settle prices till the firm had looked into the matter of the unequal distribution of work. We explained to the chairman that it was his duty to first file a complaint with the association if there is something wrong in the shop, before taking the matter in his own hands. We then filed a complaint with the association, protesting against the unequal distribution of work. Brother Curci and Dr. Abelson went up to the firm on October 7, and Dr. Abelson refused to take up any complaints against the firm until the shop chairman had first ordered the people to settle prices. Brother Curci then ordered the chairman, Morrelli, to settle prices, and he would return the next day to take up the complaint against the firm. Upon arriving in the shop the following day, October 8, Brother Zimmerman accompanied by Curci and Dr. Abelson went up and it was found that the shop chairman had not called the people down to settle prices, but claimed that he had forgotten about the price settling and when the firm called him at 5.30 o'clock he claimed that it was too late to settle prices that evening, because he had an appointment with a friend. The next morning, the price committee refused to come down to settle prices, because they were busy. These statements were made by Morrelli, and Dr. Abelson again refused to take up the case against the firm and promised to come the following day to take up the case, as soon as prices were settled. On Thursday, Brothers Zimmerman, Curci, and Dr. Abelson arrived in the shop at about 2 p. m., and found that prices were being settled with the assistant chairman, and were told that Morrelli had left the shop in the morning. We were therefore unable to take up the case because the assistant chairman did not know anything in regard to the complaint filed against the firm. Brother Zimmerman then decided that he would not entertain any more complaints against the firm until the people had first had a meeting, and that all grievances should be reported at this meeting. A meeting was held on Monday, October 14, and the following morning Brother Curci brought to my office two complaints, first that there was an unequal distribution of work in Mandelberg's department, and second, that the foreman, Mandelberg, had grossly insulted a girl, thereby forcing her to leave her position. Brothers Zimmerman and Curci, together with Dr. Abelson, went up on this case Tuesday afternoon at 2 p. m., and found that Mr. Cohen, the superintendent of the above firm, was out of town. Dr. Abelson was perfectly willing to wait until 5 p. m., when Mr. Stratton would arrive. Mr. Stratton returned at about 3.30 and stated that he is not willing to take up the case as he does not know what is going on in the factory, as Mr. Cohen has complete charge of the entire factory, and would not make any decision without him. Brother Zimmerman agreed to come the next day, and reported that this did not suit Morrelli very much, and started to argue about the delay of the case. Dr. Abelson called him a "king" of the shop, which he resented very much. However, we could not do anything that day and returned the next morning, upon ascertaining that Mr. Cohen was in town. When we began take up the investigation of unequal distribution of work, we looked back 10 weeks in the books of the firm, and Morrelli brought down four finishers of Mandelberg's department, who claimed that they were being discriminated against by not receiving an equal share of the work, but could not prove any discrimination, and the charge of unequal distribution of work was therefore unfounded. We then took up the case with reference to the charge of the foreman abusing the girl, etc., and the girl, who is now working elsewhere, was present to testify, and stated that she asked the foreman for a spool of cotton, and he answered her in a very abusive manner. Brother Zimmerman then instructed the foreman that inasmuch as he does not engage the feller hands, he had no right whatsoever to interfere with them, but should hold the tailors responsible for all bad work, or any other troubles. He received a good calling down, and was told to behave himself in the future. When leaving the office Mandelberg stated that he would not have this girl back under any circumstances. Morrelli became very angry at this point and commenced to say, "See what he says." Brother Zimmerman thereupon told him that the case would be decided upon. He, however, seemed to be very much

excited and stated that he will take his hat and coat and leave the place, and will not care what the people will do. Dr. Abelson and Brother Curci discussed the case and were willing to have three points settled in the following manner, viz:

"First. That the girl may come back to work, if she so desires, even though against the wishes of the foreman.

"Second. The foreman had no jurisdiction over the feller hands in the future.

"Third. The question of a fine to be left to the board of directors of the union, who will hold a meeting in the afternoon, and then take up the matter for discussion.

"Brother Curci demanded \$50, and then was willing to have the foreman pay \$25. Dr. Abelson agreed upon \$10, and that for the sake of peace said he would give \$15 out of his own pockets to avoid trouble. We then left, and while going downstairs we met the assistant chairman—this was about 1.30 p. m.—and he informed us that the people are all stopping from work. We then went to lunch and returned to the office about 2.15 with Dr. Abelson, and found that the people are not working. Morrelli, the shop chairman, was called down to the office, and was instructed to order the people to go back to work immediately. He claimed that he could not do so, as he had not ordered them to stop. He was told that he would be held responsible for the stoppage of work, as the case had not been finished, and we were not in a position to answer the people as to the disposition of the case, but we believe that it was through the action of the chairman that the people stopped from work. This case was taken up by the board of directors at a special meeting held that afternoon, and Morrelli, the shop chairman, was called by telephone to the meeting, and was instructed to order the people back to work, pending an investigation. He gave all kinds of excuses and evasive answers, but did not promise to order the people back to work. Only a few days later we learned that he had never ordered the people back to work, or had followed our instructions as per the decision of the board of directors. The next morning Brother Dyche took charge of this case, and he and Brother Pagano went up on the case to see if they can not induce the people to return to work. In the morning they discussed the case in the association rooms, and then the board of directors had a special meeting at which it was decided that unless the people return to work by 1 o'clock the union will not be responsible if all the people will be discharged. Brothers Dyche, Pagano, Curci, and Martin went up to order the people back to work. A committee, including the shop chairman, was called down to the office, and were instructed as to the decision of the board of directors. They, however, claimed that they must first have a shop meeting, as they are not the entire shop. Brother Dyche told them they could have a meeting, providing they all return to work at 2 p. m. The committee answered that if Brother Dyche will promise them that he will take up the case to have the foreman discharged within a certain time, they will return to work. Brother Dyche said he could not promise them this, and stated that there is nothing else to be done, excepting the people to return to work. He then left the place and went upstairs into the factory and found only 10 tailors. He gave them orders, viz, to start to work, and left the factory."

I want to say that in the course of my argument, in trying to persuade the people to go back to work, I took out from my pocket the constitution of the international union, where it reads as follows (this is on the first page of the constitution, in capital letters):

"No member is allowed to stop from work, or come out on strike, without the order of the union, for such illegal strike is a violation of the union rules, and such member will be fined or expelled."

The answer to me by these people was that they had not participated in the making of this constitution, and the framing of its laws, and they would not obey it. I told them, in that case, "Then you are outside of the pay of the union," and they said, "Just exactly, we will settle the trouble ourselves the same as we did in this firm prior to your coming."

After that I did not wait until 3 o'clock, but I left at 2 o'clock, from this factory. Of course, I then tried my very best to see when the people had left the shop, to see the foreman, and that the people were afterwards discharged, and taken back to work, and see that the firm should have their orders filled to the best of my ability, and if I have a repetition of the same kind, of course. I will do the same.

Madam President, there is one statement which I think is of the highest importance to this commission, as regards the relations of the international union

to the manufacturers' association, and if you will permit me, it will not take me two minutes, and I will be through, and it has a great bearing on the subject.

The CHAIRMAN. All right.

Mr. DYCHE. You were told yesterday of several representatives of the manufacturers' association, that they can not deal with the joint board of the international union, and that if the international union is withdrawn they can not get along.

I want to call the attention of this board to a meeting which was held, a conference which was held, between the representatives of the union and the representatives of the manufacturers' association, at which Mr. Silberman presided, during the term of the clerk to the board of agreements in the month of November. The subject in the discussion was a raise of wages for pressers, and standard rates for finishers of 65 cents an hour. We discussed the matter on the Tuesday, and we could not come to a decision upon the proposition, and we decided the next meeting should be held the following Tuesday. Then, at the meeting, to continue our discussion, Mr. Silberman, who was the chairman, held a copy of the New Post, the official organ of the joint board, where it stated in large letters as follows: "Shop chairmen, price committees, and business agents are instructed that all settlement of prices for finishing should be made at a minimum rate of 55 cents per hour"—when we were discussing the standard rate, and there was a minimum rate of 65 cents an hour—"signed, and officers of the union will be held responsible. (Signed.) A. Abelson."

Mr. Silberman said, "Did you make this communication to the press; is it within your knowledge?" I said, "We know nothing about it," and he said, "If that is the case, I will have nothing to do with you," and he refused to deal with us, because we did not represent the joint board. He said, "Gentlemen, if you will come to us and bring credentials from the joint board, we will deal with you. At present you represent nobody," and he refused to deal with us and President Rosenberg. We have a gentleman now who has the credentials of the joint board, and I hope you will deal with him.

The CHAIRMAN. Mr. Cohen, you have some more to say?

TESTIMONY OF MR. JULIUS HENRY COHEN—Recalled.

The CHAIRMAN. Mr. Cohen, could you do it in an hour?

Mr. COHEN. Dr. Hourwich is to have another hour, and he has made so many inaccurate statement that it will take me at least two hours to reply to them, and I think it would be utterly unfair to allow the impression to go abroad that he has sought to create by some statements of facts that he has made, and I think it is only fair, and you will realize that you gave most of the time to representatives from the union, so far, and on the manufacturers' side, only Mr. Silberman and Mr. Rosenfeld have appeared, and I myself for an hour, and you gave Dr. Abelson a brief time yesterday, merely to state the workings of the machinery, and he had not gone into the details of these serious matters. I think it is only fair that we should have the same time that the unions have had to present their side of the controversy.

The CHAIRMAN. Will you go on? We will give you as long as possible, Mr. Cohen.

Mr. COHEN. Now, in the first place, I want to correct any wrong impression that was made yesterday, by reason of the charge that Mr. Silberman had broken the protocol. The board of grievances passed a resolution authorizing any manufacturer to experiment on week work, in any piecework department, and the piecework prices were not fixed by the protocol, and there was nothing in the protocol that forbids the week work in the piecework department. That was a matter that was left to the discretion of the workers and employers, and in order to test out the week-work system Mr. Silberman undertook to experiment with it.

Now, as to the international's relation, regarding what Mr. Dyche has just said. When the original agreement was entered into it was ratified and confirmed by the international officers, and just such things as Mr. Dyche says occurred; the issuance of ukases by the joint board at the very moment when the parties were going into conferences were the things that the manufacturers' association could not stand for, and so they found that the only thing to do would be to do as Mr. Dyche said he did in the Stratton shop—take out the by-laws of the union and teach the people the elementary union principles. The first rule of the union was that they could not strike without the authoriza-

tion of the union, and the only people who would do that were the international officers themselves, and without the union discipline and without the opportunity to deal with the shop as we pleased, the manufacturer found himself in a position of having nobody whom he could hold responsible for the conduct of the members of the union.

Now, you have heard a good deal about continuous arbitration here. Here are four boxes. These four boxes represent the papers in the cases before the board of arbitration, those cases you have heard about [indicating four large boxes on the table].

You heard from Mr. Winslow that there were 7,556 cases that were disposed of. These boxes represent what was done in the minutes of the proceedings in the eight cases.

Can you imagine what would happen if we had this industrial court that the professor dreams about—where the lawyers would be fighting all the time, from day to day, over cases? I think the manufacturers would have to go into the law business and get out of the manufacturing of cloaks; and it is because they understand and realize that that they are opposed to this system of continuous arbitration.

But, apart from that, there is a more fundamental difficulty than that—the protocol itself never provided for continuous arbitration; it provided for methods of conciliation. And the basis of the machinery of the protocol, as every witness has pointed out to you, is conciliation and mediation.

Now, the board of arbitration, at its very last session, overruled the professor by holding that the board of grievances was a board of conciliation, and the clerks of the board of grievances were to perform the duties of conciliation.

Now, he says he is a great believer in arbitration as a substitute for strikes; that decision of the board was not Mr. Brandeis's decision alone. It was the unanimous decision of the board, including the gentlemen who had originally been designated by the union. It was in accordance with the precedents that had been established through those three and a half years. It was in accordance with the express terms of the rules that had been adopted; yet, this gentleman is infatuated with the idea of arbitration as a permanent remedy; and when the board unanimously decides against him on the very basic principle of the machinery that is working under the protocol, he still insists that the board is all wrong, and comes before you and attacks the good faith of the board. Now, if that is the kind of arbitration—he proposes arbitration—it did render a decision in favor of the pressers, involving, as he puts it, an award of over half a million dollars in cash; but I think that is more than the actual amount; but awarding half a million dollars in increase of wages to the pressers, this same board of arbitration, which is accepted cheerfully by the manufacturers, the kind of arbitration which is agreed to by the manufacturers. Yet this board is attacked when it makes a decision as to the fundamental basis of the machinery of the protocol, and is not an arbitration board that is fair. He says it is only one-sided, which means arbitration is all right when you decide in my favor, but it is all wrong when you decide against me.

Now, that is a very serious proposition, with reference to the nature of the office of clerk to the board of grievances and the relation between the international and the joint board; and let me point this out, because it bears on the present situation.

Now, the agreement was entered into originally with the international. The international officers were present. This problem was a problem, as the international secretary pointed out at the beginning of these sessions, a problem of taking 50,000 people who were good strikers and poor union men and converting them to union discipline. The only people who could do that were the leaders; and as the board of arbitration stated at its last session, it was the business of the leaders on both sides to educate the community behind them—the manufacturers as well as the workers.

Now, there came a time a year and a half ago when the international leaders found that their influence was being broken by the efforts of those who did exactly what happened in the Stratton shop—people saying, "We do not want to help make the constitution of the union; we do not care anything about your union. We do not care about your union rules." They found that kind of spirit prevailing, and they found that spirit was developed and increased by articles in the New Post, the official organ of the joint board, attacking the good faith of everybody from the international officers down; so we arrived at a situation where we could not do business in good faith with the representatives of the joint board alone, but had repeatedly to call upon the international officers to

see to it that the joint board performed its obligations of plain, ordinary good faith.

Now, when the international officers found that the new man who had been imported into the situation would not cooperate with them and would not work with them, the situation reached this crisis, where he came to a meeting of the board of grievances, and there said, "You can deal with me as representing the joint board, or you can not deal at all." I have the minutes here in the exact language which he used, in which he said, "The international is the shadow, the joint board is the substance. You can deal with the shadow if you like, but you must deal with me as the representative of the joint board."

Now, in view of the fact that we had in our safe the original resolution of the International Ladies' Garment Workers Union, ratifying and adopting this protocol, binding upon the whole international, extending all over the country, we said, "This is the first time we have heard that our contract is limited only to the members of the joint board," and so we raised that question at that point, because he raised it. We did not raise it. He said, "You have got to deal only with the joint board." That was the real reason, and we went before the board of arbitration, and the board of arbitration, in order to confirm the situation—not to soothe our feelings, not at all—they knew if the international got off the bond, the bond would be destroyed immediately, and so in order to mediate and bring the thing to a head they got this same joint board and the international cheerfully to sign and express the guaranty by which they recognized the international as being bound to fulfill the obligations, and the professor signed it himself for the joint board.

Now, what happened after that? Do not take my testimony; take the testimony of the officers of the international. They passed a resolution to this effect on December 30 last:

"Whereas in accordance with the decision of the board of arbitration, rendered February 3 and 4, the international union has been made the guarantor for the joint board in its dealings with the manufacturers' association through the instrumentality of the protocol;

"And whereas upon further decision of the board of arbitration on October 4 last this guaranty implies a joint responsibility and joint cooperation of the officers of the International union with the representatives of the joint board in carrying out the provisions of the protocol;

"And whereas the present chief clerk"—mentioning him by name—"who signs"—he attached his signature to this arrangement made by the joint board of arbitration—"has persistently and systematically attacked the policies of the international union, and openly denounced its officers, as the agents of the manufacturers' association, and has in every way tried to discredit them before our members and thus brought about a condition of affairs whereby he has made it impossible for the international officers to work in cooperation and harmony with him;

"And whereas his policies are radically and fundamentally opposed to the policies and methods heretofore pursued by the international officers;

"And whereas the firm belief of the joint executive board is that the methods pursued by Dr. Hourwich are detrimental to the best interests of our organization, the union, with the manufacturers' association: Therefore be it

Resolved, That the joint board of the cloak and shirt makers' union be informed that under the clerkship and guidance of Dr. Hourwich, the international union can not remain the guarantor for the protocol."

Now, Madam Chairman, there is a huge conspiracy in this town that your commission must unearth. It is a terrible conspiracy; at its head is our friend Samuel Gompers, the head of the American Federation of Labor. Next to him, the archconspirator, is John Mitchell; after him Frank Morrison; after him Abraham Rosenberg; after him Mr. Dyche; after him Mr. London; after him the members of the board of arbitration, Dr. Weyl and Mr. Holt; after them the statistician, Mr. Winslow; after him the members of the manufacturers' association; after them the members of the joint board—all engaged in a terrible conspiracy, and that conspiracy is just what? To preserve the conciliation machinery established by the protocol, and because they have joined in that conspiracy they are charged with being engaged in destroying the rights of the workingmen, and against them is ranged just one man, who sets himself up as being opposed to all their policies, opposed to the very fundamental basis of the machinery of the protocol, and they are all wrong, everyone of us, the present speaker included, all crazy, and he is the sane man.

Now, Mr. Ballard, let me ask you if down on the levee at New Orleans there were 100 bales of cotton, and a man came along and poured kerosene over that cotton and set a match to it, and you found he was no ordinary person, but that he was a man who had written books——

A VOICE. I want to ask a question.

The CHAIRMAN. Don't interrupt, please.

Mr. COHEN. I want to know, if you found that that man was a man of learning, what would you say was the trouble with him? Here is the situation where everybody else is engaged in a conspiracy to destroy this union, and this gentleman, by the resolutions of the leading representatives of labor throughout the country, has been told that he is discrediting the influence of his union and destroying the union.

Now, Mr. Lennon, you asked yesterday what the effect of the destruction of the protocol would have upon the unions in New York.

You heard from Mr. Rosenfeld, the president of the association, that the unions did a great thing in the strike in 1910 in bringing all the employers—not merely the minority, but all of them—to a realization that by cooperative effort this industry could be raised to higher levels. You heard voluminous testimony to the effect that this industry has been raised to higher levels; and now, if the union can be continued and this progress that is now under way made for both the workers and the employers, this will be a great thing for the trade-union; but the experiment that is now going on at this moment, Madam Chairman, is whether or not the great mass of the people in this union are capable of maintaining a union according to trade-union principles, or whether or not they are like the people in Stratton's shop, who say they do not care a hang for the constitution of the union and do not care a hang for anything else.

Now, at the head of these people at the present moment is a man who, as you heard yesterday, attacks the good faith of the board of arbitration, the tribunal which has granted, according to his own statement in writing, an award of nearly half a million dollars in advances to pressers, and whose decisions, made unanimously, he refuses to accept. I believe that when the people wake up, when they realize what their union really means to them, when they realize that only in union discipline can any such arrangement as this survive, and when they go back again, as Mr. Rosenberg told you, to the times of 14 and 15 years ago, when the shop strike produced nothing, this system of 2,000 unions—one for every shop—with which the manufacturer deals will be done away with and we will have a real trade-union. I said yesterday that the issue was between syndicalism and trade-unionism, and that is the issue to-day, at this very moment—whether a single man can repudiate the honorable decisions of an honorable board of arbitration and lead a riot against peace and order in the community.

Now, you have been told that there is a condition of unemployment in this industry at the present time, and there undoubtedly is. There are a great many people out of work. The people who are out of work are very anxious to get employment, and of course they believe that there is something wrong with the union, that it can not get employment for them.

Now, in the nonassociation shops, where the people are not satisfied with what the boss is doing, they can stop the whole machinery at once by rising up and going out at the height of the season; but nevertheless the manufacturer gets his chance when the season is over, and he gets rid of those people who are the disturbers in his shop. Now, the hands of a manufacturer in the association are tied, because if he discharges a man because he made a rumpus in the shop, on account of his union activity, the charge is made against that manufacturer of union discrimination and the man is likely to be reinstated. What the union wants done, according to the contentions of the officers in charge at present, is that the employers shall have no right whatever unless the people in the shop assent to it; this method of the board of grievances shall not be used at all, but we shall go before the board of arbitration in every case and decide whether a cloak shall have five or six or four buttons on it. Every question shall be fought out between the group of workingmen, represented by an advocate, and a group of manufacturers, represented by an advocate. We are to have continuous arbitration. You remember the witness answered your question by saying he believed continuous arbitration was practical for those eight or nine thousand cases that came up.

Now, of course, if the policy of continuous arbitration, if the policy of war which the gentleman says he is in favor of, because he says he is no concili-

ator—if this policy is to prevail, then, of course, the protocol can not last, and it can only tie the hands of one side, leaving the other side free. Whatever this terrible machinery may be, whatever it possesses potentially for constructive work and industry, it can not last under such a one-sided policy as that.

Now, he says he can not get the board of arbitration for the decision of individual cases. He attacked Mr. Winslow yesterday upon the ground that he was a statistician and that he did not believe that the statistics of Mr. Winslow were accurate. I told you yesterday that I would prove that the statement that there were no disputes on questions of fact in this board of grievances was a statement to which the gentleman himself assented. On page 320 of the record of the board of arbitration, on October 12, 1913, in discussing improvement in machinery, I stated it very frequently happened that the manufacturers voted with the union on questions of fact. Dr. Hourwich, interrupting me, said, "May I correct you right here, that we also voted with the manufacturers on questions of fact as well as the other way?"

"Mr. COHEN. The difficulty of questions of fact does not exist.

"Dr. HOURWICH. Does not exist at all."

Now, when this board, which he now attacks, came to consider this very matter they said this on page 379 of the same record:

"We, however, were very much affected in our opinion as to the need of a change in the board of grievances by certain statements of facts which were made to us to-day. There had been at the previous hearings on this subject a great, a very great, diversity of contention as to the matters of fact between Mr. Cohen on the one hand, and as we understood it, between Dr. Hourwich and Mr. London on the other, as to what the results of the board of grievances had been, of the proceedings. We, in the first place, had supposed that there had been difficulty, particularly of late, in obtaining a decision by a majority vote on certain contested questions of fact which naturally must necessarily arise from time to time in controversies which are submitted. Dr. Hourwich to-day removed the doubt which we had on the subject, and it is believed in entirely agreeing, frankly agreeing with Mr. Cohen that there was no difficulty in securing a decision on any questions of fact."

And yet he comes here, and publicly states discrediting Mr. Winslow's work, that he does not know the basis for Mr. Winslow's report that there are no disagreements upon questions of fact in the board of arbitration.

He comes here and tells you that the difficulty with the board is that it does not meet. Here are some of the minutes of this board of arbitration [indicating papers on the table]. Here are two more volumes that I left. These are the stenographic minutes of the board of arbitration sitting just as your commission sits to-day, day after day, sometimes to dispose of large and important matters [indicating same on the table]. But the difficulty with that board is that it only decides right when it decides the professor's way. If it decides the other way, it is no good.

If we had continuous arbitration with decisions in favor of the employer, continuous arbitration would be bad, too.

That is the situation that exists at the present moment, and let me observe on the general subject of whether the protocol will work, that it may be accepted as axiomatic by the commission that when a man arises and puts himself in a position of sole leader, lawyer, and officer of the union, and attacks the tribunal which his own union has helped to create, no collective agreement can last.

That is the history in England and that is the history in Germany; it is the history all over the world. No collective agreement can last that is not honorably observed by both sides, and if they constitute a board of arbitration, and are willing to accept its decisions, when it is favorable to them, and refuses to accept the decisions when it is unfavorable to them, the thing can not last; it falls of its own weight.

Now, let me say this: That this is not a matter of good name, faith of anybody, or any individual. It is an unfortunate thing that the name of one individual has to be used so frequently. It is not a matter of a decision of principle between the union and the manufacturers' association. It is not a matter of difference as to the value of conciliation or arbitration between the union and the association; but the fundamental difficulty is that the individual, whose idealism nobody can question at all, is possessed of the notion that you can have a peace agreement and a condition of war at the present time. That is the difficulty of the situation. His very conception of fighting all the time, is his conception of the office of secretary of war under an agreement which pro-

vides for a tribunal, which he himself says is to take the place of strikes, his attitude in the defense of strikes, his attitude in his articles in which he calls the international officers traitors, in which he abuses the officers of the joint board—everybody who has been working on this protocol from the day it was signed down to the present time, is an archconspirator, against him because they disagree with him.

Now, it is because he has that conception—that his duties as a lawyer are to be secretary of war in this situation—that the whole thing is falling to pieces.

Commissioner Lennon, you know perfectly well that when we were on a war basis, the manufacturing side had a pretty good secretary of war, too, and if we are going to be on a war basis I can give you my assurance now that we will have just as good a secretary of war as we had in the strike of 1910. Now, it has been suggested in some East Side newspapers that the purposes of the manufacturers were to smash the union, and to use this situation to smash the union. I want emphatically to say in public and upon record, that there is no such purposes and no such motive. The union has been shot to pieces, because one of their own men, their own employee has charged their leaders with bad faith, and with treason. The protocol has been shot to pieces by that same individual, charging the board of arbitration as it did here with bad faith and dishonorable conduct; by his charging us with an attempt to bribe him, to induce him to leave his position, for pay in their employ, a charge which is absolutely without foundation. It has been shot to pieces by his charge that Mr. Winslow has corrupted the figures that were made the basis of the statistical investigation by the board of arbitration.

We are not doing anything to smash the union. All that we said is this, and we say it again: The association of cloak manufacturers believes in trade-unionism; it believes in collective bargaining; it believes in voluntary arbitration as a means of settling controversies between employers and employees, but it believes that a collective agreement must be honorably kept by both sides; and if anybody undertakes to assume that there can be a war footing at the same time there is a peace footing he is counting without his host, and if the association has to take action as a result of that attitude, it will be taken with deep regret, but with the feeling that it is the course open to self-respecting men, unless they want to turn the management of the industry over to this single individual. Those men know that the proposition of controversy over every little detail in the shop is going to breed controversy. They know that poor arbitration, according to the history of trade-unionism, and let any trade-unionist quote from Webb on trade-unions, he knows that poor arbitration is going to break down the machinery, and no manufacturer is going to pay the penalty and the price of this thing going for another season, and if that policy—that method—is to prevail, if the protocol is to be torn up to fit the idiosyncracies of a single individual, then the sooner it comes the better; and as one who believes in the protocol as a means of progress for both worker and employer and the industry, I say that the sooner it comes the better; if that is the sort of progress, there is an end of it.

Dr. Houbwich. Can I ask a question of personal privilege—a question involving personal privilege—and for one minute, Mr. Chairman?

The CHAIRMAN. I am afraid that we shall have to ask you to wait for that question until the speaker has finished, and then you will all have a chance, if you will ask him in an orderly fashion.

Mr. COHEN. I want, Madam Chairman, to make my earnest protest upon this record against the insinuation made in the testimony yesterday that the manufacturers were using canvas cutters in place of real cutters. You heard Mr. Martin testify for the cutters' union. We did not call him. He said that there was now in conference a plan for systematic apprenticeship in this industry, and that that conference was about to be held and had already held one meeting where plans were to be worked out, and it had to be postponed because of the pending of this investigation at this moment. The cutters themselves have asked for this conference because they know the difficulty in the situation is due to the necessity of having some system of apprenticeships which is not covered by the protocol, but for any single individual to come here and tell a public body that at the present moment there was bad faith upon the part of the manufacturers of that sort is something that ought to be condemned by public opinion.

Now, I want to say a word about the difficulty of fixing piece prices.

Now, while that process is going on, if somebody throws something in the machinery to destroy it, what happens? You will not only destroy the union,

you not only destroy the protocol, but you will destroy this industry. I honestly believe, Mr. Ballard, that if this protocol goes down, and the opportunities of standardizing this industry are not availed of, it is going to do harm, and this industry is going to suffer in this city tremendously. And what is going to happen to the union, Mr. Lennon? The union lost its fights in the cities of Cleveland and Philadelphia and other places. It has not been able to win by the power of its own inherent force; it has not been able to win there, and it can not win anywhere, I claim, if it is known that the result of a strike will be no agreement that will be observed by their side. They can not win. No union can win a strike that has a record of nonperformance of its own obligations. So that we have got that problem of the piece-price system. We have got the additional problem of meeting competition of other cities. Let us assume that this piece-price problem was solved. We know perfectly well the prices in other cities can not be made the same as in this; but where there is no union to maintain prices it is one of the elementary principles of trade-unionism, as I understand it, that prices tend to sink to the lowest level.

Now, in the cloak workers' industry in this country the union has failed to jack up the standard wages throughout this country to the same high level throughout the country that they are in New York. There is competition in New York to-day. New York has held its own remarkably well, and it has held it because of the brains of the men at the top here, because of their wonderful executive capacity, and it has competed well and successfully with the rest of the world, because of that remarkable efficiency of the leaders of this industry. But just see what happens if it goes on, if the union can not maintain standards throughout the country. We are at the mercy of every other city in the country. Now, for that there is a remedy. I have suggested it, and it is now being considered in the dress and waist industry, and that is this, that as soon as the public is interested in knowing whether the garments that are being made are made under sanitary conditions, and whether a fair wage is paid to the worker, the consuming public should be brought into the game; and the National Consumers' League is to-day ready to join with the union, with the manufacturers, and with the workers to secure a label which shall be attached to every garment that is made under fair conditions—a label that shall secure to the person who is wearing the garment that it has been made under proper sanitary conditions and made with proper pay to the workers and under proper hours, and is educated up to the immorality of wearing clothes where the laborer is not properly paid. The manufacturer then will be placed somewhere near a proper plane of competition with the rest of the community. Now, when that is done we will have something done that is of benefit. It will mean more work for the people and more work for the industry.

Now, look at it from another point of view. We are now to come to a reform of society in which the workers are to have their fair share of representation. See what it means to them. These boards, with representatives of the workers in them devising ways and means which will raise up the industry, devising methods by which the industry can be improved. You have heard something of what has been done with the sanitary conditions, but you have no conception of what can still be done by these methods. And yet no state of society can be run without order and without discipline. You have heard a great deal about the right of the members of the union which are to be fought for by the lawyer of the union; you heard something this morning about the duties of the workman, with his mind turned to the fact that he must go out on strike without the order of the union. Now, this is what has happened: Although they can not go out on strike without that order, they violate the union discipline, and so the very essence of this system and of administering this system of discipline by order, where the order is violated—this system of industrial unionism, in the sense of having one union responsible for all of its members, breaks down. The workmen in the shop, if each shop is in itself autonomous, if it is an autonomous union, with no laws and no rules except the frenzy and whim of the moment, and it is the fight against that spirit—which is temperamental in this industry—that is going on at the present moment. And that fight is further indicated by the fact that a professor of learning, a doctor of philosophy, a lawyer, a man who went away from the bar while the bar was changing its own notions, and who has got a mind for statistics, and who can not see beyond the end of his nose, and who has influenced these people to the belief that everybody is working for this workable feature in the industry, is a traitor to the cause and is a traitor to the cause of trade-unionism, and he is a traitor to call that his duty; and until that

situation changes nothing can be done. It must be changed. It is just as necessary that it shall be changed as if a man who has to digest his food, who has some serious cancerous growth in his mouth, and he can not take food until that cancerous growth is relieved or removed—and the body has got to live, anyhow.

Now, it was stated yesterday—I showed you—that the fact that there were no disputed questions of fact before the board of grievances was admitted by the professor before the board of arbitration, and the board of arbitration relied upon his admission, and he comes here and tells you they can't get justice, because the board of arbitration won't take up individual cases. Now, he said yesterday that Mr. Winslow was the result of some nefarious conspiracy to bring him into the situation. At page B-88 of the minutes of the board of arbitration of the proceedings before the board of arbitration on August 3, appears this record: Dr. Hourwich says, considering the employment of this commission for the purpose of ascertaining the facts upon which the board of arbitration could act—criticizing that, he says: "The Government has no power to accept any gratuitous service from anybody. Now, considering that, I think the Commission on Industrial Relations would probably be the better institution for it, and I think it would be eminently proper for this board of arbitration to suggest to this commission the name of Mr. Winslow as a man who has already made an investigation into this industry, and who is therefore specially qualified to continue these investigations."

So he, on that date, before he knew what the facts disclosed by Mr. Winslow would show, was suggesting to your honorable body, he was suggesting Mr. Winslow as the one man to give you the facts; and now, because Mr. Winslow's figures do not tally with his, Mr. Winslow is now one of these arch conspirators seeking to destroy him.

Now, that is the kind of thing we have been up against. He says that we offered him a job at \$10,000 a year; and he said he had a perfect right to consider it because he was a lawyer. But that has given the people a notion that we were corrupting, that we were offering a bribe; and I assure you, gentlemen and members of the commission, that there is no evidence, not the slightest piece of evidence, to support such a charge as that.

Commissioner LENNON. Are you intimating that Mr. Hourwich made that statement in his remarks yesterday—that you offered him \$10,000 a year?

Mr. COHEN. No; but he has done it on another occasion.

Commissioner LENNON. I just wanted to know.

Mr. COHEN. He has done it outside; and that is one of the things that has precipitated this difficulty—because, remember this, Madam Chairman, and members of the commission, that every organization, like every individual, has to maintain its own self-respect; and when the man with whom you are to do business says you are a thief and a liar you have got to resent it, you can't let it rest; and that is what has produced the present friction—these several things.

Taking a large mass of tinder and setting a match to it, or running like a bull into a china shop, where there are delicate cups and saucers and porcelain about, charging everybody; charging the very leaders who have built up this institution with being treacherous, by their act; charging them with being agents of the manufacturers; why, he says to you: "Mr. Gompers—I don't think much of Mr. Gompers," and that kills Mr. Gompers, of course. No matter what Mr. Gompers has done, that kills him; no matter what he has done in this country for labor, the professor says he is no good. He says Mr. Brandeis is no good, that kills him; he says Mr. Weyl is no good, and that ends him; he says John Dyche is no good, and that ends him. He is a man with a set of magic labels that are called "Manufacturers' agents," and he has been going around this community and sticking labels on the foreheads of the people of this country, and they drop dead as if by magic when he does it. That is the present situation.

Now, you heard at the very opening of this session that the task, in addition to this problem of the piece prices, which occupied 80 per cent of the field of operation in this country—you have heard, in addition to that, that there is the condition of converting 50,000 people to the idea of one trades-union. The representative of the trades-union itself told you that these people are naturally individualists. They believe in doing things to suit themselves; they reluctantly joined the union. As was stated by one of their own number, they are good strikers but poor union men. That is simply because they have not learned the value of cooperative effort—and yet I may say here that the leaders

of the Socialistic movement itself are doing more good in teaching collective effort than anyone else on earth, and you know I am not a Socialist; but they are gradually teaching these people that by collective agreement, by working together and having a common interest, and by subordinating themselves to the laws of their own making they can accomplish more than by this system of guerilla warfare which they have used for 10, 15, 20, and 25 years.

I believe they have learned a great deal in the last five years, and I believe in three or four years more they will have learned the value of cooperation, not because they do what the manufacturers want them to do, not at all—though they want to claim everything they can get, of course—but the question is simply one of from day to day, what can be done and what can be done to-morrow; and so they have to have men who won't eat up all the meal at first, but who will leave a little something over for supper and a little something over for breakfast; and the wise labor leader knows—he has to know—when to ask for things and when not to ask for them. But the guerilla system is to ask for things all the time and have a continuous state of arbitration, with 10,000 or 15,000 cases, and all the time some one who is holding a shotgun at the head—and then run an industry on that basis, Mr. Ballard, and see where you will come out. So that the collective idea is gradually getting into the minds of the people, and it would have made more progress if the very people who have been educating the mass of the people to understand the value of cooperative agreement had not been discredited by a man who seemed to think he is the only person in the world who is sane on this question and the only person in the world who is honest, and that everybody else is insane and dishonest.

There is a very important fact, Mr. Ballard, which you can easily find out for yourself, that in the union shops where merchandise is made and bought of other manufacturers the people are earning more money than the people that are in the shops—in the other shops—and that is because there is more work for them to do, because the people in those shops are willing to work more reasonably on the piece-price basis, and they earn as much as \$50 and \$60 a week during the height of the season; but, of course, if they want \$15 for making a garment which somebody else is willing to make for \$5, there is not enough work in that shop, and there you have an element which makes for disturbance all the time.

I will be glad to answer any questions now which the commission may wish to ask me at this time.

The CHAIRMAN (Mrs. Harriman). Have you finished?

Mr. COHEN. I have some references to minutes that I would like to make later on.

A VOICE. May I ask a question?

The CHAIRMAN. There is a gentleman on the floor who asks permission for a question. You may ask that question now.

Mr. SAM STANHOFFS. I want to ask Mr. Cohen a question. Before I ask a question I want to say a few words. I am a worker; I never in my life—

The CHAIRMAN. You asked for permission to ask a question. Please come forward and stand in front of the rail and ask your question.

(Mr. Stanhoffs comes up to the rail.)

The CHAIRMAN. What is your name?

Mr. STANHOFFS. My name is Sam Stanhoffs.

The CHAIRMAN. Will you tell us what your position is?

Mr. STANHOFFS. I am a worker—an operator. I could not get a job; I have been suffering the last year; could not get a job. I want to ask Mr. Cohen for what side he stands on?

Mr. COHEN. No; I do not.

The CHAIRMAN. Just ask the question.

Mr. STANHOFFS. My question is, Mr. Cohen just remarked—I intend to prove it to you—I am No. 1 man; that 50,000 people are working—I don't know what he means—I want to prove that 50,000 people who are working on clothes are not satisfied with Mr. Cohen—I could swear to every word that I am saying. They work night after night. You can see to-day—at 1 o'clock there is going to be a demonstration against this ruling.

The CHAIRMAN. We would like to hear what your question is.

Mr. STANHOFFS. My question is, Mr. Cohen said that if 50,000 people are dissatisfied with this protocol condition—and only 1 man means 4 of these 50,000 people—if Mr. Cohen would say 50,000 people are satisfied, he should

go on the East River Bridge and jump off, if you are to listen to him. That is my question.

The CHAIRMAN. Do you want to answer that question, Mr. Cohen?

Mr. COHEN. I think, Madam Chairman, that is a very good illustration of just what is going on. That gentleman has been out of employment for a long period of time. He belongs to Operators' Union No. 1. He believes that it is the business of the union to see that he shall get work. He has not had work, and he is in a condition of mind where he thinks what I am saying here is against him, and he thinks it is against the other workers who are out of work, and he is not in the frame of mind where he can study this problem out—how we shall build up this industry—and he has been led to believe, it seems, that the leaders who have been working are dishonorable, because they have been working in cooperation with us; and yet if what I have said is true, it is absolutely essential to produce the work he wants, that there shall be more work in the industry for him and for others. It is necessary to have that cooperation; and if he wants to throw me and the international officers off the East River Bridge, well, it may satisfy his feelings for the moment, but that does not help to produce more work in this industry. He is not concerned much about the individuals. What he and others like him want is more work, and we are trying to get him more work; but we can't build up a building by pulling one down; we can only build up by getting the bricks together and the other materials, and building is a slow process, and, of course, for a hungry man it seems very hard for people to come here from Washington and listen to a lot of things, where the thing does not work at the present moment.

I have not any feeling against this man, and I am sorry that he has any feeling against me; but it is not a question of destroying their present officers of the international or our officers. He must know that for three years and a half we have sat down at the same table with them discussing matters with them and with the cutters' union, and that the cutters' union has made more progress by sitting down and discussing conditions with us. He must know that the board of sanitary control involved the meeting of the manufacturers with members of the international; but he thinks that is a conspiracy, because he has not got any work—and we know it is a conspiracy; it is a conspiracy to raise the industry so that there shall be better conditions and more work. There is not anything in this thing that makes for hostility to the working people. If he will only take time to overcome his feeling and study the proposition, so he will understand what the real problem is, he will be one of the first to go down and tell his own associates that by following their present policies they do not get any work.

The CHAIRMAN. Dr. Hourwich, you asked for the floor, I believe?

Dr. HOURWICH. I want, Madam Chairman, to make a statement of personal privilege.

Mr. Cohen has repeated here a charge that I have accused the manufacturers' association of having attempted to bribe me. I never made that charge either publicly or privately, and when somebody who was acting as a spy, evidently, went to our meetings and distorted my statements and related them to the manufacturers' association, and that statement was made in the letter—it was made in a letter and I promptly repudiated it—I said, first, to the reporter for the Daily Trade Record that it was not true. Somehow or other the reporter did not render my words exactly; then I sent a letter to the Daily Trade Record and that is the letter read by the manufacturers. Moreover, I repudiated that charge also in the Yiddish paper, the Daily Forward, which is read by the workingman. I never made that charge, and I am absolutely innocent of any such imputation, and I don't need to repeat that here. I will file with the commission copies and translations of my public refutations.

Mr. COHEN. I want to read the statement the gentleman made to the Daily Trade Record. I have it in the Woman's World.

Dr. HOURWICH. Have you my letter there also?

Mr. COHEN. I have this statement. I listened attentively to what you had to say. He says after giving the history of his services to the joint board, and the possibility of his continuing: "A month later my impeachment came. It was then no secret that I did not have much longer to remain with the union. At about this time there was some talk among a number of manufacturers about me, and the opinion was expressed that I was an efficient person—there are persons who think so—and that it would be advisable to appoint me as its representative, and also that I would prove valuable enough

for them to pay me \$10,000 a year. That reached me, and I retold it to a number of adherent cloak makers, to prove that what had been said about me, that through my obduracy I was creating discord with the manufacturers, was false."

Now, if that does not mean that some of the manufacturers were offering him \$10,000 a year to have him take up their employ, then the English language does not mean anything. And it has also created the impression in the minds of the people that we were trying to take him away from their service because of his remarkable efficiency and pay him \$10,000 a year for his services.

Dr. HOURWICH. I will have a chance to answer that.

Mr. COHEN. I hope you may.

The CHAIRMAN. Does any one else want to ask Mr. Cohen a question from the floor?

Commissioner LENNON. You must all remember this, I do not want to butt in, but you must remember that we are going to adjourn at 2 o'clock or a few minutes past 2.

Mr. GEORGE WISHNAK. I would like to ask a question.

The CHAIRMAN. Come forward and give your name.

Mr. WISHNAK. My name is George Wishnak. I would like to ask the speaker if he does not believe an impartial chairman on the board of grievances would rather express to our people a lost cause to the union than when it is merely a conciliatory board?

Mr. COHEN. Madam Chairman, the idea of an impartial chairman has been much discussed, and it was discussed before the board of arbitration. Now, an impartial chairman may mean one thing and it may mean half a dozen things. If it means that one person, called in for the moment, is to decide a particular controversy, that is a method for eliminating three arbitrators, and if the purpose of the impartial chairman are to get rid of this arbitration board which has decided against the professor so often and against the manufacturers upon other cases, of course, that is a good instrument for doing it. But if an impartial chairman is to be a permanent person who sits all the time hearing cases, then, of course, you have the continuous arbitration idea, and that is bad for the workman as well as for the manufacturer, and, for this reason, Madam Chairman, if you have continuous arbitration, you have people winning and losing lawsuits.

Now, we know in the factory, as has been explained to you by Mr. Zucker and by Dr. Abelson—the idea that the only way to get results is not only to get rights but to get something more than rights—by going to the men and having the men apologize for something they did, and having the manufacturer take them back. It is effective diplomacy.

Now, experience shows that out of 67,556 cases the present method disposes of every case and had disposed of every case except 8, and those had not involved disputed questions of fact. Now, if it were necessary to have somebody like a jurymen to decide a question of fact, somebody could be brought in. But what happens? What happens to-day is this: That it only requires one man on the manufacturers' side to vote with the people in the union to give a verdict for the union, and it only requires one man on the union side to vote with the manufacturers to give a verdict to the manufacturers; so you have to-day a system which avoids litigation by compelling people to conciliate. But the difficulty is just here, as was pointed out by Dr. Abelson: The man who is a conciliator is an elected official, and if he can't win all the time, when he comes up for election he is beaten; and George Wishnak, the man who asked that question, was beaten because he could not win 100 per cent of his cases. Now, he believes in the impartial chairman idea, because it would enable him to put the burden on somebody else's shoulders and would keep him where he could continue doing the work of conciliation. Now, it is not possible to have that advantage without having the disadvantage of continuous arbitration. That being so, we have felt that the suggestion as it was made was an impossible suggestion and would not work.

Now, there have been things tried in the dress and waist industry, and we can all learn from the experience in those industries, and I believe that difficulty can be overcome; I believe it can be overcome. I believe that I could sit down with a lawyer on the other side who conceived his function to be the work of construction rather than of destruction, I would find a way out of that difficulty with him; but I can't do it all alone. So I have asked repeatedly for the opportunity to meet this problem face to face, and I believe that problem can be solved. It can be solved to the satisfaction of both sides—not by the

specific proposition that has been made by the union and which has been turned down by the board of arbitration, but by some other way. I think if the parties would sit down together they can work it out.

I do not think I can discuss it because I can not take the time to discuss it now; I can not take the time to discuss the essential details, but that is a thing for constructive minds, not for a secretary of war.

The CHAIRMAN. Have you any questions to ask Mr. Cohen, Mr. Ballard?

Commissioner BALLARD. No.

TESTIMONY OF MR. ABE BISNO.

The CHAIRMAN. We would like to call on Mr. Bisno, if he is present.

The CHAIRMAN (Mrs. Harriman). Will you tell us what connection you have had in the past with the protocol, please?

Mr. BISNO. I have been the general manager of the organization of the cloak makers' union, and also a clerk for the union of the association for several months. How much time am I limited to?

The CHAIRMAN. How much time will you need?

Mr. BISNO. I could not say exactly, but it seems as though what I have to say will take off from the time of my friend, Mr. Hourwich, and I shall try to be as brief as I can; and I have asked Mr. Lennon if they have a session in Washington that I shall be called on to Washington to continue this testimony, because I am very much interested in it.

The CHAIRMAN. Mr. Bisno, I would like to make this communication: That anything that is left unsaid that any of the speakers here would like to have put before the commission, they may submit in writing to the commission at Washington. We are going back there this afternoon, and you can send anything you have left unsaid to the Industrial Relations Commission in the Southern Building, Washington, D. C.

Mr. BISNO. Before I say anything in relation to the discussion of the items under consideration, I would like to say something in reference to myself. Mr. Hourwich has introduced me here as a friend of his and would like me to represent him in this discussion; and while I sympathize very much with Mr. Hourwich, and I will not have a chance to go into an extensive discussion of the several reasons, there are some of the things that I do disagree on with Mr. Hourwich. I do agree with Mr. Brandeis almost completely on his views with relation to this protocol.

Mr. JULIUS HENRY COHEN. Will you say that again, please; I did not hear you.

Mr. BISNO. I agree with Mr. Brandeis in his interpretation of this protocol very largely, almost completely; also it seems to me that in this discussion here the real subject matter under consideration has not been raised, and that the words "war secretary" and "conciliation" and "arbitration" and "mediation" have not been used properly in relation to the facts in the case, and that there has been a cloud of dust, if you please, introduced here in relation to the whole subject matter and it ought to be cleared up, and I shall do what I can to clear it up as best I understand.

It seems to be very dim and not clear in relation to the items under consideration.

There has been said a great deal about conciliation and mediation and a grievance board. The truth is, the grievance board can not, in the nature of the thing, be a conciliating or a mediating board; they are working under an agreement which specifies that the union and the manufacturers have certain relations, and it is the business of that grievance board to enforce that—not to conciliate about it, not to mediate about it, but to enforce it, and largely to enforce it on the manufacturers for union hours, union wages, not to discriminate against the union or the union men; and when the manufacturers' association come to court public opinion, asking that this question be conciliated and mediated upon, instead of enforcing them, in substance declare themselves bankrupt—to haggle upon the question of whether they shall pay 100 per cent of their agreement or 80 per cent or 60 per cent. You must bear in mind that the subject matter for this grievance board is not questioned, that they have not been agreed upon; it is questioned that they have been agreed upon; and the intent and purpose of that agreement was to have that thing lived up to, so that when the union and manufacturers' association come before that board the intent ought to be to enforce what has been agreed on.

I agree with Mr. Brandeis; I agree that Mr. Brandeis has disagreed on points of that arbitration; but the grievance board are not dealing with great points, they are dealing with points the union and the manufacturers' association have agreed upon, and they are ordering workingmen to obey those rules; and if this grievance board is coming together on an agreed case as a conciliating and a mediating board, they come into court, so to say, declaring themselves bankrupt on the agreement; and the introducing the idea of conciliation and mediation is simply the idea of how much less shall we give you than we agreed to do. That is the real substance of the thing. And not only do they say this, but they say the question of how much less we can give you can not be passed upon by anybody, by any impartial chairman, by the public—but by ourselves. "We are the judges as to how much of that that we have agreed to we are going to give you." And understand, on this proposition that the workingmen have been working, an impartial man to decide how much that has been agreed to, they say: "We are going to get a great deal of dust and cloud thrown upon it," and talk, nothing but talk, has been heard upon it, but not a real word on the heart of this subject. We, the workingmen, say, "Gentlemen, you have agreed upon certain things being done. We do not want you to decide if you are going to give us 2 per cent or nothing and fill the air with beautiful oratory and all that." There has been a great deal of animus raised here with such words as "secretary of war" and "killing the reputation of that man and of this man," and so forth—it seems to me that that whole talk was out of place.

The truth of the matter is this, that a situation was created by which Dr. Hourwich was obliged to testify he was a scab agent, so he calls himself a scab agent; he was obliged to do it; he was obliged to do what he would call dirty work, so he put himself in the same class; and I believe this situation has been created by Julius H. Cohen and Paul Abelson and John Dyche, so any man can do something under this attitude that is likely to mete out justice.

Let me cite some of the contradictory propositions that have been submitted here under the theories of constructive work, peace agreements between capital and labor, etc.; let us go further, if you please, and call that social democracy and all of that—and that is the way the manufacturers propose to deliver from their side to the union—a faithful performance of their duty under the protocol. They say to us, "Gentlemen, this is a competitive industry; you must see that you or your side deliver, that the price for labor outside and the price of the association be approximately the same as that of our members, so that we may be able to stay in business and perform faithfully the provisions of the agreement we agreed on." And I believe this statement is right, that we ought to take cognizance of it and ought to do the best we can to deliver our side, that the prices for labor outside the members of the association ought not to be less than that of the members of the association.

Now, the scheme, in order to be uniform, must be a scheme by which the members of the association and the members of the union cooperate so that this principle can be introduced and lived up to honestly.

Well, I am going to say that I have got cooperative interests. I am going to cite the case of Mr. Crystal, who is in this audience—the gentleman is right here, so if I misrepresent here, he can call me down and say "You are not telling the truth." Mr. Lazynsky was engaged in that case, and he is right here. Members of the board of managers of the union are here who were engaged in that case, and the board of arbitrators; so all the witnesses are here; there can not be any difference of opinion as to the facts, and here is the story:

When I had charge of the union—I was the manager of that—a man came up to me whom I did not know, and asked me the following question. He said, "Mr. Bisno, give me an order from the union so I may open up a manufacturers' shop and get union man to work for me," so I said "All right, I will arrange it with you," and I sat down and wrote down his name and address, and asked him: "What did you do for a living before?" He said, "I have been a contractor, working for Mr. Crystal, a manufacturer, and now Mr. Crystal tells me that I must cease to be a contractor and become a manufacturer; that Mr. Crystal will furnish the cloth and he will call that so that he sells it to me, and he will furnish lining and call that that he sells it to me, and hooks and eyes and buttons and trimmings he will put on his books so that he sells it to me, and afterwards he will buy garments from me and he will call that buying cloaks in the open market, and the difference in the price of cloth and the difference in the price of lining etc., between the selling price and the entire garment, will be that which I will receive to divide between

myself and my workmen;" and I said to him, "Why don't you remain a contractor and work for Mr. Crystal the same as you did before?" He said, "Why, you fellows have arranged it now that an outside contractor comes under the provisions of the protocol, and I am obliged to live up to the terms of this protocol, and Mr. Crystal finds it to his advantage to change his condition, so I am to be outside the provisions of the protocol, and then Mr. Crystal will be able to do better in his industry."

I said that I would refuse to give him that certificate, because I am an officer of the joint board, who have made an agreement with the manufacturers' association to support the protocol in the arrangement we had made. He said: "You are off, you are wrong, I will go to the board of directors," and he went with his story to the board of directors, and they said to him that they refuse to give him the certificate, and he said to the board of directors, "Gentlemen, you are wrong, every man has a right to go into business; I will go before the joint board," and he did, and the joint board said to him, "You can't get the certificate." Well, what was done? His people were called out on strike by the joint board. Now, his people then came to the people who were working for Crystal in other shops and said to them, "Gentlemen, the joint board has called us out on strike; you are against Crystal, you are aiding Mr. Crystal to get money enough to defeat us. Join hands with us." And they did strike. Two or three shops went out on strike to help the shop that Mr. Crystal wanted to make a submanufacturing shop, in order that they might bring Mr. Crystal to terms on the question of defeating the provisions of the protocol.

The joint board approved of that and paid strike benefits. Then these people came to the people inside the factory of Mr. Crystal and said to the men inside, "Gentlemen, you are scabbing on us; the joint board has ordered a strike and you are hurting us. Help us." And the men inside, without my knowledge, stopped work, so that they could bring Mr. Crystal to the terms of living up to the provisions of the agreement. I was then called up by my friend Lazynsky, who served notice upon me that the protocol provides for no stoppages of work, and no strike, and I was obliged to go over with Mr. Lazynsky to the shop, order the men to go back to work inside, and they did; and I then said to myself that under this queer arrangement between the union and manufacturers' association, we were put into a position where we were obliged, in the performance of our duties to the manufacturers, to order a strike, and we were then obliged by this provision to order other members of our union to scab against him, and outside their purpose. This arrangement is a very impossible arrangement, and when Mr. Rosenberg takes the stand here that he has a right to buy in the cheapest market and, while having an arrangement with the union for agreed hours, agreed price, weekly wages, he submits an impossible condition under which an agreement of that kind can not be had.

Gentlemen of this board, you don't know what it is for a workingman to sit in the shop and agree to the price of labor that the boss wants him to have—depending on that agreed price for himself and his wife and his children, in a season's trade where every week counts, and then find himself looking at the price list on that agreement, with nothing to do, and to have his family and wife subjected to starvation, and then the union and manufacturers' association in agreement to subject him to this torture—I tell you any man subjected to this condition can not sit submissive with such large forces arraigned against his interest. And we have submitted to the manufacturers' society protective provisions, as our friend Mr. Julius Henry Cohen calls them, for helping out this problem. I cited one case where the testimony has been overwhelming, running like wildfire all over the industry, where they agreed to the price of labor not giving the workingman bundles with which to perform that labor, forming the members of the manufacturers' association into a jobbers' association and holding their prices—this business has to be stopped—"No strike," "No stoppage of work," "You have violated your agreement," etc.—that ought to be stopped.

I have said to you before that unless the attitude of the manufacturers' association is that the grievance board be an enforcing board and not a talking board the grievance board itself is then made an instrument for purposes of oppression.

Let me cite to you an example. These examples may be numerous—several thousand.

A manufacturer violates the provision of the agreement according to our interpretation of it. Paul Abelson is here. I will take a case where he and I have been on it, so there will be no question with reference to the veracity of what I say and know. A manufacturer is told that his help—they have fixed the price for piecework, the price for labor on piecework. The workingman then comes to me and complains as follows: That this manufacturer has not been dealing fairly with them on the settlement of the price they have charged; that he will discharge any man that will not concede a certain low price for labor; that he will actually use violence on some of the timid members. They charge that he will use violence on some of the timid members of the price committee, that he threw somebody out and threatened others to throw them out through the window unless they conceded to his setting of the price, and that he has made a price for labor at a time when it was not in the union and the manufacturers' association to make the price for labor, and that the dullest possible time was when the best price for labor was made, and so on. Mr. Lazynsky and Mr. Abelson on this position said the manufacturer was right, and they would not go into the question of a settled price for labor. I, representing the union, said, "The manufacturer is wrong, and we ought to go into the question of enlarging the prices for labor."

The question came up before the employers' executive committee, I understand, and they have passed an order that you can not enlarge a settled price for labor no matter what was done, and I dispute with them on that, and I charge that that was committing violence to our agreement, and I ask that we have an impartial party to pass upon it. What did they answer? They answered to that just as Mr. Julius Henry Cohen has submitted to you here to-day, and which has been submitted before, that you can not have an impartial party decide these things all that time. But what happened? These men could not work at those prices. Then they were thrown out. Then they picketed the shops, and the union was obliged to put other men there, and in turn they picketed the shop. To get these pickets away and to protect this manufacturer in his violence and deceit on the union they picketed the shop, and the only alternative we are offered is to go to conciliation and mediation. But there was nothing to concillate there. It was simply a question, Would this man honestly live up to the provisions of the protocol or did not he want to live up to the provisions of the protocol—did he or didn't he—and we claim he did not. We have no redress, and we are obliged to be in the position of an organization in aiding the manufacturers only against the interests of the men.

It has been said here that there is brewing in the union an element of what they call syndicalism to disturb the membership of the union.

Commissioner LENNON. Just answer one question. Did that case you are talking about go to the grievance board?

Mr. Bisno. Yes, sir; the grievance board, Mr. Chairman, while I was an officer of the union, practically agreed. When I came to the grievance board afterwards they told me it was the best thing out. The other members of the union told me, "We can't get anything from this board; there has been a disagreement for the last six months"—before I came; when I came almost the entire year there was almost constant disagreement; the manufacturers' association took it into their heads to take this attitude of conciliating and mediating—"Agreed upon"—and that they were the only conciliators and mediators, and there was no conciliation and no mediation practically during the entire period. My own impression is that they made a mistake. During my two weeks' stay in the city here I have inquired among members of the manufacturers, and they have taken the attitude when I have asked them what they think about an agreement of peace, that they will abolish strikes, and they told me it was the best thing to do, it was the best thing out, and they will stand for that. I have inquired among these men of the most inflamed minds what they think of an agreement of price, and they said to me that they believed in the protocol and believed in an agreement of peace.

I have not yet run across—not during the entire time I was an officer of the union—a single man, either manufacturer or union man, that told me "we do not believe in the agreement between manufacturers' association and the union or to eliminate strikes," and the following, I think, is the reason: An individual strike in a factory is no answer to the problem of labor, because there, too, he only wants a price list and does not want the bundles, and it is not—and therefore, when he is successful in a strike, his so-called success does not provide mean of earning a livelihood, and an individual strike is unnecessary to our problem. A general strike, unless followed by an agreement between the manu-

facturers' association and the union, is only an answer to our problem for 8 or 10 weeks, during this particular season. Next day the season—and the strike ends; men have no work; competition between shop and shop begins to generate the so-called factory only; next season the factory of the last season has drifted out and they have begun the thing over again. So that strikes, in the opinion of most men who have studied the industry, are no answer to the great troubles of the men engaged in that industry. The only real answer must be an agreement between the manufacturers and the union, and the agreement must be of the kind that will be workable; that will not lead the men and the manufacturers into a blind alley so that they can not get out.

And I submit that to the interpretation of these gentlemen of the grievance board, I submit it is a blind alley where you have to concillate, you have to go through this place, and you are shut off by disagreements, and we have to stay in that blind alley until it is opened up; we have to open that alley somehow. As chairman of the grievance board, an impartial, honest man, honest to both sides, who will answer everything—not arbitration on disagreed points—that is not what we are asking—we say to these gentlemen: "Gentlemen, you have agreed to a protocol, have you?" They answer, "Yes." We say, "Signed by the officers of the manufacturers' association and the union. Gentlemen, you agreed to a protocol to that effect, didn't you?" They answer, "Yes," and to the union we say, "Gentlemen, you agreed to a protocol, did you?" They answer, "Yes." We ask, "Signed by the officers of the union?" "Yes," they answer. Then, working under that instrument, that is not subject to conciliation and arbitration, which that whole talk has been about; that is subject to enforcement, and you have to have an officer to enforce it, or, at all events, to interpret it. The union claims this is enforcible one way and the manufacturers claim it is enforcible another way, and the only way out of that blind alley is a chairman who will know, because I believe with Mr. Brandeis that you can not arbitrate on agreed points; that you have to mediate and concillate on these points, and unless you do your arbitrary decision on this will not be a working instrument. But on agreed points there is no difference of opinion, and there ought not to be, unless Mr. Julius Henry Cohen and the gentlemen of his association agreed that on agreed points we have an impartial chairman of the grievance board, you have led us into a blind alley, which we can not go through. Mr. Cohen, they have there in Chicago, to my knowledge, a chairman of their board, which is a grievance board, and I was told by Carl Meyer, the lawyer of the manufacturers—of the manufacturers, a firm that employs eight to ten thousand people, a lawyer of a law firm which is one of the largest in the United States, representing banking interests and large constitutional interests—he told me, Mr. Cohen, the chairman of the board is a blessing to the industry.

It is an answer to the contested problem, and Carl Marx was speaking not for the workingman but for the manufacturer. Mr. Sidney Hillman told me—he represented the union—that the chairman of the grievance board—that an impartial chairman of the grievance board in their case was the best thing that the union introduced; that there is no friction; that there is no threatened strike; that there are not all thousands of officers calling themselves secretaries of war and so on; that there is no pretense on the subject of conciliation and mediation, but they are running an industry in the most successful way in the United States concededly so by everybody.

That is the most successful and conservative clothing firm in the United States. That is run under this rule, gentlemen, that you show so much fight on, all of you, the rule that when there is a difference of opinion on an agreed point between the manufacturer and the union, impartial parties in whom both sides have confidence, may decide, so there may be no blind alley.

Mr. JULIUS H. COHEN. May I interrupt you for a moment?

The CHAIRMAN. We would rather wait for questions until he has finished, Mr. Cohen.

Mr. BISNO. I understand, and I sympathize with the manufacturers, Madam Chairman, when they tell me that the subject of submanufacturers and sub-contractors in out-of-town work and in town work, and so forth, are difficult and complicated questions. I know it is true, and I know that it is necessary to apply to the situation the greatest amount of brains the most informed of men can bring to bear on the study of the situation, so that there may be an answer to the question, Why should a union man scab against a union man under the agreement? And I believe Mr. Cohen will bear me witness when I say that for purposes of constructive mediation and conciliation that is borne out, and on these points you find us in the advance guard. I claim that when I had

charge of the union, with a whole series of propositions, I said to the manufacturers, "Gentlemen, I will be glad to deliver you what we have," and I ask you to do the same—your association is more or less in relation with the union, so we may work hand in hand to get an answer on this question and also answers on other questions—and what we have received during the entire time—what has it been—I may say I make this statement with regret and with pain—it is only an unlimited measure of talk and of oratory, but practically no cooperation for the purposes of aiding the union or the manufacturers to give an answer to this vital question.

I think I could go in with Mr. Cohen; I think the records will probably show that Mr. Cohen delivered himself beautifully on hundreds and on thousands of occasions; but he did not come together with us every time we wanted, or every time that we ought to have wanted, to come together with us and give an answer to this question.

Mr. Cohen, you want the agreement; I told you the union wants the agreement; that I told you if we found a single inflamed mind in the entire crowd—and I am willing to be put under oath on this proposition—that did not want the agreement; I tell you I never found one single inflamed mind that did not want the agreement; I told you I have not found a single manufacturer who does not want the agreement. You must answer to the question of this so-called manufacturer and subcontractor. You must answer to the question of the provisions you have agreed to; you must answer to the question in a certain sense, on good faith.

Mr. Cohen, when you say you are experimenting on the proposition and putting on piecework and week work, and so on, you know you and I have been working on this thing—not on experiments, but on questions of values.

Mr. Chairman, you can not introduce in this matter, in this industry, two forms of pay without either one being used for the purpose of defeating the other, or both. You know the difference between week speed and piece speed; but that is not all. Suppose you have a body of men working on piecework, earning at the rate of \$30 at a price settled, but where they have only three days a week work—and we know it is so—then the manufacturer will put on a body of men working by the week at \$20 a week, and he will not give them steady work at piecework, and it is better to work at the rate of \$20 a week week work than it is to work at the rate of \$30 a week if you are only going to have three days a week work.

If a man working three days a week would work at the rate of \$20 alone, he would be starved. There is the competition between the pieceworker and the week worker. You see both of those gentlemen have a union of interest. You are putting up an impossible situation, and the man who has nothing to do will go crazy if he has nothing to do.

Mr. Cohen comes here with his very flowing and beautiful talk to the effect that an experiment was being made, but Mr. Johanson says he did not concede it. It is week work and piecework in competition, and it is impossible to maintain any sort of union standards or any sort of union rules or agreement rules under such conditions; there are any number of impossible situations entering into this. There ought to be an agreement, an understanding. For instance, Mr. Lazynsky and I went over to a gentleman named Norwick, who was manufacturing cloaks and also raincoats, and Mr. Lazynsky said to him that under the provisions of this protocol he was obliged to employ 40 workmen.

This was not in the protocol, they said. They said we are obliged to work at half the wages of those not in the protocol, so it put the men under the protocol in the position of doing the work of the men not under the protocol.

So the men went out on strike, and Mr. Lazynsky and I went to look at it to see if we could settle it—the union-men protocol; the nonunion, not protocol; competition; and so on.

Mr. Lazynsky says there is a new situation arising in the business—no: we won't do it. Then the raincoat makers went down and they picketed the shops. The protocol men upstairs were working—the members of this ladies' garment workers' union—and when these people from upstairs came down the others asked: "Are you fellows doing our work?" "Yes," they replied, "nobody told us." "Well," they were told, "you will have to come down, too." They replied, "No; Bisno told us to and Lazynsky told us to stay." I came over to Lazynsky and argued this impossible situation with the manufacturers' association, that will put a union under this sort of an interpretation, that it is an impossible thing. I don't know, but I suppose he has had a meeting of his executive board, or whatever it was—but that is the proposition. And the

protocol men went out. They said they were raincoat makers; they were no longer under the protocol. The whole business went on strike, and then Mr. Bisno was obliged to disagree with Lazynsky in regard to the price for labor for articles not under the protocol, and then they went back, and the thing was settled up.

But it certainly was not settled up in a reasonable way or in a way in which the union and the association could work hand in hand.

Gentlemen, do not make high-flown speeches. Come here on the level if you want to argue and agree or disagree; and if you disagree to submit the point to an impartial umpire, and you can decide on agreed points—not on disagreed points, but on agreed points that you have agreed to. Let us have an honest cooperation that is to extend the beneficent results of the protocol into the entire industry so that Philadelphia, during strikes, can not have it work attended to here, and that we are obliged to scab on Philadelphia; so that Cleveland during strikes can not have its work done here. Let us work hand in hand. Let us honestly cooperate for the preservation of the industry.

There are, we know, syndicalists and socialists in this industry, but I tell you I honestly believe that the manufacturer is entitled to be prosperous; otherwise the men are not going to be prosperous, and I will do my best to put the manufacturer in a position where he can honestly carry out the terms agreed upon. I tell you that most of the men are not in the feeling of destroying anything. We want to cooperate—but no buncombe about this—we want to cooperate, but we can not stand in the blind alley that is offered to us; we can't in the blind-alley arrangement on the subject of agreement for prices, and then the bundles to be taken away; and we can only look at the price list on the wall—we can not stand that; and you must agree with me that dead men can not be used to make protocols, and they can't be alive to make agreements on the prices of labor and have protocols and agreements with you gentlemen and have them disputed.

Let me say something on the subject of the international. There has been a great deal of bad feeling introduced here and there—I told you when I started that Hourwich called himself a scab agent; I told you that if I recited a number of cases you would agree with me I was a scab agent, doing violence to every principle that I considered sacred—simply because of this impossible arrangement.

If you introduce an impossible arrangement, then naturally it follows that the international officials and the local union should tear each other's hair, that there should be a condition of war instead of a condition of peace. Change the condition so that we can all live at peace, one with the other.

There is no war between the international and the local union. There is no occasion for a secretary of war. They do not discredit the leadership of any man. Mr. Hillman represents the best of the workingmen, and I know it; I have seen how he is accepted by them; I have seen the boys carrying him on their shoulders—not simply as a demagogue—they will come there and take up their time and talk business and they will not talk syndicalism, as Mr. Cohen says, but serious cases. He is a most honest man. Mr. William O. Thompson, the attorney for the union, is not called names by the union, but he is to-day the most respected man in the industry. Not only that, but Paul Meyer, the man who is a member of the most monopolistic law firm, as I will call it, in this country—a man who has been fighting labor for years, is to-day respected and honored by every man in the shop; and I can bring testimony here to prove it. You have been in Chicago, and you who have been there will not question the fact, but you will probably agree with me. Winslow told me that these two men, William O. Thompson and Paul Meyer, have brought the best contributions to the interest of labor in this country that any man has brought. So that there can be no question about it; they all agree upon it.

In answer to the question about submanufacturers being registered, every one of the men you know—ask him if he wants to be subjected to the terms of the protocol. No speeches about that; otherwise the protocol can not exist.

In answer to the question of the wages, and the terms of the agreement—no speeches about that. It won't do. Somebody infers that it took an attitude of interference, but not an attitude of conciliating. Leave it out. I think that I can probably agree with you that you can not deliver 100 per cent; well, I am willing to take 90 for the joint board. Sometimes I am willing to go down. But I am not willing to have you pass on it when we are getting nothing, and you are the only judges. It is an impossible situation. We have a very diffi-

cult proposition; we may be subjected or obliged to take 90 per cent; maybe obliged to take 95, and at times 85 or 80—we will have some sort of a show anyhow. But under present conditions the grievance board has been a disagreement board—nobody to enforce—because of the nature of the thing, the complication of making prices here depending largely upon psychology.

Now, let me tell you something about psychology—it is very interesting. I think you will find it in your experience, too. In several hundred people there are many who have a social conscience, a fear of not doing right; they have a sense of fair play. Perhaps not all of them have this, but out of every hundred there will be 10 or 15 men who show that they have a sense of fair play, and they have a sort of spiritual life related to the labor union that they call fair play; they are not men without any stomachs—they want to eat, too; they are not men who have not families—they have families—they are so constructed that they have to eat—but they have this psychology, that they have a social conscience.

Now, these men are usually made members of price committees—and these men are in the vanguard of the union; then we have 70 to 75 per cent of the “don’t care” family. Now, the manufacturer can smell a rat, very naturally, and he finds out, from those men who make the price for labor, who is working for his interest and who is not working for his interest, and he has got an easy chance to get these men out of the job. Now, getting out of a job—you know what that means. It was explained yesterday. It means putting their families into a starvation condition. Now, the whole business of conciliation and mediation comes in as a beautiful joke.

For instance, John Smith has been fired, we know, and it has been said here that there are 4,000 or 5,000 of John Smiths in the business and in the labor union; he has been fired under the charge that he was found smoking on a fire escape. The rules provide that he shall not do that. Well, John Smith is the chairman of the shop union and has been known to be loyal, and he has been discriminated against before, and the whole attention of the union is concentrated upon John Smith.

Well, the business agent of the union comes in and says, “Gentlemen, this man is guilty of an offense; he has been smoking on the fire escape. I move that we fine him \$10.” Ordinarily he would have been fined, for a first offense, \$1. He says, “I move we fine him \$5”—somebody else says that. Will we come to a tribunal to decide this thing? No; he is discharged. To-morrow morning another fellow of the same kind may be in the same place, or any of the one hundred and one cases for which a man may be discharged for what they call difficult to prove, Madam Chairman.

Now, we have had an agreement and understanding with the United Cloak-makers’ Association of this town, where these difficulties are remedied, these defects and deficiencies, and we have a board of arbitration, and I carried away 18 out of 20 proceedings victories for the union. Now, does that mean that was wrong and unreasonable. And a syndicalist, as he is known in this town, is considered to be the head of the sociological department of Columbia University—I refer to him, Mr. Devine; he is known to be charitable; he is known to have among his personal friends numerous officials; he is not a syndicalist—but he was convinced that my cause was true; he could not go against his conscience and decide against me.

I can say the same for the arbitrator for the union, Mr. Weyl, who decided some of my cases. I have asked manufacturers to decide some of my cases. I was perfectly willing to go to a jobber to decide some of my cases—any man who was a fair man, whom I considered not biased, who had not made up his mind before he came to court—any man of that kind I am willing to take to decide any of my cases; and I am willing to take any gentleman here and ask him if it is not perfectly true, and gentleman who knows anything about it.

Now, you can not maintain the protocol unless you give this answer. You must have an impartial tribunal now to enforce it, and not talk any longer about conciliation and mediation.

We will go in with you, Mr. Cohen, on every constructive proposition you may make, where we can help you, and we will do so in good faith; if you put up against us blind alleys there will be riots in New York.

Mr. COHEN. May I ask Mr. Bisno a few questions?

The CHAIRMAN. You may, Mr. Cohen.

Mr. COHEN. Mr. Bisno, you have been described by Dr. Hourwich as one of his friends, and I assume you are?

Mr. BISNO. I am.

Mr. COHEN. You said, when you first started, you believed that Mr. Brandeis was in the main right, almost wholly?

Mr. BISNO. I said that.

Mr. COHEN. Do you share Dr. Hourwich's feelings against the board of arbitration in our industry?

Mr. BISNO. I do not.

Mr. COHEN. You have confidence in their integrity, have you?

Mr. BISNO. I have.

Mr. COHEN. Have you confidence in their understanding of the industry?

Mr. BISNO. I have, only I want to submit some qualification of that.

Mr. COHEN. You may.

Mr. BISNO. This industry requires a great deal of work. Mr. Brandeis is a very busy man, and he runs a law office, I understand. He is also an active journalist and, if I am not mistaken, he probably has enough for 10 men to do; he is a very active man. He gets also a great deal of work with regard to our other situation.

Mr. COHEN. That only means that the work that they do is not as much as you would like them to do.

Mr. BISNO. That is so.

Mr. COHEN. But so far as the work they have done is concerned, have you any fault to find with its efficiency?

Mr. BISNO. I have no question that they are on general principles.

Mr. COHEN. You think they are right?

Mr. BISNO. Yes.

Mr. COHEN. I do not know whether you know it or not, but do you know that your proposition for an impartial chairman had been submitted to the board of arbitration, and was being considered by them?

Mr. BISNO. That is what I understand.

Mr. COHEN. You understand that?

Mr. BISNO. But, Mr. Cohen, I want to qualify this answer. I beg your pardon. The position with Mr. Brandeis I believe is right, and he says to us, "Gentlemen, I am an arbitrator, I am a conciliator, you gentlemen agree on this proposition, and then I will pass along with you, and that will become the law of the industry, and unless you gentlemen come to this board and say to us, or anybody, we agree that there ought to be an impartial tribunal to enforce the provisions of the agreement, if you say that, we say all right." Then Mr. Brandeis can come to you and say, "All right, let us consider it this way," but if you disagree Brandeis won't decide for you, and the reason that he won't decide is in obedience to his philosophy. This whole business is not an arbitration, it is only being more or less agreed on things where we can find out before, and when I am speaking of fighting it out I do not mean strikes, and I ask you here in public, will you for the manufacturers agree to have an impartial tribunal to decide the questions that have been agreed, not that have been disagreed, but have been agreed, and I tell you that Brandeis won't decide it for you because his line of reasoning, and I believe he is right, is not to arbitrarily decide; he wants to conciliate; he wants to bring the union and the manufacturrs' association together and hear both sides and see how near they can go.

Mr. COHEN. Mr. Bisno, you said you did not want any speechmaking. Please help me to understand your position by answering my questions. I want to know what I am to do. You say the board of arbitration will not decide anything. Do you know that the matters that were submitted, after the deadlock conferences upon these various propositions were submitted under the rules which provided that the decision of the board of arbitration shall be binding upon both parties? Do you know that there is now pending, under consideration by the board of arbitration that are attending to the rules, that the decision of the board of arbitration shall be binding upon both sides? Do you know that that is the fact at the present time; can you not answer that yes or no, Mr. Bisno?

Mr. BISNO. I would like to ask the chairman to answer this question by putting in the necessary qualifications.

The CHAIRMAN. Yes.

Mr. BISNO. Thank you very much.

Mr. COHEN. I would like Mr. Bisno to answer it.

Mr. BISNO. Mr. Cohen, the truth of the matter is that this whole business is a great deal a question of attitude. If Mr. Brandeis would find that the whole protocol would be broken up if he gave us a chairman, he won't give it

to us. If Mr. Brandeis would find that this whole protocol is likely to be broken up unless he would give us a chairman, he probably would. It is a question of the attitude on the part of the mind of both parties, the union and the manufacturers' association. We have expressed our attitude of mind. We want you to express your attitude of mind so that we can come before Mr. Brandeis and put it to him in a shape in which he is likely to absorb this whole thing—the arbitrary conciliations and mediations—and we ask you for an attitude of mind.

Mr. COHEN. Then you want the commission to understand that the present difficulty is not that the manufacturers were willing to submit the matter to arbitration, but that there is something with the matter of the attitude of the mind of the chairman toward the proposition?

Mr. BISNO. The attitude of the mind of the manufacturers testifying here is that every one of them is in substantial disagreement with the idea of the chairman.

Mr. COHEN. Even if we were, do you believe that your reasoning in favor of an impartial chairman is sound?

Mr. BISNO. Yes.

Mr. COHEN. Do you believe you can convince an impartial tribunal that you are sound upon that proposition?

Mr. BISNO. Yes.

Mr. COHEN. You believe that Dr. Weyl and Mr. Brandeis and Mr. Hamilton Holt are an impartial tribunal?

Mr. BISNO. I do.

Mr. COHEN. Then why don't you leave a question which you believe to be perfectly sound, and which you think you may convince an impartial tribunal is sound, to the impartial tribunal in which you have confidence, where it resides?

Mr. BISNO. I have no objection to leave it to them, except with these amplifications. This impartial tribunal has already before expressed its opinion that it can not sit in court as an arbitrary power; that it can only sit in court as a willing and a mediating power; and that when both sides come near having a union of opinion that it is the province of this court to come in and help both sides to enact it into law and carry it out.

Mr. COHEN. I was aware what your difficulty is, Mr. Bisno, and let me state this to you for your information, because it is a very vital matter for you in determining what your policies are: You were here at the time when the board was acting in a conciliatory way. The board has since determined in several matters that it has power, in case of a deadlock, actually to decide, and those decisions are binding upon both parties. Now, if it be true that the board of arbitration to-day has power to make a decision, absolute power binding upon both parties——

Mr. BISNO. Is it the attitude of mind that it is willing to do it?

Mr. COHEN. Yes; but it wants to consider both sides of the question of the impartial tribunal. Now, you certainly do not stand for a proposition that means that both sides shall not be considered on that question, do you?

Mr. BISNO. No, sir.

Mr. COHEN. You want it considered on its merits, not because you, Bisno, say so, or because I, Cohen, say no; you want it considered on its merits, don't you?

Mr. BISNO. Yes, sir.

Mr. COHEN. You want the opportunity to present the experience in the Hart, Schaffner & Marx situation?

Mr. BISNO. I do.

Mr. COHEN. And if you were honestly convinced by argument that it would not work in this industry, even though it worked in the Hart, Schaffner & Marx industry, you would be ready to open your mind on the subject?

Mr. BISNO. My mind is always open.

Mr. COHEN. What is your objection, then, knowing that the board of arbitration is an impartial tribunal, which you respect, that it has the power to determine this question, and if you believe you are right, what is the objection then to your submitting that question to them for their final decision? Could not you say: "I agree now that I, on behalf of my clients, will abide by any decision that that impartial tribunal renders." But I want you to present the experience of the Hart, Schaffner & Marx case. I want you to present every argument that you can make for the impartial tribunal; I want you to have

an open mind as to how far it can apply to the cloak-making situation in New York; now, are you ready to do that before the board of arbitration?

Mr. BISNO. That is a very fair and candid question for Mr. Cohen to ask me, but I can not answer it unless I give some sort of a history of this story.

Mr. Brandeis has assumed the attitude of a conciliator, and does not divide the situation between the powers necessary to enforce great questions, and the powers necessary to bring about a union of opinion on disagreeing questions, and he has been, on general principles, in the attitude of mind of conciliation. Let me recite to you an instance, and I will then tell you my opinion about it.

Mr. COHEN. But I want to say——

The CHAIRMAN. Let Mr. Bisno finish.

Mr. COHEN. I want to ask his opinion, and I may be able to save some time just to keep your point, if my interruption does not help you to keep it, but Dr. Moskowitz, the clerk of the board of arbitration—will you take his attitude for the board of arbitration, as at the present time?

Mr. BISNO. I have a great deal of confidence in Dr. Moskowitz.

Mr. COHEN. Will you take his word upon it?

Mr. BISNO. I suppose so.

Mr. COHEN. I ask, Madam Chairman, in view of the challenge made to me, that Dr. Moskowitz be asked to state from the decisions of the board, and from the minutes of the board of arbitration, what the attitude of the board is with reference to its power to decide submitted matters, after they have gone through conference, because apparently Mr. Bisno, since he left for New York, has not been familiar, as I have been, with the attitude of the board of arbitration. Are you willing, Mr. Bisno, before you proceed with your explanation, to have that official statement of what the attitude of the board of arbitration is, and the method by which they proceed to determine?

Mr. BISNO. Perfectly willing that Dr. Moskowitz will give me his motives.

The CHAIRMAN. You have finished?

Mr. BISNO. I agree with Mr. Cohen on that, that Dr. Moskowitz is to have the floor, but I only want to submit one experience I have had with Mr. Brandeis on this. I have told him of all the troubles we have had in the union, and he said, "Get together with the manufacturers, and conciliate." I told him that we had conciliated, and that the other side did not conciliate, and he said, "Sweat it out," and I told him that we were doing all the sweating and the other fellow is not sweating at all.

Mr. COHEN. I do not agree with you on that. There is a lot of perspiration on our side too.

Mr. BISNO. I said that our men are discharged, and I considered subjected to starvation in hundreds of cases, and that they run their business smoothly and quietly, and keep on disagreeing in the grievance board. He said, "You can not submit this to arbitrary rule." He suggested to me that if a certain gentleman was put into that grievance board, he would agree to have him pass upon several contested issues, etc., so that Mr. Brandeis is extremely difficult and very much prejudiced, as I would call it, on this proposition, and yet, Mr. Cohen, I have confidence in Mr. Brandeis, and I believe that if we come to him and tell him our story and all of our story, that if we can only get time enough—the man is very busy—I believe he would concede that agreed cases ought to be submitted, and what has been agreed on should be subject to enforcement, and not talk.

Mr. COHEN. May we hear Dr. Moskowitz on that, because I want to ask Mr. Bisno some more questions.

Dr. HOURWICH. A good many charges have been made against me, and I think it is no more than fair that I should have a chance to say something.

Mr. COHEN. I won't be more than a few minutes.

The CHAIRMAN. Dr. Hourwich, when we have heard from Dr. Moskowitz and Mr. Cohen, we will hear you.

TESTIMONY OF DR. HENRY MOSKOWITZ.

Mr. COHEN. You are the clerk to the board of arbitration, are you not?

Dr. MOSKOWITZ. Yes.

Mr. COHEN. You have been present at all of these sessions of the board of arbitration held during the last year or two, have you not?

Dr. MOSKOWITZ. Yes.

Mr. COHEN. And especially those sessions that have been held recently, and you are familiar with the practice of the board of arbitration, are you not?

Dr. MOSKOWITZ. I am.

Mr. COHEN. May I ask you to stand up, as the boxes are hiding your view. Are there pending to-day before the board of arbitration certain questions which were deadlocked before the board of grievances as a conference body?

Dr. MOSKOWITZ. Yes; there are.

Mr. COHEN. Those questions were submitted to the board of arbitration for final decision, were they not?

Dr. MOSKOWITZ. Yes; they were.

Mr. COHEN. And you so understood it?

Dr. MOSKOWITZ. I understand.

Mr. COHEN. Among those questions was a proposition submitted for an impartial chairman for the board of grievances?

Dr. MOSKOWITZ. The proposition for an impartial chairman, or the general proposition to overcome the deadlocks and grievances in the board of grievances.

Mr. COHEN. Was the matter discussed before the board of arbitration?

Dr. MOSKOWITZ. The matter was discussed before the board of arbitration, and also discussed after conference. Madam President, may I just add here one word?

The CHAIRMAN. Yes, Doctor.

Dr. MOSKOWITZ. I want to say that this question of an impartial chairman, and the question of overcoming deadlocks in the grievance committee, is being carefully investigated by the board of arbitration, and they intend to make a definite decision upon this matter. The board at no time expressed any opinion one way or the other on the subject. At the last meeting of the board after it had decided a question of wages, it also decided to continue to investigate the working of the grievance committee for the purpose of enlightening it before it rendered a decision.

This question is still up before the board of arbitration, and I want also to add this one remark: And that is, that the board of arbitration as a board has always been loth to decide questions before they have been considered in conference and before the machinery of conciliation has been exhausted, but that does not mean that the board of arbitration has not been ready to give final decisions on questions, after the machinery of conciliation has been exhausted and after conference, and this particular matter concerning an impartial chairman is receiving very serious consideration by the board.

Mr. COHEN. Or in other words, in short, Dr. Moskowitz, the suggestion made by the union of an impartial chairman for the purpose of avoiding deadlocks is now under consideration by the board of arbitration; it has power to decide that question finally?

Dr. MOSKOWITZ. It has, finally.

Mr. COHEN. And you understand both sides are bound by the decision?

Dr. MOSKOWITZ. Both sides bound by the decision.

Mr. COHEN. Do you understand there is to be a session of the board of arbitration to-morrow morning?

Dr. MOSKOWITZ. There is.

Mr. COHEN. Will the board be willing to hear Mr. Bisno present any arguments that he wants to present in behalf of the ideas that he thinks are valuable?

Dr. MOSKOWITZ. With the greatest of pleasure the board will be very glad to hear Mr. Bisno.

Mr. COHEN. And I assume, of course, if there are any criticisms on that the board will take them into consideration?

Dr. MOSKOWITZ. Exactly.

Mr. COHEN. Now you said the board had made a careful investigation and study of the workings of the board of grievances?

Dr. MOSKOWITZ. Yes.

Mr. COHEN. How long has that investigation taken; how long a time has it covered?

Dr. MOSKOWITZ. It investigated a number of them and this was one of them and, offhand, I think it has taken over, I think, six or eight months; perhaps longer; I do not remember exactly.

Mr. COHEN. Who is paying for that investigation?

Dr. MOSKOWITZ. Both sides.

Mr. COHEN. And the report of that investigation has not yet been made?

Dr. MOSKOWITZ. Has not yet been made.

Mr. COHEN. So that it can be made as soon as it is completed to this very board?

Dr. MOSKOWITZ. To this very board; in fact, it will be made to the board. I would like to say this, Madam President, that the board did decide one question, and that is the question of increasing the wages of one branch of the week workers, the pressers; and, as a result of its decision, an increase amounting to \$300,000 annually was awarded to this branch of the industry.

Mr. COHEN. And was it observed by the manufacturers?

Dr. MOSKOWITZ. I think it was; I am sure it was.

Mr. COHEN. Have you heard any protest?

Dr. MOSKOWITZ. No. Perhaps I might add that I have not heard any protest; perhaps that would be more accurate. I have not investigated that matter. I wish also to say that the board is still considering the other questions which it is investigating and has not yet decided on those questions; and most important, in my judgment, is the overcoming of the deadlocks in the grievance committee.

Mr. COHEN. Dr. Moskowitz, one more question. Do you remember that after the first year of experience with the protocol that there was friction over the workings of the machinery of the board of grievances?

Dr. MOSKOWITZ. I do.

Mr. COHEN. Now, you will remember also that rules were adopted under which the organization is now working.

Dr. MOSKOWITZ. I do.

Mr. COHEN. The board of grievances?

Dr. MOSKOWITZ. I do.

Mr. COHEN. Was it not the board of arbitration that discovered those rules and promulgated them for both parties?

Dr. MOSKOWITZ. It was the board.

Mr. COHEN. And after discussion?

Dr. MOSKOWITZ. After discussion.

Mr. COHEN. And after differences between both sides?

Dr. MOSKOWITZ. And after differences between both sides.

Mr. COHEN. And the rules were finally laid down by the board of arbitration?

Dr. MOSKOWITZ. The rules were finally laid down by the board of arbitration.

Mr. COHEN. Is there any reason that you know of to-day if the board of arbitration is trusted as an impartial body, why it can not mend or add to those rules so as to relieve friction?

Dr. MOSKOWITZ. There is no reason. I would like to add this, Madam President, to enlighten you upon that one subject, that after the protocol was signed both sides experienced great difficulty in enforcing this protocol, because the union said "We are not allowed to send a delegate to see whether this protocol is in force," and on that account the board of arbitration established this institution of the clerks; in other words, the institution of the clerks was established to facilitate the enforcement of the protocol, and if the board of arbitration had authority to establish the institution of the clerks, to facilitate the enforcement of the protocol, certainly the board of arbitration has authority to modify its present institution, if it is defective in any particular respect.

Mr. COHEN. One other thing——

The CHAIRMAN. Mr. Cohen, just one question only.

Mr. COHEN. Did Mr. Brandeis say at the last session of the board substantially these words: "I think that on all the evidence that has reached us, and every indication that has reached us, there has been a very strong desire on the part of the manufacturers, and so far as we know extraordinarily successful, of making the members live up to the agreement. I recognize, everybody must recognize, the difficulty that there is on either side to educate members, and so far as I am concerned, while you gentlemen are impressed with the difficulties and defects of this machinery, naturally I am constantly amazed when I come back with what you gentlemen have complained about?"

Dr. MOSKOWITZ. He did say that, Madam President.

Mr. COHEN. That is all.

The CHAIRMAN. Thank you. Now Dr. Hourwich.

TESTIMONY OF DR. ISAAC A. HOURWICH—Recalled.

Mr. HOURWICH. Madam Chairman and gentlemen of the commission, when I hear my esteemed colleague, Mr. Cohen, talk of me, I am always reminded of Goethe's famous poem, "Reinecke, the Fox." Those who have read it will probably appreciate it. I am very proud of the description of my powers that have been given here by Mr. Cohen, and all I have to say is that this man is a prophet, and 50,000 people will take my word for it.

I never knew I was such a powerful man, and I certainly appreciate the compliment. I say, "Blessed be the memory of the late Sir Isaac Pitman, for having invented stenography." If it were not for him, I do not know where I would be here. Human memory is a very imperfect instrument, and sometimes stenographic minutes will not help, because it is possible to quote one page without quoting another page. Some Frenchmen said that the Germans are a very treacherous people, because they will tell you a long sentence, and you think it is in the affirmative, but at the very end they will put in the word "nicht"—not. So it upsets the meaning of the whole sentence.

Now, sometimes my friend forgets to put in that last word "nicht," and the result is that the meaning is entirely different from what it was intended to be.

Now, first of all, I want to say in regard to that personal matter, you have had before you my letter. I stated quite clearly that it was a simple, private talk, and no offer of any kind on the part of the manufacturers. That talk originated after it became known I was quitting the organization; consequently, there was no possibility of an inducement for me to go over to the other side, and to bribe me and take me away from the organization. I tendered my resignation five times. I finally said I would not stay with this organization, because I can not stay with those conditions, and when my term expired I would be free. I was impeached, and the charges were withdrawn, but the fact was this: It was then known that the question of my appointment or re-election was raised by the operators locally, that the minority was in favor of my return, but the majority of the joint board voted against me.

It was perfectly plain that I was not going to stay with the organization, and it was later on that the referendum vote was taken and the majority of the membership sustained the minority on the joint board. There was no imputation of anything dishonorable to the manufacturers' association in the first place, not even previous. A few manufacturers had said: "This lawyer is going to quit. He is a good lawyer. We can find some use for him. You must engage him," and there was just this general talk. That talk was distorted into the charge of bribery. I have never made that charge. I have repudiated that charge in public as efficiently as I could.

Now, I want to say something about that theatrical display that you had here to-day—about these eight boxes. If instead of these eight boxes, filling eight cases, you had 7,500 cases, you would have 7,500 boxes. There would be no room in this hall for them.

Now, it is not as bad as it is represented. Let us know what those eight cases were. They were not cases of grievances, over four buttons or eight buttons. The board of arbitration sat there over questions of legislation, every question affecting the entire industry. There was an immense amount of testimony over wages, over conditions of labor. Fifteen propositions had been before the conference of manufacturers and union men, and on those fifteen propositions some had been agreed upon, others were submitted to the board of arbitration for decision, and naturally there was a great deal of written evidence.

We did not want those 7,500 cases to come before the board of arbitration. We did not want them to arbitrate; but what we do want is those cases upon which a reasonable agreement can not be reached, and that ought to be perfectly plain.

It is not a question of 7,500 cases. According to what has been shown here there were only 179 cases, all told, in about three years. By the way, during my incumbency there were only 13, and those cases were not small cases, not trivial cases.

Let me tell you what those cases were. Mr. Cohen read to you page 320, but let me tell you something about page 331, which he has not read and which will be very interesting. Pages 330 and 331 are as follows:

"Chairman BRANDEIS. Is there any case on which the board deadlocked on a question of fact?

"Mr. COHEN. I know of none.

"Chairman BRANDEIS. Well?

"Mr. ABELSON. No, sir.

"Dr. HOURWICH. I guess questions of fact and law——

"Mr. COHEN (interposing). Policy—the deadlock; not just on the question of fact, but it appears from the record that they deadlocked upon the consideration, upon the law.

"Dr. HOURWICH. Well, upon the construction of the fact in the light of the law.

"Mr. COHEN. Yes.

"Mr. BRANDEIS. And that question—did it involve both law and fact?

"Mr. COHEN. Yes.

"Dr. HOURWICH. Yes.

"Chairman BRANDEIS. But the point that created the deadlock was the existence of the legal principle or a policy?

"Dr. HOURWICH. Yes."

Now, that was on page 331. Now let me tell you what Mr. Cohen said in regard to that on page 316.

"Dr. Hourwich and I are in accord. The highest tribunal, as speedily as possible, is the only remedy for serious conditions of things concerning the interpretation of the protocol and the rights and obligations of the parties. And the clerks can not agree; they must not agree. It is their business to fight [that is, Mr. Cohen], my business to fight. It is Mr. London's business to fight. It is Dr. Hourwich's business to fight on those fundamental things that they believe in. They can only submit for the final interpretation to the tribunal that is created for that purpose."

It is my business to fight, according to Mr. Cohen, for principles, and that is the only thing that I have fought for.

Madam Chairman and gentlemen of the commission, when I used that metaphor I think I made a mistake, because when people begin to misinterpret metaphors we get anywhere. What I meant, I think, was perfectly clear. We have two distinct classes of cases: Cases over controversies, over four or eight buttons, and cases involving principles.

That work was divided, conciliation was assigned to my assistant—that is, Mr. Wishnak—who argued the question here; and cases where conciliation had failed were assigned to me. I was really only the clerk in name; in fact, I was counsel for the union, and I have been instructed by the joint board to appoint another assistant, who will do the work that Mr. Wishnak had been doing before his resignation. I proposed to do that; if I have not done it, it is because we are in this state of turmoil. I do not propose to do next year anything that I have not done before, and consequently all these oratorical effects about the bull in the china shop are absolutely irrelevant. I am not going to a china shop where conciliation is hidden so you can not see it; that will be done by somebody else. What I shall do is that which I have been doing heretofore. I shall appear in those cases where, according to Mr. Cohen, it is my duty to fight, where it wants me to fight, and that is all there is to it.

Let us come now to this question about what the board of arbitration has decided to do. It has been said here that the matter was submitted to the board of arbitration.

Now, blessed be the memory of Sir Isaac Pitman, I say again. Human memory is a very bad instrument. Once Prof. Munsterberg, of Harvard, made an experiment. He read a story to his school in psychology, and asked them if they would write it down after he read it; and he received 20 different statements on a very simple fact, and there was no controversy involved there.

Here we have heard from Mr. Cohen and Dr. Moskowitz, who is a friend of mine, that the matter has been submitted to the board of arbitration. It has not; and the record will presently bear me out. Let me tell you the whole history of it.

We were discussing that proposition 15 before the conference; that was the proposition of the impartial chairman. We could not agree upon it. Finally, after some discussion, Mr. Cohen, Mr. London, and myself had lunch together, and we conciliated. We devised a scheme. He said that his constituents would not stand for any reformation of the board of grievances, but what they would do would be to have a sufficient number of substitutes for the principal arbitrators. Upon this plan we agreed. Then we came again before the conference, and there the question arose: "How many substitutes should we have?" They wanted only one substitute. I said, "One would not do," because that would leave us without a substitute for our principal arbitrator; and what I said is on record, Mr. Hillquit. We have already one substitute, Dr. Weyl; and if Dr. Weyl is unable to be present there would be nobody. So, finally, it was agreed that there should be two substitutes for each arbitrator. That was the plan upon which Dr. Cohen and I agreed.

Then we came before the full conference, and the manufacturers said that this arrangement ought to be reported for the information of the board of arbitration, simply as a matter of courtesy to them, and we did so.

What happened? Mr. Brandeis and the other arbitrators became displeased with that scheme. Have you ever heard of arbitrators interfering when the parties have agreed? It is the duty of arbitrators to arbitrate disputes; it is not their duty to create disputes; and that is what Mr. Brandeis has done, and I charge him right here with it.

When we presented a scheme that was satisfactory to us he began to find fault with it. It was not his business to do it, and I told him that right there, and that the function of the board of arbitration was to pass upon the questions that had been submitted, and that question has not been submitted.

What was the result? He said he would take it under advisement; and he kept it over two months; and then, meanwhile, somehow or other an impression was formed by my former associate, Mr. London, that Mr. Brandeis and the board were favorable to a scheme of an impartial chairman; and he came before the board of arbitration, and he said he preferred that scheme of the impartial chairman. The result was that Mr. Cohen was released under the obligation—under the arrangement we made. If we repudiate an agreement in which we have entered, naturally the other side is free from obligation; and he said that he did not believe in that scheme at all, and that he yielded only because I had made a statement there that I had a technical right to invoke the governor in case we can not get our arbitrators to attend to our business, and he personally did not believe in it, and the whole scheme fell through.

Therefore, I said to the board of arbitration on this issue, this question 15, upon which we were debating before the conference, this has not been agreed upon, and therefore we now submit it; and what did Mr. Brandeis say? I will read to you what he said.

Mr. Brandeis says as follows, on pages 388 and 389 of the minutes:

"We therefore suggest that, so far as the proposition of amending the machinery of the protocol is concerned, with a view of securing some better method of adjudicating the difficulty which seems to require urgent treatment, that that matter be referred back to the board of grievances for consideration, or through the board of grievances to the conference, if it still exists, however those interested may think the best way of treating the matter. If after that has been done, and after the matter has been fully considered by the board—that means the board of grievances, or possibly the board of arbitration—you believe that we can be of any assistance in considering your conclusions, we shall, of course, be very glad to take the matter up with you later."

I was not born in this country, but I have lived here more than 23 years, and I think I understand English a little bit. If that means anything, it means that the matter has got to go back to the board of grievances or to the conference; in other words, the five weeks that we have been arguing in conference are not enough for Mr. Brandeis; he wants us to waste time again in useless argumentation, then come to him again and submit that matter. He does not regard the matter that has been submitted to him, and there is not the slightest indication that the board was going to take up this matter. If it has, it is news to me. I heard of it the first time this morning. The matter has not been submitted, and, as a matter of fact, our only attempt at conciliation was thwarted by Mr. Brandeis. I do not make any charge of lack of integrity against Mr. Brandeis. I never did. The record will bear me out. What I say is that Mr. Brandeis has not performed his duty, because he can not admit that he performed his duty, which is among these things he interrupted. He has not performed the duty for which we asked him, but, at the same time, he has assumed authority to overrule an agreement reached between the parties, and that is not the province of the arbitrator.

Mr. Bisno is a friend of mine; I regret, instead of confining his testimony to that which he knew of his own knowledge, he went into the question of arbitration. He was never present at a single session of the board of arbitration. All sessions of the board of arbitration, with the exception of one which took place in 1911, occurred before his coming, or were held in 1913, after he had left. He has not read all those voluminous packets of testimony. He knows of Mr. Brandeis from social intercourse, and I am willing to bear testimony that Mr. Brandeis is a very pleasant gentleman in social intercourse, but his understanding of his duties of arbitrator are such that I believe he has mistaken his part for the part of a legislator instead of the part of an arbitrator.

This question of the guaranty has been spoken of so much here. That has done mischief. Mr. Brandeis evidently believes, and probably Mr. Cohen believes, and possibly a good many others believe, that the present government of a labor organization is a government by a few anointed leaders, who will

educate the masses. That idea of benevolent absolutism is more than 100 years old. It is too old. Our present labor unions must be built upon the principle of democracy. I am not the dictator of the union. I am the man chosen by the union to represent it. If the union, as Mr. Cohen thinks, consists of irresponsible individuals, in that case the protocol could not maintain it, because the leaders of the union have no other power than that which they derive from the membership. If the membership are unreliable they will upset any group of leaders in time, and what they have is not a guaranty.

There is going to be a regular convention next May, I think, of the international, and there is a possibility of these leaders who are so favored by Mr. Cohen being defeated for the election, and what is he going to do? Is he going, then, to terminate the protocol whenever an election within the union does not go to his taste? A relation between two organizations of labor unions and a manufacturing association can be maintained only upon the basis of recognition of the rights of self-government in each organization.

Mr. Cohen is a very effective speaker, and he has defended the rights of his organization splendidly. He has made a very good showing here. He has influenced the New York press very effectively. I give him credit for all that, and that is the reason—the next thing I am going to the joint board—I am going to put up a demand that we do not want to deal with Mr. Cohen as a representative of the association. We insist that they shall appoint a lawyer for the association, and when they appoint him I assure you that I will be able to get along with him a great deal better than I do with Mr. Cohen.

Mr. COHEN. How about that lunch?

Dr. HOURWICH. That is all right. What I will say is this, I am willing to take lunch with you now, if you will treat me to one.

Mr. COHEN. You are too much of a secretary of war to take lunch.

Dr. HOURWICH. Now, what I wanted to say is this: It is, I think, a position that has been taken by every independent nation, and I simply follow the precedent established by my illustrious friend, Mr. Cohen, in comparing the cloak makers to another group—we always speak in terms of diplomacy—the United States has made a number of arbitration treaties with foreign nations. Every arbitration treaty has a provision that questions of sovereignty can not be arbitrated. This question whether a lunatic ought to be the counsel for the union is a question which 50,000 lunatics belonging to the union are the only ones competent to pass upon. Outsiders can not interfere, and when a demand is made to this organization that I shall be removed it is a demand absolutely beyond the scope of the protocol. It is a demand which can not be arbitrated, and if this board of arbitration has called a session to consider the question whether I am the counsel that is to be cut out it will be my duty, on behalf of my constituents, to tell the board of arbitration that they have no jurisdiction to perform this surgical operation and that this question can not be considered. He said that I have refused to accept the decision of the board of arbitrators. I am aware of that. What I have done is this: I have criticized the board of arbitration. Very well. People in this country have a right to criticize the United States Supreme Court. The protocol, to my knowledge, has not abolished the Constitution of the United States and the constitution of the State of New York. It has been made subject to them, and it is the right of every American citizen to express his opinion. When the court will give me an order to do a certain thing I will do it, but then I will come out in the public print and I will say that the decision of the United States Supreme Court upon this question is unsound. I have a right to do that, and that is the only thing I have done, and I again say there has been an attack upon the freedom of all the press for a year and a half.

As you have heard from Mr. Cohen, and ultimately the board of arbitration came out and sustained that attack upon our press. Mr. Brandeis has expressed the opinion that the most innocent articles—I have them here on record, and I will send a translation to your board—that the most innocent article which could have passed muster in Russia—that that most innocent article was overstepping the limits, because although he did not say anything against the protocol, people after reading it might infer from it that it might not be a bad idea to terminate the protocol.

So it was then said that we must not even intimate that there is a possibility of terminating the protocol. The protocol is not made for all time. If it does not suit us, we can terminate it. The manufacturers' association has threatened to terminate the protocol, because they do not like me. Have we no right to discuss this matter? How can we conduct an organization of 50,000

1152. REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

men and women upon democratic principles unless we report to our membership what is going on, and if we are to be muzzled, the fundamental principle of the Constitution of the United States has been violated? I will say, quoting a sentence from Zangwill's *Melting-Pot*, I say to the board, "Gentlemen, you have spoiled my America for me."

I may have all the respect for the gentlemen in their individual capacity, but when those gentlemen come and infringe upon our rights openly, upon our fundamental rights, which are not abridged by the protocol, when they want to make laws about the scope of the protocol, I say I will not, if I can help it, allow Mr. Brandeis to become the John Marshall of this protocol, without criticizing him for it.

I had a number of individual cases, but it will be impossible for me to go into all those cases. The time has been limited. I have been switched off, and I will not go into them. I will only say as far as the possibility of a trade court is concerned, I do not share the dire apprehensions of my colleagues.

You have heard that there has been a great deal of experience in these matters; the trouble is that Mr. Cohen can not separate in his mind the idea of a court from the idea of a cobweb of old-fashioned technicalities which impede the administration of justice in our courts. Let me tell you, I have been a member of the bar in two countries. I have practiced under the French system of procedure. I have practiced in the courts of justice of the peace where they first begin with conciliation; that is the beginning of the procedure. If conciliation fails, then only does the justice of the peace administer justice in the ordinary sense. In other words, then he becomes the impartial chairman between the two parties whom he could not conciliate.

I have practiced law under that system.

Under the French Code they have no technical objections, "I object—I take exception—this is incompetent, irrelevant, and immaterial." All that thing is swept away. The court takes in all the testimony, and then the court sifts that testimony, and then decides upon the merits of the case, taking in all the testimony, regardless whether I am giving you direct information or hearsay evidence. A trade court could also proceed in the very same manner. There is no need for raising all of these entanglements by lawyers, and let me tell you—I wanted to read it to you, but I can not, because the time is too limited. I remember a case, which was subsequently settled. In Phonson's case all I wanted was that my assistant, who investigated the matter, should be allowed to come in and testify what he had seen in that case. I was not present. I had not been present on the case. I do not know whether it was operating work, or tailoring work. I am not a tailor, and did not know the difference, and so I asked to allow him to make the statement that would take five minutes, and we wrangled over it from page 12 to page 49 of the minutes, and my remarks are on pages 12, 13, 20, 31, 32, 34, 36, 48, and 49. Mr. Silberman was present there, and let me tell you that the most unexpected technical objections were raised. I would put leading questions to him. Have you ever heard of an associate counsel being put leading questions to? That was when I wanted him to make a statement. It was all unofficial. We have plenty of technicalities in our board of grievances, and I can not improve upon that, and no lawyer could improve upon those technicalities.

Now, there is a statement that we have been guilty of nonperformance of obligations. I do not know of any such case where we have not performed our obligations. I would like the specific cases to be filed with this commission, and I will answer them, if I have a copy of those charges.

As a matter of fact, throughout this whole period I was brought under charges, natural ones, and let me tell you what those charges were. The association, as you know, was censured, when I first came in, so that after all it would be tit for tat, one guilt on one side and another guilt on the other side, and let me tell you I said to the board of arbitration that they had no right to pass upon our articles. Our press is not regulated by the protocol. The protocol regulates hours of work, sanitary conditions in the factory, and other things, but not our press.

The manufacturers' association has no right to tell us what we are going to write, and what we shall write in a paper, and the board of arbitration has no right to pass, no jurisdiction to pass, upon any questions that are not in the protocol, because the board of arbitration is a board created within the protocol, and if this board has gone out of its way and has passed upon it, and expressed an opinion, it has committed an act of usurpation, and I charge that against this board of arbitration, and that is why I say as individuals they enjoy my

full respect, but as a board of arbitration they have usurped powers that do not belong to them.

That question of the guaranty. First, Mr. Brandeis comes and says that they are a sort of guarantors, because they signed the protocol. Well, we do not quarrel about it, it is not worth while. Then he comes and he says, being guarantors, they are a sort of partners to the agreement, although from a legal point of view, the legal relation may be different. Now, Mr. Brandeis is an eminent lawyer. He knows that a guarantor is not a partner. Anybody understands that. Mr. Brandeis can not make law. Mr. Brandeis can not upset the law that has been made for centuries, and tell us that if I guarantee that you will pay your rent, therefore I am a partner to the lease. It is an absurdity, even if Mr. Brandeis says so, but it has worked mischief, because it has given the international officers an idea that they could come in and boss this job.

Mr. Brandeis knew that Mr. John Dyche had been clerk, and was forced to resign, or resign himself. Anyway, as Mr. Cohen put it, it was so. What did Mr. Brandeis do? He forced Mr. Dyche upon the union which did not want him. That is usurpation, and I charge him that; and that is why I say I have lost confidence in the ability of Mr. Brandeis to be an arbitrator, just as much as he may have lost his confidence in my ability to be counsel for the union.

It is nothing discreditable to him as a gentleman.

Now, there has been a great deal said here about my sanctioning picketing. Now, that is something I will have to read.

Here is the correspondence [indicating same]. I will first preface it by an explanation. Under the protocol we have no right to strike. There is a provision in the rules, made by the board of grievances, that whenever there is a strike, it is the duty of the clerk for the association to call upon the clerk for the union to send the people back to work. Then, of course, he sends them back to work and then the whole matter is thrashed out by the board of grievances. It is very plain. But Dr. Abelson, in the case of Jaffe & Katz, took the position that they had the privilege—the option, as he put it—that he had the option to either call upon—that is the way he put it—"that the firm has the right of exercising and, above all, of insisting through the associations that the people be put back to work, or discharging the men."

Now, that is the whole contention. That is in a letter dated April 15, 1913. That contention is absolutely contrary to the protocol. It means in other words that in case there is a stoppage of work, instead of conciliating, the manufacturer has the right to respond by a lockout. That is the whole substance of it, and I will submit what the definition of a lockout made by the United States Bureau of Labor in its four reports is, and that definition will sustain me. I have always contended that they had the right to do so. Mr. Abelson contended that they had a right to do so. What happened then was this: That in the case where they had responded by a lockout to a strike, the men went out picketing in response to that lockout, and immediately a complaint was lodged that they were picketing. Now, that is answered in a letter dated April 26, 1913, addressed to Mr. Rosenfeld, chairman, and so forth:

"Replying to your letter of the 25th instant in relation to the dispute in the cloth operating department of Jaffe & Katz, I have to say that you are evidently misinformed.

"There is no strike in any of the departments of Jaffe & Katz, but there is a lockout of the employees of that department by order of your association.

"That there is no strike in that factory is clear from the fact that all those employees who have not been locked out by the firm are at work.

* * * * *

"If any member of our organization, or any person acting under the instructions of a member of our organization, has threatened to commit violence against any individuals who have taken the places of the locked-out employees of Jaffe & Katz, our grievance committee will, upon proper complaint, promptly discipline the offender.

"We can take no action, however, upon vague allegations such as are contained in your letter.

"No one can question, however, our right to advise our members that the ethics of trade-unionism condemn a worker who fills the place of an employee locked out by a firm in the course of an industrial dispute.

"Your call upon us 'to take strong measures to prevent the former employees of Jaffe & Katz from picketing' after your association has, in open violation of the protocol, ordered a lockout of the same employees, comes as a

surprise to us. It is a fundamental principle of equity jurisprudence that 'he who seeks equity must do equity.' We would be perfectly within our rights if, in response to the lockout authorized by you, we would have stationed pickets in front of the factory of Jaffe & Katz. But it is not our policy to take the law into our own hands, and we have therefore authorized no picketing in this case, leaving the redress of our grievances against the firm of Jaffe & Katz to the board of arbitration.

"The officers of the union, however, have no greater powers than the police to restrain the use of the public highways, or the exercise by a citizen of the freedom of speech guaranteed by the Constitution of the United States and the State of New York. Any individual in this State has a right to stand on the sidewalk whenever he chooses, and has likewise a right to speak to any person who desires to listen to him. Any discharged employee may stand on the sidewalk and relate to the passers-by his grievances against his employer. This is called 'picketing' and it has been recognized by the court of appeals of this State as perfectly legal. It would be against public policy on our part to attempt to abridge the rights of the workers recognized by the courts after a long contest."

Now, if you will realize the situation. I told the men I should not picket when I received that complaint, but at the same time I said they had committed no offense. I told them not to, because it was not our policy to, but we were charged with countenancing picketing, and I said they had no charge in law, because they had made a lockout.

That was still a worse case, and that was the case of Levay & Friedberg. In that case, the men struck, and the firm immediately proceeded to engage other people. I shall conclude within the allotted time. They secured the services, or they thought they had secured the services, of the former employees of theirs, but one of the employees immediately went to the office of the union and asked, "Boys, what is the trouble," and they were told the trouble. So, as he was a friend of the firm, he went back and said to them, "What is the use of fighting with your men, I can get you all of them back. They are a good lot." So Mr. Levay said, "I would like to do that but I can not do it without the permission of Dr. Abelson;" so he said, "Let us go to Dr. Abelson." Then they went to Dr. Abelson and he said, "Now, you must not do it," and the result was that, of course, the strike was not settled. He is a peace officer. His business is conciliation in industrial disputes, is it not? But he did not do it. The result was that there were pickets stationed, and he came with his cutters' union, and that cutters' union is on friendly with the association, and Mr. Martin, who testified here yesterday that he is perfectly pleased with the protocol, went with Dr. Abelson. "Why, the union is going to uphold that strike. They are all friends of the protocol when the shoe pinches on somebody else's foot but they are willing to go out on strike in spite of their convention in the protocol when the shoe pinches on their own foot."

Now, then, you see a complaint was lodged, that is, that there was picketing. Now, I will read the letter from the chairman of the executive committee:

"SEPTEMBER 23, 1913.

"THE JOINT BOARD OF THE CLOAK AND SKIRT MAKERS' UNION,

"49 East Nineteenth Street, New York City.

"GENTLEMEN: My attention has just been called to the situation in the shop of Levay & Friedberg, 40-46 West Twenty-fifth Street. In that shop the cutters failed to attend work on the morning of September 18. Thereupon, the firm, exercising its right, engaged 14 new cutters. The 14 new cutters employed came to work Monday morning, but at noon, without giving any explanation, 12 of them left. It then appeared that the former employees were picketing the shop and were informing the new cutters that there was a strike in the shop. Upon inquiry at the office of the cutters' union, the manager of our labor department was informed that the cutters' union would give moral support to the men on strike.

"As this is a very distinct and aggravating violation of the protocol, I must call upon you for immediate action and direction that picketing be stopped, that an official communication be sent to the cutters' union that the conduct of its officers at its office is a violation of the protocol, and that publication be made in the newspapers (in accordance with previous precedents) that there is no strike in this factory."

To this I replied as follows:

" SEPTEMBER 25, 1913.

" Mr. L. E. ROSENFELD & Co.

" DEAR SIR: Your letter of the 23d instant, in relation to the difficulty in the shop of Levay & Friedberg came to this office during my absence from the city, hence the delay in answering the same.

" I have made inquiries at the office of the cutters' union and I find that no official action authorizing a strike in the shops of Levay & Friedberg has ever been taken by the duly authorized representatives of the union. Any statement to the contrary which may have been made in the heat of an argument by some employee of the union merely expressed his own individual opinion.

" We fully agree with you that the firm has a perfect right to engage new cutters in the places of those who have quit work, and if any of our members should make inquiries at this office, we shall advise them that there is no strike in the shop of Levay & Friedberg.

" I must reiterate, however, the view expressed by me in our correspondence in relation to the Jaffe & Katz case some time ago, viz: That our organization has no authority to curtail the right of its members as citizens to use the public highways, or their exercise of the right of free speech in telling their troubles to passers-by who are willing to listen to them.

" On the other hand, I am advised that the firm and the cutters who have quit work could easily adjust their difficulty, if it were not for the fact (as alleged) that the manager of your labor department has warned the firm not to treat with their employees. I am confident that this allegation has no foundation in fact, inasmuch as such a stand would be incompatible with the office of a mediator in industrial disputes whose primary duty is to seek conciliation between the parties."

And since that I have alleged a complaint against the board of grievance, against the clerk.

Now, let me explain the position I took before the board of arbitration. I decided a point which I recognize in the light of the decision, was wrong. I conceded the point that the manufacturers' association has a right to discharge men when they go out on strike. That was inconsistent on my part. They have no right to discharge. If they came to us there would have been no picketing. But I considered the unsound theory advanced by Dr. Abelson and the officers of the association, namely, that the employer under the protocol has the option, either to call upon the union officers under the protocol, or to go in a private way, and I said if there is a private way, we have no official notice of it, and you did not complain. You have locked them out contrary to law, and then they picket contrary to law. In other words, no one can invoke the law who does not uphold the law himself.

Since that time Mr. Brandeis has held that picketing is not permissible. I told him that I conceded that he was right and picketing is not permissible under the protocol, because lockouts, in response in strikes, are not permissible under the protocol; and in that feature if I, as counsel for the union, will ever be informed that such a condition exists, I will insist upon the reinstatement of all the men who have been locked out lawfully, and I will bring the matter before the board of arbitration. I leave it to this board of arbitration that it will pass impartial judgment upon it.

There are a great many other things that I wanted to say, but I have not time to answer everything.

I will only say that that reference of mine that Mr. Winslow should be recommended to this commission was simply a polite way to get Mr. Winslow out of the way when Mr. Brandeis proposed that we should have him.

I said it would be the right thing for the Commission of Industrial Relations to engage him to make that investigation, because I was confident that the Commission of Industrial Relations would not engage Mr. Winslow as its chief statistician. I was confident if he went to work for the commission he would work under good guidance, and then, of course, the position he held in the Bureau of Labor would be satisfactory, and not as a man who should direct our investigations.

Why, under his direction a statistical table was presented to us in regard to the wages of finishers. We have asked for an increase of wages of finishers and it was necessary to know what they were earning. They are the men finishers only. They presented to us a table in which men and women finishers were put into one group, and they gave us those average wages. We were compelled to withdraw that table of Mr. Winslows, because anybody under-

stands that womens wages are not the same as men's wages. Shall I be expected to rely upon the statistics that are produced without seeing how they are being produced?

We were told that only one-fourth of 1 per cent of the payments were under the scale according to their investigations. I want to know how that figure has been arrived at, and let me tell you, by the way, you know statistics are a very dry subject, but statistical figures are sometimes very living subjects. Only one-fourth of 1 per cent from the 20,000 workers—one-fourth means 502 workers, and means 50 families—and if they do not get what they were entitled to, that means that 50 children went without shoes. That is what statistics means.

In conclusion, I want to say this: I have been elected by the membership after a very bitter contest, in which everybody, the international officers included, had every opportunity, and availed themselves of every opportunity, to speak and to write against me and to say those very things that have been said here against me, and worse.

After listening to all that, after reading all that, without my having any opportunity to reply—because some of the charges were made on the eve of election and I had no chance to reply—after hearing all of that an overwhelming majority of those members who cared to vote, about 77 per cent of the members voted for me. I mean 77 per cent of those voted for and 23 per cent voted against me.

I had been elected by a vote of the membership. If we live in a democratic country the will of the people, after it has been spoken, is the law.

If our union is a self-governing body, the international officers were within their rights in objecting to me before I was elected.

After I had been elected this whole agitation against me is to unseat me—this attack to interest public opinion, this writing of letters to manufacturers suggesting arbitration, knowing that we have no right to submit this question to arbitration—all this is what? It is defying the will of the membership.

Officers have no right to defy the will of the membership. I may be the worst man in the world, but I have been elected, and I have said to the membership in a public statement, "Friends, you have elected me; you possibly do not know the consequences that may result from election. You do not anticipate that it may lead you into a conflict of opinion with the manufacturers' association. A good many of you did not know that your bread and butter were involved, and therefore you voted for me. Think it over again. Go over to your regulation section meetings and discuss it, and if you find you have made a mistake in abstaining from voting against me, or voting in my favor, demand my recall," and if the membership will demand my recall, and if they will recall me, I tell you, Madam Chairman and gentlemen of the commission, I will feel that I have been relieved of a position, of a job, that is certainly not a very easy job, and not a sinecure. I thank you.

The CHAIRMAN. Dr. Hourvich, I would like to ask you a question. From what you have said to us to-day and to the commission, do they gather that it is more a question of personalities than machinery that is the matter with the protocol?

Dr. HOURWICH. No; I would say it is a question of machinery. The imperfection of the machinery has brought about these personalities. If we had paid arbitrators, who would be on the job whenever they were wanted, there would be no occasion for me to criticize the arbitrators for not coming.

The CHAIRMAN. When you said to-day that Mr. Brandeis socially was very agreeable, and so forth—do you mean by that that he is impossible to work with?

Dr. HOURWICH. No; I do not mean that. What I mean is—

The CHAIRMAN. Can you work with him?

Dr. HOURWICH. I have to.

The CHAIRMAN. Can you work with him?

Dr. HOURWICH. I would say this, that I will certainly take exception to Mr. Brandeis assuming legislative powers, powers that have not been delegated to him; and also to Mr. Brandeis imposing a censorship upon our members, and to Mr. Brandeis saying that while the protocol gives us the power to demand arbitration in every individual dispute, we shall not have it, until he has studied the statistics. The statistics ought to have been studied when the protocol was made. The protocol gives us that right, and we demand it, statistics or no statistics. When Mr. Brandeis disregards entirely the provision of the protocol, and sets himself up as an autocrat over the protocol, I say nobody has elected him autocrat of this union, and if I have anything to say, he will

either not be an autocrat of the union or the chosen representative of both sides on the board of arbitration.

The CHAIRMAN. Have you gotten on well with the joint board?

Mr. HOURWICH. Well, I do not get on with the joint board, for the very simple reason there was a majority and a minority. The majority of the joint board was a failure to me. I think the majority is now with me. Those things happen in politics sometimes; sometimes the mayor disagrees with the majority of the board of aldermen.

Commissioner BALLARD. Doctor, what positions do you hold? I understood you were the clerk?

Dr. HOURWICH. Well, nominally I am the clerk. It was never intended that I should be the clerk in fact. I can not do the work of three men. It is enough for me to do the work of two men, Mr. Ballard. What I am going to do when this matter is settled, is this: I am going to appoint some one as my chief assistant who is going to do the work of the clerk. I will confine myself to the duties of counsel. That is what I have always done. That is what I am going to do in the future, although my nominal title may be clerk.

The CHAIRMAN. One more question. Have any of the joint board resigned?

Dr. HOURWICH. No; the joint board was to be elected, and was reelected.

The CHAIRMAN. None of them have resigned?

Dr. HOURWICH. No; the joint board did not have to resign, because an election took place in the latter part of December, a couple of weeks after my election, and the new joint board is acting in unison with me.

Commissioner BALLARD. Doctor, do you remember the case that Mr. Bisno spoke of?

Dr. HOURWICH. That was not during my incumbency; it was before me.

The CHAIRMAN. Does any one on the floor care to ask any question of the doctor?

Mr. COHEN. I would like Dr. Abelson to state the facts with reference to the case.

Commissioner LENNON. That is almost impossible.

The CHAIRMAN. We have 15 minutes, and we would like to call some one else before we adjourn.

Mr. COHEN. I am at the disposal of the commission, but I do want to call the commission's attention to the fact—

Commissioner LENNON. Can Mr. Abelson state what he has to say in 10 minutes?

The CHAIRMAN. We will listen to Mr. Abelson for 10 minutes.

TESTIMONY OF MR. PAUL ABELSON—Recalled.

The CHAIRMAN. We can not give you more than 10 minutes, it is 2 o'clock now.

Mr. ABELSON. I would like to present to the chairman and the gentlemen of the board some of the facts that Dr. Hourwich has touched upon.

The CHAIRMAN. Would you state first what your position is in relation to the protocol?

Mr. ABELSON. I am the clerk to the board of grievances for the manufacturers. You have heard Dr. Hourwich say yesterday, as I said, and I think I can explain from the very beginning all of the relations I have had with Dr. Hourwich. The first case I had with Dr. Hourwich was that case, the Goldfield & Lachman case. I went with him and gave him everything he wanted. He wrote out the propositions, which one of his assistants, as an expert, had suggested, and that agreement was made out, and Dr. Hourwich went to Washington, and the general proposition that was involved in that was left for conference, and consequently went to the board of arbitration, but all of that particular issue I conceded to him—that is, I gave in.

The next issue we had was a question of working overtime. The protocol says that no overtime shall be allowed after certain times. The union has been in the habit on a number of occasions of issuing rules in the official organ of the New Post which were in contravention of the protocol, because it has not been brought out here that there are some 20,000 workers who are not under the protocol, and under the claim that those notices are given to the other people they have not made any distinction, and the union has theoretically never conceded that there was any distinction between protocol and nonprotocol shops, so the order was issued.

For instance, we have such an order to-day in the New Post, the official organ, which was published yesterday, which states in the advertisements of Local 1

that for certain offenses that any man working with a nonunion man will be fined \$25. There is no definition whether it is protocol or nonprotocol.

This very matter was called to the board of arbitration, and the people shook their heads, but the notice is in to-day's paper. Such a notice was given out that they shall not work overtime during certain times. I wrote it in very, very simple language, and called their attention to a certain shop where they were working overtime.

In answer to that we received a very interesting disquisition on the interpretation of the protocol, in which it says: "No overtime shall be permitted except at certain times." The argument was that it did not mean that it was obligatory, and the reasoning, which I characterized yesterday as the syndicalist point of view, is expressed in a letter signed I. A. Hourwich, in which he says: "What one individual may lawfully do, a number of individuals may likewise lawfully agree to do." It would therefore be perfectly logical for the workers at a given shop to agree to this fact.

Now, the answer that was given to this incident outside of this general proposition was that we should interpret the protocol in a common-sense way. The protocol says there shall be no work done on a certain day, such as on holidays. If Dr. Hourwich's reasoning were correct, when men were found working in a shop on a holiday the boss could not say, "I did not send for them." As a matter of fact, the rules of the board of grievances have interpreted that the very persons in that shop were there by the permission of the boss; in other words, we interpret the terms of the protocol in a common-sense way.

Now, there was a conference on that subject, but this was the decision arrived at.

The next issue we had was a question of tearing tickets. There is a pressing department where they work by the week. Those pressers are the least skilled in the industry in the sense of the time that it takes them to learn. I think it was brought out in the discussion that they are the strong men, and there has been at least a complaint that they are apt to curtail the output of the product. Also there ought to be a method of finding out who made the particular garment; if a presser burns out a garment, you need to know who did it; so they have in the shops tickets which indicate this, so that the garment can be identified. Now, the union had a difficulty about that. They said, "If you tear tickets, it means you count the garments, and introduce the sweating system." That is what they did not want. My position was that they should go by the common-sense proposition that if a man was discharged because the boss told him he did not turn out enough work it became a subject for investigation as to whether he made one-third less than he ought to or not.

The union agreed, and did not agree until the very board of arbitration in another industry rendered a decision. They said that an employer has an absolute right to keep a record of the work. So on that basis cases were signed up that the men where they refused to tear tickets were ordered to do so.

The cases 997 and 7099 were adjusted, and the men were tearing tickets.

Now, there is an interesting side light. These cases are marked "adjusted," but they ought to be signed in favor of the association, but as a matter of common sense we say an agreement was reached.

When we sent that to Dr. Hourwich he wrote a letter. He said that tearing tickets was doing clerical work, and the pressers were not obliged to do that. Here is the letter:

"FEBRUARY 18.

"Replying to your letter of the 17th in relation to instructions given to our downtown office for the pressers of a certain firm, the tearing of tickets, on the other hand, is work of a purely clerical nature, intended for the purpose of keeping records of the work performed. As the joint board views it, such duties should be performed by the clerical force of the factory; we therefore believe that we are entirely within our rights in insisting that the pressers shall not perform any other work than pressing."

Now, I took the trouble to go down to a factory, and here is one set of cutters' tickets and here is another [indicating].

Have you ever heard a cutter say that this is clerical work, because it is part of his work to keep records?

The Secretary of War took this up and I only had an undersecretary, because the Secretary of State had no power in the last analysis, as you know—it stands to reason.

Now, the reference was made to the Samuelson case, and that is the most important of all. I stated to you yesterday that the great difficulty of this situation is teaching both sides the collective principle. After Dr. Hourwich

was installed in office, and after that guaranty of the international was given—by the way, a mistake was made here which nobody called attention to—the guaranty was put first before the criticism, and what really happened was the manufacturer said, "We can not do business with irresponsible people," and the board said the international people are responsible, and then Mr. London said, "You ought to criticize the stopping of work."

Now, that is a wonderful thing, to put the second thing first and create a wonderful impression. This is by way of introduction of what happened there. I think whenever you have a period of turmoil and unrest it affects business and the syndicalist spirit manifests itself.

Now, it expresses itself in the reaction of cutting down in the sense of responsibility. The joint board controls eight locals. When there is unrest the locals control the joint board. I have a newspaper here which said the people will go out—that is, at the time I had the famous dinner at the Cafe Boulevard, and three stoppages of work occurred that were instituted by the locals. I have here the paper and I have brought a copy of the New Post, because Dr. Hourwich wants to be shown.

What happened was this: In a certain shop the operators and the tailors made up their minds they were going out in the height of the season; that they were going to leave as individuals. That theory was expounded at the time of the overtime dispute, "And, of course, they have a right; they can not be slaves," and the New Post says—

Mr. COHEN. Your time is going.

The CHAIRMAN. You have only one more minute.

Mr. ABELSON. This is very important—the people left; in another shop they left; in the third shop the issue there was whether the joint board shall control these locals and the irresponsible people, or whether the locals shall dominate.

Dr. Hourwich came into that issue. There were three shops, and, of course, we got on the job. One shop we held out for four days. Of course, in such a case the manufacturer was anxious to have the thing settled and he would give in, but if he gave in in the height of the season every shop would know, because what happens? In one shop they know all over. So I had to be on the job and keep tab on it. You see, the principle of the protocol was involved in it when people go out in the height of the season, contrary to the union advice, because they will do it everywhere else.

I wrote in the letter to Jacob Samuelson's shop, and the people were warned: "If you go out, you will lose your jobs," and Mr. Wishnak asked me to go up there. The day before I went up there, there was one of those situations when there was nothing to do; it was one of those complaints that you could not do anything for, and I said to the manufacturer, "You know those people threatened to go out, and they will go out," and he says, "If they go out, I can not help it," and I said, "You understand that none of them can come back for the season." He says, "I understand that; I will take my medicine," and they went out.

A few days later they changed their minds and wanted to come back.

Now, while I was on this post of duty, in the other shop where this stoppage was occurring there the union could not take them back for four days, and Dr. Hourwich said he wanted to talk over with me the Jacob Samuelson matter, and I was in a quandary. What should I do? I suspect that this was a proposition that was put up by the other side, by the joint board, and that they wanted Dr. Hourwich to do this, and I said to myself, "I do not see what I can do."

I expressed my opinion that I thought the principle of both organizations was at stake, and I said, "The men are picketing," and I have seen them there, and if they will not picket I promise I will put the matter up to Mr. Silberman." He said, "Of course, they will not picket." Next morning I said, "Dr. Hourwich, these men are still picketing," and he said, "I do not know."

Now, the report of the joint board about it is as follows:

"REPORT OF THE JOINT BOARD IN THE NEW POST OF MARCH 22, 1913, IN REFERENCE TO THE FIRM OF JACOB SAMUELSON.

"Local No. 1 reports that a committee of Jacob Samuelson's workers have appealed to the local in reference to the trouble in the above-named shop. The local therefore wishes to be better informed as to what has happened in Jacob Samuelson's shop.

"Following is an explanation of the situation:

"The workmen of Jacob Samuelson's shop have for a long time wished to leave the place because they have had very little work there. The firm sent

most of its work outside. The people finally decided to look for other positions. It appears, however, that a little later on a few of the people repented and wished to return to their old jobs. The union could not help them in any way, as they were warned that they would lose their jobs. Many of them have already found jobs, but several have, as yet, been unable to find work, and the only thing that can be done for them is that the local support them until they find work."

Now, the proposition of Dr. Hourwich, that when men go out on strike, and they are discharged for not coming back to work, that they afterwards can claim to come back to work in their own time, and if the manufacturer does not take them back to work, it is a lockout. This has been decided by the joint board themselves, that men who go out and disobey the orders of the clerks, lose their jobs.

I do want to say to you that the last case about Levy & Friedberg, when the man came to me with a proposition, I said, "I won't undertake to take these people back now, and I will confer on that one feature of it at the end of the week." And I said, "The manufacturers' association do not stand for that." Now, you see the difference.

I am sorry that I have not time to present this whole thing.

The CHAIRMAN. We are very sorry, too, Dr. Abelson, but some of the commission have got to leave at half past 2, and we have to hear from one more person. Thank you very much, indeed.

Is Mr. Polakoff here?

Mr. ABELSON. May I, Madam Chairman, ask permission to file these papers?

The CHAIRMAN. Certainly.

Mr. ABELSON. And I want the record to stand.

The CHAIRMAN. Is Mr. Polakoff here?

Mr. ABELSON. May I file these papers with you?

The CHAIRMAN. Certainly.

TESTIMONY OF MR. S. POLAKOFF.

The CHAIRMAN. Will you tell us your position, please, Mr. Polakoff?

Mr. POLAKOFF. My position is that I am at present the chief clerk for the union of the waist and dress industry, and I am first vice president of the International Ladies' Garment Workers' Union.

Madam President and members of the board, really what I have to say has been said to a great extent by Mr. Bisno. There are only three points, which, in my opinion, ought to be made clear before this board—that if the manufacturers really mean everything in good faith those three questions must be put before them and decided.

Now, the question of subcontracting has been covered by Mr. Bisno. I believe the manufacturers will not deny the fact that when the strike was settled of the contractors, the majority decided and insisted that the price ought to be the same. After the first season, the subcontractors began to be created not from the fault of the union, but from the creation of the manufacturers. Now, we sincerely believe that if the subcontractors be abolished immediately and also having the large manufacturers not send their merchandise, their raw material, and so forth, and then call it buying merchandise, then half the trouble would be remedied.

The second point is, as has been explained by Mr. Bisno, in my opinion, after the strike was settled for the first, second, sixth, or seventh months, there was no necessity for an impartial chairman. Now, there is an absolute necessity for an impartial chairman—not because we believe we will have more justice from an impartial chairman but for another reason—cases will come before the grievance board, when the clerks of the association will know there is somebody on top of it, and we may expect justice will be given. At present most of the deadlocks are not coming before the grievance board, but they are dead before they come to the grievance board. This is the real truth, and I believe Dr. Abelson and Mr. Lazynsky will not deny that.

Then there is another important point. At present members of the union—I don't know for what reason—sometimes the working is not all right, sometimes as to behavior, sometimes on union activity they are discharged, and when they are discharged complaint is filed by the union. Now, the moment the man is out of the factory, there are 99 per cent of changes to be reinstated, for the reason that when he is outside he has something to say of what had happened for the last three or four months in the factory, and the manufacturer has something to say against him, and it is hard to bring those two together.

Now, why not have a system where the manufacturer, if he is guilty of something, he is not expelled from the association the first time; he is reprimanded, sometimes a fine is imposed, but he is not expelled. Why should not the workman have an equal right?

And then, if he does not honestly believe that somebody in the factory is doing right, let him prefer charges, and then we will have smoother working.

If these three points can be taken up either by the board of arbitration or by the grievance board, and something could be drawn up to take care of them, I sincerely believe the protocol will be improved.

But, as I have explained before, you can't expect from the workers, call them syndicalists or anything else you want—they began to be syndicalists when the work is taken away from the factory—and we know where manufacturers employed 100 people before where they now employ 60, and work is being done by men who have not \$500 to their names; we know that it is true that legitimate manufacturers do not do that, but it makes no difference, the others are members of the association, and they are protected by the protocol. And if this board wants to do something good, it is up to them to see that these others shall be abolished. If they can't be abolished, no protocol can be lived up to.

Mr. COHEN. May I ask just one question?

The CHAIRMAN. Certainly.

Mr. COHEN. Have you confidence, Mr. Polakoff, in the members of the board of arbitration?

Mr. POLAKOFF. Absolutely.

Mr. COHEN. Are you willing to submit any decision to that board with regard to the construction of the protocol?

Mr. POLAKOFF. Yes, sir.

Mr. COHEN. Are you willing to leave the question of any amendments to the machinery of that board?

Mr. POLAKOFF. Yes; absolutely.

Mr. COHEN. Do you know that the decisions of the board of arbitration instead of having been made by Mr. Brandeis have been unanimous all the time?

Mr. POLAKOFF. Yes, sir.

Mr. COHEN. And that the union appointed one of the members of that board, did it not?

Mr. POLAKOFF. Yes, sir.

The CHAIRMAN. Does anyone else want to ask any questions?

Commissioner BALLARD. I would like to ask, do you remember the case that Mr. Bisno spoke of—the case of Schroll?

Mr. POLAKOFF. If I would have the time I could emphasize not only this case, but 10 or more cases of the same nature.

Commissioner BALLARD. I was going to say; I suppose it is perfectly proper to say it—that I am not going on that 3 o'clock train to Washington, and I would be very glad to talk to you or to Mr. Bisno or anybody else later this afternoon.

Mr. COHEN. Mr. Ballard, will you permit them to get together with you on this question this afternoon?

Commissioner BALLARD. Certainly; I will be glad to.

Commissioner LENNON. Madam Chairman and gentlemen, I want to express to you my gratification at the splendid way in which you have talked out this subject.

I know from a long experience that it does help any industry, and in the controversies that arise in any industry, to have a full opportunity to say sometimes what we have in our minds to say. I want to call your attention to something remarkable in this instance. I have been 43 years in the trade-union movement and come in contact with all phases of organized and unorganized labor and with employers both organized and unorganized. Everybody who has spoken to the commission and before the commission have agreed that the protocol should not be broken down. There is not a single exception to that. Not one. We can not say, we have not consulted, even as a committee or subcommittee of the commission, as to what we may say or do within the next few days or within the future; we have no right to indicate what we will do or can do, but that one thing having been agreed upon by all your representatives I tell you the protocol is going to stand, and it is going to be amended from time to time as the necessities of the industry require it; and that is what you all want, I am confident of. [Applause.]

(Whereupon, at 2.30 p. m., the meeting was closed.)

EMPLOYMENT OFFICES AND UNEMPLOYMENT

(For exhibits under this subject, see pages 1363 to 1440.)

COMMISSION ON INDUSTRIAL RELATIONS.

CITY HALL, BOROUGH OF MANHATTAN,
New York City, May 18, 1914—10 a. m.

Present: Chairman Walsh, Commissioners Lennon, O'Connell, Ballard, and Garretson.

Chairman WALSH. The commission will please come to order. I will announce that Mrs. Harriman and Mr. Delano will not appear here until tomorrow; but we will proceed with those that are now present.

Mr. THOMPSON. Mr. Chairman and members of the commission, the first thing on the calendar for this morning is the question of employment offices and unemployment, which is a matter that has been developed by Mr. Leiserson, who has had that special subject under supervision; and we will now proceed to call the witnesses.

Mr. LEISERSON. Mr. Chairman, we will call Mr. Charles K. Blatchly, of the employment application bureau. But, Mr. Chairman, before asking the first witness to testify, I would like to give just a very brief outline of the line of testimony that we would like to have the witness testify to. This hearing on these three days, will be on the subject of unemployment and employment offices. The most important part of the problem of unemployment is how to get a job. Now, there are various agencies already in existence who try to help people get jobs; there are private employment offices; philanthropic employment offices; trades-union employment offices; employers' association employment offices; and public employment offices. What we want is to know how each of these agencies is handling the problem, and whether any one of them is the best one to handle the problem, and if they have not handled the problem well in the past, whether it has been due to a fundamental error in the principle on which they are based, or merely an error or a failure due to people not knowing how to run the business properly.

Now, Mr. Blatchly, you have many applicants come to you——

Chairman WALSH. First, I wish you would develop Mr. Blatchly's name, his present occupation, and how long he has engaged in it, and all those details for the record.

Mr. LEISERSON. Yes. Now, Mr. Blatchly——

Chairman WALSH. What is Mr. Blatchly's full name?

Mr. LEISERSON. Charles K. Blatchly. You have been in charge of the general application bureau and the association for improving the condition of the poor, and of the charity organization society. You have many applicants come to you for help?

Mr. BLATCHLY. Yes, sir.

Mr. LEISERSON. Sometimes they are able-bodied people, and you have to try to find them a job. Now, what we would like to know is the difficulties and your experiences in finding jobs for these people. Now, to begin with, will you please state your qualifications to testify on this question, the associations you are connected with, and the period of years and so on?

Mr. BLATCHLY. Mr. Chairman.

Chairman WALSH. Mr. Blatchly.

TESTIMONY OF MR. CHARLES K. BLATCHLY.

Mr. BLATCHLY. I have been superintendent of the joint application bureau of the societies mentioned by Mr. Leiserson for six and a half years. Prior to that I was in charge of the State aid and poor in their New York office, so that I have had about 10 years' experience in dealing with these men, and particularly with the men who are on the border line of being unemployable.

I did not expect to outline any particular part of this testimony this morning myself, but rather to answer questions which I expected Mr. Leiserson to ask me.

I want to make very clear that primarily the work is charity work and not running an employment office. When we do get work for our applicants, it is as an incident to our charity work, and it is not the primary function of the bureau. We do get work for 1,000 to 1,200 men every year. Some of this work, however, is only temporary. We place from 300 to 400 men on farms in the country every year and some others in the city, and several hundred are secured temporary work in cutting ice in the winter and shoveling snow and short jobs of that sort. I should much prefer to have the questions asked me and I will answer them to the best of my ability.

Mr. LEISERSON. When a man comes to you to ask for help and he is able-bodied, you sometimes direct him to a private agency, do you not?

Mr. BLATCHLY. We do; yes.

Mr. LEISERSON. What we would like to know is, what your experience has been with private employment agencies in getting jobs for those people?

Mr. BLATCHLY. The agencies getting work for common laborers, so called, are usually situated on the lower east side. I have in mind Mr. Lundow's office, 9 Delancey Street. He ships men to the Florida East Coast Railroad. At other places the agency on Mulberry Street supplies the Erie Railroad to a large extent; agencies of that sort. We have simply directed our men to those agencies where we hear there is an opportunity for securing work from them. There are one or two agencies on State Street, Messrs. Atkins, 12 State; also the National Employment Exchange, 56 Cooper Square. We will direct those people to those places. Our experience with these agencies has been that the agencies care more especially—that is, they care nothing particularly for the welfare of the men, but they do care a whole lot more about getting their fees, and when they have the matter arranged so that they get the fees, or are assured, they do not take much further interest in the men. I mean by that that they do not make any inquiry into the working conditions or the living conditions under which the men are to live and work on the jobs. Their particular interest is a selfish one, getting their fee on the job and placing as many men as possible on the job. They do not care whether a man remains on the job or not. That gives them an opportunity to place more men on the job. I hope I am not doing them an injustice, but I think some of them perhaps may want a man to leave a job as soon as possible, because that gives them an opportunity to place another man in their place.

Mr. LEISERSON. Do they make it appear that they try to find out whether a man can do the work, or whether he is fit for the job?

Mr. BLATCHLY. I can not say as to all agencies. Some do not. I know one employment agency told me not so very long ago, he said the particular company referred to said they will take anybody so long as he is able to carry a shovel. That is, that he had no regard for the fitness of a man to do the work in hand.

Mr. LEISERSON. What proportion of the people that you send to private employment agencies actually get jobs?

Mr. BLATCHLY. Well, that is impossible to state, because many of them do not return to us. We simply direct them there. When we guarantee the fee, as we do where we have looked up a man's references so that we know he is reliable and trustworthy, and sometimes we have him visited personally, and we send a man to the bureau, guaranteeing his fee. This is only an estimate, but I should think 25 to 30 per cent of the men sent get jobs that way, when we have agreed to be responsible for the fee.

Mr. LEISERSON. What has been your experience with philanthropic employment agencies, those like the National Employment Exchange, or the Alliance Employment Bureau, the kind that are not run for profit primarily?

Mr. BLATCHLY. The experience of the joint application bureau with those agencies has not been at all successful. They have only placed approximately 1 per cent of the applicants referred to them. In fact, the manager of one of the branches of the National Employment Exchange said to me that they d'd not care to have our applicants referred to them, as it was likely to injure the reputation which they were trying to build up for this exchange. Of course, we would have been very glad to have referred a much larger number to them if it had not been for their lack of success and their direct statement to us that they did not care for our applicants. I want to make it clearer there, however, that a large part of our applicants are members of the nearly unemployable class, rather than the able-bodied men out of work. That is the particular class that I am referring to in this statement.

During the winter months we do have a large number of low-grade able-bodied laborers applying to us for work.

Mr. LEISERSON. The Federal Government has an employment office here run in connection with the Division of Information. Have you had any dealings with them, and what has been your experience?

Mr. BLATCHLY. We have referred applicants to the Bureau of Advice and Information, Department of Commerce and Labor, 17 Pearl Street, since its opening, I am not sure of its date, four or five years ago. We are able to get work for the men outside of the city in a fairly large percentage of the cases, but the difficulty of placing our men through this agency, the difficulties, are these: That where the men have—where the prospective employer has sent the money to pay the transportation to Mr. Green, the director, the prospective employer requires some guarantee that the man will be delivered to him, and it is required in every instance that that man has to have baggage supposed to be of sufficient value to guarantee his transportation; that the baggage can be checked through to destination, and the baggage sent to the employer.

I only mention that to show that our men do not meet that requirement. And in most cases sent out of town we have had to be responsible for the transportation ourselves.

Our applicants are of such character and reputation that we have been unwilling to take that responsibility in many instances, and for that reason we have not been able to place many men through this agency. We have furnished transportation to the destination in quite a number of instances, and, I am sorry to say, we have not been able to get a refund in very many of those cases.

Mr. LEISERSON. You would not think it advisable, would you, that transportation should be given to the class of men that you speak of that have no baggage?

Mr. BLATCHLY. I would not advise it. I think it would be very inadvisable, because the men would abuse the privilege. The particular class of men that come to us frequently state to us that they think they can better their condition and get a job, or they would be a whole lot better off if they could get to Boston or Baltimore or Buffalo or some other place away from where they now are, and they would abuse the privilege of accepting this transportation and not accepting the job. I might add right there that it frequently happens where we do furnish transportation that the man goes out to the locality where the real job was; he goes in there and finds that some one else is willing to give him a dollar or two more a month perhaps, and he accepts the other offer and does not go to work for the men for whom we furnished the transportation.

Mr. LEISERSON. You have two classes of men who come to you, one, we will say, roughly, has baggage and the other has not baggage. Those able-bodied and willing-to-work men who have got a little bit of baggage with them, you would say that for them the question of advancing transportation is an advisable thing?

Mr. BLATCHLY. I would say that in those cases.

Mr. LEISERSON. And the other it would not be advisable?

Mr. BLATCHLY. It would not be. A very small percentage, less than 1 per cent, I should say a quarter of 1 per cent, perhaps, of our applicants have baggage of sufficient value to guarantee their transportation.

Mr. LEISERSON. Would you say, then, that the vast majority of your applicants are unemployed or the unemployable?

Mr. BLATCHLY. Well, it is impossible to answer that question by saying yes or no. They are practically unemployable. They are unreliable. They are men who are heavy drinkers to a very large extent. I estimate that 90 per cent of them are drinkers to such an extent as to interfere with their ability to earn a living. Some of them are willing workers and able-bodied, but they work a month, or until the first pay day, then they quit and spend the money. They are that type of men largely. I do not say, and I do not mean to say, all of them are, but a large percentage. I should say on an estimate nearly up to 90 per cent, perhaps 90 per cent.

Mr. LEISERSON. Now, for men of the type that are unreliable, would you think that employment offices of any kind would be any particular value to help them out of their condition?

Mr. BLATCHLY. It would be; employment offices would be of some value, but it will not solve that problem, in my opinion.

Mr. LEISERSON. Will you state what you think would be more advisable toward the solution of the problem of these men who come to you, in a great majority of cases?

Mr. BLATCHLY. I should think the first necessary thing would be a survey of the field to find out how many men there are, if possible. It would be impossible to find out actually the number of the floating class which I mention.

Mr. LEISERSON. Do you think an employment office, by a system of records, would be able to help you to get that information?

Mr. BLATCHLY. That would be the first step. If an employment office, or system of employment offices, with a system of records, keeping track of these men would show how large the problem of floating labor is. There is a large demand for floating labor. I have directly in mind the harvest fields of the West. A particular class to which I speak beat their way west on freight trains and beat their way east when the job is finished, and they do beat their way to the casual work in other parts of the country, and they do a real service in that. I don't believe an employment office would help that situation very much, because an employment office would presuppose the payment of the fare. There is no Government office that would advise these men that there was work in Minnesota or Dakota, and advise them to beat their way on freight trains. Many of our men are of the class that they will never improve their condition very much until they have definite periods of training in some industrial colony of some sort. That is the particular class of people with which the joint application bureau is dealing. We have urged that upon the State and the city for several years.

Mr. LEISERSON. Go back to the employment offices. Now, would you say that the private employment offices were not a very great help to you for the able-bodied men and willing workers; I mean the reliable class, now.

Mr. BLATCHLY. Well, I shall have to explain my answer. The National Employment Exchange—

Mr. LEISERSON (interrupting). Pardon me, just a moment. Let us leave the philanthropic out; just profit-making agencies first.

Mr. BLATCHLY. In this connection, I refer to the National Employment Exchange as a—not as a philanthropic agency, but as an agency paying reasonable returns on the investment. The other agencies have been fairly successful in getting work for those men in certain periods of the year. They seem to me to fill the need fairly well when there is work to be had. Of course, in the wintertime, when there is no demand for laborers, a hundred employment agencies could not get a job for one man if there was no work to be had. In the spring and in the summer I think they are fairly successful in taking care of that situation.

Mr. LEISERSON. Do you think that the fee that they charge is a hardship for the men?

Mr. BLATCHLY. It is a hardship as at present administered, because the men are selected without any particular regard, apparently, for their fitness for the work. This does not apply to all agencies. I only refer to some. So that the man is constantly changing his work, and if he changes his work several times during the summer and has to pay a fee at every change, as he does, it is a hardship. If he only had to pay one fee for one summer's work it would not be a hardship.

Mr. LEISERSON. Have you any case in mind where men have paid many fees during the year, so that it would make quite a sum?

Mr. BLATCHLY. I haven't specific instances in mind which I could mention; that is to know the man's name and number of fees and things of that sort. But I know, in talking with the men who have applied at the bureau, that that is so. In going over one case record, as we call it, only two or three weeks ago, I found that one man had had 30 or 40 jobs in the last seven or eight years. I had that directly in mind, but there are several others that would have nearly as many jobs; and he paid a fee in nearly every instance.

Mr. LEISERSON. What was the fee?

Mr. BLATCHLY. Ten per cent of the salary. He was a low-grade worker, usually received board in addition to his salary. He was employed as an orderly or attendant in institutions where the salary was from \$20 to \$35 a month and maintenance.

Mr. LEISERSON. And he would pay how much?

Mr. BLATCHLY. Well, at a \$20 job he would pay a \$2 fee, and if—up to \$35, I think that was the highest he ever received a month, it would be \$3.50.

Mr. LEISERSON. You think, then, he would pay as much as \$10 a year in fees for jobs?

Mr. BLATCHLY. Well, I think that he would pay in some years \$15 to \$20 a year in fees.

Mr. LEISERSON. Do you think that the service that private employment agencies render in getting the men these jobs is worth the price?

Mr. BLATCHLY. Why, I think so; yes. I think the fee is fairly reasonable; 10 per cent.

Mr. LEISERSON. Would you say that it would be perfectly proper for the manner of getting jobs for wage earners, or bringing the employers and the workmen together, to leave that in private hands, with whatever fee they will charge, or that 10 per cent fee, that they will take care of this problem satisfactorily?

Mr. BLATCHLY. Well, I don't believe they will ever take care of the problem satisfactorily, for the very reason that they naturally work for selfish motives entirely, and they are not running these agencies for the welfare of men. I mean by selfish motives, gainful motives; that is, they want to get as much income as possible and place as large a number as possible, without consideration of any other matters.

Mr. LEISERSON. You said 10 per cent was a reasonable fee. Is that what is ordinarily charged?

Mr. BLATCHLY. That is the regular, the usual, fee with agencies of which I have knowledge. The National Employment Exchange charges \$2, I believe.

Mr. LEISERSON. What I would like to get from you is this: Is the fact that there are very many employment agencies in the business, each of them, perhaps, charging 10 per cent, is that a hindrance to a man getting a job, or does it increase his opportunities?

Mr. BLATCHLY. It makes a hardship in getting the job, because there are only so many jobs anyway, and the man might have to canvass 30 or 40 agencies, for instance, to find a particular job for which he was fitted. If the information was all in one central agency where he could go and find out if there was any work for which he was capable, it would be much easier for the man and save a great deal of lost energy.

Mr. LEISERSON. You would say, then, that it was a vital defect in the system of leaving the labor market to private agencies, to have so many of them?

Mr. BLATCHLY. I should say it was a vital defect to have so many of them without any supervision. If they were required to register their calls for work and also the applicants for work in a central agency, it would not make any difference how many you had—ten or a thousand—if the information was available so that a man might get it by going to one place instead of a large number of places.

Mr. LEISERSON. Would it ever be possible, so long as this is in private hands, to have that kind of a central agency, to have all of them report to it?

Mr. BLATCHLY. I think it would be possible, but very difficult. It would be necessary to require them by law to report these applicants daily, and I fear that to secure this daily reporting of applicants it would be necessary to have a considerable force of inspectors to see to that, if the law was to be made practicable.

Mr. LEISERSON. Now, you said that 10 per cent is the reasonable fee, and that is generally charged by private agencies for the service that they render. From the standpoint of the society which wants to get these people to work as soon as possible, would it be advisable to prohibit the collecting of the fee from them and to have the State spend the money, if it were to cost, say, 10 per cent, in order to get the service?

Mr. BLATCHLY. That is rather a difficult question to answer. I am inclined to think that it would be worth while, but I should want more careful study of the field before coming to that as a definite conclusion. I am inclined to think it would be desirable.

Mr. LEISERSON. Besides these private employment agencies——

Chairman WALSH. Just a moment, Mr. Leiserson. This 10 per cent; what is that charged on?

Mr. BLATCHLY. Ten per cent of the first month's salary.

Mr. LEISERSON. Besides these private agencies, there have been and are philanthropic agencies which are operated not primarily for profit, but to make the thing pay just a very reasonable or very small profit; that is to say, on the same principle that philanthropists put up model tenements or a penny provident fund. Now, do you think it advisable for us to encourage that sort of enterprise as against the private agencies?

Mr. BLATCHLY. Agencies of that sort would be more helpful in conserving the resources and energies of the men; that is, if such agencies were operated in

a businesslike manner, at a minimum cost, it would certainly be of much more benefit to the men than other agencies which are operated solely for their own financial gain—be much better.

Mr. LEISELSON. You have had some experience with the agricultural employment office in this city?

Mr. BLATCHLY. We have.

Mr. LEISELSON. Can you tell what that has been?

Mr. BLATCHLY. We have been able to secure very little work through the State agricultural bureau; but this is no reflection on the State department. The reason we have not been able to secure more is the reason that our men have not had baggage sufficient to guarantee their transportation to destination; and that is one of the absolute requirements of the State agricultural bureau, as I gain from our experience. Wherever we have had a man with good baggage, as we do have in rather rare instances, they have been quite successful in securing a good position for him.

Mr. LEISELSON. You have stated generally that there have been evils connected with the private employment agencies; for example, the changing of men around so as to collect more fees, and so on. Can you go into that a little more in detail and give us some idea of what the abuses of the private-agency business are?

Mr. BLATCHLY. Well, I probably receive more complaints from men who have gone to work for different sections of the Erie Railroad than from any others. These men are furnished the Erie Railroad, I understand, through Mr. Marr, and I have never had any dealings with him directly, so this is on information given us by our applicants after they return to us from the work. At one time we did refer a considerable number of Italian laborers to an employment agency at 733 (?) Mulberry Street, who turned them over to Mr. Marr. These men complained to me. Now, I have not verified this personally; in fact, it has been impossible for us to do it. I have no official standing in making any such investigation. These men are frequently very needy, and their transportation has to be advanced to them by the railroad company, and they have complained that they are sent out—that they are placed in box cars with perhaps none or very little accommodation made for their comfort and welfare. Frequently they have nothing to sleep on, sometimes a tick filled with hay or straw or excelsior is provided for them and charged up to them. The men complain of the exorbitant charges for foodstuffs. In addition they have to pay for the sleeping accommodations in the box car. Generally they are required to do their own cooking, no facilities being provided by the railroad company for doing this. That is, they have to buy frying pans, spoons, knives, and forks, or anything they want of that sort, and that the employment fee and the high prices charged for foodstuffs, makes it impossible for them to save any money. Very frequently they decide to quit the job. They say that they can not hardly live, much less save anything, and very frequently their transportation is deducted from their wages in addition to the fee charged by the agent for placing them, and, of course, all advances made from the commissary. In addition to that they claim that when they serve notice on the foreman that they intend to quit work the foreman says, in substance, "Very well, the paymaster will be around in 10 days." They ordinarily have to get their pay on the job—that is, they can not come back to New York, the place from which they are hired, and get the money. This requires that they still continue to buy their foodstuffs of the commissary, so that if they have anything coming when they quit, by the time they have had to wait to get their money they have nothing. I want to make it very clear that I have not made any personal investigation to verify it, but have heard this story from large numbers of men who applied for assistance to the bureau, and I mention that only as an instance.

Mr. LEISELSON. Is there any department of the Government that is disposed to look after things of that kind?

Mr. BLATCHLY. Not so far as I know.

Mr. LEISELSON. You have never made any personal investigation of the labor camps of the State?

Mr. BLATCHLY. I never made any personal investigation of the State labor camps. I did make a personal investigation of some of the camps maintained by New York City at the time they were increasing the size of the reservoirs on the Croton Aqueduct.

Mr. LEISELSON. Have you ever been to any of the ice camps?

Mr. BLATCHLY. I have; yes, sir.

Mr. LEISELSON. You may tell us something of those.

Mr. BLATCHLY. I inspected the camps maintained by the Mountain Ice Co. at Greenwood Lake, N. J. This was a year ago last winter, the winter of 1912 and 1913. I visited these camps as the result of complaints by some of the laborers, who had been discharged, that the living conditions were very bad. The New York Call printed quite a long article, making a severe arraignment of these camps, which was the reason for my investigation, because we had furnished several hundred men to work for this particular company. We visited the camp at the upper end of the lake and the camp at the lower end. They have specific names for them, but I have forgotten the names for the moment. There were three of us visited the camps. Our visit was not announced, but we introduced ourselves to the foreman in charge, who took us about the different ice houses. They have three or four ice houses, as I remember it, side by side at the upper end of the lake. The working conditions seemed fairly satisfactory. The men are housed in wooden shacks erected, as I understand, for the purpose of housing employees to cut ice during the winter months. The sleeping accommodations were not very good, but they were not very bad. The men were furnished a tick filled with straw and two or three blankets; no sheets. The place was not very clean, but the foreman said that the company endeavored to keep it so, but the filthy habits of the men made it impossible, and I am inclined to think that the foreman may have been right in that respect, because I observed the room where the men had expectorated on the floor, and so on. There were stoves in each one of these places. The men were provided with plenty of coal and if they did not keep warm it was their own fault. The foreman said the men were frequently too lazy to go down to the coal bin and get the coal, which was perhaps two or three hundred feet away. There was very little complaint, if any, of the upper camps. As I said before, we came in just before dinner time, and so our visit was unannounced. I told the foreman we would like to inspect the food, and he said, "Come on down to the camp and have dinner with the men." So we went on down and sat down at the table and ate the same dinner served to the men, and it seemed good, very good, and fairly adequate.

Chairman WALSH. He didn't ask you to sleep with them?

Mr. BLATCHLY. He did not. I had an engagement in New York that night [laughter], so I would have been unable to accept that invitation. As I remember it, though, they had a fairly generous quantity of roast pork, baked potatoes, and bread and butter served to them. We then visited the lower camp—

Chairman WALSH. Right there, before you leave that point, what did they have? Just describe the food.

Mr. BLATCHLY. They had baked potatoes, roast pork, plenty of brown gravy, and bread and butter and coffee. I think in addition to that they had a pudding of some sort; I have forgotten whether it was a bread pudding. There was something else in addition to that, but of course it was served in generous quantities and well cooked.

Commissioner O'CONNELL. What are their hours and wages?

Mr. BLATCHLY. They were paid 20 cents an hour. The men during the rush season there were allowed to work as long as daylight lasted. Sometimes they get in 10 hours a day. They also worked Sundays. Ten hours a day at 20 cents an hour would, of course, be \$2, and when they worked only eight hours it was \$1.60.

The next camp we visited was the camp at the lower end of the lake. The company had placed a woman in charge of this camp, who was of rather slovenly habits, apparently. That is, the place was not well kept. This seemed to be the main difficulty there. The company supplied the food—furnished the food, rather, charging the boarding housekeeper for it. The company did furnish good food materials. We inspected the meat and inspected the vegetables sent up, and inspected the bread, and so forth, and the company's part was well taken care of. This is the camp from which complaint had come in, and I think it was entirely on account of the woman and the men—the woman was in charge, but she had one or two to help her do the work—because of the incompetence and slovenliness of the woman. We talked with several of the men there, and that seemed to be the trouble—that the food was badly cooked and badly served, and that the place was dirty.

Commissioner O'CONNELL. To keep the record straight there, does the company furnish the food or foodstuffs to the men in addition to their wage—in addition to this 20 cents an hour?

Mr. BLATCHLY. No; the men are charged 25 cents a meal and 25 cents for lodging, so that when they only work 8 hours they get only 60 cents a day clear, and when they work 10 hours only a dollar a day clear. In addition to that, they are charged their transportation to the place, which I am not sure of the fare, but I think it is \$1.60 to \$1.75 sent to Greenwood Lake, N. J.

Mr. LEISERSON. Mr. Blatchly, would you say that the condition you have just described, and the fact that there is a very little left, after they have worked, that that has some influence in making them quit at the end of a month or two and making them into the kind of men that you have spoken of?

Mr. BLATCHLY. Of course, it is cause and effect of making these men what they are. A man who can not save anything naturally gets discouraged. When he is able to get a little money saved he likes to drown his troubles, to use the familiar expression.

Mr. LEISERSON. Put it this way: You say that a good man, one of these able-bodied men, with baggage and willing to work, and so on, would be able to work and live under the conditions that you found?

Mr. BLATCHLY. Well, he would be able to save very little money, very little. However, if this man of good reputation, with baggage, and who had saved his money at farm work, where he was able to earn \$25 or \$30 a month, with board, during the summer, this would be an opportunity of giving him temporary work, perhaps, from 6 to 12 weeks during the winter, which would enable him to earn his board and a little in addition.

Commissioner O'CONNELL. Will you tell us what baggage is required of a man making 60 cents a day?

Mr. BLATCHLY. Not any. In a case like that, I only refer to baggage where a man is sent out to a job which lasts through the season. This ice work would only last six or eight weeks. They would hardly be taken into consideration in talking about permanent jobs.

Commissioner GARRETSON. If a man went to a position of that kind, with baggage, would he be liable to have any to bring away?

Mr. BLATCHLY. He would quite likely have it stolen. That is not required at all.

Mr. LEISERSON. I would like to ask you whether you made a record on that investigation; whether there is a written report which the commission could have.

Mr. BLATCHLY. I don't remember whether I made a written report. I think I did. I think I made a written report to my committee. I am not absolutely sure. I will look it up and I will be glad to send it to you if I have one.

Mr. LEISERSON. Let us go back for a moment to the private employment agencies. I would like to go into detail a little in regard to their abuses. Has it been your experience that men have been sent to places and fees collected and there were no jobs for the men?

Mr. BLATCHLY. I have had knowledge of that, but not with any of our own particular men. We had an inspector making a study of conditions at the city aqueduct. That happened there. Twenty men were sent there, fees collected, and there was no job there; but I am glad to say that our inspector had the man arrested, and he was sent to six months in jail on the charge. I have not had any such experience with any of our applicants, and in this particular instance the man was punished for doing that.

Mr. LEISERSON. Have you ever had complaints against private agencies that you referred to the inspector of licenses or commissioner of licenses, in order to give you some idea of the effectiveness of the regulation of these agencies?

Mr. BLATCHLY. I don't remember ever reporting any agencies to the commissioner of licenses for any dereliction of duty. I have threatened to in one or two instances, where we have paid the fee, and the man was sent to a job that he was obviously unfitted for, and I had demanded the fee back. We have had a little difficulty, but I don't remember ever reporting any such an agency.

Mr. LEISERSON. You would not be in position to testify as to the effectiveness of the regulation?

Mr. BLATCHLY. I am not.

Mr. LEISERSON. I think that is all, unless some of the commissioners have a question.

Chairman WALSH. I have a question or two to ask, if you please. In those ice plants that you visited, had there been 10 per cent collected by some employment agency?

Mr. BLATCHLY. There had been no fee collected whatever.

Chairman WALSH. The commission would like to know what is the meaning of the joint-application bureau. That is the designation of your bureau?

Mr. BLATCHLY. It was so named because it is supported jointly by the Charity Organization Society and the Association for Improving the Condition of the Poor, two large philanthropic organizations.

Chairman WALSH. Both located in New York?

Mr. BLATCHLY. One hundred and five East Twenty-second Street.

Chairman WALSH. Have they any connection outside of New York?

Mr. BLATCHLY. They have none.

Chairman WALSH. Do you have what is designated as an employment bureau in the association?

Mr. BLATCHLY. We have not.

Chairman WALSH. You have no separate department?

Mr. BLATCHLY. We have no separate department for that.

Chairman WALSH. Where is your office?

Mr. BLATCHLY. One hundred and five East Twenty-second Street.

Chairman WALSH. What is the designation on your door?

Mr. BLATCHLY. Joint Application Bureau of the Charity Organization Society and the Association for Improving the Condition of the Poor.

Chairman WALSH. Do you keep a record as to where these men come from that you undertake to obtain employment for?

Mr. BLATCHLY. We do; yes.

Chairman WALSH. Where do you have those filed?

Mr. BLATCHLY. Filed in our office, first floor, 105 East Twenty-second Street.

Chairman WALSH. Is there any touch between your bureau and any State agency or municipal agency that has to do with the question of unemployment?

Mr. BLATCHLY. There is not.

Chairman WALSH. None whatsoever?

Mr. BLATCHLY. None whatsoever.

Chairman WALSH. Who meets the men when they come in to apply for those places?

Mr. BLATCHLY. Well, we have 12 or 14 employees. We have interviewers there. We have three men.

Chairman WALSH. But, they do not interview them on this alone, but general interviewers?

Mr. BLATCHLY. General interviewers; yes, sir.

Chairman WALSH. For instance, in the case of those ice camps, are there any statements made to the men going out as to the exact conditions in the camps?

Mr. BLATCHLY. Generally. Of course, when we send out, we send out sometimes 50 to 100 men a day.

Chairman WALSH. Yes.

Mr. BLATCHLY. And I intend to advise every man, and I generally announce before the men assembled there exactly the conditions, as far as possible; but they have to sign a paper, that I see in every instance, that the wages and the amount to be deducted is incorporated in the contract they sign. So they know exactly what will be deducted. They go with full knowledge of what they will have to pay for board, the amount of railroad fare, and the wages received.

Chairman WALSH. When did you make this visit to the camps, Mr. Blatchly, in person?

Mr. BLATCHLY. As I remember it, a year ago this last winter. I think it was the month of January; may have been February. January or February, 1913.

Chairman WALSH. Prior to that time had you any personal information as to the conditions of the camps—how the men slept, what they ate, or anything of that sort?

Mr. BLATCHLY. I had not.

Chairman WALSH. Through whom do you acquire that information to give to these men?

Mr. BLATCHLY. From the offices of the company, the secretary of the Mountain Ice Co.

Commissioner GARRETSON. How long have you been in the business, Mr. Blatchly?

Mr. BLATCHLY. Ten years.

Commissioner GARRETSON. I assume that you have in that time formed some opinions in regard to certain features of that that might be valuable to us. Do you believe that if legal means were devised whereby what might be termed an industrial rate could be established, whereby unemployed men in search of employment—men in one region—could be connected with employment that might exist in another region, for the off season, that that would be desirable?

Mr. BLATCHLY. I think it would be very much so.

Commissioner GARRETSON. Have you ever given any thought as to whether or not a means could be devised that would prevent the abuse of that rate by the—not only by the men themselves, but by those who administer it, issue it?

Mr. BLATCHLY. Well, I have not worked out any particular working scheme. I do think that some plan requiring every applicant for work should be required to have some sort of a work book, such as is required of men who sail on the sea, so that when a man is discharged from any given job that the employer is required by law to state what his record is and enter it in his work book. I think some such plan as that should be put into operation.

Commissioner GARRETSON. In other words, a passport; workmen's passport.

Mr. BLATCHLY. Yes.

Commissioner GARRETSON. That is what it would be equivalent to?

Mr. BLATCHLY. Yes.

Commissioner GARRETSON. And devised by each employer.

Mr. BLATCHLY. And I should insist that that should be made so important that a man traveling without his workman's passport would be looked upon rather suspiciously. I should do it to encourage the men to cooperate in having that so that we could weed out and find out how many men of the tramp, vagrant, and inebriate type were roaming around the country, undesirous of getting satisfactory work, of getting steady work.

Commissioner GARRETSON. A measure of that kind could only be conducted under a national system.

Mr. BLATCHLY. It could only be conducted under a national system.

Commissioner GARRETSON. Does your experience with the employing of men lead you to believe that the fee system furnishes an incentive to nontenure, to shorten the job, in order to duplicate the fee?

Mr. BLATCHLY. I think it does. I am quite positive that it does.

Commissioner GARRETSON. Have you ever found any evidence of collusion between the employing agents—I am speaking purely of the commercial agent—and the gang boss to fire and hire.

Mr. BLATCHLY. I have frequently heard such statements, but we have never made an investigation to determine that. I don't know that.

Commissioner GARRETSON. Well, as a matter that has come to your knowledge often, does the knowledge which has reached you here lead you to believe such a thing might often exist?

Mr. BLATCHLY. I believe it does.

Commissioner LENNON. Suppose you receive an application for, say, 50 men, and you have none connected with your office—that is, that have reported. How do you go to work to find the men, or do you do anything of that kind?

Mr. BLATCHLY. For several years we have maintained a social secretary, so called, at the municipal lodging house, which is maintained by the department of public charities for the care and shelter of homeless men. When we get a call for 50 men to go out to cut ice we never—we never—if we haven't the men on hand ourselves, of course—if we have them, we send them out, but if not we notify our wood yard. We maintain a wood yard to give work to these men. These men only earn a bare subsistence there. We first telephone to the wood yard and see if there are any men there, and if there are to send them over; and if we don't get enough there, we notify our social secretary or the superintendent at the municipal lodging house to send men over from there. Occasionally we have asked one or two other philanthropic agencies in the city. We never ask any other agency except the philanthropic ones to send men to us. We simply tell them—these other agencies are referred to; the Bowery Branch of the Young Men's Christian Association and the Bowery Mission, and agencies of that sort—simply tell them briefly of the opportunity for work and living conditions as we know them, and the hours and rate of pay, and deductions.

Commissioner LENNON. Suppose you have 50 or 100 men and don't know of any jobs open. What effort, if any, do you make to find if there are jobs open? Any—or if you make any, what are they?

Mr. BLATCHLY. We are in touch with the different employment agencies through our visitors. We get information from them as to the possibilities of getting work through the different agencies. For instance, when men are in demand for the Florida East Coast Railroad or men are in demand in other construction work—barge canal, State roads, etc.—through any particular agency we usually hear of them. The other men, other applicants, advise us where men are being shipped. But we do not advertise or have any other way of knowing it.

Commissioner LENNON. You spoke about 10 per cent commission being paid out of the first month's wages. Suppose a man was employed for just one week. Would he pay the whole 10 per cent by the monthly rate or would he pay 10 per cent of what he got for the week?

Mr. BLATCHLY. If he was engaged for a week, the fee would be 10 per cent of his earnings for the week; but if he—a man got a job under the present system, he has to pay his fee in advance. If he worked a week and quit the job, he would lose his fee, 10 per cent of the month, whatever it was.

Commissioner LENNON. In that case he would be paying by the month.

Mr. BLATCHLY. He has paid for it by the month.

Commissioner LENNON. Do I understand you correctly to state that men—I think you mentioned the Erie Railroad Co.—men furnished to the Erie Railroad Co., had to pay their transportation, and were transported to the place where the work was to be found in freight cars?

Mr. BLATCHLY. I did not say that.

Commissioner LENNON. I thought I must have misunderstood you.

Mr. BLATCHLY. I did say that the men told me that the transportation was deducted from their wages. They were carried up in passenger cars. They were furnished freight cars to sleep in on arrival.

Commissioner LENNON. Oh, yes.

Mr. BLATCHLY. I want to make it very clear that I don't know this. I am repeating what the men told me. I have had it told to me at so many different times, I think there is considerable truth in it.

Commissioner BALLARD. Are these men usually foreigners, or are they Americans, that you send out?

Mr. BLATCHLY. A large percentage of them are; practically all of them are English-speaking people. I should estimate that 50 per cent of them were born in America, but that the other 50 per cent had been here long enough so that they speak English well, if born in non-English-speaking countries. We have many Irish and a few Scotch and a few English who apply.

Commissioner BALLARD. Would they be generally men with families, or are they without families, or have they abandoned their families?

Mr. BLATCHLY. So far as we know, they are men largely without family connections. If they have abandoned their families, they are unwilling to admit it, when applying to us. I presume that that is so. In some cases we have found it to be true.

Commissioner BALLARD. They would be largely, then, what you know as the hobo class.

Mr. BLATCHLY. That is the common name for the class; yes.

Commissioner BALLARD. As I understand you, about 90 per cent of these men drink whatever money they get, drink it up?

Mr. BLATCHLY. I estimate about 90 per cent of them.

Commissioner BALLARD. If that is true, would it make any difference whether they received \$1.60 or \$2 a day or \$4 a day, and whether they paid \$1 a day for board or 60 cents, when the end of the month came or the end of the four or five weeks' ice-cutting season, would it be better they should receive \$10 cash, or \$50 in cash, if they are going to drink it up anyway?

Mr. BLATCHLY. The only object of paying larger wages is it helps get the money in circulation. One of the most experienced philanthropic workers in New York said to me not long ago, that it would be better if these men could be compelled to work without pay; that their help was better. This statement was made by the superintendent of an institution where there are a large number of unpaid helpers, and I have protested at the injustice of requiring those men to work for nothing, and he said for this class of men it is much better they work for nothing, because any money they earn they spend for drink, and by working for nothing they keep in good health and in condition to do their work satisfactorily; whereas, if we paid them we would not have them.

Commissioner BALLARD. Then, the more wages they receive the quicker they drink themselves to death?

Mr. BLATCHLY. That is the idea.

Chairman WALSH. This gentleman's idea, who gets the money? Who gets the profit?

Mr. BLATCHLY. The saloon keeper.

Chairman WALSH. This gentleman who says they should not get any pay at all, for their moral and general welfare, who gets the profits, the earnings?

Mr. BLATCHLY. The city, in that instance.

Commissioner BALLARD. One other thought. Are they furnished with liquor at their work, and is that deducted from the wages, or can they get whisky from any source where they work, which will come out of their wages in some way?

Mr. BLATCHLY. I can not answer that question. In some instances that I know of, however, they are allowed to. I refer especially to the camp maintained on the New York City Aqueduct. They were allowed to buy liquor just as far as their credit would enable them to do so; so that the men each day drank practically what they earned.

Mr. LEISENBERG. I wanted to ask the question, if, as Mr. Blatchly stated, the wages came up to \$4 a day, whether that would not attract a different kind of men into the camp.

Mr. BLATCHLY. There would be no question about that. I was simply referring to this particular class of persons. Of course, possibly, if he got \$4 a day, and had been able—wages had been such that he could have earned that, possibly he would not have had the discouragement that he now has, and he would have saved his money and made a respectable, self-supporting citizen.

Commissioner O'CONNELL. Now, what way do you differentiate between the men that are gathered up, or come to your place of employment, good, bad, or indifferent? Do you attempt to separate them in any way?

Mr. BLATCHLY. We take a man's statement. Of course, they all come to us for something; that is, either ask for work—a large number of them do; but they are all destitute.

We take a statement as to their needs, and in this statement we take the names of their employers. We either visit the employers, if they are city references, or write those outside, and get a line on the man that way, and find out whether they are reliable or whether they are discharged, and whether there is any chance for reemployment at the place where they last worked, and other information. We have a form letter for that.

Mr. LEISENBERG. I would like to get a definite statement from you if you know whether these conditions in the camps—these ice camps, or aqueduct camps, or railroad camps—have anything to do directly with manufacturing hoboos—that is, in making them drunkards, and so on.

Mr. BLATCHLY. There is no question in my mind that they are one of the most potent factors in making hoboos and drunkards.

Commissioner O'CONNELL. If an application comes to you for 50 or 100 men from a railroad, or some large employer, do you make any investigation as to whether there is any strike or trouble on that road, or with that employer, between himself and his employees?

Mr. BLATCHLY. We do; yes. We get a statement from the prospective employer that there is no strike or labor trouble. We would not send any men out where there was any labor troubles.

Mr. LEISENBERG. It has been suggested that by the establishment of the so-called labor farms, where men of this class are sent for a month, or two, or four, or maybe six, until they can perhaps be taught some more permanent class of work or occupation, you might overcome this drinking habit. Have you ever considered that for this country?

Mr. BLATCHLY. We have considered it very carefully, indeed. In fact, the joint-application bureau took charge of a legislative campaign in 1911, which resulted in the establishment of a State industrial farm colony in the State of New York for this particular training of these men. The land has already been purchased for this institution at Green Haven, Dutchess County, N. Y., and we believe most sincerely that that is the only way to ever make these men self-supporting citizens—is to give them this particular training, which has been so successfully done in foreign countries, particularly Switzerland and Germany. In fact, in Switzerland, it has been so well done at the Weitzel Colony, that the men pay the whole maintenance and administration charges of the institution and return as profit to the State several hundred dollars each year. I would not expect that to be done quite so well in this country, perhaps, because conditions are different. But in Germany the men are maintained on an expense of only \$29 or \$30 a year to the state in these labor colonies.

Commissioner O'CONNELL. Are you speaking of the difference between the applicants who may have baggage and those who do not have baggage? The one with the baggage seems to have more value.

Mr. BLATCHLY. Yes.

Commissioner O'CONNELL. What do you consider baggage in that case?

Mr. BLATCHLY. We consider baggage something that can be checked on the railroad. The railroad company, for instance, will not take a bundle done up in a paper and tied with strings; they must be incased in either leather or wood—

Commissioner O'CONNELL (interrupting). Do you examine the contents?

Mr. BLATCHLY. Not at all.

Commissioner O'CONNELL. And the man who comes along with an imitation suit case that he has picked up from some place, and able to check it, would get an important standing over the man who did not have baggage?

Mr. BLATCHLY. I think it would be likely we would not send these men out and advance hundreds of them with fare, in fact, until we knew something about them, and our men always—one of our visitors always goes to the train with them. He would detect them. I remember once or twice a different employment agency had suggested where they had a requirement for baggage that anything would do; can't you find some old suit case a man will check? Of course, we don't do it that way. I don't think that is done very often, although I did furnish transportation less than two months ago to one of Mr. Green's cases up to Syracuse, N. Y., to a definite farm job there. The man went there. We expended altogether \$14 or \$15. We checked his baggage through, and sent the check to the farmer in the usual way. The man had found that he could get work in a factory in Syracuse, and he went to the railroad office and identified himself as the owner of the baggage without the check, and the baggage was delivered to him without any further ado, and we lost the \$14.

Commissioner LENNON. If there is anything about this question I am about to ask that you don't want to develop by this witness, just say so, and go on. What, if any, system, or lack of system, is there in employment agencies as to the collecting of data of jobs open for the entire country? There are jobs open often in towns of a thousand inhabitants, or two thousand or five thousand, and in country districts. What system or lack of system, in your view, is there regarding the collection of data to the open jobs throughout the country?

Mr. BLATCHLY. So far as I know there are no employment agencies doing that at the present time. I believe the National Employment Exchange intended to do that, but so far as I know they have not done it.

Mr. LEISENBERG. Mr. Lennon, the other witnesses will testify on that point.

Commissioner LENNON. All right.

Mr. LEISENBERG. There is just one question. If you had a body of good laborers, what ordinarily we call willing working men, say, a family man, or a man who is not married, but has got baggage, and you had an order from an ice camp for men, would you send those to the ice camp, or would you instead of that, look for a definite class, say, the hobo class, to go to those camps?

Mr. BLATCHLY. That quite frequently came up when we sent the men to them to the ice camp, and I advised the family man not to go, because he could not earn enough there to help support his family in the city, so I told him it would be better to remain here, and endeavor to get more suitable work in the city.

TESTIMONY OF MR. RICHARD G. WAHRBURG.

Mr. LEISENBERG. State your full name and the association you represent, please.

Mr. WAHRBURG. Richard G. Wahrburg, Employment Agents Protective Association.

Chairman WALSH. That organization has its office in New York, has it, Mr. Wahrburg?

Mr. WAHRBURG. Yes.

Chairman WALSH. And what are the constituents of it; the employment agencies of the city?

Mr. WAHRBURG. Well, we have a number of employment agencies of the city, what belong there, and the common employment agency, to see that no bad employment agencies are getting the help and support of the commissioner of licenses.

Chairman WALSH. They are all private agencies?

Mr. WAHRBURG. All are private agencies.

Chairman WALSH. Employment agencies for profit?

Mr. WAHRBURG. Yes, sir.

Chairman WALSH. What position do you hold with it?

Mr. WAHRBURG. I am president in this organization. There is also other organizations, united employment organizations, that is represented by Mr. Irvin and of this organization I am the treasurer.

Chairman WALSH. Are you a paid official?

Mr. WAHRBURG. No, sir.

Chairman WALSH. Do you have a private office?

Mr. WAHRBURG. I personally have an office; yes, sir.

Chairman WALSH. You have also an employment office?

Mr. WAHRBURG. And employment agency.

Chairman WALSH. All right.

Mr. LEISERSON. You are not the president of the association; you are the treasurer?

Mr. WAHRBURG. No, sir; there are two organizations.

Mr. LEISERSON. You are the president of—

Mr. WAHRBURG. I am president, and at the same time treasurer of the other.

Mr. LEISERSON. What is the distinction between the two associations?

Mr. WAHRBURG. One is the old organization and the other is the bigger one—the United—that used to be on the east side and the west side. This is the east side, and the United has the west side; that still remains.

Mr. LEISERSON. You heard some remarks made by Mr. Blatchly in regard to private employment agencies and in regard to the evils of their business. Would you like to answer any of the statements that he made?

Mr. WAHRBURG. Well, I do.

Mr. LEISERSON. Well, go ahead.

Mr. WAHRBURG. Well, I do believe that, for instance, Mr.—I don't know the name of the gentleman—made the remark that employment agencies do not do so very good, because they only have personal motives, and on account of that they do not care very much about the employers and about the employees. Now, I like to contradict him in this. We are business men just as any other business men. We try to make money; that is understood; but how could we make money, how could we do things, only in the way of that we help the employees and the employers alone and serve them right. We can not work any business—no employment agency either—if you do not try to do the best for both sides. I would not get any laborers or workingmen to my agency if I did not try my best for them. I am 17 years in this business line, and when I started to come in this I placed about, on the average, 170 to 270 a year. I am placing to-day about 6,000 to 10,000, and I only could do that because I tried my very, very best for them. They would not come to me if we would not have done so.

My agency in special does more for women, employing more women; and I want to state, so far as women are concerned, there is never need of employment. We always have three times as many applications for help as help; every woman what is willing to work and is honest and respectable, if she is under the age of 40, could get at any time work in the city of New York or outside of the city of New York.

Mr. LEISERSON. What kind of work, if you please?

Mr. WAHRBURG. Well, either domestic work or work in hotels or restaurants or work in factories.

Mr. LEISERSON. What would you say at the present time—that there is plenty of work for women in factories and hotels and restaurants?

Mr. WAHRBURG. I admit that at the present in factories there are not so many applications, but there are so many applications for domestic help in hotels and restaurants that we absolutely are unable to fill them. I charge not a single cent to the employees—the women. I give them the positions free of charge. The way I charge is only the employers, not the women.

Mr. LEISERSON. In what kind of business—in domestic?

Mr. WAHRBURG. Domestic or hotels or restaurants.

Mr. LEISERSON. Or factories?

Mr. WAHRBURG. Well, outside of factories, we do not charge them anything.

Mr. LEISERSON. Do you place any stenographers or clerks of that kind in positions?

Mr. WAHRBURG. No; I do not attend to that at all.

Mr. LEISERSON. You do not?

Mr. WAHRBURG. No, sir.

Mr. LEISERSON. You do not charge any women any fee at all?

Mr. WAHRBURG. No, sir; except the only fee we charge for women is for high-priced cooks for hotels, that earn from \$80 to \$170 a month and their board.

Mr. LEISERSON. You charge them?

Mr. WAHRBURG. We charge them 10 per cent. At the same time I want to state this much; I want to contradict the gentleman who says before a party pays an agency six or eight or ten or twelve times a year the fees during the year. I do mean when a party has to change eight or ten times during a year that party does not want to work, because it is impossible that a person who is looking for work should not be able to stay in one of the 8 or 10 places for a length of time. We have to-day, so far as women are concerned, over 2,000 people; my agencies have over 2,000 people all longer than two years in working at the same place. So far as men is concerned, I want to state also that I should—I have during all the time of the year, all the time—I can not get as many men as I really need to work in boarding houses as porters or dish washers, or things of that kind—that kind of work that pays about from \$20 to \$25 and board.

Mr. LEISERSON. You charge men fees, do you?

Mr. WAHRBURG. Oh, I do; only about very few of them. I do not charge the most of them, either.

Mr. LEISERSON. Do you give your men employment and get most of the fees from your employers?

Mr. WAHRBURG. From the employers; yes, sir.

Mr. LEISERSON. Would you say it would be a good thing that no agency should take fees from workingmen, but should take it from employers?

Mr. WAHRBURG. I don't know.

Mr. LEISERSON. Why not, if your business can be run that way?

Mr. WAHRBURG. I will tell you, too, I have found out that not charging fees in a certain way keeps the people out of employment.

Mr. LEISERSON. Not charging them?

Mr. WAHRBURG. Yes, sir; not charging a fee in a certain way.

Mr. LEISERSON. How, for instance?

Mr. WAHRBURG. I have found out that when a party came to an agency and paid her office fee down and they engaged a position, they took their word and went the next morning in the position; but if they did not pay any office fee they engaged about 20 positions and did not go in one.

Mr. LEISERSON. Have you ever heard of agencies that do not charge registration fees at all? And they pick out the people, the people that actually want to go to work, from the applicants that come there? Do you think those agencies have any more difficulty than you have in getting the proper kind of people to go to work?

Mr. WAHRBURG. Well, I don't know that. That is pretty hard for me to answer this.

Mr. LEISERSON. You are not acquainted with agencies that do not charge any registration?

Mr. WAHRBURG. My office in general don't charge it; in general, we charge about 5 per cent of the people what come to me—we charge office fee.

Mr. LEISERSON. Do you find that the people whom you charge fees do stick to the job better than those that do not?

Mr. WAHRBURG. I do think so.

Mr. LEISERSON. Do you find that as an actual fact?

Mr. WAHRBURG. At least, keep it much better.

Mr. LEISERSON. Then why don't you think that kind of a system would be good?

Mr. WAHRBURG. I tell you, when I started my office, and had that done, I worked my office up in this way—it would be pretty difficult, and now, after being 17 years in that business, to change this. I have people coming to me for many years that take positions from me, and if I would start in now to change that, that would be quite difficult.

Mr. LEISERSON. You stated that you made an effort to get the right people in the job; otherwise, you would not be able to build your business up?

Mr. WAHRBURG. Yes, sir.

Mr. LEISERSON. If you by a system of fees can get better people than otherwise, then why don't you try to get the better people by having fees? Why didn't you in the past.

Mr. WAHRBURG. Well, I only got this experience after 17 years. I did not have the experience when I started.

Commissioner O'CONNELL. In collecting fees—you collect fees from some of the employees, don't you, if not all?

Mr. WAHRBURG. Very few.

Commissioner O'CONNELL. Do you get these from all of the employers for all of the help you furnish?

Mr. WAHRBURG. Yes, sir.

Commissioner O'CONNELL. And you get fees from some employers and some employees for the same position—get double fees?

Mr. WAHRBURG. Not always.

Commissioner O'CONNELL. Sometimes?

Mr. WAHRBURG. Sometimes; yes, sir. As I stated, there is very few. I will tell you how it is. I have found out that most of the time that men what work 8 or 10 months in a position and even had saved about \$200 or \$250, they took a little rest, and they did not come to my agency again so long as anything was left of the \$250; and when they came again to look for a position I have asked them for a fee, and they have plainly stated, "Well, I haven't got it. Give me 10 cents car fare, so that I may be able to go for my clothes and bring my clothes to the office."

Commissioner O'CONNELL. What do you collect from the employer?

Mr. WAHRBURG. From the employers?

Commissioner O'CONNELL. Yes.

Mr. WAHRBURG. That is different. In private or hotels, for instance?

Mr. LEISERSON. How much?

Mr. WAHRBURG. We have a certain scale. We charge people what wants domestic \$3 up to \$20, \$4 to \$25, and \$5 above \$25.

Mr. LEISERSON. What do you charge for hotel and restaurant help?

Mr. WAHRBURG. \$2.

Mr. LEISERSON. Everybody?

Mr. WAHRBURG. Yes, sir.

Mr. LEISERSON. To the employers?

Mr. WAHRBURG. To the employers.

Mr. LEISERSON. And common laborers or men?

Mr. WAHRBURG. Well, my office in general don't do so very much work for laborers, but I know they charge, oh, from \$1 to \$3.

Mr. LEISERSON. You say that the only reason you have for saying that you would not have a law passed to prohibit an employment agency from charging fees to working people is because you can get better working people, or you get them to take the jobs, if you charge them fees. That is the only reason?

Mr. WAHRBURG. Well, there are some other reasons, too.

Mr. LEISERSON. Well, what other reasons are there?

Mr. WAHRBURG. You mean so far as the law—what I get—

Mr. LEISERSON. No; you stated that you charged working people no fees hardly. That looks like a good idea. Perhaps with good laws passed that all employment gencies should do business the way you do, and now you say that is not a good idea, because you can not get as good people if you do not charge fees. Is that the only reason that you have?

Mr. WAHRBURG. There is other reasons, too. There are certain employers who will not pay any office fees.

Mr. LEISERSON. What do you do with them?

Mr. WAHRBURG. He can not get no help from me, but there are plenty of places where he will get it.

Mr. LEISERSON. There are employers what—

Mr. WAHRBURG. What will absolutely refuse to pay any office fees.

Mr. LEISERSON. Suppose no employment agency would be able to get his money from workingmen, he would have to charge them, wouldn't he? He would have to charge the employer?

Mr. WAHRBURG. Well, I don't know.

Mr. LEISERSON. Would you say that your experience in business proves that an employment agency can run a successful business without charging fees to workingmen, to working people?

Mr. WAHRBURG. I doubt it, for men.

Mr. LEISERSON. You do not charge any for men?

Mr. WAHRBURG. My business is very little in men.

Mr. LEISERSON. What proportion of the 16,000?

Mr. WAHRBURG. About 90 to 10.

Mr. LEISERSON. That is, you would place about—

Mr. WAHRBURG. About 90 to 95 females.

Mr. LEISERSON. Do you place 16,000 people every year? Did you last year?

Mr. WAHRBURG. No, sir; I said I worked it up to six or eight or ten thousand people.

Mr. LEISEBSON. You would say that 1,000 of those were men?

Mr. WAHRBURG. Well, not even that, I don't believe.

Mr. LEISEBSON. Have you received a copy of the proposed plan of the commission for a national system of labor exchanges?

Mr. WAHRBURG. Yes, sir.

Mr. LEISEBSON. I would like you to give your ideas in regard to the provisions that are made in that plan for regulating the business of the private agents; that is, for licensing them, and the rules, etc.

Mr. WAHRBURG. Well, I say if this law was passed, so far as employment agencies are concerned, it would be very hard for us, because—I don't know why—there are more laws for employment agents made than for anybody else. We are pretty good guided now by special State law; we are under the commissioner of licenses; we are also under the commissioner of labor; and if this law would pass, we would be guided by three different kinds of inspectors. We would be up, then probably one inspector would give us some kind of advice, the second inspector would give us just the opposite, and certainly we would get it in a third way. That would make it very hard for us. We are licensed already under the city, and we would get a second license. It could be that a man would lose one license, one license would be revoked, and the other license would not be revoked, so there would be a question if we would be able to go ahead with it, because he has still that one license, or if he can not.

Mr. LEISEBSON. That is the main objection that you have?

Mr. WAHRBURG. Oh, there is some other objections.

Mr. LEISEBSON. Well, now, just a moment. What do you think are the reasons that have led the State to regulate the private employment agency business more than any other business in the State?

Mr. WAHRBURG. Well, the reason for this is, I could tell you—we have a very big enemy, a very powerful enemy, because in opposition to us there is the press of the United States. The press of the United States itself is in this business. They would like to get the people to come to advertise; and we are, in fact, placing 90 per cent of the people. And the only chance—they would like to drive us out of the business very much, so they would do the advertisement.

Mr. LEISEBSON. You think that was the main reason that led to the regulation—

Mr. WAHRBURG (interrupting). Well, that is one of the reasons.

Mr. LEISEBSON. Do private employment agencies advertise in the newspapers extensively?

Mr. WAHRBURG. Very little.

Mr. LEISEBSON. Is that your experience?

Mr. WAHRBURG. Yes; very little; because the newspapers don't want to have our advertisements anyhow. They charge us about ten times as big a price as anybody else.

Mr. LEISEBSON. You state that as a matter of fact?

Mr. WAHRBURG. I don't know exactly ten times, but much more than anybody else. That is a matter of fact, very frequently. I could name papers that plainly refused to advertise, that did not care to take employment agencies, specifically, the Brooklyn Eagle.

Commissioner WALSH. That interferes, you think, with their advertising for help?

Mr. WAHRBURG. Well, they believe we take the advertising away from them. They take the belief that if there were no employment agencies, then these people would be forced to go to them and advertise there for help, and also the help to advertise for employment.

Mr. LEISEBSON. Have you any connection with other employment agencies, by which you fill jobs together; that is, if one has an order and the other will send men to fill them?

Mr. WAHRBURG. No; I have not; and that is also a reason what I do account of which I have an objection, in a certain way, to this law, because I do believe that that is an individual thing, how you do that business. Every agent, you see, has to have a class of customers, has to have different classes of employments what would call on them for help; and it takes years of practice, of hard work, to find out what kind of help certain employers need, and you hardly can get that through other agencies.

Mr. LEISEBSON. Can you state about how many private agencies there are in the city?

Mr. WAHRBURG. Well, there are, I believe, about 700 to 800.

Mr. LEISERSON. Are they all in your association?

Mr. WAHRBURG. No; they are not all in our organization. I wanted to say that much. There are a lot of theatrical agencies, also, included in this between 700 and 800; and their interests are not the same as ours.

Mr. LEISERSON. You stated that this employment-agency business is an ordinary business, just like any ordinary business. Don't you think that this business could be run better if it were a monopoly; that is, if there were only one agency which could get all the orders, so that there would not be any duplication?

Mr. WAHRBURG. Well, I doubt it. In fact, I am certain. Why? Because if the State takes this matter over, and I could assure you that this business is an awful hard business; I don't believe that any man who is working as an employee, and I could say that, for my own business employs about 10 to 12 people—they will not work with that interest for placing people as we do ourselves.

Mr. LEISERSON. Have you ever heard of State employment agencies that have been successfully managed?

Mr. WAHRBURG. Well, so far I have not heard. They are a failure, especially in this country.

Mr. LEISERSON. You never heard of any that were successful?

Mr. WAHRBURG. Very few of them, because I don't think—it happens to me, for instance, very often, that I am unable to take time to eat from 8 o'clock in the morning until 7 o'clock in the evening. I have absolutely no time for many, many days to take any lunch. I don't believe anybody will do that if he is not interested to work for himself.

Mr. LEISERSON. You merely think, then, as a matter of theory, that a State employment agent, being an employee, would not work so hard? You never were in one, were you? And saw whether they worked hard or not?

Mr. WAHRBURG. No.

Mr. LEISERSON. You never were in a State employment agency, were you?

Mr. WAHRBURG. No; I never was in a State employment agency.

Mr. LEISERSON. That is all I wanted to ask. When employment offices get an order from an employer, is the same order very often given to many employment agencies?

Mr. WAHRBURG. No.

Mr. LEISERSON. Not in your experience?

Mr. WAHRBURG. No. The same also with the employees. I wanted to mention this, that the gentleman has mentioned that a certain party would go to 30 or 40 agencies. I know the employees that come to me don't go around to 30 or 40 different agencies. They come to me for many years, and they don't go to any other agency. There is very little of them floats around—anything but undesirable people float around from one agency to another.

Mr. LEISERSON. Now, you are speaking now of women only; you do very little business with men?

Mr. WAHRBURG. Well, the most of them are women.

Mr. LEISERSON. That is, you are not in a position to speak authoritatively about men's employment agencies?

Mr. WAHRBURG. Well, I also speak for men employment agencies for restaurants or hotels or that kind of work. It might be different for labor which is to go outside of the State to some other States.

Mr. LEISERSON. Now, if you haven't any other thing you would like to say, we would like to have the president of your association.

Commissioner O'CONNELL. I want to ask you one question. You say you are president of one organization of employment agencies and treasurer of another?

Mr. WAHRBURG. Yes, sir.

Commissioner O'CONNELL. Please state what the difference is between the two.

Mr. WAHRBURG. None at all. We work together.

Commissioner O'CONNELL. Why were the two societies organized?

Mr. WAHRBURG. There used to be one on the east side and one on the west side, and they are still in existence, but they are working on the same line; and the best thing that shows that—I am an officer in both of them.

Chairman WALSH. What did you say your name was?

Mr. WAHRBURG. Richard G. Wahrburg.

Commissioner GARRETSON. Now, you referred to the fact that there was more regulation of your business than of any other, and you offered as one reason the antagonism of the press. Has the press ever been able to regulate any business in which evils did not exist?

Mr. WAHRBURG. Well, I suppose in every business there are some evils.

Commissioner GARRETSON. That is all.

Mr. WAHRBURG. I wanted to say one thing, too. I do believe there is one thing that could be improved in the law, so far as employment agencies go, that has never been so considered. I mean, in the city or State of New York anybody is able to get a license, and I would believe that it would be better if it would only be given to a citizen or to people that are many years in this country at least.

Commissioner O'CONNELL. Do you make any investigation if an employer wants men to be sent away by a railroad or a contractor or to any city—whether there is any trouble or a strike on?

Mr. WAHRBURG. Yes; we certainly do.

Commissioner O'CONNELL. What do you do in that case?

Mr. WAHRBURG. We have to give statements that there are no strikes.

Commissioner O'CONNELL. You tell the man when he comes in for employment, if he asks, that there is no strike?

Mr. WAHRBURG. Yes, sir.

Commissioner O'CONNELL. Do you ask him whether he is a union man or not?

Mr. WAHRBURG. No; not whether he is a union man.

Commissioner O'CONNELL. Do you ask him whether he belongs to a labor organization?

Mr. WAHRBURG. No; we do not.

Commissioner O'CONNELL. You do not ask him any question of the kind?

Mr. WAHRBURG. No; not that.

Mr. LEISERSON. That will be all. Thank you, Mr. Wahrburg.

TESTIMONY OF MR. CHARLES O'CONNOR IRWIN.

Mr. LEISERSON. Will you state whom you represent?

Mr. IRWIN. I am president of the United Employment Agents' Protective Association. I will have to question Mr. Wahrburg's position, because his association is obsolete, I believe. It did exist, but we thought we were together; but if he is running an association, we shall have to reprimand him at the next meeting. I did not know he was.

Chairman WALSH. And do you mean to say that the organization he says he represents does not exist?

Mr. IRWIN. Well, it is obsolete.

Chairman WALSH. Does not exist?

Mr. IRWIN. I don't think it has meetings now. We understood that we united, and united so as to strengthen ourselves, and for that purpose we united.

Chairman WALSH. Is that the organization that he says he is president of or treasurer of?

Mr. IRWIN. No; he is treasurer of our organization, and a magnificent treasurer, too. We'll trust him with anything. But I am only making myself clear, because, in any organization just at the present, and that is united—the meaning of the word “united,” I think, explains it—there ought to be only one, anyway, if there are two. If we are not united then I don't know what I am president of myself.

Mr. LEISERSON. Will you tell us the purpose and object of your organization?

Mr. IRWIN. Well, the purpose of our organization is for the betterment of our business, for the betterment of the unemployed, and for the betterment of the employers. We recognize, you know, as it has been said here by Mr. Wahrburg, that we have a very powerful enemy in the press; so we have. But I myself, personally have fought the press to a standstill. They connected us with every villainess, or tried to in the past. We were white slavers when white slavery was disturbing that city in 1910 or 1911; and Mr. Rockefeller gave \$25,000 to abolish white slavery and find out the promoters of it; but the employment agencies were yanked into this white-slavery agitation and also politically, and also by most estimable ladies who thought that these agencies were engaged in that business. So I took it upon myself to go around to all the agencies to discover the conditions, and to know what conditions existed. I knew it was not correct. Now, over on the east side, there was a man there by the name of Greenbaum happened to be a member of our organization. This is one instance, gentlemen, that I would like you to bear in mind. On one occasion, when McClure's Magazine was writing up white slavery, an agent for, I presume, McClure's Magazine went over to the east side and called upon this employment agent, Mr. Green-

baum, and said to Mr. Greenbaum: "I would like to take a picture of your agency, a photograph." And Mr. Greenbaum says, "I have no time to have any pictures taken," and he says, "Well, please let me take it; I am a poor man and I would like to earn 25 cents." And he prevailed upon the good nature of Mr. Greenbaum to let him take a picture of his agency, and later that picture appeared in McClure's, but I want to say that before taking the picture he called in some of his aids, some young men from outside, and had them come in and take off their coats and look in the eyes of some of Mr. Greenbaum's help, and he fixed the picture up. Mr. Greenbaum has a case against McClure's Magazine Co., and he will recover. It was a disgraceful and mean and contemptible thing to do on the part of that magazine to take and publish this when there was no shadow of truth in it. Now, that is one incident. And recently the New York Press wrote up something about an agency and, being a married man and having grown daughters, and being very much interested in the nature of this thing, I did not want to ally myself with any such thing, and I went to this agency and found out the facts, and went to the representative of the press and showed him that it was not true; and he said that the statements made were not in connection with the employment agencies, but only the so-called employment agencies, and I have the press clipping here, and it is an abject apology, and it speaks of the licensed agents as being excellent and doing good work. But I had to nail the lie first before I got that apology.

Mr. LEISERSON. Will you tell us just what the purposes are of your association?

Mr. IRWIN. We are assembled together for the purpose of reciprocity—that is, helping each other out in filling orders. Mr. Wahrburg's business—his help doesn't lie exactly in our lines, but a little different. I have myself exchanged orders with others. I am principally dealing in nurses and high-class nurses and orderlies and undergraduates, and so forth. Now, once in a while, as what I would call a sporadic case, there is now and then one trickles into my office, such as Mr. Blatchly has spoken of, down there, some gentlemanly hobo that he is trying to place. When they come into the office they change the atmosphere of the office——

Commissioner GARRETTSON. Physically, or the mental atmosphere?

Mr. IRWIN. The physical atmosphere; they permeate the atmosphere with an odor of—a very disagreeable odor; I don't like it myself.

Mr. LEISERSON. How long have you been in the business?

Mr. IRWIN. Twenty-eight years.

Mr. LEISERSON. You say that the licensed employment agents ordinarily are square business men?

Mr. IRWIN. We could not be anything else under the law. If they are not they are soon found out.

Mr. LEISERSON. To whom did you refer when you said that the press, or the journalist, had stated were not square? Are there any unlicensed agencies?

Mr. IRWIN. Yes. The city is permeated with them now, but it would take the commissioner to double or triple his staff to find them out; people receiving fees who are not licensed agents, churches, and charity organizations are doing it, and unquestionably it is being done in different forms and by different persons. We have church help. For instance, a lady, if I may be allowed to explain what I mean, is looking for a domestic, and will come to our church organization and say, "Do you know anyone whom you can recommend?" And the church will say, "Yes," or some one allied with the church. "Well, if I get a job do I have to pay any fee?" "Oh, no; just a donation to the church." Well, that is all right, of course; you can't stop that. But there are different other multifarious channels that I can myself enumerate. I have not myself made investigation, but I am stating from what I hear, and Mr. Blatchly's testimony was hearsay to a great extent. My testimony also will be hearsay; but from what I hear and what I believe to be true there is—at least there must be—a great many hundreds of dollars paid in that way through the cause of charity.

Mr. LEISERSON. Pardon me. Aside from charitable and church organizations, are there people taking fees who are not licensed; I mean who are engaged privately in the business, aside from charitable and church organizations?

Mr. IRWIN. Oh, yes, there are; yes.

Mr. LEISERSON. Do you think that is due to their inefficiency or lack of proper help in the commissioner's office?

Mr. IRWIN. No; nothing of the kind. It is impossible for the commissioner to find it out; impossible for any commissioner to find it out. The commissioner can't find it out——

Mr. LEISERSON. You say these people, then, who are operating that way are crooked?

Mr. IRWIN. They are committing a misdemeanor. If it could be proved that they were taking a fee from help or employers without a license, it is a misdemeanor under the law.

Mr. LEISERSON. And when the commissioner finds them they are licensed?

Mr. IRWIN. When the commissioner finds them, sometimes; yes. That is, he licenses them; that is all right; but they have been sent to jail. I believe the records will show that and the commissioners will substantiate it. There are two commissioners here, one for whom I have great respect for, and I hope I share it with him; but they will tell you there are many instances of that kind. It is a misdemeanor to take fees in that way without a license. You see, gentlemen, the agencies are most rigorously inspected. No such condition as Mr. Blatchly stated can arise; but Mr. Blatchly did not know. What he stated was principally from hearsay. That is one of the clauses, that if an agent induces by any means or otherwise any help, female or male, to leave their employment, that is a matter for revocation of their license. It is distinctly against the employment-agency law; and that is what we are united for, to have each one of our members understand that law and live up to it. The agent that sends a domestic or an employee to a place, that employee is a fixture there; that agent knows, if he has any sense at all—and we will assume that they all have pretty good sense—that that is a standing advertisement for that agency. What good does it do an agent to send a man or woman to a place and have them stay there only a month and leave? Why, that employer would only go elsewhere after that.

Mr. LEISERSON. Why that suspicion on that point, Mr. Irwin? Have you ever heard it said that the foreman on a job to which the agent sends men is connected with the agent, and that he wants the men changed every month, because he gets a division of the fee?

Mr. IRWIN. Very often charges of that kind are made, and I have heard it. Where these charges are brought home, the agent, I am sure, would be most rigorously dealt with, because it is nothing but taking money under false pretenses under the employee.

Mr. LEISERSON. Have you ever expelled members from your association for misdoing?

Mr. IRWIN. We asked one man to resign, and he did resign, but not for that cause. No; we have no evidence of anything of that kind.

Mr. LEISERSON. You have never, then, had occasion to discipline any of your members?

Mr. IRWIN. Never been compelled to discipline any.

Mr. LEISERSON. You think that that is pretty good evidence that there is no abuse of that kind among the licensed employment agencies?

Mr. IRWIN. Unquestionably, no; but there are abuses, or rather differences, that happen to come up among these employment agencies, such as with reference to the return of fees. Some of the agencies think that they ought to be up in algebra so as to get three-fifths or two-thirds, and sometimes they are questioned where there is a difference, and the conditions are such that it would take a Philadelphia lawyer to interpret the law. And I have been asked myself—and I am always called up on the phone, frequently—I am not a paid officer, but it is an honorary position, and I am called up, I should imagine, 10 or 15 times a day, and I don't know that I am getting a great deal of honor out of it, but I have been called up by lawyers asking me to explain what this person was entitled to, etc.; and I have been giving expert testimony as regards the value of services, and all these questions that come up to me about what the applicant would be entitled to and what the employer would be entitled to. Now, I obey the law, if there is a law there, I obey it, and we all obey the law. We have got to obey the law——

Mr. LEISERSON (interrupting). Well, possibly you are just the same as the license commissioner; you can catch all those who are operating without a license, and that is one place where the law is violated. Now, is it possible to catch all the violations of the law where the people actually are licensed?

Mr. IRWIN. On complaints, most unquestionably.

Mr. LEISERSON. On complaints?

Mr. IRWIN. Yes; that is another purpose of our organization. I have myself received—people have come to me and asked me, "Sam, I did so-and-so, so-and-so." And I read the law and interpret the law to them, and now I says, "If you doubt it, go down to the commissioner of licenses." If any one

came down to me and made a demand, I only send them down to the commissioner. There is only one instance where I have broken that record, and that is no personal disparagement, but on this occasion I was discharged with honor—the complaint was discharged with honor to me, and I was told that I went to a great deal of trouble to get the applicant employment. I purchased his ticket and telephoned out and arranged that he should go to the gentleman's place in the country, and he got into trouble, and I told him I would pay his fare, and the fare happened to be more than the fee, and I got him fixed up and he promised to go out, but instead of going to the place he went down to the commissioner to get the dollar back. The gentleman who wanted him had to go 3 miles, I think, and I asked him to send him back to me, for heaven's sake, when he comes there. But he was not there, and I had lost my customer.

Mr. LEISERSON. But, Mr. Irwin, what would you think of the idea of passing a law to compel all agencies to do all their business on the basis of not collecting fees from the men, but collecting them from the employer?

Mr. IRWIN. That law would, in some respects, be a good thing for the saloon keepers; it would help the saloon keepers greatly, and as far as the male help is concerned, the man who would come into such an agency and apply would be, in 90 per cent of the cases, the kind that Mr. Blatchly described——

Mr. LEISERSON. Why would it help the saloon keeper?

Mr. IRWIN. Because the money that they would pay the agent would otherwise go to the saloon keeper, or rather the money that the agent would not get would go to the saloon keeper.

Mr. LEISERSON. That is to say, the people that patronize these places.

Mr. IRWIN. The kind that Mr. Blatchly was speaking of?

Mr. LEISERSON. Oh, no; I am speaking about employment agencies.

Mr. IRWIN. Oh, no; no, no; far from it. Any one can walk into an employment agency. There is no law that will prevent that. No; you must remember that the agent is responsible for the help that he sends. I would not send a drinking man to a place, and I don't think, if I know him to be——

Mr. LEISERSON (interrupting). I am asking one question. I asked you whether we should pass a law prohibiting you or Mr. Wahrburg or anybody engaged in the employment-agency business from taking a fee from anybody who applied for employment, and you stated that it would not be of any advantage to the applicant.

Mr. IRWIN. Yes; I state that, unquestionably.

Mr. LEISERSON. I would like to know what you think about that.

Mr. IRWIN. Well, so far as my knowledge is concerned, it certainly would not tend to keep an employee in a place. Mr. Wahrburg does business on his own system. He does business on a very excellent system, if he can make it pay. He finds that a great many of the help engaging in one place or in two places—I will explain. If one of you gentlemen would come to my office, or say a gentleman comes to my office from Rochester to get help, or to engage help, say, two domestics; and he comes all the way for that purpose and to help pay the fees and in complying with the law get his receipt, and I sign my name, and I have an acceptance from this employee, saying, "I have accepted this position," and he is to go the next day. The applicant for it returns to his home, and the help turns around and says, "I am not going there, I have changed my mind." That would happen in 19 cases out of 20, if that fee that he has to pay was eliminated. It would be impossible to conduct an employment agency on such a basis. The employment agency would have to go out of business.

Mr. LEISERSON. Mr. Wahrburg hasn't that experience.

Mr. IRWIN. Oh, everybody has his own way. A great many ways that agents have of conducting their business. There are a great many agents that do not take anything whatever from the employer, but take it all from the help. Now, the conditions are reversed here——

Mr. LEISERSON (interrupting). That is what we want to know, whether it would not be possible to run the business without charging fees——

Mr. IRWIN. It would—under different conditions, yes; but I say, take the hotel people; the hotels do not pay anything for their help——

Mr. LEISERSON (interrupting). Well, just one other question, Mr. Irwin. Do you think a man ought to be made to pay to be given work?

Mr. IRWIN. If the agent has to pay his license to the city, and the city has a law on the statute book allowing him to give his services for such a purpose, why, certainly, yes——

Mr. LEISERSON (interrupting). Well, but——

Mr. IRWIN (interrupting). Well, pardon me, I was going to say, just as much as the State or the Nation have a right to pay an employee in a large central bureau, and the public is paying them for the purpose of finding them employment. I think the employment agent is just as much entitled to it. The agent is running his business to get his living out of it. He is giving it all of his time and all of his attention and all of his brains, if he has brains, and doing his best to make a living out of the business, and doing his best to do right. He knows the needs of his employers, and now the Nation, if you make it a national law, would have the employee—why, men come there, men who get all the way from \$3,000 salary down. What you gentlemen want to bear in mind is that we don't want any more employment bureaus, nor any central bureaus. What we want is employment. You ought to create employment. When you do that you will have accomplished something. If you will create employment and open up these fertile fields all over the country and send these Weary Willies, these men that come in without any clothes to their back, or hardly sufficient clothes, and try to get them out of town, and make them work and compel them to work, and make it a misdemeanor to be out of employment, then you will know that you have accomplished something. Sixty per cent of the applicants that come to the average bureau are alcoholics. The saloons of New York City get \$12,000,000 a year. They pay that for licenses.

Mr. LEISERSON. Well, 60 per cent of the applicants that come to your agency?

Mr. IRWIN. I think so; yes.

Mr. LEISERSON. Are alcoholics?

Mr. IRWIN. Yes; but that 60 per cent are the class that the agents can not place, and don't place. I have placed an unfortunate drinking man at some times, but I am a pretty good judge of human nature; and it is my business, and it has taught me psychology; and I can tell a drinking man. And if he wants help, I help him with money out of my pocket, and I have put shoes on them and clothes on their backs in the past, but I have found it is no good, and found that it is in reality a misfortune for him; and I have found that the man that had any sense it tends to drive him more and more into the hobo class. A decent, respectable man does not want it——

Chairman WALSH (interrupting). Just what was the question?

Mr. LEISERSON. We just wanted to know from you, or get a statement, as to whether you thought that was a proper policy for the people of this State or this country to have the working people pay for the service of the employment agent or to have the employer pay——

Chairman WALSH (interrupting). I take it now he has answered that question very fully.

Mr. IRWIN. Yes; because——

Chairman WALSH (interrupting). Do you think that they should be permitted to charge?

Mr. IRWIN. I know that; yes, sir. An employee, if he is a respectable, decent man, don't want charity. They don't want to demean themselves. I predict that if you were to open up a dozen free agencies you would not get respectable, decent, self-respecting men to patronize them.

Chairman WALSH. So you don't favor that?

Mr. IRWIN. No; I don't, and I could not. Now, another thing, I want to state that they opened a bureau—the city opened a bureau on Twenty-eighth Street some time ago. You know it was something awful. It was a good thing for the agent, because we were able to send the hoboes up there, and we were very pleased. We would send them up there to that bureau—these cases of the Weary Willies and the down and outs and those cases that would not work if they could work and could get work were all sent there by the agents——

Mr. LEISERSON. Mr. Irwin, if you will leave that clipping that you have here we will return it, and that will be all.

Mr. IRWIN. I would like to state about Mr. Blatchly and I. I have never seen him before, but he knows me through letters. I would like to state just this one statement, and that is: I have been able to place occasionally applicants that Mr. Blatchly sent me. I have done my best. I have collected fares that Mr. Blatchly has paid when I have lost my own commission, and I have collected money for clothes that Mr. Blatchly has given to some of the men. Now and then I get an order for kitchen help in the country. In fact, he had only one shirt, and he has got to go to bed while getting that washed, for he hadn't another shirt to put on, and the charity organization furnished it,

and it was only the other day I was able to give Mr. Blatchly \$1.20 for clothes he had furnished to a man at Mr. Blatchly's request, and was very glad to do it because he might give this—he could use this \$1.20 to buy some clothes for the next applicant, but I have not yet got my own fees. And it is only my desire to do the best for the applicants that come to me occasionally.

Commissioner O'CONNELL. The agency collecting fees, the general proceeding. You say that in some instances the men pay money and also the employers?

Mr. IRWIN. Oh, yes.

Commissioner O'CONNELL. Collect fees on both sides?

Mr. IRWIN. Yes. The law permits the agent to take 10 per cent for unsettled labor on a month's wages, and 10 per cent if you are engaged for the week, as stated here.

Commissioner O'CONNELL. Both sides?

Mr. IRWIN. There is no limit of the fee as to the employer, only as to the employee.

Commissioner O'CONNELL. What guarantee has the man, when you take \$2 from him, say, for a job, and he goes for the job and there is no job there?

Mr. IRWIN. A good remedy. The man comes back; comes to the agent and says, no job there, I want my railroad fare both ways. Certainly he has got to give it back, and if he does not give it back the commissioner of licenses has that agent down to him, and for his remedy the railroad fare is returned and the man's time is returned. I know an instance of that in my own organization. A man got a fake order some time ago from Lakewood for a domestic. There was no such order there. The man paid \$7 and remained, stayed with friends there two days, and charged the agent two days' time and two days' board, and the agent had to pay it. The commissioner as a rule always—and rightly so, I think—leans toward the applicant for employment. The reason has been asked here, if you pardon me, was asked why; what was the purpose or why the commissioner's office was supported. I will tell you now if you permit me.

Chairman WALSH. Well, we are trying to make a record, and you have answered the question, to which both sides excepted.

Commissioner O'CONNELL. As I understand your position, you don't think it would be a good thing for the Government, or the States of the Government, to assume the entire question of operating employment offices, to the discontinuance of all kinds and factions of employment offices, and that the expense of furnishing employment would be thrown upon the whole people?

Mr. IRWIN. I don't believe so. I think the city has the matter fairly well in hand. No; I don't think it is possible to better the laws regulating employment agencies as it at present exists on the statute books, and I don't think the National Government can improve on that at all, so far as the law now governing employment agencies. I think they have it fairly in hand, and the help and employees are satisfied with the conditions and the law, which is very fair to them.

Commissioner GARRETSON. Mr. Irwin, you said that Mr. Wahrburg's system was excellent, if he can make it pay.

Mr. IRWIN. Yes.

Commissioner GARRETSON. In your opinion, would any system be excellent if he could not make it pay?

Mr. IRWIN. If you go into any business for a living and don't make it pay the system is not excellent.

Commissioner GARRETSON. Leave the question of living out.

Mr. IRWIN. I beg your pardon.

Commissioner GARRETSON. Leave the question of living out. A system could be excellent even if it did not pay, couldn't it—excellent for the employer and the employee?

Mr. IRWIN. It would be excellent if the person running the system—if he was paid by somebody. If a man had a million dollars and wanted to spend it, his system of giving away that million dollars for the use of unemployed may be considered excellent or not.

Commissioner GARRETSON. Leave the individual out. A system could secure the result that is desired and in a sense be excellent, without profit, couldn't it?

Mr. IRWIN. In connection with this question here? In connection with the unemployed? Is it in connection with this question here when you speak of system?

Commissioner GARRETSON. A system that will connect a man out of work with a job may be excellent even if it did not yield some outsider a profit. Or could it?

Mr. IRWIN. I assume so. No endeavor is in vain, of course, in that line; but in the past such experiences have taught that when the State opened the bureau, and other bureaus, they were utter failures and were only patronized, indeed, by the undesirables, it seems to me.

Commissioner GARRETSON. Have all stayed efforts along this line?

Mr. IRWIN. No; I don't think so.

Commissioner GARRETSON. There is no evidence that other governmental agencies might necessarily be failures?

Mr. IRWIN. No. I think so far as the unemployed, a certain class of the unemployed—you must remember, gentlemen, that the domestic help, there is a congestion there, and for every order I get, every hundred orders I get for domestics, I can fill about 5 per cent; so there is no such thing, never was, a scarcity of domestic help. So you eliminate all of that. But for the unskilled labor—yes; the State might try to open up a fertile field for labor, for the unskilled labor and for the class who are habitues of alcoholics, etc.; they might try that. They might give them the gold treatment and put them on farms and keep them there until they get out of the habit of indulging in strong drinks.

Commissioner GARRETSON. Well, I understood you to make the statement that what the commission ought to do was to create more employment.

Mr. IRWIN. Yes; certainly.

Commissioner GARRETSON. Well, then, a remedy for all business depression would be to create a market.

Mr. IRWIN. Yes.

Commissioner GARRETSON. If a Government commission could create jobs, it would be evidently just as easy to create a market, wouldn't it, by Government commission?

Mr. IRWIN. You mean so far as—a market so far as business is concerned?

Commissioner GARRETSON. You don't look on a remedy then as the devising of a method whereby the man who wants work in a locality where there is no work could be connected with an employer in a region who had work and did not have employees?

Mr. IRWIN. I think that plan would be excellent. I think if you had such an office here in New York for the unemployed the men who could not get work and wanted work. Whether it was desirable or not it would be a good thing to do, ship him off, each agent to—no agent can do very much at his expense, no private agency—but ship him off to some part of the country where work existed, provided—

Commissioner GARRETSON (interrupting). Then right there, can any agency except a governmental agency perform that service properly?

Mr. IRWIN. No; not without doing the work gratis, certainly not. It would be utterly impossible. It would be utterly impossible.

Commissioner GARRETSON. You spoke of the inability of the commissioner's office to get track of these people who were infringing the law. Isn't one of the missions of your organization to detect and report people doing that business?

Mr. IRWIN. Yes.

Chairman WALSH. I thought so.

Mr. IRWIN. Let me answer that question.

Chairman WALSH. You did answer it.

Mr. IRWIN. I mean this here. You must remember that these people have, as said before, the church and the donation people cover them so well up it is impossible to reach them.

Commissioner GARRETSON. Has your association, referring to the statements that you said that you had heard of this connection between the gang boss and the employing agent, has your association ever gone into exhaustive investigation? Bear in mind that is a matter of common report.

Mr. IRWIN. Yes, sir.

Commissioner GARRETSON. Have you ever taken up a full investigation of that question?

Mr. IRWIN. You know there were shipping labor agents; we have not very many labor organizations in our association. Our association, we are all busy men, trying to earn our living, and we do not think it fair to expect us to go

out and to do the work of the commissioner's office. That would not be right, because they have got plenty of inspectors to find out those conditions. Then we have the Emigration Industrial Union; the agents are also under that.

Chairman WALSH. Let us cut this down if we can.

Mr. IRWIN. Yes, sir.

Chairman WALSH. You know of no systematic effort or investigation of this question of collusion between the employment agents and the gang boss, if any?

Mr. IRWIN. I assume the commissioners' office are to look after that.

Chairman WALSH. Your organization has not?

Mr. IRWIN. No, sir; we can not do it.

Chairman WALSH. That is all we asked. Now, Mr. Ballard—

Commissioner BALLARD. Do you allow any members of your association to have in connection with your office a saloon?

Mr. IRWIN. No, sir; we can not have a license over a saloon. If we had, we would lose it in 25 minutes. We are not allowed to open over a saloon.

Commissioner BALLARD. Or in a saloon?

Mr. IRWIN. That would be considerably worse.

Commissioner BALLARD. Yes. If as president of your association, having most of the employment agencies in the association, if any employment agency is guilty of any practice which is either illegal or not considered by your association to be right and proper, would you expel them from your association?

Mr. IRWIN. We would. That is one of our by-laws, to prosecute agencies for violation of law.

Commissioner O'CONNELL. Does your association publish an annual report of any kind showing the number of people in positions, or costs, and all that?

Mr. IRWIN. No, sir.

Commissioner O'CONNELL. Do you have to make a report to the State in any way?

Mr. IRWIN. No, sir; but our votes will show it. The commissioner of license office, they publish an annual report, whether they give the statistics—

Commissioner O'CONNELL. I mean does each individual employment agency have to report to the State in any way?

Mr. IRWIN. To the city.

Commissioner O'CONNELL. To the city?

Mr. IRWIN. On the number of places procured, the amount of fees paid. Those books are examined bimonthly by an inspector who carefully goes over them.

Commissioner O'CONNELL. Then the information is in the department of the city in that matter?

Mr. IRWIN. In the department of the city. Then we have the immigration people after us also, and I may say in respect to this, there is a great deal of waste time and money there.

Chairman WALSH. We do not care to go into that.

I have been asked to ask you one other question. Before the passage of the law prohibiting the running of employment agencies in connection with saloons, or adjacent to them, were there not agencies so operated?

Mr. IRWIN. There were employment agencies operated in all nefarious manners. We couldn't exist without the present law being on the statute books.

Chairman WALSH. Your answer is yes?

Mr. IRWIN. Most emphatically.

Commissioner LENNON. I understand that, in your business, you had to do with the furnishing of nurses?

Mr. IRWIN. Yes; principally.

Commissioner LENNON. What precaution do you take, if a nurse is called for, to ascertain that she is not to be used somewhere that the illegal or immoral use of the nurse is to be had?

Mr. IRWIN. Why, I know my patrons as well as I know my own family. If a doctor—

Commissioner LENNON. Suppose a stranger comes to you?

Mr. IRWIN. A stranger?

Commissioner LENNON. Yes. Who wants a nurse.

Mr. IRWIN. One stranger did come to me and he spent six months on the island, because I suspected him, and I put him six months on the island. You do not think, sir, I spent 26 years in this business without knowing the ulterior motive of people or without finding them out. My principal patrons are doctors running sanitariums, hospitals, where I send graduate and undergraduate nurses. If I send a nurse to a private family, I know the address

and the location. I see the person in my office before me, and I can easily use my judgment, and I have never, I am sure, made any mistake, because the nurse, I know that about all there is, she would come back to tell me something had happened so quickly that the employer would not know what happened. That condition is utterly impossible. It is impossible on my part, except in one case, a man came to me, and I sent him to the island for six months.

Commissioner LENNON. I suppose you are aware that this feature is criticized?

Mr. IRWIN. By the press; yes, sir. And that is what I fought, and that is why the editors have apologized. There is no agency that will send to the house of ill fame—

Commissioner LENNON. I don't mean house of ill fame. There are private houses where they go sometimes.

Mr. IRWIN. Let me tell you, the last question, the man having that ulterior motive in view, the last person he would go to would be an employment agency. He would advertise. He knows what would happen if he came to an employment agency; and there is no prisoner ever went through Sing Sing who had a better record of him than is taken in the employment agency. He knows it means trouble for him. I have records there that indicate how the work is to be done by certain classes of employees that leave my office.

Chairman WALSH. You are getting away from the question the commissioner asked you. Was there anything else?

Commissioner LENNON. No.

Chairman WALSH. Have you any other question, Mr. Leiserson?

Mr. LEISENBERG. One question.

Chairman WALSH. I beg your pardon.

Mr. LEISENBERG. Do you consider it an evil to have churches and other philanthropic organizations get help for the people?

Mr. IRWIN. Do I consider it an evil?

Mr. LEISENBERG. Yes; you spoke—

Mr. IRWIN. No, sir; I do not consider it an evil to have any church get anyone employment, but I think that, of course, if any organization of that kind secures employment, and then asks a donation for securing the employment and for that specific purpose, it is going mighty near breaking the employment-agency law. That is all.

Mr. LEISENBERG. That is all.

Chairman WALSH. That is all.

Mr. LEISENBERG. I will call Mrs. Marion K. Clark, chief investigator of the bureau of industries and immigration.

TESTIMONY OF MRS. MARION K. CLARK.

Mr. LEISENBERG. Mrs. Clark, will you state your name and your official position?

Mrs. CLARK. Mrs. Marion K. Clark, chief investigator of the bureau of industries and immigration.

Mr. LEISENBERG. How long have you been connected with it?

Mrs. CLARK. Since February 16.

Mr. LEISENBERG. Of this year?

Mrs. CLARK. Of this year.

Mr. LEISENBERG. What was your previous experience along this line of work?

Mrs. CLARK. I have held no active position in this line of work. I have investigated the subject of immigration for a number of years. I have devoted my work to the investigation of the subject of immigration and sociality.

Mr. LEISENBERG. As volunteer, or in connection with any bureau?

Mrs. CLARK. Simply as a volunteer.

Mr. LEISENBERG. Have you with you any of the records of complaints that were made to your bureau against private employment agencies?

Mrs. CLARK. A number of complaints; we have a number of complaints.

Mr. LEISENBERG. Will you tell us briefly just the character of the abuses of private employment agencies that are complained of?

Mrs. CLARK. Of course, you understand that we have no jurisdiction whatever. We refer.

Mr. LEISENBERG. Will you state just what jurisdiction you have?

Mrs. CLARK. We have no jurisdiction except to investigate the complaint and then to refer it to the commissioner of licenses. We also, under the law, are

obliged to investigate the records of the private employment bureaus to the extent of ascertaining the country of birth and the length of residence in this country of the alien applicant. We have found that that has caused a duplication of work with the bureau of licenses and, consequently, through an agreement with Commissioner Bell, we have decided to accept his report on that. Consequently that eliminates that much of the work from our bureau.

Most of the complaints are in reference to misrepresentation, excessive fees before employment has been obtained, and the fact that there is no employment after the fee has been collected, and the applicant has been sent in search of the work.

Mr. LEISERSON. Will you give us an example of the misrepresentation? What is the character of it?

Mrs. CLARK. The misrepresentation of the character of the work to be performed. The fees accepted for a definite sort of work, and when the applicant arrives at his place of destination he finds that either that work is for a limited period or that it is a different sort of work from which he has been accustomed.

Mr. LEISERSON. Different from what he has been told?

Mrs. CLARK. Yes, sir.

Mr. LEISERSON. Have you investigated to verify those complaints?

Mrs. CLARK. We have verified very largely; yes.

Mr. LEISERSON. Have you found them correct complaints? Or have you found them untrue?

Mrs. CLARK. In a great many cases we have found them true, and have then referred them to the commission.

Mr. LEISERSON. What has the commissioner of licenses done in those cases? Does he prosecute?

Mrs. CLARK. Yes. He has absolute jurisdiction.

Mr. LEISERSON. One kind of abuse, then, was misrepresentation as to the character of the work. The second, you said, was extortionate fee. Will you give us an example of that kind of abuse?

Mrs. CLARK. Men come to our office complaining that they have been charged anywhere from \$3 to \$7.

Mr. LEISERSON. Is there any law in the State limiting the fee?

Mrs. CLARK. Not that I know of.

Mr. LEISERSON. What do you do in cases of that kind?

Mrs. CLARK. At the present we refer them to the bureau of licenses. It had been the custom to take an affidavit from the complainant and to investigate his claim, but we find that in doing that we are not facilitating the work of the bureau of licenses at all, because they prefer to take their own affidavit; so at present any cases or any complaints that come to our office we refer to the commissioner of licenses.

Mr. LEISERSON. Have you had many complaints where the amount of the fee was from \$3 to \$7?

Mrs. CLARK. Yes.

Mr. LEISERSON. Have you verified those complaints?

Mrs. CLARK. Yes, sir; and we have had reports that the fees in many cases have been returned.

Mr. LEISERSON. Have been returned?

Mrs. CLARK. Yes.

Mr. LEISERSON. That is where you had verified them?

Mrs. CLARK. Yes, sir.

Mr. LEISERSON. How could you get them returned if there was no law compelling them to charge a smaller fee?

Mrs. CLARK. The commissioner of licenses has absolute jurisdiction in that matter.

Mr. LEISERSON. You don't know as to how he has any way of judging what is a reasonable fee?

Mrs. CLARK. The commissioner of licenses?

Mr. LEISERSON. Yes.

Mrs. CLARK. No, sir; I really do not.

Mr. LEISERSON. What do you consider a reasonable fee for those commissions that you speak of?

Mrs. CLARK. I don't think I would be competent to answer that question.

Mr. LEISERSON. How do you decide whether the man has a complaint that you want to investigate, when he comes to you and says he has paid an extortionate fee of from, say, \$3 to \$7, what makes you decide that you want to investigate that?

Mrs. CLARK. The fact that the man has paid anything and has received no return for it.

Mr. LEISERSON. I am speaking of cases where he has received a position. You would not investigate cases of that kind?

CHAIRMAN WALSH. One minute at this point. The commission will stand adjourned until 2 o'clock. We will reconvene promptly at 2 o'clock.

(At 12.45 p. m. a recess was taken until 2 p. m.)

AFTERNOON SESSION—2 P. M.

TESTIMONY OF MRS. MARION K. CLARK—Continued.

Chairman WALSH. Will you please indicate whom Mrs. Clark represents?

Mrs. CLARK. Chief investigator for the bureau of industries and immigration of the Department of Labor of New York State.

Mr. LEISERSON. Now, Mrs. Clark, we stopped at the point——

Commissioner O'CONNELL. Will you state what the purpose of that department is?

Mr. LEISERSON. I think Mrs. Clark can tell you best what the purpose is. Will you please state the purpose of the bureau of industries and immigration?

Mrs. CLARK. To prevent the exploitation of the alien in this State. To facilitate in the assimilation and naturalization and the education of the alien.

Mr. LEISERSON. We stopped at the point when you were telling of the abuses of private agencies as they were revealed to you in complaints to your department. Will you tell us of the third kind of abuse; that is, when people were sent out to places, and where there was no employment. Will you give us some definite examples of that kind of abuse?

Mrs. CLARK. We have had complaints in the bureau, where immigrants have been sent by employment agencies, as far from New York as Michigan. On their arrival they discovered that a strike was in process, and it was not possible for them to work there. They had been sent there with the understanding that their transportation would be paid by the agent, and that they would be obliged to work a certain length of time to repay that expenditure; and being stranded there, they have found that it was impossible for them to work, and that there was absolutely no means of transportation back to New York; consequently they were in a very distressing situation.

Mr. LEISERSON. Did you investigate that?

Mrs. CLARK. Yes; we have investigated it. There are a number of cases.

Mr. LEISERSON. Of that kind?

Mrs. CLARK. Yes.

Mr. LEISERSON. Did you find that the men were not told there was a strike on at the place to which they were sent?

Mrs. CLARK. Yes; they were not told.

Mr. LEISERSON. They were not told at all?

Mrs. CLARK. No.

Mr. LEISERSON. How did the complaint reach you? Did the men come back?

Mrs. CLARK. Yes; some of them drifted back—worked their way back.

Mr. LEISERSON. What did you do in a case like that? Refer it to the commissioner of licenses?

Mrs. CLARK. Yes; referred it to the commissioner of licenses. That is all we can do. We have no jurisdiction.

Mr. LEISERSON. Have you any idea as to the frequency with which such things happen among employment agents? Have you many complaints of that kind?

Mrs. CLARK. I could not give you any definite number. There are a number of cases on file in the bureau. If you would read a report on the subject, I would be very glad to submit it to you.

Mr. LEISERSON. Yes; we should like that.

Chairman WALSH. What is that which you say you have a manuscript of—that you could furnish?

Mrs. CLARK. I should be very glad to submit a report. I can not tell off-hand the number of cases.

Mr. LEISERSON. In the majority of cases, where the men were sent out to work—cases of strikes—where they were not told there were strikes.

Chairman WALSH. I would like to ascertain, for the benefit of the commission, what mechanical means have we now of following things such as this? Who is looking after that?

Mr. LEISERSON. I am looking after that.

Chairman WALSH. All right.

Mr. LEISERSON. Have you any cases where the men were sent to places where there was no employment whatever?

Mrs. CLARK. The majority of the complaints have been just such cases.

Mr. LEISERSON. And about how many complaints would you say that you would get in a year?

Mrs. CLARK. From October 1 to May 15, I had a record of 156 cases.

Mr. LEISERSON. And in the majority of those cases you would say that they were cases where there was no employment, but the men were sent to work and fees were collected?

Mrs. CLARK. Where the fee was collected in advance and the work was misrepresented; either there was no work or it was a different sort of work than they—than was represented to the applicant.

Mr. LEISERSON. We have a system of regulating those private agencies in this State. You have the commissioner of licenses. Now, do you think it is due to inefficiency in that office, or what other reasons are there that make those abuses go on despite the fact that there are regulations?

Mrs. CLARK. I would not like to criticize the office of the commissioner.

Mr. LEISERSON. Can you give us the reason why such a thing should happen under proper regulations.

Mrs. CLARK. That might happen in spite of the investigation of the commissioner of licenses.

Mr. LEISERSON. Put it this way: Do you think, under the present system of regulating private agencies, that it would be possible to do away with these abuses that you have mentioned?

Mrs. CLARK. Not absolutely.

Mr. LEISERSON. You think that the abuses will always exist as long as the employment agencies remain in private hands?

Mrs. CLARK. That would be my opinion.

Mr. LEISERSON. Have you had any occasion to investigate philanthropic agencies?

Mrs. CLARK. We investigate all of the philanthropic employment agencies, or rather, the philanthropic institutions dealing with aliens in this State.

Mr. LEISERSON. Have you found any abuses in so far as these were employment agencies in that business?

Mrs. CLARK. Not any that would be worthy of mention.

Chairman WALSH. I wish you would speak a little bit louder, please.

Mrs. CLARK. I beg your pardon. There might be an isolated instance, but it would not be worthy of mention. We make a monthly inspection of all of the philanthropic institutions dealing with aliens, and we cover their financial situation and the manner of distribution of the aliens and of the funds. So that I should say that it would be almost impossible for any very great abuses to exist among these institutions.

Mr. LEISERSON. Without your knowing it?

Mrs. CLARK. Yes.

Mr. LEISERSON. Have you any other abuses in mind of the private employment agency business that you have not spoken of?

Mrs. CLARK. Immigrants are sent out of town by employment agencies after having collected a fee and have found that there was no work at the point of destination, find themselves in exactly the same condition as I described in connection with the strike breaking. That same condition exists in the city. Fees are collected in advance and no wages provided.

Mr. LEISERSON. Within the city?

Mrs. CLARK. The consequence is that the applicant is kept continually between some place where no work exists and the employment agencies until they are worn out and have to apply for assistance to our bureau.

Mr. LEISERSON. Your department has recommended in its reports to the commissioner of labor several times the establishment of State free-employment offices. Will you give us the reasons for that recommendation?

Mrs. CLARK. I haven't made any recommendation of that sort since I have been in the bureau, but my predecessor, Miss Kellor, has been very much interested in that. I know that Commissioner Lynch is an advocate of a State employment bureau, and I believe it is in process of organization now.

Mr. LEISERSON. Do you think that, from the experience that you have had in this business, State employment agencies are desirable; and if so, why?

Mrs. CLARK. I think there is no question whatever that a State employment agency is desirable, and I think it is the only means by which we can abolish the abuses that will exist.

Mr. LEISELSON. Would you recommend abolishing the private employment agencies entirely by law?

Mrs. CLARK. No; I would not care to recommend anything of that sort.

Mr. LEISELSON. Why not?

Mrs. CLARK. I would think that it would be possible for them to cooperate with public-employment agencies.

Mr. LEISELSON. You think it would be possible to eliminate the abuses if you had a system of State employment agencies cooperating with private agencies?

Mrs. CLARK. I think possibly—I don't care to make any specific recommendation of the sort.

Mr. LEISELSON. Have you read over the proposed plan for organizing the labor market—the printed plan?

Mrs. CLARK. Submitted by your commission?

Mr. LEISELSON. Yes.

Mrs. CLARK. Yes, sir.

Mr. LEISELSON. Have you any suggestions or criticisms of that plan that you would like to make before the commission?

Mrs. CLARK. I would prefer to make them in writing, if you would allow me to do so.

Mr. LEISELSON. Very well, if you will do that. There is one line along which I would like to question you. Your department has jurisdiction over all places where immigrants work?

Mrs. CLARK. Yes.

Mr. LEISELSON. And some of them are labor camps in this State?

Mrs. CLARK. Yes.

Mr. LEISELSON. Your department has made some investigations in those camps?

Mrs. CLARK. Yes; we are authorized to inspect the camps—the labor camps of the State. There were 1,052 camps listed last year in our bureau and of that number 181 were examined by our investigators. We hope to cover a great many more this year.

Mr. LEISELSON. Can you give us any idea, briefly, as to the conditions in those camps?

Mrs. CLARK. The conditions in some of the camps, according to the reports in the bureau, have been appalling, so far as sanitary conditions go. The employment question does not enter into that subject very largely, except in the matter of the commissary store. We have numerous complaints in relation to the commissary charges and accommodations.

Mr. LEISELSON. Have you any idea that the conditions in the camps cause the men to quit their jobs frequently, and thus cause a lot of unemployment?

Mrs. CLARK. The living conditions?

Mr. LEISELSON. The living conditions of camps.

Mrs. CLARK. We have frequently had complaints of that sort, where men can not live in the camps in the accommodations provided for them, and they are obliged to pay the same amount to the commissary as they would if they—

Mr. LEISELSON. Have you made written reports to the commissioner on conditions in the camps?

Mrs. CLARK. No, sir.

Mr. LEISELSON. You have not?

Mrs. CLARK. No, sir.

Mr. LEISELSON. But you have the material in your office?

Mrs. CLARK. Yes, sir; we have the material.

Mr. LEISELSON. That will be all.

Chairman WALSH. Do any of the commissioners desire to ask any questions?

Commissioner GARRETSON. Yes. Do you believe, Mrs. Clark, that a national system, planned on the basis of furnishing the machinery of correlation between the various State systems, if such existed, would be desirable?

Mrs. CLARK. I think there is no doubt of it whatever, because we have correspondence from all over the United States, concerning applications for labor and advice.

Commissioner GARRETSON. This would furnish a proper line of interchange as between the various State systems?

Mrs. CLARK. There is no question whatever, because we can only refer them to benevolent institutions, or some such institutions that will take an interest in that case.

Commissioner GARRETSON. There is one question I would like to ask, that is purely a question of your own experience. Has your experience in the investigations of the evils that have arisen and the conduct of private employment agencies, led you to believe, as was virtually stated here this morning, that the men engaged in that business are closely resembling Caesar's wife, not only pure but above reproach?

Mrs. CLARK. I should say, quite the contrary.

Commissioner GARRETSON. That is all.

Commissioner BALLARD. I would like to ask you: You said that about 150 cases that you had investigated in the past four or five or six months have been sent west to the various points, and there has been either no work or a strike on; that 150 cases represents about what proportion of all that have been sent out of the city paying employing fee?

Mrs. CLARK. How many applicants for employment?

Commissioner BALLARD. Yes; would be sent out of the city to these positions that were in question?

Mrs. CLARK. Of course those 150 cases covered all of the applications within the city as well as outside the city.

Commissioner BALLARD. Then of all the applications that have been made in the city and out of the city, and who paid their fees in advance and received no work, there have been only 150—

Mrs. CLARK. Not all of the 150—156 from October 1 until May 15, and of that 156 the great majority are cases where no work has been furnished, and the fee has been collected in advance.

Commissioner BALLARD. You don't know how many cases have been given work altogether?

Mrs. CLARK. I can get them.

Commissioner BALLARD. Some 15,000, or something like that?

Mrs. CLARK. I really couldn't say.

Commissioner BALLARD. If there were 15,000, that would be only 1 per cent of the cases that had been sent off without any work?

Mrs. CLARK. Yes, sir.

Commissioner BALLARD. You see what I mean?

Mrs. CLARK. Yes, sir.

Commissioner BALLARD. In other words, in that 150 is that a very large proportion, or a small per cent?

Mrs. CLARK. It would be a large per cent of the cases where the fee would be accepted and no work.

Commissioner BALLARD. In that case, where the fee has been paid and no work, who paid the railroad fare?

Mrs. CLARK. The agent usually advances the railroad fare, with the understanding that the applicant will work a certain length of time in order to repay him.

Commissioner BALLARD. Of those 156 cases, the agency has furnished the railroad fare?

Mrs. CLARK. No; those 150 cases included the cases in the city.

Commissioner BALLARD. Where they were out of the city, the agent had furnished the railroad fare?

Mrs. CLARK. Yes; they had furnished the railroad fare.

Commissioner BALLARD. If the men did not get any work, the agent would lose the fee? He would never get his railroad fare back again?

Mrs. CLARK. I suppose not.

Commissioner BALLARD. It would seem a little uncertain, in my mind, whether the men would deliberately accept a fee and send a man away without getting any work. He must have thought the man would go to work or he would not have laid out the expense of the railroad fare.

Mrs. CLARK. Yes. Our difficulty arose in the cases of those sent to Michigan not having explained that a strike existed there.

Commissioner BALLARD. In those cases there was a strike?

Mrs. CLARK. Yes, sir.

Commissioner BALLARD. You said, speaking of the unreliable employment agencies, are there a pretty large proportion of the employment agencies, as a class, unreliable, or a very small proportion unreliable?

Mrs. CLARK. I beg your pardon.

Commissioner BALLARD. Of the agencies, are there a large proportion of the agencies unreliable? As I understand it, there are 600 or 800 of those agencies in the city. Are there a large number unreliable?

Mrs. CLARK. The complaints that come to us are from agents who handle immigrants only; and I should say that they are pretty equally distributed among those agents.

Commissioner BALLARD. That is all I have.

Commissioner LENNON. Does your department intervene, immediately upon the arrival of the immigrants, to try and take care of them; or do you wait until they make some application to you?

Mrs. CLARK. For complaints; yes.

Commissioner LENNON. I mean, for work, to place them?

Mrs. CLARK. Oh, we don't place any applicants for work. We do not furnish work.

Commissioner LENNON. But you investigate?

Mrs. CLARK. We investigate complaints against agents; yes.

Commissioner LENNON. You do not intervene in the matter yourselves, as a department, in order to place those immigrants?

Mrs. CLARK. No, sir. We do not place the immigrants at all.

Commissioner GARRETSON. I want to ask one question that has been brought out by another. In this matter of the number, the proportion of the whole that makes complaint, is it your opinion that every immigrant who has been deceived in any form makes complaint to you, or only the occasional one of those who has been deceived?

Mrs. CLARK. I think only the occasional one, because a very large majority of those who have been exploited have either sailed away or have been forwarded to some other destination outside of New York.

Commissioner GARRETSON. Or don't know of your department?

Mrs. CLARK. Or don't know of our existence.

Commissioner O'CONNELL. Do those agents go into the immigration station looking up those people?

Mrs. CLARK. Our agent?

Commissioner O'CONNELL. The agents of the private agencies, when the immigrants come in?

Mrs. CLARK. The private employment agencies?

Commissioner O'CONNELL. Yes. Do they go among them, seeking to let them know they can probably find employment for them?

Mrs. CLARK. Not that I know of.

Commissioner O'CONNELL. I do not quite see where your department fits into this question of the local employment. What is the law that provides that you shall interest yourselves in the immigrant after they go away from the immigrant station and become admitted to the country?

Mrs. CLARK. Simply the protection of the immigrant, protecting him from being exploited.

Commissioner O'CONNELL. How do you follow him up after he leaves the station?

Mrs. CLARK. We do not follow him up at all.

Commissioner O'CONNELL. Then, it is purely up to the immigrant himself if he has a complaint, if he knows enough to do so, or if somebody informs him, to make a complaint to you that he has been imposed upon?

Mrs. CLARK. Not necessarily. Our investigators cover all docks and terminals in the city, and make regular daily inspections.

Commissioner O'CONNELL. But after he leaves the dock?

Mrs. CLARK. On the arrival of the steamship or the departure of the steamship, on the arrival of the trains and ferryboats. Most of the exploitation of the immigrant takes place along the dock lines and at the terminals.

Commissioner O'CONNELL. Once he gets away from the docks or the terminals and gets up on Broadway or over on Third Avenue, some place in New York, you lose sight of him?

Mrs. CLARK. Yes; unless we hear some specific complaint from him.

Mr. LEISERSON. In order to get something straight in the record, Mrs. Clark, a question was asked you whether the employment agencies advanced the transportation. Your records would not show whether the employer gave the money or whether the employment agency paid it himself—the transportation? In cases of those strike breakers to Michigan, would you know whether it was the employers who furnished the transportation or the employment agent?

Mrs. CLARK. I couldn't tell you that without referring to the specific case.

Mr. LEISERSON. That is all.

Chairman WALSH. That is all. Thank you, Mrs. Clark.

Mr. LEISERSON. I will call Mr. Bell.

TESTIMONY OF MR. GEORGE H. BELL.

Mr. LEISENBERG. Will you please give your full name and official position?

Mr. BELL. George H. Bell. I am commissioner of licenses of the city of New York, and, among other things, license and regulate the business of the private employment agencies, and because we have no department corresponding to the average public welfare department in this city it has been recently provided by an ordinance passed by the board of aldermen and signed by the mayor that a public employment agency shall be established in my department.

Mr. LEISENBERG. How long have you been commissioner?

Mr. BELL. Since the beginning of the year.

Mr. LEISENBERG. Did you have experience in this line of work before the beginning of this year?

Mr. BELL. Yes, sir. Through the life of the Immigration Commission, with which I was connected for some time.

Mr. LEISENBERG. The Federal Immigration Commission?

Mr. BELL. Yes, sir; the Federal Immigration Committee. I was connected through the entire time of its existence with it in the investigation in the South and in and about New York—general investigation.

Mr. LEISENBERG. You heard the testimony in regard to the abuses of the private employment agency. Have you any additional cases of abuses, aside from those that were mentioned?

Mr. BELL. Oh, yes. We get complaints of abuses, probably about 50—an average of 50 complaints—a week in our office. In fact, because of the fact that it is our office that has jurisdiction an arrangement has been made between Mrs. Clark's office and my own by which those complaints are sent to me for investigation and disposition, and the result of our investigation and disposition is sent back to Mrs. Clark, we being the office that has jurisdiction under the law.

Mr. LEISENBERG. Can you cite to us any different cases of abuses other than those that were mentioned?

Mr. BELL. Well, we get complaints of abuses of so many different characters that I could spend two or three days in telling about them. Some, of course, are meritorious; some, it develops, have no merit. The proportion is just about, I should say, as in the proportion of meritorious cases of the character that comes before a court or any other body that has the disposition of such things. We get complaints, very many, where the character of the work is misrepresented. Where men pay fees and are sent out. We get complaints, again, a few, where men are sent to jobs, and we feel that there is collusion between the gang boss, as was suggested this morning before the commissioners, and at the expiration of a certain time a man is discharged and another is taken in his place, and if possible a second fee is collected from the workman. We get all sorts of conditions of complaints.

Mr. LEISENBERG. Have you had occasion to follow up complaints of that kind?

Mr. BELL. I have followed them just as far as it is possible. I think I would like to say, at the outset, that I do not feel that the licensing and regulation of employment agencies is a city function at all, because we have no jurisdiction outside the city, and are unable to get any proper data as to conditions as they exist outside the city. I feel that employment agencies should be licensed and regulated by the State and by the Government, and I have taken such steps as I could to get the cooperation of the Department of Labor, the National Department of Labor and the State department of labor, in helping me to investigate cases where men are sent from New York City to either places within the State or in other States, so that I could get some accurate data on which to determine complaints. For that reason it is difficult to get the data concerning conditions. Where, for instance, men are sent from New York to North Carolina on a lumbering job—men sometimes come back and complain that the work was misrepresented. There were probably conditions of living which could not be set forth clearly in the labor situation developed down there, and I am absolutely at a loss to get accurate information as to conditions. I can only write and ask employers, and very often they side with an employment agent, and on that basis I have to determine the case. The employer says one thing, the agent says the same thing, the employee says something different. It is purely a question of veracity, and the only thing I have is the appearance of the witness on which to determine a case of that kind.

Mr. LEISENBERG. Referring to the statement made this morning by a representative of the employment agent, that the regulation of this business has been due, not so much to the abuses but to the opposition to their business on the part of newspapers, what have you to say in regard to that statement?

Mr. BELL. It is a very difficult thing to say. I have found in my office that most of the newspapers—the attitude of most of the newspapers was absolutely cordial and friendly where decent conditions existed. One or two newspapers undoubtedly are; feel that anything in the way of a public employment agency or private employment agency has some effect on the part of their “help-wanted” columns. I think there are just one or two papers that do believe that.

Mr. LEISERSON. Let me put the question this way: You feel that the business really needed regulation aside from anything the newspapers may have said?

Mr. BELL. I do.

Mr. LEISERSON. You think the main reason for the regulation of the business is because there were many abuses?

Mr. BELL. Yes; I think that probably is the reason it came about in the first place. Unquestionably it needed regulation. I find that the decent agent does not object to the regulation and is rather glad to have it, and I think the proportion of good and bad agents is about relative to the proportion of these men and otherwise—people of other characters in any other line of business. Most of the agents with whom I had relations are absolutely all right; some are not. And most of the abuses come from the agencies that are not. That does not—I don't mean to say by that that complaints are not made against good agents occasionally, and complaints that we fight about together and determine on the merits in our office, but most of the complaints are against agents who do not attempt—

Mr. LEISERSON (interrupting). In your experience do you think that, if not a city, a State system of regulation could remove the abuses from the business?

Mr. BELL. It probably could not remove the abuses from that—the entire abuses—by regulation, but you can minimize it. You can not get it to the real minimum by city regulation, for the reason, I say, that many, many men of the kind you are talking about are sent out of the city and out of the State, and our jurisdiction ends at the city line, and we can not get at them.

Mr. LEISERSON. Assuming you have the best kind of regulation, do you think that by letting this business in private hands that the best method is secured for bringing the men in touch with the jobs?

Mr. BELL. No; I think that the—

Mr. LEISERSON. Why not?

Mr. BELL. I don't think that the private employment agent should be annihilated; I think he has a place just the same as any other business man has, but I think they merely scratch the surface. I don't think that they reach at all the problem or question of unemployment. It seems to me that every State, every municipality of any size, and the Federal Government should have a system of public employment agencies.

Mr. LEISERSON. Well, do you think that if the city established an employment agency, it could do more than these private agents have done?

Mr. BELL. In some directions.

Mr. LEISERSON. In what directions?

Mr. BELL. Probably in the—it is difficult to answer that just that way. We have found that out of the great number of unemployed in this town a very, very small number patronize the private agencies—a very, very small part. This city is so large that dozens of jobs might exist, vacant jobs might exist here, there, and everywhere through the town, and 50 men might need those jobs and yet not find them. And probably the best of all ways to reach that condition would be through a governmental agency of some sort; through a Federal or State or city agency, in which agency great numbers, if not all, of the employers could be interested, and to which agency men would be educated to go looking for those jobs. In that way we can reach it.

Mr. LEISERSON. You would say, then, although we have close to 800 employment agents, licensed employment agents, in this city—

Mr. BELL (interrupting). We haven't any more; we have cut it down considerably.

Mr. LEISERSON. How many?

Mr. BELL. Six hundred and twenty-five now. We had 835 a little while ago. It is fair to say—it is the beginning of the licensed year, and we expect to have probably 150 fewer than the last licensed year.

Mr. LEISERSON. So that, although you have over 600, they hardly scratch the surface in bringing the man and the job together?

Mr. BELL. In most kinds of labor. Probably in the nurses' employment they do nearly all of the employment, and some other kinds; but among the laborers,

common laborers and workmen of various classes—factory workmen, farm laborers, and so on—a very small proportion.

Mr. LEISERSON. Can you give us any reasons why that is? Is it anything inherent in the private enterprise of these private agencies that makes it impossible for them to get all the business?

Mr. BELL. Well, I think it is a poorly organized business, to begin with. We found, after making some rough figures just after I assumed this office, that not over 40 per cent of all the jobs that were offered to agencies to fill were filled by the agencies; 60 per cent of all the jobs that went to them were lost, never filled. In certain specific instances, where I went to see employers who had asked agencies to fill the place, I found that after two or three or four weeks they had not gotten anybody and the places were still open. I was able myself by 10 minutes' telephoning to fill some of those places without any difficulty, just figuring, for instance, what union would have a man such as was wanted, or where a man was likely to be found, and almost invariably got him at once. The agencies, because they were not supplying that particular kind of help asked for, had not made any special efforts to fill those places. I suggested to the employment agents' association, in telling the result of that investigation, that they organize a central place where jobs could be—jobs of that kind that came to agents that they were not in the habit of filling could be filled through their central office by some other agent, some of their own association. I don't know just how far that has gone, although they seemed to be interested in the figures.

Mr. LEISERSON. They have not organized any such central agency?

Mr. BELL. I think not, except as Mr. Irwin spoke of it this morning.

Mr. LEISERSON. Do you think the fact that an employment agency ordinarily specializes in one kind of work, that that is the reason they do not fill such a large number of commissions?

Mr. BELL. Probably that is true; but it does not seem, in the abstract it does not seem, as though the business of a private employment agency appeals to the community at large, except they have got in the habit of going to an employment agency for a particular kind of help, probably. Domestic help nearly all comes through private agencies, because that is where they look for them.

Mr. LEISERSON. Well, you think the business, in order to be done properly, is too big an enterprise for the private agency to undertake?

Mr. BELL. That is the conclusion, although I don't see why it should be, because there are many bigger businesses that have been successfully conducted—

Mr. LEISERSON. You would not say, though, that the experience—trouble has been that no private agencies have undertaken properly to do this work.

Mr. BELL. Yes; that is a fact.

Mr. LEISERSON. You would not consider that the work of attempting to bring the man and the job together at the present time is properly done?

Mr. BELL. No; it is not, because no accurate information is procured, as we don't know anything about the labor market conditions; that is, we do not know anything about the labor market.

Mr. LEISERSON. Then you would condemn the private handling of the labor markets, on two points—one for the abuses of the business, and second, from the fact that they are very inefficiently run from their own standpoint.

Mr. BELL. Oh, I don't say that the private labor agent ought to be eliminated, because he has his place, but I think he ought to be regulated, and ought to be regulated very much more effectively than he is now, for his own good as well as for the good of the community. The private employment agent has so small a place in the whole question of placing people in jobs, that the rest of it needs to be done, and needs badly to be done, by a very wide system of employment bureaus rather than by the Government.

Mr. LEISERSON. Aside from putting the amount of business—that is not what I had in mind—but that is from the standpoint of doing the job and accomplishing the purpose of bringing the man and the job together, you would say that they failed first because they cover such a small field—

Mr. BELL (interrupting). Yes.

Mr. LEISERSON. And that they are not sufficiently organized to undertake a system.

Mr. BELL. Yes.

Mr. LEISERSON. And secondly, because there are these abuses that the business is particularly liable to, and which so far have not been effectively regulated because it has been municipal regulation.

Mr. BELL. That is true.

Mr. LEISERSON. Do you have any supervision over employment agencies, conducted by employers' associations?

Mr. BELL. Only where they collect fees. Where they collect no fees, I have not.

Mr. LEISERSON. Have you any of that kind in the city?

Mr. BELL. We have one or two that are licensed so as to permit them to accept fees, if they want to, but they do not.

Mr. LEISERSON. What are those?

Mr. BELL. The New York Retail Grocers' Association and one other of a similar name. I have forgotten for the moment. But they are simply licensed so they can charge fees if they want to.

Mr. LEISERSON. Have you ever had occasion to look into their business to see whether they cover the field for their industry?

Mr. BELL. They do not cover the field for their industry but simply supply help for their own members and are not effective at all.

Mr. LEISERSON. Have you ever had complaints against employment offices conducted by employers' associations?

Mr. BELL. No, sir.

Mr. LEISERSON. None whatever. You have jurisdiction over philanthropic employment bureaus and the National Employment Exchange.

Mr. BELL. The National, we have. They charge a fee. The Alliance, I think, is not licensed.

Mr. LEISERSON. Do you think that these philanthropic agencies are any more successful in the accomplishment of bringing together the man and the job than the private agency?

Mr. BELL. Not a bit.

Mr. LEISERSON. Not a bit; have you any idea of the reasons for that?

Mr. BELL. Well, first, I think that the thing is so big a subject, that it is Nation wide, and that it can not be covered by any little agency which is local or small. It has got to be done by a closely related series of those things all over the country everywhere; particularly so that you can get very complete data as to the condition of the labor market everywhere through the United States, bringing it together so that it is available everywhere in the United States.

Mr. LEISERSON. Wasn't the National Employment Exchange organized with that purpose in view?

Mr. BELL. I know very little about their organization. I just tried to watch what they have been doing since I have been in charge; and I have not found that they were filling any very great want.

Mr. LEISERSON. Your conclusions with regard to philanthropic employment agencies would be, then, that in so far as they do work, they do it in a limited field.

Mr. BELL. Absolutely.

Mr. LEISERSON. To that extent, do you think their activities are advisable? That is, you would not suggest turning that over to public or private hands?

Mr. BELL. I don't think any agency is advisable by itself. I don't think any agency is any good unless it is connected up with a very complete system which would cover the whole country.

Mr. LEISERSON. Have you ever had occasion to look into the employment offices conducted by the trades-unions, or do they have any?

Mr. BELL. There are some conducted by trades-unions, generally without license charges, just among their members. There are some few, as in the case of the chemists' club—not really a trades-union, but supply chemists and pharmacists, and people of that sort, among themselves. They all work in a limited way, however.

Mr. LEISERSON. Do the unions, then, have any kind of an employment system, to your knowledge, for bringing the man and the job together?

Mr. BELL. Yes; and probably they do it better than most other agencies that exist.

Mr. LEISERSON. That is for their members.

Mr. BELL. For their own members.

Mr. LEISERSON. You have no jurisdiction over them?

Mr. BELL. No; I have no jurisdiction.

Mr. LEISERSON. Have you ever had any complaints against them?

Mr. BELL. Never.

Mr. LEISERSON. You have no jurisdiction over the State agency of the department of agriculture of the State?

Mr. BELL. No; none whatever.

Mr. LEISERSON. Do you happen to know anything about their business?

Mr. BELL. Well, that is just—no; we have had no relations with them at all, not so that I would know what they had done. As I understood their agency, as I understand—that is, it is not in existence at this time.

Mr. LEISERSON. I understood that it was.

Mr. BELL. They sent some few farmers up-State, but I thought that was not done by the State employment agency.

Mr. LEISERSON. Have you any suggestions or criticisms to make in regard to this?

Mr. BELL. I think that the question of collection of information regarding labor conditions ought to be very completely arranged, so that absolutely accurate information as to labor conditions all over the country is generally available. I think, having that in hand, the remedies will suggest themselves. I am somewhat doubtful as to the advisability of an advisory committee as set forth here, particularly as relating to the administration of the employment agencies.

Mr. LEISERSON. I would like to have your criticism on that point.

Mr. BELL. I think you have got to get interested every employer in the United States in this thing ultimately, and I think you want the interest of the labor unions particularly, so that in times of labor troubles there will be somebody actually known to labor people as labor men who can vouch for the conduct of the Federal employment office set forth here, so that they will know the office is taking a neutral place or a neutral position in the labor troubles. But I do not think it is advisable to have a committee of citizens helping in the administration of your office.

Mr. LEISERSON. The advisory council, that is, here in paragraph 3—

Mr. BELL (interrupting). It speaks of the advisory council working in conjunction with the director; for instance, in selecting employees for the agency. Of course that is a particular instance, and it says here that the employees shall be taken from the civil-service list.

Mr. LEISERSON. Would it not be possible to make this advisory council a committee of the civil-service examining board for civil service?

Mr. BELL. It speaks of an equal number of employers and representatives of labor, as I recall it.

Mr. LEISERSON. Paragraph 3 on page 2.

Mr. BELL. I can see where such a committee can be of great service in enlisting the support of the employers and keeping the labor side of things straight; but I can not see where they would be of any value in the administration of the bureau, which should be in the hands of the director, in whom should be concentrated responsibility for the actual administration of the bureau.

Mr. LEISERSON. Are you familiar with the workings of these advisory councils in the European employment offices?

Mr. BELL. Not as they relate to administration.

Mr. LEISERSON. The idea, then, in regard to the civil service is primarily to take the appointment of the offices out of politics.

Mr. BELL. Yes, sir; absolutely essential.

Mr. LEISERSON. And the best way to control that is to have the interests, the employers and workmen, be the examining board that would certify a candidate; in other words, to do the work, or doing the work, rather, of selecting candidates.

Mr. BELL. That might work that way. I did not so understand it.

Mr. LEISERSON. Have you any other criticism in regard to that?

Mr. BELL. No; except that I want again to say that I think the arrangement for the collection and dissemination of information regarding labor conditions ought to be very, very complete.

Mr. LEISERSON. You think it is inadequately covered here?

Mr. BELL. I am not sure about that. I think I should like to go over it some more, and possibly I might send you some suggestions on that.

Mr. LEISERSON. Would you be willing to send in your suggestions in writing to the commission?

Mr. BELL. Very happy to do it.

Commissioner GARRETSON. Mr. Bell, as a practical fact, do you know whether or not employment agents, as they at present exist here, employ runners among the immigrants?

Mr. BELL. I think not; not in any great numbers.

Commissioner GARRETSON. You could not tell—

Mr. BELL. A few, but none to speak of.

Commissioner GARRETSON. You spoke a little while ago that our investigation—you were referring to the matter of want of jurisdiction—that is, authoritative jurisdiction.

Mr. BELL. Investigating complaints that arose.

Commissioner GARRETSON. That nearly always the employer and the employing agent made the same answer, and that is in opposition to the statements made by the employee.

Mr. BELL. Very often.

Commissioner GARRETSON. Well, generally, that is the natural thing.

Mr. BELL. Where we have any difficulty in deciding a case that is what happens.

Commissioner GARRETSON. The natural community of interest would lie between those two.

Mr. BELL. That is true.

Commissioner GARRETSON. And their interest in the question would undoubtedly be the same as against the man who made the complaint.

Mr. BELL. Yes; that is true. For instance, if that employer is located in North Carolina, the city of New York has no opportunity for knowing what the conditions are, and has to trust to writing and ascertaining in that way.

Mr. LEISERSON. That is one of the weaknesses of the Federal system.

Mr. BELL. Yes; and I think the Federal Government is in a position to handle that complain down there, and to ascertain what the conditions were. They could determine very much more readily.

Commissioner GARRETSON. Then if, according to your belief, the employing agent was continued as a necessary factor the existence of the national system as a means of correlation would be just as necessary.

Mr. BELL. Oh, yes.

Commissioner GARRETSON. Then speaking of the inadequacy of the present private-agency system, in that it does not cover the field, there are a very large number of private employers who will not patronize the private agency, are there not?

Mr. BELL. I say that is true, because they do not. I have no private expression from them.

Commissioner GARRETSON. As it virtually stands there, it is a patch instead of the whole garment?

Mr. BELL. Yes; that is true.

Commissioner GARRETSON. Can any private system, in your opinion, furnish data that would be of any value in determining any of the factors in the problem of unemployment as a whole?

Mr. BELL. I think not.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner LENNON. Mr. Bell, the matter of the revocation of the licenses comes under the jurisdiction of your department, does it not?

Mr. BELL. Yes, sir.

Commissioner LENNON. Are the causes for which revocation can take place set forth in the law, or are they matters that are subject to your judgment?

Mr. BELL. Oh, they are set forth in the law; and I would be very glad to leave you a copy of that law——

Commissioner LENNON. Well, they are set forth in the law.

Mr. BELL. Yes, sir.

Commissioner LENNON. I would be glad to have that.

Mr. BELL. We revoke the licenses after hearings, and our decisions are subject to review by the courts. I will send over a sufficient number of copies to go around.

Commissioner O'CONNELL. Do the commissioners make reports on these agencies each year, or monthly, or how?

Mr. BELL. We make under this law inspections bimonthly of the registers of each employment agency.

Commissioner LENNON. Is that in print or is the result of it in the form so that we can get it?

Mr. BELL. The inspectors make what are considered confidential reports to the office where they find conditions which need to be remedied within the agency. Complaints are made by the inspectors and hearings are held, and those hearings have been on minor things, such as the way the records have been kept and the way things have been kept in the office. They really reveal any great abuses as applied to applicants for employment.

Commissioner LENNON. You do not print, then, any report covering that phase of your administration.

Mr. BELL. No; the reports we have had along those lines are practically of no value.

Commissioner LENNON. The only way the information then could be gotten for our record would be going over the records in your office?

Mr. BELL. I will get you that information in the best shape I can from such materials as we have along those lines. We hold approximately two hearings a week, and probably have 50 complaints. We average 50 complaints a week, I should say, against employment agencies. We send inspectors to investigate and some of them develop complaints without merit, where it is apparent there is no merit, and there is perhaps complaints beyond our jurisdiction, as complaints as to conditions.

Commissioner LENNON. In what way do these complaints arise? Are they running in the way of not securing positions after paying the fee for the service?

Mr. BELL. Not securing positions, and sometimes employees are discharged within a few days, or something of that kind, and are entitled to a refund from the employment agent after having paid him the fee; and sometimes the work is misrepresented, and it is difficult to know under our law to find those conditions, when the work is within the State. Under the law, the labor statement is given to employees sent out of the State, and it is necessary to set down on that labor statement the conditions under which they are to work. I have made it very clear to the agents, since I found that abuses came up in connection with those things, that all the labor statements given to an applicant for work, all of the conditions must be set forth very fully; and failure on the part of the agent to set forth the conditions under which the man is to work and the compensation and cost of board and things of that kind that would be charged up to him, transportation, etc.—failure to put that very fully on the contract statement has been considered by me as practically the same as misrepresentation; and I have made agents refund these, and treated them accordingly.

Chairman WALSH. How many licenses have been revoked, would you say, within the last six months?

Mr. BELL. I can send you accurate data——

Chairman WALSH (interrupting). Could you approximate what proportion of them are decided in that manner——

Mr. BELL. By——

Chairman WALSH. Of the complaints; yes, sir.

Mr. BELL. Comparatively few. Most of the—I should say all the labor agents who have done business in a large way of sending employees out of the State, however, we have revoked the licenses of about one-third of them in the last few months; two or three of the biggest agencies sending Italian laborers out of the State have been practicing abuses.

Chairman WALSH. Is that for continuous offense?

Mr. BELL. Usually where their records have not been very good and we have got a very good case on them.

Commissioner O'CONNELL. Have you any idea of the general earnings annually, say, of the average one of these offices?

Mr. BELL. Oh, they vary very greatly. Some of the agents do a very small business. I found agents, for instance, located in the front room of a flat, just one room in the front of a flat; who do a very, very small business; probably their gross income just about pays for the license in each year; and in such a case I have sent for those agents and asked them why they wanted to continue the business.

Commissioner O'CONNELL. For instance, one of the gentlemen before us this morning said that he furnished employment for eight or ten thousand people a year.

Mr. BELL. He is one of the biggest agents in the city.

Commissioner O'CONNELL. What do you imagine his income would be approximately?

Mr. BELL. It would be difficult to say. He is one of the biggest and, I must say, one of the best, for we have rarely ever had complaint against him for any abuse.

Commissioner O'CONNELL. I imagine his income, however, is sufficient to pay for his lights and gas. [Laughter.]

Mr. BELL. No question about it.

Mr. LEISERSON. Why do those people continue in the business themselves that you asked?

Mr. BELL. Usually they are people who have some small income or the man may be out of work or he may be earning \$12 or \$15 a week, and his wife conducts an agency in a small room and helps out with the rent or something of that kind. I have sent for every one of those agents personally, and whenever I felt sure they should be put out of business that has been done. Sometimes I found that there was no abuse and that I had no right to revoke their licenses, but I have talked it over with them and practically where they are making no income or some cases I get them to drop out.

Mr. LEISERSON. What proportion of the total license fees of that kind are there?

Mr. BELL. Probably 500 out of the lot are very small agents.

Mr. LEISERSON. Isn't it a fact that you do not think that they do very effective work toward bringing the man and the work together?

Mr. BELL. No; they have no bearing on the situation at all. They supply a few—usually a few domestic servants, and they have no real place in the whole question.

Mr. LEISERSON. Do the license fees that you get cover the cost of administration?

Mr. BELL. No, sir.

Mr. LEISERSON. Can you give us any idea as to the cost of the administration of the law?

Mr. BELL. I can send you accurately what it costs and what the income has been.

Mr. LEISERSON. Can you tell us approximately here?

Mr. BELL. Yes. Unfortunately I have not a copy of my budget here. It is downstairs. But I can send you a copy of my budget and give you the exact figure.

Mr. LEISERSON. We would like to have that, and if you have any idea approximately—

Mr. BELL (interrupting). The reason I am in the air on that is we are changing the whole status of our office. We are organizing a department of licenses which will include everything.

Mr. LEISERSON. The point I wanted to make is that besides leaving this business in private hands the State has to spend a good deal of money to regulate the business, and what it gets from the agents does not pay the cost of regulation.

Mr. BELL. Does not anywhere near pay it—that is, the city. The city regulates.

Mr. LEISERSON. Well, the city regulates and gets the license fees.

Mr. BELL. The city regulates and gets the fees and pays the expenses of my office.

Mr. LEISERSON. Well, would the licenses even amount to one-half?

Mr. BELL. No; not near.

Mr. LEISERSON. Not near half. One other question. If a man makes a complaint to you, does that mean that the man has to prosecute or do you prosecute?

Mr. BELL. The man has to appear. We try to assume a position between the two and find out what the real facts are. It is a semiofficial position that we take.

Mr. LEISERSON. But when it comes to a case in court, who prosecutes?

Mr. BELL. We prosecute—cases of abuse of that sort, and cases of conducting employment agencies without licenses we prosecute. It is fair to say that most people who are apprehended for conducting employment agencies without licenses are ignorant of the law and do not really intend to commit a crime.

Mr. LEISERSON. What is the amount of the license fee?

Mr. BELL. \$25 a year.

Mr. LEISERSON. That is for all agencies?

Mr. BELL. Yes; for all agencies.

Mr. LEISERSON. A statement was made this morning that if employment agencies act illegally there are that department and the State department—the State bureaus of industries and immigration—that would take care of such complaints. Now, I would like to know whether, in your opinion, practically all the abuses come out in the form of complaints to you or whether you think, from your experience, there are a good many abuses that never come to light, because the wage earners do not know their rights in the matter.

Mr. BELL. Oh, I think the complaints that come to us are a very, very small percentage of the abuses that occur.

Mr. LEISERSON. You have, then, 50 complaints a week on an average, and that, you would say, is a very small percentage of the total number of cases that ought to be looked into?

Mr. BELL. That is true. For instance, in many theatrical agencies we rarely get a complaint, because we feel the reason we rarely get a complaint is that a few big concerns control the business, theatrical people are afraid to complain. We don't get the complaints; but we feel quite certain that gross abuses are occurring every day. Now, much of that theatrical business is interstate business. This is the center, practically, of the theatrical-business side of theatrical affairs in this country, and we have practically no jurisdiction once they get out of the State.

Mr. LEISERSON. What do you think of the suggestion that was made this morning to prohibit any fee being charged to the employee—to put the cost onto the employer?

Mr. BELL. I am not clear as to that. It is fair to say that the employment agency performs a service for the employee as well as for the employer.

Mr. LEISERSON. Doesn't he equally for the employer?

Mr. BELL. Yes.

Mr. LEISERSON. At the present time, whom does he charge in the main?

Mr. BELL. In the main, he charges—it depends on the class of help. Of course, among the domestic agents they charge both, many—some few domestic agencies, such as Mr. Wahrburg and others, they charge only the employer; in many of the hotel agencies they charge only the employee; and so it goes.

Mr. LEISERSON. In the majority of cases of common laborers and factory workers, who pays the fee?

Mr. BELL. Both; or at least in nearly every case the employee pays it.

Mr. LEISERSON. The employee?

Mr. BELL. Yes.

TESTIMONY OF MR. HERMAN ROBINSON.

Mr. LEISERSON. Will you state your full name and your official position?

Mr. ROBINSON. Herman Robinson; no official position at this time.

Mr. LEISERSON. You were formerly commissioner of licenses?

Mr. ROBINSON. Yes, sir.

Mr. LEISERSON. For how many years?

Mr. ROBINSON. Four years.

Mr. LEISERSON. And before that, what was your position that would qualify you for this kind of work?

Mr. ROBINSON. My occupation? I am a garment worker. Prior to my accepting public office, I was one of the general organizers for the American Federation of Labor, and also financial secretary of the Central Federated Union of New York.

Mr. LEISERSON. You were commissioner of licenses for four years. During that time can you give us an idea of the abuses that have crept into the private employment-agency business as they came to your attention during those four years, so far as any have not been mentioned before?

Mr. ROBINSON. The abuses that crept in during the four years?

Mr. LEISERSON. No; I mean that you were acquainted with. Those that came to your attention.

Mr. ROBINSON. There were several things that were called to my attention in assuming the office, all of which had to be investigated. I found that a great deal of the alleged abuses were either magnified, exaggerated, or did not exist. There were considerable abuses that had to be remedied; and in the course of four years 63 licenses, to be exact, were revoked by me for various causes. Quite a number of applications for licenses were refused.

Mr. LEISERSON. In your reports to the mayor you stated several times, I think, that you were opposed to a State or municipal free employment agency. Or is that your position?

Mr. ROBINSON. I did not say that I was opposed to it. I said that I did not think that they would prove successful.

Mr. LEISERSON. Will you give us your reason for that, please?

Mr. ROBINSON. It is because of the personal element that enters into the selection of persons seeking employment and desiring employment. A success-

ful employment agent—or, rather, an employment agent who desires to be successful—can only be successful in either one or the other. Mr. Wahrburg this morning stated that he dealt largely with domestics. He could not be successful if he tried to deal with laborers and others. He and his partner in the business know the kind of help required by the applicants, and that is why they are successful in being able to select the proper kind of help.

Mr. LEISERSON. Wouldn't it be possible for a State or a municipal employment office to be familiar with the kind of help desired?

Mr. ROBINSON. I doubt whether it would in the domestic line.

Mr. LEISERSON. You have never heard of successful State officers in the domestic line or city offices?

Mr. ROBINSON. No, sir. There may have been such reports printed, that they were successful, and it looked good on paper.

Mr. LEISERSON. Did you ever visit any State or municipal employment office?

Mr. ROBINSON. State or municipal employment bureau?

Mr. LEISERSON. Yes. So that you would be able to tell from actual knowledge?

Mr. ROBINSON. Not in recent years I haven't.

Mr. LEISERSON. Do you consider that the private employment agents that you had to regulate properly conducted the business from the standpoint of fitting the person into the job—leaving aside now the abuses—but did they pick out the right people?

Mr. ROBINSON. So far as the domestics are concerned.

Mr. LEISERSON. In regard to the others?

Mr. ROBINSON. In regard to the others, I favored the establishment of Government labor exchanges.

Mr. LEISERSON. You would have Government labor exchanges, then, for all except domestics?

Mr. ROBINSON. Oh, no, no. Exclusive of domestics, there are the commercial help, which covers the intelligent class. Then you have the nurses' registers, while theatrical agents, of course, are in a class by themselves.

Mr. LEISERSON. Will you state definitely as to which kind of labor you think—State or municipal or Government or national employment exchanges—might prove successful?

Mr. ROBINSON. Farm labor; unskilled labor generally.

Mr. LEISERSON. Factory workers?

Mr. ROBINSON. Well, they are in the unskilled class.

Mr. LEISERSON. You don't think it would be successful for skilled employees?

Mr. ROBINSON. I doubt it. Of course, it has taken a man some time to become skilled, and in that time he becomes familiar with conditions, more or less, and is able to consider for himself.

Mr. LEISERSON. Is he able to know that there is a position in a different part of the city that he lives in—10 or 15 miles away from that? You understand the idea of an employment office is merely to bring the two together?

Mr. ROBINSON. I appreciate that; I understand it.

Mr. LEISERSON. Is it of value any the less for skilled labor?

Mr. ROBINSON. The service may be valuable to him; the information may be. No question about that.

Mr. LEISERSON. Well, why should you not advise the State doing that for the skilled man?

Mr. ROBINSON. I think the skilled man would be capable of investigating the condition of that himself.

Mr. LEISERSON. It is not a question of investigating conditions, but of bringing him in touch with the job in the first place. Can the individual skilled man find out where the job is as fast as an agency whose business it is to do that?

Mr. ROBINSON. I have already stated that from the point of view conveying information it may be all right. No question about it.

Mr. LEISERSON. As from the point of view of conveying information?

Mr. ROBINSON. Yes.

Mr. LEISERSON. You would think that the employment agency for skilled laborers, managed by the State or the city or the Nation, would be desirable?

Mr. ROBINSON. Oh, yes.

Mr. LEISERSON. Well, is it your idea that an employment office should do any more than that—than convey information?

Mr. ROBINSON. For the unskilled, I do.

Mr. LEISERSON. What, for instance?

Mr. ROBINSON. Well, not alone to tell him where the job is, but to get him to the job.

Mr. LEISELSON. You mean to ship him there and pay his transportation? You think it would be desirable to pay the transportation?

Mr. ROBINSON. That is the only successful way in bringing the job and the man together; telling the man that a job exists elsewhere, and he has not the transportation to get there, is not doing him much good.

Mr. LEISELSON. Wouldn't it be possible to get an employer to advance transportation? Have you had any experience along that line?

Mr. ROBINSON. Oh, yes; a great many employers do.

Mr. LEISELSON. Railroads always do.

Mr. ROBINSON. In most cases.

Mr. LEISELSON. During your experience as commissioner of license, do you find the employment agencies misrepresent conditions as to strikes frequently or infrequently?

Mr. ROBINSON. In some instances they misrepresent the true state of affairs and sometimes they make the misrepresentations upon the information they have received.

Mr. LEISELSON. Sometimes they do it knowingly and sometimes unknowingly?

Mr. ROBINSON. Yes. They would receive an application from an employer who might have some trouble in his factory, asking this particular agent to supply a number of workers, and withhold the information from him that there is a strike on.

Mr. LEISELSON. Did you get a copy of that plan? Have you any criticisms to make in regard to it?

Mr. ROBINSON. Well, if it is going to cover the question of workers, and I assume that will be the object, would be to benefit the workers; that is one of the greatest evils that exist to-day, to my mind, so far as supplying workers is concerned during strikes, are not so much the employment agents as the so-called detective agencies are.

Mr. LEISELSON. Those are not distinctly employment agencies.

Mr. ROBINSON. Well, I would judge that they are.

Commissioner O'CONNELL. Do those agencies come under your license department?

Mr. ROBINSON. No, sir. Those are one of the things I complained of in my first annual report, the so-called detective agencies, who obtained a license from the comptroller from the State of New York; pays his fee for a license and he sets out to do detective work, and being legitimately engaged in detecting crime, or ferreting out crime, I believe that that is a proper function for which he should be licensed as a detective agency. But when a detective agency obtains a license to cover itself as such and receives applications from employers to furnish a lot of men during a strike, and they evade the law by entering into a contract and becoming a contract, why, then I believe that that is the worst evil that we have to contend with.

Mr. LEISELSON. Your idea, then, would be to put these under the employment-agency law?

Mr. ROBINSON. My idea is different entirely. If they are a detective agency they should be confined to detective work, real detective work.

Commissioner O'CONNELL. And if a detective agency of New York, in addition to its detective agency business, if it also furnishes employees—workmen—would it not have to take a license out?

Mr. ROBINSON. They evade the law by doing this; and pay particular attention and I will explain, because I have endeavored to have the district attorney of New York County prosecute some of them for violating the employment-agency law, because they surely were not supplying these men without obtaining a fee. The district attorney explained that he did not think he could successfully prosecute those men in a court of law because they did not obtain the fee from the men whom they were placing at work, but that they entered into a contract with the employer at so much per man. They would employ the men, send them to work, and pay the men themselves, and, therefore, become contractors.

Mr. LEISELSON. That is all, Mr. Chairman.

Chairman WALSH. What are the names of such agencies as you discovered doing business in New York City while you were in office?

Mr. ROBINSON. Waddell & Mahon.

Chairman WALSH. Where is their office?

Mr. ROBINSON. I don't know just exactly where their office is. They are in New York City. The directory would tell you that. On Broadway somewhere—Berghoff Bros.

Chairman WALSH. Berghoff?

Mr. ROBINSON. Berghoff Bros.

Chairman WALSH. Any others?

Commissioner O'CONNELL. Are those detective agencies?

Mr. ROBINSON. They are licensed detective agencies—licensed by the comptroller of this State.

Commissioner O'CONNELL. Has the Burns Agency got a license?

Mr. ROBINSON. Burns?

Commissioner O'CONNELL. Yes, sir.

Mr. ROBINSON. They have a detective license. I don't know that they have supplied them.

Chairman WALSH. Do you know of any others?

Mr. ROBINSON. There are quite a few of them. Their records are over in the office of the commissioner of licenses.

Chairman WALSH. In what way can they be identified for the record? For instance, if we sent an investigator over there, in what way could he determine which of those officers were licensed as detective officers but who sent out employees in places where there were strikes going on?

Mr. ROBINSON. It is the duty of the office of the commissioner of licenses to not alone follow up the alleged violations of the law, but to look through the newspapers, follow up advertisements, and invariably when there was a strike about to take place, or that had taken place, and one of these detective agencies had the contract to furnish the men, they would advertise for 150 able-bodied men to appear at a certain time, or at a certain office, and we would believe—or rather we would feel—that this might be something that deserved investigation. Somebody might be collecting fees for gathering these men and furnishing positions; and if it was so, it was a matter that required our attention. The inspector would go there and he would return with a report which would be placed on file showing that they were not charging any fees.

Commissioner O'CONNELL. Did the Farley Detective Agency have quite a reputation for furnishing men during strikes?

Mr. ROBINSON. Yes, sir; there were several of those in addition to those I have mentioned.

Commissioner GARRETSON. Did your investigations ever lead you to the conclusion that the Pinkerton Co. engaged in a like service?

Mr. ROBINSON. I did not follow all of them. When I found out that I couldn't do anything to prosecute them, I felt that it was hopeless, although I called it to the attention of the mayor in my first report, and stated that some sort of regulation ought to be had over these detective agencies to see what they were actually doing.

Commissioner O'CONNELL. You have jurisdiction, of course, over the theatrical agencies?

Mr. ROBINSON. Yes, sir.

Commissioner O'CONNELL. What is the general method adopted? Don't they usually charge a certain per cent of the salary arranged for?

Mr. ROBINSON. In June, 1910, the New York State Legislature amended the law known as the general business law, covering employment agencies, including this section, that a contract shall be given to the applicant for employment which shall be equitable in its form, and that the commission to the agent shall not exceed 5 per cent of the weekly salary, payable at the end of each and every week. Quite a number of complaints were made because of the excess fees collected in violation of the laws. Many actors and actresses, particularly in the vaudeville line, complained that they were obliged to pay 10 per cent in order to obtain employment. We took the complaints as fast as they came in, and in a very few instances would the complainants appear to sustain their claims.

Chairman WALSH. Was there a reason for that?

Mr. ROBINSON. They claimed at that time that if they did appear that it might be the means of their being unable to get future employment.

Commissioner GARRETSON. They would appear in the black list?

Mr. ROBINSON. That was their contention.

Commissioner O'CONNELL. Is there any evidence that that contention might be true?

Mr. ROBINSON. Only to a slight degree that I have been able to verify. I have tried to get a number of persons to appear to prosecute some of the agents that I knew were getting 10 per cent, but in order to revoke the license I was obliged to have what we term positive evidence, because the law provided

that where a license is revoked that the action of the commissioner may be reviewed upon a writ of certiorari in the court. And I had even gone so far as to have the district attorney of New York County summons several of the members of the actors' organization.

Commissioner GARRETSON. The White Rats?

Mr. ROBINSON. The White Rats; to compel them to testify that they paid 10 per cent to agents in violation of the law. I regret to say that they failed to produce evidence themselves, although they were the ones who were making the most noise.

Commissioner BALLARD. Was that 10 per cent of a week's wage continuously or just the first few weeks?

Mr. ROBINSON. Every week, because every week's work was considered a separate week's engagement.

Commissioner O'CONNELL. Make an engagement, for instance, with a circuit of vaudeville houses running from New York City to San Francisco?

Mr. ROBINSON. Yes, sir.

Commissioner O'CONNELL. Every week would be considered a separate engagement?

Mr. ROBINSON. Because they worked for a different boss every week. The law permits that.

Commissioner O'CONNELL. What do you think of the idea of that whole matter being thrown into a proposition, on the tentative proposition here for the handling of that sort of engagements through a Government or State office?

Mr. ROBINSON. Well, I can say this, that I think originally the law was placed upon the statute books ostensibly for the protection of the alien, the foreigner, and the illiterate, who was unable to protect himself, and I doubt very much whether the actors and actresses would want to be placed in the same category as being unable to protect themselves.

Commissioner O'CONNELL. I think it would appear as though they were over-protected.

Mr. ROBINSON. What?

Commissioner O'CONNELL. I think it would appear from the arrangement that they have to pay every week of the engagement, every week, 52 weeks, there is overprotection.

Mr. ROBINSON. Some of them are willing, and are willing and will tell you that they are willing to pay 104 times in order to get 52 weeks' wages.

Commissioner O'CONNELL. That is all.

Chairman WALSH. Is there anything else?

Commissioner GARRETSON. I have nothing more.

Chairman WALSH. That is all. Thank you.

TESTIMONY OF MR. ADOLPHUS RAGAN.

Mr. LEISEN. Mr. Ragan, will you give your full name and your official position to the reporter?

Mr. RAGAN. Adolphus Ragan; examiner of accounts in the office of the commissioner of accounts.

Chairman WALSH. Louder, please.

Mr. RAGAN. Commissioner of accounts in the office of the examiner of accounts, city of New York.

Mr. LEISEN. Have you made an investigation with the commissioner of licenses of the agencies covering about a month? I would like to have you testify as to just what you found in that investigation.

Mr. RAGAN. The investigation covered a period—I will say in the beginning that the investigation was with one specific object in view. It was not a general investigation of employment agents. The object we had in view was to determine if there were any adequate means in the city of connecting the man with the job, and in order to determine that, why, we concluded—that is, the office of the commissioner of accounts, and I was acting as their agent—we mailed, through the commissioner of licenses, a circular letter to the employment agencies; there were about 748 agencies at that time. That was about January 20, 1914. We asked them in the circular letter to furnish us on the inclosed form considerable data, among which was the number of persons applying for employment at each agency, male and female; whether in the city or outside the city; and the number of places that were filled by them, and the number of places remaining unfilled during the period, and from that data we figured the percentage of places that remained unfilled and the per-

centage of applications that were placed in positions. The returns from 320 of the 748 agencies—I will say that subsequently we got more returns, but they were delayed to such an extent that we could not make use of them. The matters that we had in mind were urgent. The 320 that returned data showed 41 per cent of all positions in the city which were reported to agencies to be filled remained unfilled during the month from December 15 to January 15 of the past winter. It also showed that only 17 per cent of applicants applying for work actually received the work.

We made another classification from the records of the commissioner of licenses as to the kind, or rather—yes; as to kind—of agencies and as to the languages spoken there at the agency. That is, a great many agencies are designed to accommodate persons speaking a specific language, a certain language. We found that this covered 725 agencies. We found that of the 725, 316 were for the accommodation of English-speaking people; that 20 were for the accommodation of Scandinavians; 24 German; 46 Yiddish; 2 Hungarian; 42 Italian; 2 Greek; 17 Bohemian; 22 were Polish; 8 were French; 1 Finnish; and here is one which, of course, is English speaking, but it is segregated on account of race—negro, 61; Japanese, 5; Spanish, 1; and other mixed nationalities, 163. That is the segregation of the private employment agencies as they existed on or about January 20, 1914.

When our returns came in, which showed that only 17 per cent of all persons applying for work were placed, and yet 41 per cent of the jobs remained unfilled, why it appeared to us that there was something radically wrong; so I submitted a report to the commissioner of accounts, and in that report advised the establishment of a public employment exchange and bureau. That is, it was to be utilized as an exchange between the private agencies and for those employment, seeking employment; at the bureau direct it was to be used as a free public employment bureau. We do not say that we did establish such a bureau; but we inaugurated such a plan. We had two or three men detailed from other departments, and they—of course, this is all under the direction of the mayor—and they conducted an employment bureau without any additional appropriation from the city—an employment agency without any additional appropriation from the city, just simply assigned to the work.

Well, we started in with the promise of about 50 private agencies to cooperate with us. We installed a telephone exchange with seven wires, with operators, and expecting to do a rather large business between the private agencies. That is, where there was one with a job and another with a man and would so report them to us, we would adjust conditions by sending the man, or, rather, telephoning and have them send over one from one agency to the other agency. But, as it turned out, the private agencies either just did not understand the method and the purpose and they did not give us the whole-hearted cooperation that we expected. They were instructed to call us up daily and make reports of jobs and positions that they had left over from the preceding day. But a very few of them ever called us, and when we called them we got very little satisfaction. It seemed not so much that they wanted to boycott the bureau as that they did not think it would be an effective instrument.

Judging from the list, the schedule that we prepared here of the languages spoken, and also from telephone conversations, I would judge that most of the agencies were conducted by people who experienced some difficulty in—I should not say conduct, but those who answered the telephones, at least, were people who have a very slight acquaintance with the English language, and for that reason it is very unsatisfactory. We could not get any specific or definite data from them. However, I will say that there were two or three agencies, among them Miss Atwood, and two or three others, that really cooperated with us in a whole-hearted way, and Mrs. Atwood's agency, 12 State Street, I believe, actually sent us men to be placed through our bureau free, which was very unusual, I should think, and we sent her a number of people during the snow-shoveling period, and she placed a number of people from our agency. She charged a minimum fee, I believe, of 15 cents each, or something like that, and a great many of those people were hungry and she actually fed them, and gave them coffee or a sandwich, or something like that. So that all private agencies are not bad.

Mr. LEISERSON. Will you give us, briefly, what the conclusions that you reached from your investigations, are?

Mr. RAGAN. As to the effectiveness of private agencies?

Mr. LEISERSON. Yes.

Mr. RAGAN. Well, my conclusion is, in so far as the general problem of unemployment is concerned, that they do not even tend toward a solution.

Mr. LEISERSON. Why not?

Mr. RAGAN. Because, while a number of the people that applied at our bureau, after we had questioned them, stated that they had been to private agencies, most of them stated that they had not been to private agencies, and the reasons given were that they did not have the price to pay the fee and they would get no consideration by going to a private agency. We concluded that a man—that it was just as much of an economic waste for a man who did not have a dollar to be out of work as it was for a man who had money to be out of work, and that was the main, or at least a majority was that kind of men who came to us, apparently without work, I mean, without means at all. I know the boys in our office frequently, and sometimes in squads of 8 or 10, had to pay even the car fare of those people after they had walked 7 or 8 miles to the bureau. These people could get no consideration from a private agency.

I will say this, Mr. Wahrburg this morning stated that they were glad of the establishment of our bureau, so that they could unload their "Weary Willies." It is a fact, I think, that a number were directed to the bureau; that is, a number of the so-called "Weary Willies," but in the opinion of a private employment agent, I think a "Weary Willie" is one who has not got the commission or fee to get the job.

Mr. LEISERSON. Are you still connected with the municipal employment office?

Mr. RAGAN. Yes; I am technically in charge of it.

Mr. LEISERSON. Can you tell us whether you consider that work successful at the present time?

Mr. RAGAN. As long as we were using it and pushing it as an experiment; that is, pushing it vigorously as an experiment to see if there was a need for such a bureau, I consider it eminently successful and that it filled a long-felt want in the community. For the last few weeks we are still placing people in jobs right along, but what I mean is, since the ordinance has been passed by the board of aldermen making this bureau permanent, and a law has been passed by the State legislature, consolidating the commissioner of licenses' office with the mayor's bureau of licenses, we have had about all we can do to bring together these elements without pushing the employment bureau as we would like to. But it is doing considerable work even now.

Mr. LEISERSON. During the period that you were pushing the work, how many people did you place during a month?

Mr. RAGAN. During the first month, including snow shovelers, there were about 3,000 of them; we placed altogether that month nearly 4,000—3,973, I believe, the first month.

Mr. LEISERSON. Was it your experience that the establishment of the municipal bureau found a good many positions that the man himself could not find, and that the private agencies did not get?

Mr. RAGAN. Unquestionably, I think so.

Commissioner O'CONNELL. Wasn't that an extraordinary condition, the snow-shoveling period you speak of?

Mr. RAGAN. It is extraordinary in that it happens once a year only.

Commissioner O'CONNELL. But at the time of putting so many people to work it gave you an extraordinary opportunity?

Mr. RAGAN. It did; but that happens every year. It just happens that we organized it at that time. That is a casual labor that will be placed every year.

Mr. LEISERSON. Aside from snow shoveling, I had in mind—did you find a good many persons work that are found either by private agencies or men themselves?

Mr. RAGAN. Yes. You mean that were telephoned to us?

Mr. LEISERSON. Yes.

Mr. RAGAN. Oh, yes; most of the jobs that were filled were.

Mr. LEISERSON. Did you solicit business?

Mr. RAGAN. We solicited only by telephone. The best work by telephone, because we had nobody to send out and interest people in the bureau.

Mr. LEISERSON. Can you furnish to the commission a copy of the report that you made of that investigation?

Mr. RAGAN. Yes, sir; I will have an extra copy made for the commission.

Mr. LEISERSON. That is all.

Chairman WALSH. That is all. Thank you.

TESTIMONY OF MR. DAVID N. BRESSLER.

Mr. LEISERSON. How long have you been general manager of the Industrial Removal Office in New York City, Mr. Bressler?

Mr. BRESSLER. Over 12 years.

Mr. LEISERSON. And what was the purpose of the organization?

Mr. BRESSLER. The purpose of the Industrial Removal Office was to see to the distribution of Jewish immigration and population from the seaport cities, particularly New York City, in those sections of the country where there were better opportunities for employment.

Mr. LEISERSON. Can you describe the organization by which you accomplish that, or aim to accomplish that?

Mr. BRESSLER. We have what we call agencies throughout the country. In practically every important center throughout the United States we have volunteer committees, composed of representative men and women of the community, who have been taught to appreciate, I think, the value of the distribution of immigrants, and we place at their disposal a pay agent, whose duty it is to keep constantly in touch with the local labor market and situation and to notify us every two weeks what the condition of that labor market is, from which we are able then to judge what particular class of workers we should send to any given section of the country.

Mr. LEISERSON. You have a paid agent in each one of those cities?

Mr. BRESSLER. Practically.

Mr. LEISERSON. How many?

Mr. BRESSLER. Well, at this time we have something like 30, I think, but outside of those pay agents we have volunteer agents and volunteer committees in the smaller towns in the United States whose industrial opportunities are not large enough to warrant the payment of a salaried official.

Mr. LEISERSON. Do you consider it necessary to have a paid agent in the larger centers?

Mr. BRESSLER. Yes; absolutely.

Mr. LEISERSON. Will you state the reason why you can not depend on volunteer committees?

Mr. BRESSLER. Why, it takes an agent's entire time if he is going to be faithful to his job and going to find out what is going on; and, furthermore, he has got to take care of the people that are selected by the home office and who are sent to his community in accordance with his industrial reports. He must take them around to the job, make them comfortable when they get there, find a lodging house for them, and a dozen minor little duties—what we call friendly duties, duties of friendship, which makes the newcomer more at home and less of a stranger in his new environment—and we feel that no man can do this excepting a man who gives his whole time to it and is paid for it—makes it his living.

Mr. LEISERSON. When you send a man from one city to another, does he always go to a definite job, or does he sometimes merely come on the invitation of the agent when there is no job?

Mr. BRESSLER. It almost never happens. The agent must send us a regular report every two weeks as to the state of the industrial, or rather labor, market, which will tell us—if you permit me, I have brought along with me what I would call some exhibits. We send out a report, or rather a blank form of report, to every agent in the country, and he is asked to report the various industries at that time; for instance, in the woodworking industry, such as carpenters and cabinetmakers, carpenters and woodworkers, metal workers, building labor, the needle industry, and so on. We ask the average wages per week he might expect, number of working hours per day, conditions as to union, and general conditions, and remarks which he may consider pertinent in further illuminating the subject for us.

Mr. LEISERSON. Does your agent have definite applications for help on which he gives you that report, as to the demand in the woodworking industry, or is it merely a general idea?

Mr. BRESSLER. Both. Sometimes, when an agent is fairly well known in a community, the various industries that are acquainted with him will ring him up or write him and say, "We have use now for 2 or 3 or 10 carpenters, or cabinetmakers or bricklayers," or he will make a general survey of the situation, and he will find, for instance, in some months, the spring months, when the building industry is going on rather well, that bricklayers can generally

be used. He finds that out by speaking to foremen and bosses and employers of labor.

Mr. LEISERSON. Ordinarily, your agent does not run an employment office?

Mr. BRESSLER. No; absolutely not.

Mr. LEISERSON. So, ordinarily, he would not have a definite demand for the labor in that way; merely, he might call up and ask whether they are hiring people now?

Mr. BRESSLER. Yes; he goes around personally.

Mr. LEISERSON. Have you had cases where men were shipped to the city and then he could not find work for them?

Mr. BRESSLER. Sometimes; very rarely.

Mr. LEISERSON. What do you do in cases of that kind?

Mr. BRESSLER. If he can not be found a job in that particular town, we find out by telegraphing other agents in the vicinity where he can get a position, and send instructions to the local agent to forward that man to so and so, in any State, but that happens very rarely.

Mr. LEISERSON. Do you deal with Jewish people exclusively?

Mr. BRESSLER. Yes, sir.

Mr. LEISERSON. About how many do you distribute in that way?

Mr. BRESSLER. Well, we have distributed in the last 13 years about 75,000 souls.

Mr. LEISERSON. During the last year, how many?

Mr. BRESSLER. During the last year about 6,500.

Mr. LEISERSON. Mostly from the New York office?

Mr. BRESSLER. Practically from New York.

Mr. LEISERSON. Do the men pay any fees for this service?

Mr. BRESSLER. No, sir.

Mr. LEISERSON. Well, who supports your organization?

Mr. BRESSLER. It is practically the Baron Hirsch fund.

Mr. LEISERSON. Do you advance transportation?

Mr. BRESSLER. Yes, sir.

Commissioner O'CONNELL. Does the man return the transportation?

Mr. BRESSLER. Very infrequently. We don't ask it.

Commissioner O'CONNELL. He only volunteers?

Mr. BRESSLER. Yes, sir. We do not ask it; particularly if it is a case of a man who has got a wife and children.

Mr. LEISERSON. Is the man considered an applicant for charity at the time that he comes?

Mr. BRESSLER. No, sir.

Mr. LEISERSON. Would you give a man the same service if he had money of his own?

Mr. BRESSLER. Precisely the same service. You mean, if he has money of his own would we pay the transportation?

Mr. LEISERSON. Yes.

Mr. BRESSLER. No; we will not.

Mr. LEISERSON. You investigate his case, then?

Mr. BRESSLER. Yes, sir. I have this all here, the gradual steps.

Mr. LEISERSON. Did our investigator get a copy of that from you?

Mr. BRESSLER. Sir?

Mr. LEISERSON. Did our investigator get a copy of your report from you?

Mr. BRESSLER. I think he did. He did, a copy of our last annual report. He didn't get this; no; I don't think [indicating].

Mr. LEISERSON. The commission can have that?

Mr. BRESSLER. Yes. I brought this for the commission.

(The report referred to is marked "Exhibit A.")

Mr. LEISERSON. Do you think it would be advisable for the Federal Government, say, to do on a large scale what you do for those 6,500 people?

Mr. BRESSLER. I certainly do.

Mr. LEISERSON. Do you think it would be necessary to have this done only for non-English-speaking people, or would it be advisable for all classes?

Mr. BRESSLER. I think it should be done for all classes requiring it, regardless of whether they spoke English or not.

Mr. LEISERSON. Before you established your own organization, did you think of the private employment agencies that were doing this kind of work?

Mr. BRESSLER. I don't quite catch you.

Mr. LEISERSON. Did you think of using the private employment agencies for doing that kind of work?

Mr. BRESSLER. Well, they have not got the idea of distribution which underlies our work.

Mr. LEISERSON. The essential idea of your organization is what?

Mr. BRESSLER. Distribution of immigration and population from the crowded, or, rather, congested quarters of the large seaport cities.

Mr. LEISERSON. To get them westward.

Mr. BRESSLER. To get them to every section of the country.

Mr. LEISERSON. You don't follow them up, and if they lose a job in Texas, say, you don't consider it important to distribute them farther?

Mr. BRESSLER. We do follow them up, follow them up for a period of a year, and, for instance, last year's figures, at the end of the year we ascertained from the reports of our various agents that of the total number sent out for a given period—say, 10 months prior to the report—88 per cent were working in the cities to which they had been sent.

Mr. LEISERSON. Not necessarily at the same job?

Mr. BRESSLER. Not necessarily the same job; they might have changed jobs.

Mr. LEISERSON. What proportion come back eastward?

Mr. BRESSLER. Well, the reports of our agents would indicate that less than 5 per cent have come back, except, possibly, at a time like the present that there is an industrial slump; and I imagine quite a number are thrown out of employment, and, having no particular reason for staying in the new town to which they were sent, some of them might come back. I say this because I have seen quite a few that I recognize in our office in the last few months who were sent out at a previous time. But, altogether, very few come back, particularly in normal times.

Commissioner GARRETSON. Is there any other organization that you know of performing a like service for a purely Jewish clientele?

Mr. BRESSLER. I don't know, sir.

Commissioner GARRETSON. Then I want to ask a question, because, until you made the statement, I have been quite in the dark as to a certain condition I found in a Middle Western town. Do you authorize the practice on the part of your local representatives, probably nonpaid ones of the kind that you mention—volunteer agents—of accepting a fee per capita for every man of that class for whom they get employment?

Mr. BRESSLER. From whom?

Commissioner GARRETSON. From the man himself, and usually collecting it through his employer.

Mr. BRESSLER. No, sir.

Commissioner GARRETSON. What made me ask is, there is in a town that I know, a town of, say, 40,000 people, where there is a very large foreign population, where a good many men are secured from a recognized agent, who, I judge, is not salaried, for he is engaged in other pursuits himself, and they get—I know a number of other industries there get a very large number of Jewish immigrants. I won't say a very large number, but a considerable number; and, in one instance at least, I know the employer told me that he got those men from time to time, and that he always paid so much per head for them, collecting it from the man and remitting it to the agent.

Mr. BRESSLER. I don't know of any such thing. If you will tell me the name of the town I think I could answer specifically yes or no.

Commissioner GARRETSON. Well, I would have to bear in mind that this information did not come to me as a commissioner; it came to me as an acquaintance, and was only—in fact, it never occurred to me that it was a part of an organized movement. I thought that this man was running an individual peonage system. That is what it amounted to.

Mr. BRESSLER. As a matter of fact, we make it a point to discourage the sending of any considerable number of people to any one town.

Commissioner GARRETSON. Well, that town has a very considerable number of men of the race.

Mr. BRESSLER. Yes.

Commissioner GARRETSON. It is a town that does a good deal of manufacturing; it has a large foreign-speaking population, and a very considerable number of those are Jewish immigrants.

Mr. BRESSLER. Yes.

Commissioner GARRETSON. Do you raise any question over that, because this was connected with the same question—as to whether labor troubles exist?

Mr. BRESSLER. We do that from time to time. Every time we organize an agency, and every six months we send out a circular to all our agents throughout the country, again reminding them that in the case of a strike, or even or impending or threatening strike, they should telegraph us—not to use the mails, but to telegraph us at once—and to specify in what particular industry the labor trouble is threatened. And he is under the pain of instant dismissal if he ever takes any of our men and finds them positions in that particular sort of industry.

Commissioner GARRETSON. Yes.

Chairman WALSH. Do you send out men designed to be agricultural laborers?

Mr. BRESSLER. Sometimes. But there is an organization in this city known as the Jewish Agricultural Industrial Aid Society. I think you have got Mr. Leonard G. Robertson subpoenaed; he is the manager of that society. It is devoted practically exclusively to finding opportunities on farms.

Chairman WALSH. How long has your organization been doing this work?

Mr. BRESSLER. About 13 years.

Chairman WALSH. Have you a sample here of your reports that are made from your outside districts?

Mr. BRESSLER. Yes, sir [exhibiting paper].

Chairman WALSH. Now, are the statistics that are kept in other cities kept in a uniform manner?

Mr. BRESSLER. Practically.

Chairman WALSH. And you have a follow-up system?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. That tells you the industry the man has gone into?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. His domestic situation, his family?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. And after he receives his employment, his continuity in it, the disposition of his children, the schooling, and everything of that sort?

Mr. BRESSLER. Within a year of the time, we send a man, because it would be manifestly impossible to continue this indefinitely, especially when you consider that in the 13 years we have been doing this work we have sent out almost 75,000 people.

Chairman WALSH. What would you say that generally—I believe you gave some figures—that the statistics show of the number of those employees, or those laborers that you sent out—that remained in the community to which they were sent?

Mr. BRESSLER. In the last year—I have these figures on the tip of my tongue, because I have looked them over quite recently.

Chairman WALSH. Yes.

Mr. BRESSLER. It was 88 per cent.

Chairman WALSH. In some cases do they run as high as 95 per cent?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. That is, the men shipped there in particular industries, the children went to the public schools, and they became a part of the life of the community in which they were sent?

Mr. BRESSLER. Yes, sir; take, for instance, Kansas City.

Chairman WALSH. That is what I had in mind; as I understand, 95 per cent of them maintain citizenship and become a member of the community.

Mr. BRESSLER. Yes, sir.

Chairman WALSH. Do you remember how many were sent there?

Mr. BRESSLER. I think I can tell you by looking up this report.

Chairman WALSH. Have you it in the report—the number sent to these various cities?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. I will ask you this for my own information.

Mr. BRESSLER. We sent people to over 1,500 cities, and it would be difficult to remember how many in each city.

Chairman WALSH. I was going to ask—the cities of comparatively the same population. Do you send more to Kansas City than to other cities?

Mr. BRESSLER. I think we do.

Chairman WALSH. You think you send more there?

Mr. BRESSLER. I think we do.

Chairman WALSH. The local equipment that you manage to get cuts a figure in it, of course?

Mr. BRESSLER. Very much; because we have very adequate cooperation there.

Commissioner O'CONNELL. What do you say about ascertaining the wages, hours, and so on, and duties to instruct your people here before they go, as to the probable rate of wage?

Mr. BRESSLER. Our agent gives that report to us.

Commissioner O'CONNELL. And if the wages are poor and the conditions offered are not standard, you don't send them?

Mr. BRESSLER. No, sir.

Chairman WALSH. As a matter of fact, your agents assume the duty of looking out for these men when they first come there, as to fair working conditions?

Mr. BRESSLER. They are their friends, so to speak.

Chairman WALSH. Do they make a report of the number of those men who become affiliated with different crafts—labor organizations?

Mr. BRESSLER. Well, they have not been doing that systematically; but we encourage—in fact, we write to all our organizations that every man possible should join, as soon as possible, some organization that is going to mean the progress for his—industrial progress.

Chairman WALSH. As a matter of fact, what do you find out about them?

Mr. BRESSLER. They join them.

Chairman WALSH. Do they readily go into labor organizations?

Mr. BRESSLER. Yes, sir; they join the unions.

Mr. LEISERSON. Can you give us an idea of the cost of placing those 6,500 men last year?

Mr. BRESSLER. We spent about \$130,000.

Chairman WALSH. Have you read this proposed law?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. The tentative proposal?

Mr. BRESSLER. Yes, sir.

Chairman WALSH. Have you any suggestions to make with reference to them, or criticisms that you can make verbally here; or, if they are extended, could it be put in in manuscript form?

Mr. BRESSLER. I got this only on Saturday, Mr. Chairman.

Chairman WALSH. Then, Mr. Bressler, will you look over that and make any suggestions or criticisms?

Mr. BRESSLER. I have got it. I worked on it yesterday and permitted myself to put it down in writing, which I will be very glad to—

Chairman WALSH. Turn it over to our secretary. If there is any striking ones you would like to give us verbally, we would be glad to have it.

Mr. BRESSLER. I would like to read it, because you might want to question me on some statements I make; but I realize the time is short.

Chairman WALSH. How much of it is there?

Mr. BRESSLER. I have got a little over four pages.

Chairman WALSH. Well, you may read it, if there is no objection.

Mr. BRESSLER (reading):

"The intent of the proposed measure is primarily to increase the efficiency of labor agencies and by a proper cooperation between them and central clearing houses to connect the laborer with the job. There is no doubt that the bill presents many commendable features and that it will increase and improve the facilities for closer cooperation between employer and employee. It should increase the confidence of employers of labor in labor agencies, and by prohibiting a registration fee it will, on the other hand, likewise increase the confidence of the workmen in such agencies. Among the purposes of the proposed bureau is the following: 'To do everything that is possible to aid in securing the fullest application of the labor forces of this country.' Such purpose invests the bureau with a broad scope and implies the recognition that the unemployed situation may be ameliorated. What, it may be asked, is the most important factor in maintaining what is known as the reserve army of the unemployed? The most generally recognized cause is seasonal variation of business activity. According to the census of 1900, among masons and plasterers, more than one-half were out of work a portion of the year; of brick and tile makers, nearly one-half were at times unemployed; among paper hangers the proportion was 44 per cent; among carpenters and painters, over 40 per cent. In the same period more than one-fourth (27 per cent) of all tailors were out of work at the same period. To discuss whether or not such seasonal variation may be overcome is purely theoretical. However, there is a class of labor which is capable of shifting from one industry to another, and that is unskilled labor; unfortunately, the interchange of unskilled labor between various large industries throughout this country is restricted by the geographical location of these industries. In normal times it has been established that the large em-

ployers of unskilled labor can not supply their demand. For example: The investigators of the United States Immigration Commission were informed that as regards the Birmingham iron and steel industry in Alabama the ordinary labor supply which may be relied upon continuously affords about 50 per cent of the total necessary to operate all plants and mines.

"According to an investigation made by the United States Bureau of Labor the demand for laborers of all kinds in all lines of industry greatly exceeded the supply during the year 1906. One of the great lines of railroads reported an increase in its construction and track gangs of 41 per cent in 1906 over 1905, and the president of one of the largest railroads stated: 'Our work was delayed in both years, 1905 and 1906, by the inability to get workingmen.' No one will argue that the inability of these large labor-employing companies to get adequate labor is altogether due to a shortage in the supply, because it is well known that even in the best of times thousands of able-bodied common laborers are without employment. The main factor, as already indicated, is the inability of these unemployed common laborers to connect with the jobs, because, first, of their ignorance of the existing opportunities, and, second, even if informed, their inability to proceed to the point of employment.

"As to the first, the measures proposed by the bill should provide such laborers with the necessary information through the bulletins which it is intended that the bureau issue in all necessary languages. But the question is forced upon us: What provision can be made for that large number of unskilled laborers in a destitute condition by lack of funds for transportation? I think it is of high importance that this problem receive your very earnest consideration, for we have in our midst a preponderance of unskilled labor, and our immigration is largely composed of common laborers. If we consult the immigration figures for the last year we will find that out of almost 1,200,000 arriving immigrants only 160,108 were skilled, whereas of those termed miscellaneous (unskilled) there were 727,127; the remaining 297,188 had no occupation, but this number included women and children. Unquestionably, the bureau can not differentiate in favor of one class of employees as against another, but no class of workingmen is more in need of guidance and information than is the unskilled laborer. He is the only one who is usually exploited, because of his need to accept anything which offers itself in the way of employment.

"Therefore, I venture to urge a consideration of the needs of the unskilled laborers, who, although provided with favorable information as to employment, will be unable to pay the fare to the designated point. In this connection, I want to cite the experience of the Division of Information of the Department of Labor at Washington, which is most illuminating. That division, since the year 1907, has concentrated its efforts to influence a distribution of our immigrants into industrially and agriculturally favorable sections of the country. In that period it has extended information to over 121,477 applicants, of whom only 25,299 availed themselves of the advice given and located in other sections of the country. It should be noted that in this same period 3,164,139 immigrants arrived. In explanation of this scant result, the division in its report for the year 1913, says, among other things: 'Transportation is still the great stumbling block to distribution. I am of the opinion that mileage issued by the Government and so arranged as to be honored by all railroads on presentation would be of great economy and value to the Government and to traveling seekers of employment if a plan can be perfected which will be acceptable to the transportation lines.'

"In this connection it is possibly in place to point out that yearly there is a considerable balance over and above the cost of running the Immigration Service for its various departments, such surplus being derived from the head tax paid by the immigrants themselves and now representing the substantial total of almost \$8,000,000. Might not use be made of this money which belongs to one class of our labor, namely, the immigrants, in bringing them and the job together? If deemed desirable or advisable, the Government might even arrange so as to merely advance the fare, to be refunded in installments by the employer, out of the wages of the employee.

III.

"Advisory council: Equal representation of employers and employees. What employees?

"Whenever representation of employees is spoken of, we naturally have in mind those employees who are organized. These unquestionably should have

representation. But what about the preponderating element of employees who are not organized and whose interests should be safeguarded in determining the policies of the bureau?

"Section VII: Clearing house.

"This section as to the collating and distributing of information is somewhat vague.

"1. Is it intended that every clearing house in receipt of information send the same to the central bureau at Washington before distributing it direct to the labor agencies in its district? Or is it empowered to act immediately on this information and to prepare it in suitable form for both employer and employee in its jurisdiction? If the former, will there not be entailed a loss of time which may defeat the necessary timeliness so important in information of this kind?

"2. Has the commission considered the advisability of a clearing house in agricultural sections designed especially for that large number of peasant workers who are unable to procure the opportunity to work at their natural calling because of the peculiar economic conditions at the ports of entry which make it imperative that such laborers accept any form of employment for means of subsistence?

"In this connection, I desire to call attention to the fact that in the year 1913 alone, over 320,000 farm laborers arrived in this country, the greatest proportion of whom were compelled to seek employment in plants and factories for the reason above indicated. Especial effort should be made to place these workers on farms and especially in the southern sections of this country, which have long clamored for agricultural laborers, and whose regions are relatively undeveloped because of their inability to procure such farm laborers.

"The fate of the peasant immigrant in this country has long been the subject of comment. Time and again it has been demonstrated that as soon as these laborers accumulate a pittance, many of them leave this country to return to their native shores, there to buy a piece of land often valueless and at extortionate prices. It has been estimated by Lajos Steiner, possibly the best informed student of this question, that annually \$300,000,000 in immigrant savings is taken out of this country by departing aliens who could not satisfy in this country their land hunger."

Chairman WALSH. Have you observed, Mr. Bressler, the activities of the private employment agents?

Mr. BRESSLER. I have not made it a study, Mr. Chairman.

Chairman WALSH. Well, have you observed it, the way they go about getting work for people, etc.?

Mr. BRESSLER. To some extent.

Chairman WALSH. Now, would you say, from your experience, that these men that your association employs for the purpose of looking up jobs, are more lax in their endeavors than the men who are in the private business, or does each of them do the job as well or better?

Mr. BRESSLER. I did not quite get that.

Chairman WALSH. The point is this: It has been stated that if there was a State or governmental agency that had agents looking for jobs for people, that those agents would not be as active as private employment agents, who are spurred on by the simple question of profits in the business. Now, I am asking you if in your observation you have noticed any difference in the activities of the private agents looking for work and of your agents when they look for work as to the activity and the intelligence in securing the job.

Mr. BRESSLER. Naturally I believe that our agent is even more interested in finding and connecting the man with the job than the man who gets a fee for it.

Chairman WALSH. Although he is simply paid a salary for it.

Mr. BRESSLER. Yes.

Chairman WALSH. But he perhaps has other ideals and thoughts about it.

Mr. BRESSLER. Yes; he does more than just to get the man and the job together.

Chairman WALSH. Is there anything else?

Commissioner O'CONNELL. Just one point: I notice you raise a criticism as to the creating or determining of who should be representatives of the employers and of the employees.

Mr. BRESSLER. Yes, sir.

Commissioner O'CONNELL. You speak of the great body of the unorganized and its representation. How would it be possible to select from that great body

of the unorganized any one person who would be satisfactory as a representative to that body?

Mr. BRESSLER. I have asked myself that question and have been unable to answer.

(Mr. Bressler subsequently sent the following communication to the chairman of the commission:)

INDUSTRIAL REMOVAL OFFICE,
174 SECOND AVENUE,
New York, May 19, 1914.

HON. FRANK P. WALSH,
Chairman United States Commission on Industrial Relations,
City Hall, New York City.

MY DEAR MR. WALSH: Yesterday, when I was on the stand, a member of the commission asked me how the unskilled laborers could be given representation on the advisory council of the proposed bureau—a representation which I suggested as being desirable. At the time I frankly confessed to my inability to answer the question, because I had not the opportunity to give the matter close thought. Since then I have deliberated on it, and beg to submit the following suggestion which may be considered as a supplement to the memorandum submitted:

The factor which complicates an intelligent handling of unskilled laborers is their lack of organization. We have little conception of what they are capable of in the way of efficient organization and the claims of the self-constituted I. W. W. leaders do not afford us any clue. However, an enlightened opinion is striving to formulate some policy with regard to the unskilled laborer so that his interests may be conserved. To this end, the commission may contribute, I believe, by appointing members at large of the advisory council of the proposed bureau whose interests would not be restricted to either employer or employee, but who would represent the public. In this capacity they could concern themselves with the problem and the needs of the unskilled laborer as part of the more general problem. They might include a prominent economist, a social worker, and a public man familiar with industrial disputes and having experience as arbitrator in such questions.

Very truly, yours,

DAVID M. BRESSLER.

Commissioner O'CONNELL. It would only be through some kind of organized force, would it not?

Mr. BRESSLER. No, sir; I think it merits the consideration of your commission as to how that can be done. I can not answer it off-hand. I would have to think it over very carefully; but the thing struck me the very first instant that I read it, and I thought it worth while suggesting it.

Commissioner O'CONNELL. We had the thought well under consideration. I assure you—while we have not yet thrashed it out, at all; but we wanted your suggestion.

Chairman WALSH. We thank you very much, Mr. Bressler. Now we will stand adjourned until 10 o'clock to-morrow morning. The hours that the commission has decided on for its sessions will be from 10 o'clock until 12.45, and from 2 o'clock until 4.30, and we will try very hard to observe those hours.

(Thereupon, at 4.30 o'clock p. m., the hearing was adjourned until to-morrow, Tuesday, May 19, 1914, at 10 o'clock a. m.)

CITY HALL, BOROUGH OF MANHATTAN,
New York City, May 19, 1914—10 a. m.

Present: Chairman Walsh and Commissioners Lennon, O'Connell, Ballard, Garretson, Harriman, and Delano.

Chairman WALSH. The commission will please come to order. Put on your first witness, Mr. Leiserson.

Mr. LEISEN. Is Mr. Coletti here?

Mr. WALSH. The sergeant at arms says he is not here as yet.

Mr. LEISEN. Well, Mr. Wade Hampton.

Chairman WALSH. Take that chair, Mr. Hampton, please.

TESTIMONY OF MR. WADE HAMPTON.

Mr. LEISERSON. Will you state your name and official position, please?

Mr. HAMPTON. Wade Hampton, general auditor of the Standard Oil Co., New Jersey.

Chairman WALSH. Take a seat. Mr. Hampton, please, right there.

Mr. LEISERSON. Will you tell us the exact position that you are in, in charge of employment work for the Standard Oil Co.?

Mr. HAMPTON. I have to do with the employment principally of the clerical help for our New York offices, and incidentally act somewhat as a clearing house for other positions—other applications that might come before me for positions, different from those, in which case I would refer the applicant to the head of a certain department. That would end, so far as I was concerned, their employment.

Mr. LEISERSON. Do you have charge of handling the labor gangs for the company?

Mr. HAMPTON. No, sir.

Mr. LEISERSON. Did you have charge of that?

Mr. HAMPTON. Never did.

Mr. LEISERSON. Is there anyone in your department that had charge of shifting gangs of men from one part of the county to another, when they are through with one job, going to another?

Mr. HAMPTON. Not directly with my department; no.

Mr. LEISERSON. Can you tell us anything about that work?

Mr. HAMPTON. Only in a general way, previous to the dissolution of the Standard Oil Co. Of course, I refer to that case because at the present time I know nothing at all about what the segregated companies are doing. The employment, of course, of labor for the factories—that is, for the refineries—is one which is handled locally by each manager or superintendent of the works. There are almost altogether permanent labor pay rolls at all the plants, and with all companies, pipe line, gas companies, and others, except the construction gangs. These construction men constitute a special class of labor. They are tong men, principally; the pipe-line men and gas company's men are what they call tong men or pipe men; they are special men. As a rule, those men are shifted from one part of the country to another as the construction happens to be under way. If one company gets through with a gang of construction men, another company that knows of that work going on and which contemplates certain work of the kind, make arrangements for the entire gang to come over and perform the work for their company. I suppose that is largely done to-day; they simply get in touch with each other. We make no use whatever of employment agencies or bureaus and never have.

Mr. LEISERSON. You have no one employment department that handles all the labor for your company?

Mr. HAMPTON. Have not.

Mr. LEISERSON. Did you ever have?

Mr. HAMPTON. Never have. Each one of these companies, as a rule, takes care of its own labor.

Mr. LEISERSON. With the exception of these tong men.

Mr. HAMPTON. Well, they take care of that in this way, that they confer with other companies with a view to ascertaining what chance there would be of engaging their gang when they are through with them.

Mr. LEISERSON. There was no one employed by your company whose business it was to register these men and then transfer them from one part of the country to the other.

Mr. HAMPTON. Not particularly. The consulting engineer had in mind this work going on all over, and he kept in touch with the foremen of these gangs.

Mr. LEISERSON. Have you ever had up for discussion in your company the establishment of such an employment office for all your help?

Mr. HAMPTON. Never have; never felt the need of it.

Mr. LEISERSON. Except with regard to clerical help.

Mr. HAMPTON. Well, that bureau of employment is established for the reason that we have so many applicants come into 26 Broadway, there must be some office wherein or whereat they can file their application and can be interviewed, and their applications, of course, have to be classified, indexed, etc.; and then if any one of these departments wishes a certain kind of help they come to my office and look over the applications.

Mr. LEISERSON. Did you receive a copy of the proposed plan of a system of labor exchanges?

Mr. HAMPTON. I did.

Mr. LEISERSON. Have you any criticism or suggestions to make in regard to that?

Mr. HAMPTON. I have hardly had time to study it. I only received the pamphlet yesterday.

Mr. LEISERSON. Will you give the commission your criticisms and suggestions in writing?

Mr. HAMPTON. Why, I have no objection; I don't know that I can offer very much, as I have had but very little experience, except with our own company.

Mr. LEISERSON. That will be all, Mr. Hampton.

I will call Mr. Carpenter.

TESTIMONY OF MR. EDWARD W. CARPENTER.

Mr. LEISERSON. Will you state your name and your business connection?

Mr. CARPENTER. I am not connected now in any business at all. My name is Edward W. Carpenter.

Mr. LEISERSON. You were formerly the superintendent of the National Employment Exchange?

Mr. CARPENTER. I was manager.

Mr. LEISERSON. Manager?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. For how long?

Mr. CARPENTER. Five years.

Mr. LEISERSON. From the time of its organization?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. When?

Mr. CARPENTER. April 1, last year.

Mr. LEISERSON. Of this year?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. Will you please tell what the purpose was of organizing the National Employment Exchange when you had charge of it?

Mr. CARPENTER. To obtain employment for skilled workmen, laborers, people seeking office positions, executives, and engineers.

Mr. LEISERSON. Will you please tell the commission just who was back of it and how it was organized, in order that they might understand the purpose of it?

Mr. CARPENTER. It was composed of about 29 of the leading men of this country: Mr. Otto T. Bannard was president; John R. McArthur was vice president; a fellow named Wahrburg, treasurer; Eugene H. Outerbridge, secretary; Mr. Jacob H. Schiff was one of the directors; Mr. Francis L. Hine; Robert W. De Forrest; and L. V. Loree.

Mr. LEISERSON. How did they come to be interested in the proposition of establishing a labor exchange?

Mr. CARPENTER. It was established at the suggestion of Mr. Schiff. He had an investigation made of the employment offices and the need of such an exchange, which was made by Mr. Edward T. Devine, of the Charity Organization Society. The outcome of that investigation was the formation of the National Employment Exchange.

Mr. LEISERSON. Will you tell the commission the reasons which led you to believe that such an exchange was necessary in the city of New York or in the Nation?

Mr. CARPENTER. There had been a great deal of comment as to the way many of the ordinary private agencies had been conducted, and they thought they would be able to improve matters if they went into this field.

Mr. LEISERSON. The investigation, then, so far as you know, showed that the private agencies, private employment agencies, were not meeting the situation?

Mr. CARPENTER. Well, I suppose that was the result.

Mr. LEISERSON. Do you know whether Dr. Devine reported to that effect?

Mr. CARPENTER. He issued a book. I don't just recall. It was quite a lengthy report, and he seemed to think that there was a great need of an institution such as the National Employment Exchange.

Mr. LEISERSON. When you took charge of this work you thought also there was such a need for such an institution?

Mr. CARPENTER. I had not gone into it at that time when they asked me to take charge of it. I had been in the contracting business prior to that time, and my principal work was building railroads. I had conducted such work in various States—Iowa, Illinois, Virginia, West Virginia, Indiana—and, of

course, I came in contact with most of the employment offices in obtaining men for my work, and they thought I was fitted for conducting the exchange on account of that experience.

Mr. LEISERSON. And on that experience did you think the private employment agencies were meeting the need in regard to supplying labor to employers?

Mr. CARPENTER. They did not always meet our need, and at that time, of course, I was a little doubtful as to whether they were conducting the agencies properly or not. After I got into the business I found that it was not always possible to obtain men.

Mr. LEISERSON. As a result of your five years' experience in charge of this exchange, do you think that the ordinary private agency, aside from your own, are meeting the situation in regard to employment?

Mr. CARPENTER. They are doing a great deal of good, there is no question about that. There are many of the agencies that are run by unscrupulous people, and they should be put out of business, in my opinion; but I think that any honest agency that is conducted properly should be encouraged to keep in the field.

Mr. LEISERSON. Do you think it is possible, leaving it in private hands—leaving this business in private hands—for them to properly take care of the whole field of bringing employer and workman together?

Mr. CARPENTER. I am not so familiar with the conditions in some of the larger cities as I am in New York City. I am somewhat familiar with Pittsburgh and Chicago and Omaha and in the Virginias.

Mr. LEISERSON. Tell us what you know, from your own experience, wherever it may have been.

Mr. CARPENTER. In most of the places there seem to be sufficient agencies. The great trouble is that under normal conditions you are unable to get men. That was the experience with the National Employment Exchange. We had very little trouble in obtaining orders for men during normal conditions. Our great trouble then was to obtain the men to fill our orders. Under conditions as they exist now the trouble is to get the orders. There are plenty of men to be had.

Mr. LEISERSON. From your experience with the National Employment Exchange, was it your idea that this exchange was to supplant the private agencies?

Mr. CARPENTER. Oh, no; we had not any idea of putting the private agencies out of business; that was not the idea of the exchange at all. It was just another idea—aid—that could be put on a larger basis. That is what the directors hoped to do. In fact, they hoped to have a network through the United States of offices.

Mr. LEISERSON. You thought there was not enough connection between the private offices run on the competitive basis, and the thing that was necessary was the large national exchange to cover the country?

Mr. CARPENTER. Yes, sir. That is what they had in mind when the exchange was organized, as I understood it.

Mr. LEISERSON. Then, is the result of your experience that the bigger the scale on which the business is run the more effectively it can get the results desired?

Mr. CARPENTER. Well, I think if there were a system of offices throughout the United States one office would benefit the other.

Mr. LEISERSON. Do you think necessarily that some must be under one head, or by getting competing employment agencies to cooperate?

Mr. CARPENTER. I think you ought to have competition. As I stated before, under normal conditions men are very hard to obtain, and one office located in any large city could not possibly meet the situation.

Mr. LEISERSON. If you have many employment agencies, aren't you against the same difficulty that you are when you have no agencies—the men go to one office and the demand for men may be in another office?

Mr. CARPENTER. There is such a thing as having too many agencies, where it would be impossible for a man to know just where, just what agency for him to go to, to obtain work. If the National Employment Exchange was left in the field alone, we would have to have several offices in the city of New York to handle the situation right here. One office can not ship out as a rule more than one gang of men a day. As soon as you have two or three gangs going out of the same office the men become confused, and after they have been assigned to one job they talk to the men of another gang, and they want to switch and go with the other men. It causes a great deal of confusion. For

that reason we ought to be able to combine more than one office in New York, so we could put out more than one gang.

Mr. LEISEN. But your idea is that several offices are needed merely to help the work, but that these offices are better under one management than under different managements?

Mr. CARPENTER. I would not say that. There are some men that we have dealt with we did not want to deal with again. Some employers, our relations were not satisfactory, and just because we were dissatisfied with our relations with them is no reason why they should not have an opportunity to obtain men through some other house. The same with the workmen. Sometimes the workmen did not treat us in the manner we thought they should, and, of course, naturally we declined to find employment for them the second or third time, and those men should be privileged to go to some other place and find work.

Mr. LEISEN. Can you tell us what the results of the five years' experience of the National Employment Exchange was? I mean, do you consider that it succeeded in doing what it started out to do?

Mr. CARPENTER. Well, no; it did not.

Mr. LEISEN. Well, will you tell us the reasons?

Mr. CARPENTER. Our main reason, we could not obtain men when we had the orders. I am speaking now exclusively of the manual-labor branch. I take it you are not so interested in the office positions.

Mr. LEISEN. We are interested in all of them.

Mr. CARPENTER. Well, occupations must be taken up separately. I don't believe the situation pertaining to office people would pertain to laborers.

Mr. LEISEN. You wish to speak of manual labor?

Mr. CARPENTER. Yes.

Mr. LEISEN. Your main reason for not succeeding there was that you could not get enough men during the ordinary prosperous times?

Mr. CARPENTER. To fill our orders; yes.

Mr. LEISEN. Did you make any effort to go out and get the men?

Mr. CARPENTER. Yes; we made considerable effort. We canvassed the parks, and we had cards—what we called throw aways—and we advertised in many of the foreign papers, and even sent out men to Elizabeth and Passaic and around other near-by towns, where we heard there were men out of work.

Mr. LEISEN. Will you explain to the commission just what the character of the laborers wanted were—just what kind they were—railroad or—

Mr. CARPENTER (interrupting). Well, we wanted them for factories and foundries and railroad construction, State road work, canal work, etc.

Mr. LEISEN. Practically, that's true for all the five years of your experience, that you could not get enough men?

Mr. CARPENTER. Absolutely; yes.

Mr. LEISEN. What do you say was the reason for that shortage of labor?

Mr. CARPENTER. Well, there didn't seem to be enough men to fill the positions; that is, enough men who were willing to work. There were plenty of men around the parks idle, but they did not want work.

Mr. LEISEN. Was there anything in the conditions of employment, do you think, that made men feel that they did not want to work at that kind of work? Were the wages low, for example?

Mr. CARPENTER. No; the wages were always very good.

Mr. LEISEN. What were the wages?

Mr. CARPENTER. Well, it would vary, anyway, from \$1.60 for 8 hours to \$2 for 10 hours, sometimes.

Mr. LEISEN. What would be the wage during the summer time when this demand is great—what would be the normal wage in the city for common laborers?

Mr. CARPENTER. Well, they always paid a little more in the city. We did not have many orders from the city.

Mr. LEISEN. Do you think that had anything to do with it—if they were paying 25 cents an hour here, the men would not go for something less?

Mr. CARPENTER. Not at all.

Mr. LEISEN. You think that had something to do with it?

Mr. CARPENTER. No.

Mr. LEISEN. How about the conditions of housing or board, where the men would get their board? Did that have anything to do with the men not wanting that work?

Mr. CARPENTER. Well, in some cases; yes. We always paid particular attention to that. My several years' experience in the contracting business, I knew

about what the men ought to have in the way of camps, and I would always instruct our men who took these men to destination to look into the camps, and if they were not suitable to make recommendations to the foremen or the superintendent or the owner.

Mr. LEISERSON. Did you have a regular system of inspection of the places of employment?

Mr. CARPENTER. Only that the man who was to take these men to the destination was instructed to look into the camps and see if they were clean and they had blankets and stoves and things necessary.

Chairman WALSH. What were the orders about the equipment, the specific orders about the equipment of camps? What were the specific orders you gave about the standard equipment of camps?

Mr. CARPENTER. There wasn't any specific orders, particularly, other than that the man was instructed to see that they had suitable living quarters, sleeping, and also cooking utensils and accommodations that would encourage them to remain on the work.

Chairman WALSH. Was this before or after the men were hired?

Mr. CARPENTER. This was at the time the men were taken right to the camp. Our men often would go with the foreman right at the time, and go to a town and buy blankets, or things that he thought were necessary to make the men comfortable.

Chairman WALSH. He made the company do that, did you say?

Mr. CARPENTER. We could not make the company do that, but we told them it was advisable for them to do it; it was to their interest to do it.

Mr. LEISERSON. Was that done in many cases?

Mr. CARPENTER. Was it done?

Mr. LEISERSON. Yes?

Mr. CARPENTER. Oh, many places; yes, sir.

Mr. LEISERSON. Were there cases in which your pilot had taken men and found the camps unfit for use?

Mr. CARPENTER. Well, not so many. We were rather particular as to whom we took orders from.

Mr. LEISERSON. You had no set standard that you required; for instance, so many cubic feet for each sleeping party?

Mr. CARPENTER. No.

Mr. LEISERSON. But it was just the general opinion of your pilot?

Mr. CARPENTER. Yes.

Chairman WALSH. How about the food?

Mr. LEISERSON. Yes; any requirement about the food?

Mr. CARPENTER. Well, about the food, if we would learn that the commissary prices were high, we would take that up with the employers, and tell them that they ought to reduce the prices of food, otherwise the men probably would not remain there. We were anxious, of course, that all men we furnished should remain on the job.

Chairman WALSH. Upon what do you base your conclusion as to the reasonableness of the charge for food in the commissary?

Mr. CARPENTER. Well, we have a general idea as to what commissary supplies cost. It would depend a great deal on the distance from a railroad station. Some places they would be charging 10 and 15 cents for a loaf of bread, where we would object to that and tell them they ought to reduce that price.

Mr. LEISERSON. Were your objections effective in those cases?

Mr. CARPENTER. In many cases; yes.

Mr. LEISERSON. Were you in a position to learn of the majority of cases of extortionate prices?

Mr. CARPENTER. We encouraged the men we furnished to write us and let us know the conditions after they arrived there.

Mr. LEISERSON. Have you any idea the total amount of deductions that was made from the men's pay for board and lodging?

Mr. CARPENTER. Oh, that would vary. Some men would eat more than others.

Mr. LEISERSON. Well, for the \$1.60 a day man, on the average, how much would he have to pay for board and lodging?

Mr. CARPENTER. Well, you take with the Italians, they live very cheaply. My experience is that their deductions would average somewhere around about \$9 a month.

Mr. LEISERSON. They boarded themselves?

Mr. CARPENTER. Yes; all these men boarded themselves.

Mr. LEISELSON. There are no cases where the company furnishes the board and deducts the amount?

Mr. CARPENTER. Yes; in some cases, but not very many. Most of the foreigners furnished by us preferred to board themselves—preferred their own way of cooking and their own cooking. They can live much cheaper that way.

Chairman WALSH. Where did they get the foreigners?

Mr. LEISELSON. Where did you get the foreigners and Italians?

Mr. CARPENTER. We had an office at 56 Cooper Square. That is still located there, and that is just on the outskirts of the foreign settlement in New York City—that is, one section—the East Side section.

Chairman WALSH. Did you have somebody in that office that made a special effort to get these men when they came in or when they were located there?

Mr. CARPENTER. Yes; we had interpreters at all times.

Chairman WALSH. And they solicited them, did they?

Mr. CARPENTER. Yes; sometimes we would send men over to where they resided, and to coffee houses where they would hang out during the daytime, and offer what work we had to them.

Chairman WALSH. Did you have any special persons with whom you connected with them of their own nationality? You had an organization of your own that kept in touch with the leaders of the foreign colonies?

Mr. CARPENTER. Well, there were not any leaders of the class we furnished, particularly. Our men were——

Chairman WALSH (interrupting). Who did you connect with in the foreign colony to find out what men you could get to come?

Mr. CARPENTER. The men we hired as solicitors for us were men from their own nationality. They would go over to the East Side and if they saw three or four men standing talking that looked like laborers they would approach them and ask them if they did not want work. Sometimes they would and sometimes they would not want it.

Chairman WALSH. Let me ask you. You mentioned about the Italians that board or live cheaply and that live together. Would you send them out to a specific place in a group if possible?

Mr. CARPENTER. Yes; but we did not furnish many Italians.

Chairman WALSH. What other nationalities were there?

Mr. CARPENTER. Polish, Russians. We furnished more Polish and Russians than any other nationalities.

Chairman WALSH. Was there a desire on the part of any particular industry for any particular nationalities?

Mr. CARPENTER. Well, they would want a foreign nationality, such as Slavish people or Italians. Italians, as a rule, are very hard to get, and the agencies seem unable to get Italians any more.

Chairman WALSH. Why are they hard to get?

Mr. CARPENTER. They go out on work on their own accord. They don't patronize the agencies as much as they used to.

Chairman WALSH. What particular industry, for instance, would you say, favored any particular nationality? Have you observed that? Was there any particular industry, for instance, that would rather have Russians, and others would rather have Italians, and others rather have Slavs?

Mr. CARPENTER. No particular industry. Employers have their ideas as to the nationality they like. Some prefer Hungarian, some Polish, some Russians, some Italians.

Chairman WALSH. What industry would you say would prefer Hungarians? Just give me an idea?

Mr. CARPENTER. Foundries and factories prefer Hungarians; and railroad construction, why, they prefer Italians or the Slavish.

Chairman WALSH. And are you so notified?

Mr. CARPENTER. Yes; as a rule they would specify them; as a rule give you two or three different nationalities that they would prefer.

Chairman WALSH. You say that they did prefer foreign people? Why did they prefer foreign people?

Mr. CARPENTER. Well, the foreign people would do the kind of work they wanted done, whereas the Americans won't do that sort of work any more. English-speaking people don't care to handle the pick and shovel any more. They seem to obtain a higher grade of work.

Mr. LEISELSON. You maintain three offices for manual labor?

Mr. CARPENTER. No; maintain two.

Mr. LEISERSON. Manual labor, regular employment offices, and you have runners to get men to come to the offices and register?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. And what proportion of the total business that you handled for manual labor were foreigners, and what proportion English-speaking American?

Mr. CARPENTER. Oh, I would say that about 80 per cent were foreigners.

Mr. LEISERSON. Now what fees do you charge those men?

Mr. CARPENTER. We charge the men \$2.

Mr. LEISERSON. For a common-labor job?

Mr. CARPENTER. For a common-labor job. That was always deducted from their wages. In some cases the employers, when men were hard to get, the employer would say: "Don't ask any deduction from the men. I will pay that fee."

Commissioner O'CONNELL. Does the employer pay, too?

Mr. LEISERSON. You ordinarily require the employer to pay a fee besides——

Mr. CARPENTER (interrupting). We did not the first three years we were in business, but a year ago I asked the employers to pay a fee in addition to the workmen. We were unable to conduct the exchange and do sufficient business to make it self-supporting with the one fee.

Mr. LEISERSON. So that made \$4 for a common-labor job?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. Required from the employer and the employee?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. Do you think the fee has anything to do with the fact that you could not get enough men?

Mr. CARPENTER. Oh, no, not at all. All the laborers pay a fee, and they made no objections to that. We did not have any trouble on that.

Mr. LEISERSON. Have you ever found that State free employment offices, that give this service free, have any difficulty in getting the laborers?

Mr. CARPENTER. Why, they seem to have as much difficulty as agencies charging a fee.

Mr. LEISERSON. They do?

Mr. CARPENTER. I think so, as nearly as I can learn.

Mr. LEISERSON. Did you have much difficulty in getting the transportation charges for the men to places from New York?

Mr. CARPENTER. No; invariably the employers would advance the fare; in some cases they would deduct it and in some cases they would say if the men remained 60 days they would not make any deduction. That was usually the case.

Mr. LEISERSON. You think, then, that if a national system of exchanges were established, such as was your plan, or one by the Government, there would not be much difficulty in getting people who actually wanted to go to work—that is, manual labor, to the places of employment?

Mr. CARPENTER. It would depend on the distance.

Mr. LEISERSON. Well, how far?

Mr. CARPENTER. Well, where the fare gets much over \$10 the employers are not inclined to take the chance; there have been too many cases where the men have not remained at work, but go on farther to other destinations, and they had been out the fare. They do not want to take that chance.

Mr. LEISERSON. Did you ever make any efforts to see that the men did not abuse that privilege?

Mr. CARPENTER. Oh, yes; we tried in every way to select the men who are really sincere in wanting that particular work.

Mr. LEISERSON. And how successful were you in that?

Mr. CARPENTER. We were quite successful. Along when we first opened we lost quite a number of fees, but toward the last we did not lose many. I think we shipped about—I don't recall the exact number—but I think we shipped out to the Youngstown Sheet & Tube Co., Youngstown, Ohio, where the fare was something like 10 or 11 dollars, something over a thousand men—twelve hundred men. I don't think out of the twelve hundred men there were over 30 that did not go to work.

Mr. LEISERSON. You think, then, that if the office is managed by an efficient, experienced man, he can practically take care of the transportation proposition—getting the fare from the employer?

Mr. CARPENTER. Well, that is pretty hard to tell sometimes.

Mr. LEISELSON. But up to about \$10 you think there would not be much difficulty, and if the rates could be lowered for transporting workmen in some way, so that \$10 might take a man, for instance, to Chicago, or farther, might it not—

Mr. CARPENTER. Yes.

Mr. LEISELSON. So that for a distance of almost a thousand miles it would be possible, without advancing the transportation directly through your agency or through the Government, to get men distributed by the employer advancing the fare?

Mr. CARPENTER. Well, it would cost up to \$16 apiece to get them to Chicago.

Mr. LEISELSON. It does now.

Mr. CARPENTER. About \$16, I think. May not be able to get that rate. I don't know, or don't just recall.

Mr. LEISELSON. You get no reduced rates for shipping large numbers of workmen?

Mr. CARPENTER. Yes; you get a party rate of 10; that is all; or in some cases you can buy mileage and get 2 cents a mile.

Mr. LEISELSON. Would you think it advisable for the Government to advance transportation for laborers in such cases?

Mr. CARPENTER. Well, that requires—I would not want to express myself on that.

Mr. LEISELSON. Do you think it is best for an employment exchange to be organized on a national basis, or a philanthropic agency, such as you were connected with? That is, do you think the experience you have had with it so far is conclusive that it can not be done, or, rather, that there were some things in it that merely prevented that particular experiment succeeding?

Mr. CARPENTER. I have concluded it can not be done and made self-supporting yet.

Mr. LEISELSON. Then, your conclusion would be that the general public would have to support an institution of that kind?

Mr. CARPENTER. Yes.

Mr. LEISELSON. Do you think it is a desirable thing, or do you think it is advisable for the Government to incur that expense?

Mr. CARPENTER. Well, I think that the Government ought to control the agencies—any agency doing an interstate business—and I am rather inclined to think the Government should establish offices; but I should not advise that there should be a network all over the United States to begin with. I think you should go slow about it.

Mr. LEISELSON. Well, let me get your point. You think the organization of the labor market on a national basis, bringing the man and the job together from all parts of the country, can not be done and made self-supporting?

Mr. CARPENTER. No; I don't think so.

Mr. LEISELSON. That is, that would apply to philanthropic as well as private agencies?

Mr. CARPENTER. Yes, sir.

Mr. LEISELSON. That it can not be done properly as long as it has to support itself?

Mr. CARPENTER. That is right. There is only about six months in the year to do the work.

Mr. LEISELSON. Yes; now, then, what we would like to know is, whether you think it is advisable for the Government to support it—whether the service is worth it.

Mr. CARPENTER. I don't know. I would like—

Mr. LEISELSON (interrupting). Well, what do you think is accomplished by bringing the man and the job together? Is there any great saving in wealth to the country?

Mr. CARPENTER. They might facilitate matters and shorten the time, but I think eventually all the work—all the jobs are filled.

Mr. LEISELSON. Would an agency like those eliminate suffering on the part of the unemployed, say for a week or any appreciable time, if you get the man to the job faster?

Mr. CARPENTER. Yes; I think it would.

Mr. LEISELSON. Wouldn't that in itself be a very desirable thing for the Government to spend money for?

Mr. CARPENTER. There is no question but what it would be a help.

Mr. LEISELSON. Well, wouldn't the supplying of men to employers, two days or three days earlier than the men can find it themselves, be a saving to the production of the country?

Mr. CARPENTER. Naturally.

Mr. LEISERSON. So, wouldn't you say, then, that whatever expense the Government might go to would be justified from the results that would come to both sides?

Mr. CARPENTER. Depends upon what the expense would be.

Mr. LEISERSON. What would you consider a reasonable expenditure?

Mr. CARPENTER. I am not in a position to express myself on that.

Mr. LEISERSON. Did you get a copy of the plan of the commission—

Mr. CARPENTER (interrupting). Yes.

Mr. LEISERSON. Have you any suggestion or criticisms to make in regard to that?

Mr. CARPENTER. I think the plan a very good one, but I might make one or two suggestions. I rather lean to the New York State law. I think that is a very good law, if enforced.

Mr. LEISERSON. How does this differ from the New York State law?

Mr. CARPENTER. Why, it is practically the same, except you have left out some of the requirements that the State law enforces, or asks that the agencies conduct their business under.

Mr. LEISERSON. You would say that your experience would make you inclined to support a plan of organization for the labor market such as is proposed here?

Mr. CARPENTER. Yes; I think so; if you do not eliminate the private agencies.

Mr. LEISERSON. You don't think the private agency should be eliminated, but should be regulated in accordance with—

Mr. CARPENTER (interrupting). That is absolutely the question in my mind, is whether the Government offices would be successful.

Mr. LEISERSON. What are the reasons you think the Government office might not be as successful as a private or philanthropic office?

Mr. CARPENTER. Well, there is a good deal of politics in this country—favoritism, you know.

Mr. LEISERSON. Don't you think the creation of an advisory council in this plan, which would have the same control in the examining of candidates as a civil service examination—have the same control—that a civil service examination would secure, that that would tend to eliminate politics? Did you give any attention to that advisory council provision?

Mr. CARPENTER. As to the men who were to take charge of the branches, you mean?

Mr. LEISERSON. No; the director of the plan of labor councils—

Mr. CARPENTER (interrupting). Yes, sir.

Mr. LEISERSON. Would have an advisory council composed of an equal number of representatives of employers and of workmen. This council would act as an examining board for the Civil Service Commission. Don't you think that kind of a direct relation of the interests involved of the employers and the workmen, united with the selection of the office force in that way, that that would tend to eliminate politics?

Mr. CARPENTER. Well, it would have a tendency to do that.

Mr. LEISERSON. Have you ever heard of cases where that was done in Europe or in this country?

Mr. CARPENTER. No; I have not. The State, for instance, in conducting labor exchanges—my opinion would be that if there was quite a shortage of men, and one certain contractor who has a stand in with the officials of the State wanted 100 men, he would have a preference over some other contractor who did not have as much influence.

Mr. LEISERSON. You think he would?

Mr. CARPENTER. I think he would; yes.

Mr. LEISERSON. Have you ever known cases of employment agents—State employment agencies—where that happened?

Mr. CARPENTER. I have not known any State employment agencies.

Mr. LEISERSON. And you merely deduce that as a logical thing that might happen?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. That is a thing that happens now with private employment agencies—they favor whomever they want to?

Mr. CARPENTER. Yes, sir.

Mr. LEISERSON. And you know of no cases of public employment agency where they were not absolutely impartial?

Mr. CARPENTER. No; I don't know of any public employment agents that furnish laborers other than the Government office there at the Battery.

Mr. LEISERSON. You were not acquainted with Wisconsin or Illinois employment offices?

Mr. CARPENTER. Only in a general way; I have read their reports.

Mr. LEISERSON. You don't know that they are run impartially and that no preference is given to one class of employers or employees?

Mr. CARPENTER. No, sir; I have not talked to anybody who has any information.

Mr. LEISERSON. The commission would like to have you write any suggestions in detail in regard to this plan, if you will, please.

Mr. CARPENTER. Yes, sir.

Commissioner LENNON. What effect does the competency and habits have upon the retention in a job?

Mr. CARPENTER. Well, as to the——

Commissioner LENNON. As to the people you send out through those agencies?

Mr. CARPENTER. It has every effect on them.

Commissioner LENNON. Is this incompetency, as it may be called in some instance, a result of habit or lack of opportunity to children to learn to do something effectively? Have you studied men to any extent, and women, that you have dealt with?

Mr. CARPENTER. Naturally, I have observed them. I have employed many men myself, and there are some men who are hard workers, industrious, and want to work, and there are many others who will not work, and it is pretty hard to attribute why they won't work or why they are held idle to any particular thing. It seems a disease. No matter what penalty you may inflict, they will not do differently. The same as a burglar; he might serve five or six years, and when he comes out he goes right back to burglarizing again, as a rule. If you put a man on a work farm and on account of idleness, he would probably still remain idle. I don't think it could be corrected. You might save some men before the disease gets hold of them, but I think idleness is a disease that after it once gets hold of a man it is pretty hard to get it out.

Commissioner LENNON. Can not the relief from this be applied when they are young, when they are in their formative condition, so as to make boys come into manhood competent to do something?

Mr. CARPENTER. Well, I think that we ought to have more trade schools than we have; teach a man a trade so that he will have something higher to look forward to than the ordinary laboring chap.

Commissioner LENNON. What are the habits that, to you, seem to destroy the most of men's ability to hold a job?

Mr. CARPENTER. Liquor is one.

Commissioner LENNON. That is all I have.

Commissioner GARRETSON. You stated, Mr. Carpenter, that the difficulty that confronts you strongly under normal conditions is that you could not get the men.

Mr. CARPENTER. Yes, sir.

Commissioner GARRETSON. Did the commercial agencies get any greater proportion of men and what was desired from them than you were able to get?

Mr. CARPENTER. I don't think so; I think we got our share of the men.

Commissioner GARRETSON. It was simply under those conditions, man's shortage?

Mr. CARPENTER. Yes, sir.

Commissioner GARRETSON. It was not on account of any feeling of any kind toward your agency on the part of the men?

Mr. CARPENTER. No; I don't think so.

Commissioner GARRETSON. You made the statement that the American does not care to handle the pick and shovel any more. Is it because the American does not care to handle the pick and shovel any more, or is it because a cheaper grade of men have kept the wage down until the American can not live to standards that are set by the pick and shovel men without lowering their standard? You speak of this or that race living cheaply. To compete with them on the pick and shovel, would not the American have to come to a similar standard?

Mr. CARPENTER. I don't think so. I think the wages have been pretty good in construction camps. It depends on the line of business. In some factories they do not pay very much, but the same Americans will work as porters or drivers in the city, and they won't make as much money as laborers make.

Commissioner GARRETSON. But they probably have a continuity of the service in the lower grade of pay that gives them a far larger earning per year?

Mr. CARPENTER. Yes, sir.

Commissioner GARRETSON. Than the higher occasional man?

Mr. CARPENTER. Yes, sir.

Commissioner GARRETSON. Would get elsewhere?

Mr. CARPENTER. That is probably true. They probably have work the year-around with the lower wage, but if they go out on the construction work they have about six or seven months' work.

Commissioner GARRETSON. We will take one of the commonest pick and shovel pursuits, the section men, the American has almost wholly disappeared from that, hasn't he?

Mr. CARPENTER. Yes, sir.

Commissioner GARRETSON. That is all the year around work?

Mr. CARPENTER. Yes, sir; that is, as a rule, all the year around, with the exception of the extra gang.

Commissioner GARRETSON. When an extra gang on a railroad, for instance, I am using the trade terms—

Mr. CARPENTER. I understand.

Commissioner GARRETSON. Service gang or construction gang, for any purpose, are being paid what you quote as a reasonable wage, working half a mile from them would be a class of section men that are paid far less, wouldn't there?

Mr. CARPENTER. Yes; they do not pay the section men quite as much—the regular section men—as they do the extra gangs.

Commissioner GARRETSON. There is no instance, in fact, where they do, is there, within your knowledge?

Mr. CARPENTER. No, sir; not within my knowledge.

Commissioner GARRETSON. Does your agency employ any runners direct to the immigration stations?

Mr. CARPENTER. No, sir; the law does not permit us to.

Commissioner GARRETSON. That is all, Mr. Carpenter.

Chairman WALSH. Call your next.

TESTIMONY OF MR. GEORGE A. MARR.

Mr. LEISERSON. Will you explain what the Lake Carriers' Association is, please? First state your name and your position.

Mr. MARR. George A Marr, secretary of the Lake Carriers' Association.

Mr. LEISERSON. Will you explain what the Lake Carriers' Association is?

Mr. MARR. May I be permitted to read? I prepared myself with a short paper in connection with this matter, covering the point as fully as I could, and I would be glad if I may be permitted to read it.

Mr. LEISERSON. Yes.

Mr. MARR (reading):

"The Lake Carriers' Association is an association of vessel owners and vessel managers operating vessels upon the Great Lakes, principally such vessels as carry the three chief articles of commerce upon those waters—iron ore, coal, and grain. In addition there are a few vessels, principally in one fleet, engaged in the carriage of package freight. None of the vessels in the association is engaged in passenger traffic.

"The association has existed in one form or another since 1886. At that time there was organized under the name of the Lake Carriers' Association an organization consisting principally of vessel owners having their headquarters at Buffalo. From then until 1893 there existed some temporary organizations at Buffalo, Cleveland, and a number of other ports on the Great Lakes. In 1893 they came together into the more general present organization and continued under a loose agreement from year to year until 1903, when the association was incorporated under the laws of West Virginia.

"The reason for incorporating was to provide for the continuity of membership. Under the arrangement previously existing the membership was from year to year, and each season before the opening of navigation it was necessary to ascertain from each manager or vessel owner whether he desired to continue in the association for the ensuing year. It was felt that the best means of making the membership continuous and at the same time providing for the withdrawal at any time of any member was the incorporation of the association, and while in form it is incorporated as a corporation for profit, in reality it is not. The articles of the association gave the general objects and purposes to

establish and maintain and procure the establishment and maintenance of aids to navigation and improve and secure the improvement of channels, docks, wharves, loading and unloading and terminal facilities, and, among other things, establish and maintain a place for the convenient securing of seamen for vessels on the Great Lakes, their connecting and tributary waters, and establish and maintain, by contract or otherwise, such amicable relations between employers and employees as will avoid the public injury that would result from lockouts or strikes in the lake carrying service, and generally to provide for the prompt and amicable adjustments of matters affecting shipping and the interest of vessel owners of the Great Lakes and their connecting and tributary waters.

"During the years that the present organization and its predecessors have been in existence the traffic of the canals at Sault Ste. Marie has grown from four and a half million tons in 1886 to nearly 80,000,000 tons during the season of 1913. The size of the vessels carrying this traffic has increased from 300 feet in 1886, with a carrying capacity of about 3,500 tons, to a length of over 600 feet, with a carrying capacity in a single cargo of 14,000 tons on normal draft in 1914. The rapid and wonderful increase in the size of vessels in the traffic upon the Lakes during these years has made necessary the continued improvements of channels, terminal facilities, and loading and unloading facilities, as well as the establishment of many aids to navigation, such as lighthouses, ranges, gas buoys, spar buoys, and fog signals, and to the accomplishment of these things for the better handling of the immense traffic of the Great Lakes, which contribute in so large a degree to the prosperity of the whole country, the attention of the Lake Carriers' Association has been most earnestly directed. Through the efforts of our association, at least, to a great extent, channels have been deepened, lighthouses and other aids to navigation have been established, with the result that to-day a ton of coal is carried from Ohio to Duluth or Milwaukee for 25 cents or 30 cents, and the carrying charge on a ton of iron ore from Duluth to any of the lake carrying ports, including Buffalo, a distance of about a thousand miles, has been reduced from \$2.11 in 1887 to 50 cents in 1914.

"Improvements which have been secured through the efforts or at the expense of the Lake Carriers' Association have not been confined to the advantage of the membership exclusively, but the benefit has been participated in by all vessels on the Lakes; as, for instance, for many years the Lake Carriers' Association maintained a lightship at an annual expense of several thousands of dollars at South East Shoal in Lake Erie. They also maintained at an expense of several thousand dollars annually a system of range lights and buoys marking the channels in the lower Detroit River. Later the expense of these aids to navigation was participated in by the United States Government, and finally a few years ago were taken over by the Canadian Government, the channels which were thus marked being in Canadian waters. These aids to navigation marked the channels for vessels not in the membership of the association as well as for those who contributed to the expense. Years ago, through abnormal weather conditions, it was necessary to force at a great expense through the ice in the Detroit River, and the demands of commerce required that navigation start before the warm weather had unlocked the channels.

"A similar action was necessary a few years ago, when ice blocked the St. Marys River late in the spring and the Northwest was in desperate need of fuel. There were large quantities upon the docks and in the cargo holds of the vessels in lower Lake ports. Many times in the fall of the year, when ordinarily lightships and gas buoys were to have been taken in early by the Government, in advance of natural close of navigation as assurances against possible loss or difficulties, our association has guaranteed to bring these aids to navigation safely into port if they were left out until the necessity for them had passed, when belated vessels with their final cargoes of grain had made the closing trips of the season.

"There have also been maintained, during all these years, assembly rooms at the various ports for the use of seamen awaiting employment upon the vessels and for the convenience of the officers of the vessels in seeking men for their service. While it is undoubtedly of interest to the commission to know how the Lake Carriers' Association is constituted and the object for which it is formed, I understand that it is upon the latter phase of their interest that I am called upon to address the commission.

"The association has at the present time a membership of 450 vessels under about 50 managements. The gross registered tonnage of these vessels is approximately 2,000,000 tons, and when all in operation it would require at one

time about 12,000 men to man. With the natural tendency of the men of the lower rating to transfer from ship to ship, it may be said that there is on an average of two to three thousand men ashore at all times, awaiting opportunities for employment. This, therefore, gives us a normal average during the navigation season of approximately 15,000 men engaged in navigation business upon the vessels of the Lake Carriers' Association. It has, therefore, been considered from time immemorial that these men should have places of rendezvous in order that the officers of the vessels might, without scouring docks or streets of the city, find men competent to perform the duties of seamen. For the purpose of securing efficiency among the men, there has always been an effort upon the part of the vessel owners to standardize the work on board the ships and upon the assurance of the various unions of the men employed upon the ships that the standard of efficiency would be raised and that competent men could be furnished, contracts were entered into with these organizations to supply the men required for service upon the vessels of the association.

"It is unnecessary for me to go into the details of these relations, some of which antedated my connection with the association, but I will submit to the committee herewith a pamphlet which deals with this phase of the matter and which explains more fully than I can in an address to you the causes which led to the declaration of the present principle of the association in 1908. It is sufficient to say that during the seven or eight years under which the vessels were operated under before-mentioned contracts the service was so unsatisfactory that the association felt that it was necessary to adopt the policy it did and in the spring of 1908 adopted the following resolution:

"The experience of the shipowners, managers, and licensed officers for the past years has demonstrated the necessity of what is referred to as the open-shop principle, in order to give that control and direction of the ships which is required for the equal good of the owner, the employee of the ships, and the defendant trade. And so it is resolved:

"1. That the owners of ships on the Great Lakes do now declare that the open-shop principle be adopted and adhered to on our ships.

"2. That the Lake Carriers' Association stands for the foregoing principle.

"3. That the matter be referred to the executive committee with full power to act and carry out this principle.

"4. That it shall be the aim of the committee in the means they shall adopt to recognize a fair and equitable rate of wages, to insist on such regulations as shall promote the comfort and well-being of the employees, shall put the discipline of the ship in the hands of the executive officers and tendering liberal appropriate wages and conditions, requiring in response appropriate, diligent, and prompt service from the members of the crew.

"5. And at this meeting, representing 91 per cent of the tonnage of the association, as a definite and specific support to the committee it is voted to adhere to and observe this action, referring also any and all special cases to the committee."

Mr. LEISENBERG. Leave that with the commission, will you, please?

Mr. MARR. I have brought here, as requested, a great many of the forms that—all of the forms of our work, and I will leave all of them with the commission. I think, as a matter of fact, they are all nearly self-explanatory. [Reading:]

"During the existence of the contracts and while the unions have supplied the men for our vessels, little necessity existed for the maintenance of assembly rooms on the part of the association, our commissioners calling upon the union headquarters for men and many times the officers of the vessels applying directly to the union officials to recruit their crews. Upon the establishment of the present policy, however, the assembly rooms of the Lake Carriers' Association were rehabilitated, and the men were given clean, light, cheerful, well-ventilated places of assemblage while awaiting employment upon the vessels. During the season of navigation these assembly rooms are open to all persons desiring to make use of them for the purposes stated, and this without regard to their affiliation or nonaffiliation with any other organization of any kind. These assembly rooms are maintained by the Lake Carriers' Association at its own expense, and no charge whatever is made to the men using these rooms as places of rendezvous during the season of navigation; nor is any charge made to any vessel nor to any officer of a vessel nor to the owner for the services of these assembly rooms. The rooms are maintained by the vessel owners for their own use and convenience and the use and convenience of the officers of their ships, and for the accommodation of the men desiring employment upon

the ships of the association. The Lake Carriers' Association, as such, is not an employer of labor, and in no sense of the term are these assembly rooms employment offices, nor is our commissioner an employment agent. When men are required to fill out the crew of any vessels, the officers of the vessels come to these assembly rooms and make their selection of the men they desire to employ, or if, as is sometimes the case, they telephone to our commissioner to send them certain men, our commissioner sends the men desired, but in no way engages the men for the vessel."

Mr. LEISEN. Will you explain what the commissioner is?

Mr. MARR. The commissioner is the employee of the Lake Carriers' Association in charge of the rooms, having the care of the rooms, the maintenance of the order, and responding to the calls of the vessel men, the officers of the vessels.

Mr. MARR (reading):

"When men are called for by the vessel the commissioner gives to such men as are selected an identification card or card of recommendation, based upon the commissioner's knowledge of the man's competency and experience and without any discrimination as to the man's creed, color, nationality, or affiliation. No bargain is made by our commissioner as to the man's duties on board ship or the wages that should be paid him. He is not promised employment, nor is he in any manner engaged for service by the representative of the Lake Carriers' Association. If the man recommended to a vessel is not satisfactory to the officers thereof, they are at full liberty to decline his services, and, if they choose, may request that other men be sent; and this process may be repeated until the master or other officers of the vessel are satisfied or until the available supply of men is exhausted.

"For convenience and as well as promoting efficiency among the men and creating an incentive among them for better service and establishing a basis for promotion on shipboard, there was inaugurated in 1909 a system of registration. This system of registration embodied the issuance of certificates of competency to able and ordinary seamen, together with the issuance, in lieu of single discharges on single sheets readily subject to loss, but containing the same data of a continuous credential or record of service and discharges more commonly called a 'Discharge book,' in which are noted the names of the steamers on which a man has served, the capacity or rating in which he served, together with the dates of employment and discharge, and a notation as to the character of his service over the signature of the officer under whom he served. I may say, in passing, that in the column for 'Character of service' there is permitted to be entered only the word 'Good' or 'Fair,' as the character of the service may be best described, with no reference whatever to any misconduct of which the sailor may have been guilty."

I wish to add that this continuous credential is a matter of distinct pride with a great many of the sailors. [Reading:]

"This registration includes not only the advantages of continuous credential, a valuable asset in the securing of employment, but entitles the sailor to the use of the clubrooms maintained during the season of unemployment or season when navigation is closed. During that period, which extends from early in December until April, the assembly rooms are converted into clubrooms, together with a number of other clubrooms which are opened only during the winter season in cities where there is a population of sailors to justify their establishment. These assembly rooms or clubrooms are supplied with the standard magazines, ranging in character from the technical to the fiction and humorous, with daily papers, facilities for writing and receiving letters, and facilities for amusement, such as cards, checkers, chess, etc. Many of them are supplied with shower baths; all of them have Victrolas, with a circulating library of well-assorted records, consisting principally of higher class music. Some of the rooms have pool and billiard tables, and all are furnished comfortably and attractively and are kept in a clean, sanitary condition by a custodian. All of this is furnished to the men for the nominal charge of \$1 per year.

"While the Lake Carriers' Association would doubtless bear the whole expense of maintaining these clubrooms for the use of the men, it has been felt and demonstrated by experience that by the payment of the nominal fee the men would feel a proprietary interest in these assembly rooms and be saved any humiliation of accepting a charity. It also creates sense of independence in the use of these rooms, which is not embarrassing to the self-respect of the men. There are also included in the registration grades for master, chief

engineers, mates, and assistant engineers. The fees for registration of the officers are according to the grade of enrollment, from \$5 to \$2.50 per year. All of the funds accumulated from the registration fees are expended in the maintenance, improvement, and extension of the clubrooms for the men. There have during the past year been maintained 18 of these assembly rooms or clubrooms around the Great Lakes as follows:

"Licensed officers' assembly rooms at Buffalo; seamen's assembly rooms at Buffalo; assembly rooms at Conneaut; assembly rooms at Ashtabula; assembly rooms at Cleveland; licensed officers' assembly rooms at Cleveland; engineers' assembly rooms at Cleveland; seamen's assembly rooms at Toledo and Detroit; licensed officers' assembly rooms at Detroit; a general assembly room at Algonac, Mich.; separate seamen's and officers' assembly rooms at Marine City; officers' assembly rooms at Port Huron; seamen's assembly rooms at South Chicago, Chicago, Milwaukee, and Duluth.

"The average daily attendance of these assembly rooms during the past winter has ranged from 700 to 1,000 men.

"Last winter an experiment was tried in the establishment of night schools in the seamen's assembly rooms at Buffalo, Cleveland, Detroit, Marine City, and Duluth under the direction of instructors secured through the boards of education in the various cities. So successful were these schools that it is planned to enlarge the scope of them during the coming season. The average attendance at the various schools was about 25 pupils at each, and it was found that so wide a gradation of education existed among those who attended that it is quite probable that two or more instructors will be engaged at each school hereafter. Some of the pupils were college men, one being a graduate and having had six years' experience as a teacher himself, while a few of the men were unable when they started the schools to read or write the English language. Many of the pupils who took advantage of these schools were young men who had had the advantages of common-school education and high-school education, but took this opportunity to refresh themselves in the studies and prepare themselves to secure licenses as pilots or engineers. In Marine City 15 out of a class of 31 secured licenses, about equally divided between the forward and after ends of the vessel.

"There is also provided by the Lake Carriers' Association a death benefit and a total-disablement benefit, which it pays out of its own funds, without any charge either to the sailor or to the beneficiary, in cases where a registered sailor meets death or total disablement by accident in the discharge of his duties in connection with a ship of the association. This death benefit is graded from \$500 in the case of masters to \$75 in the case of ordinary seamen."

I will leave with the commission a copy of the resolution under which this provision is made. [Reading:]

"In the phenomenal storm which visited the Lakes on November 9 and 10 last year, in which 14 vessels were wrecked and 235 lives were lost, 6 of the vessels were in the membership of the Lake Carriers' Association, on which 150 men lost their lives. Through our system of registration we were able the moment that we learned that a vessel from our membership was involved in this storm to name every man upon that vessel, together with his home address and the name of a near relative or friend. We have in our possession a partial description of each man, and were able to secure promptly detailed descriptions, which were at once forwarded to a committee sent to the shores of Lake Huron to recover the bodies as they were washed in by the sea. In most every case it was within our power to quickly identify the bodies found, and, where the relatives desired, we were able to promptly forward the bodies to them for burial.

"There was accumulated in Cleveland by popular subscription a fund of over \$75,000 for the relief of the widows and orphans and other dependents of the victims of these wrecks. Without our system of registration this relief fund would have been futile, as there was absolutely no means of knowing under the old system who the men were that were on the vessels of the Great Lakes, where their homes were, or who their friends or relatives were. With the machinery of the Lake Carriers' Association available to the committee having charge of the disbursement of this relief fund it was possible to investigate the family and financial conditions of every man whose life was lost and to distribute this fund in proportion to the extent to which his family and loved ones were dependent upon him. By virtue of these records the widows of these sailors have received \$1,000 each, dependent children have each received one-third of that sum, aged parents have been provided for, and untold wants and distress have been relieved.

"After the November storm hundreds of inquiries were received from anxious parents, wives, and other relatives concerning men who were known to be sailing on the Lakes. In practically every instance we were able to promptly reply by wire, advising these inquirers what vessels the men were employed upon and assuring them of their safety. Similar advantages of registration occur throughout the season in cases of individual accident. In almost every case we are able to return to the family the bodies of men who are killed on the vessels, and in many instances where death occurs as the result of disease, in a hospital, or by railroad accident, or in other manner distant from the scene of vessel operations, use is made of our facilities for locating and informing the relatives.

"After the November storm the Lake Carriers' Association appointed a committee of captains to go to the Canadian shore, where most of the bodies were recovered. These men established headquarters at Goderich, Ontario, and organized a patrol system which extended from the head of St. Clair River to the entrance to Georgian Bay. The beach was thoroughly patrolled day by day until winter set in and the formation of ice assured the organization that no further bodies would be recovered. A reward of \$25 was also offered by the Lake Carriers' Association and paid for the recovery of each body. In all, our association has expended in the neighborhood of \$5,000 for this patrol service and the care and shipment of the remains when recovered and is obligated to the payment of about \$18,000 in death benefits, all of which has been paid with the exception of a few cases where faulty addresses were given and a few where the relatives are in foreign countries and with whom efforts to communicate are still pending through the consular service of these countries."

Chairman WALSH. What did I understand you to say at the beginning of your paper, that you paid for each seaman—the death of each seaman?

Mr. MARR. In cases where they met death by accident while on board vessels in discharge of the vessel's duty.

Chairman WALSH. How much?

Mr. MARR. It ranged from \$500 in the case of a master, down to \$75 in the case of a deck hand or ordinary seaman. [Continues reading:]

"In some degree also the association has assisted in looking after the personal estates of the men whose lives were lost in this storm.

"Our association has established, through the cooperation of the Cleveland Trust Co., of Cleveland, Ohio, a system by which the employees of the vessels may bank their money at 4 per cent and draw without leaving the vessel, no matter in what port the vessel may be docked. When paying off the captain inquires of the sailor how much he desires to save, and upon being informed draws a draft upon the manager for the amount to be deposited, giving the sailor the balance of his wages in currency and sends the draft to the Cleveland Trust Co., who in turn collect it from the management and deposit the amount to the credit of the man, issuing a pass book to him, which he may either carry in his possession or leave in the possession of the bank, in which latter case they send him an individual receipt for his deposit. The sailor may also draw upon the bank at any time, and from any port, receiving from the bank without charge a New York draft, or he may direct that the bank send the draft to any other payee desired.

"In none of these matters, either the registration, attendance at school, or the depositing of money is there an arbitrary requirement on the part of the association that the men participate. Yet, so freely have the men accepted these advantages, that during the first year of this registration system 10,000 men took advantage of it, and at the close of 1913, 19,553 registrations were in effect. In the savings plan 3,922 men had opened accounts up to April 1 with a total of deposits amounting to \$582,193.17. Of this number, there still remained in force with the season of unemployment ended and navigation about to open 841 accounts, with a net total amount on deposit of \$107,455.05. The object of all these activities on behalf of men employed upon the vessels of the Lake Carriers' Association is to encourage stability, sobriety, thrift, and self-respect. The employers composing our association realize that money and effort expended in these directions is money well invested, and that the returns in competency, efficiency, loyalty, and better service generally, are repaid manifold.

"Our association insists upon fair treatment and consideration of the men and the regulation of their working hours to the fullest extent possible in the transaction of their business. We also require that the men have clean, comfortable, well-lighted, well-ventilated, and well-heated quarters aboard ship, and that

good, wholesome, clean, well-cooked, nourishing food be furnished. All this with the best wages that are paid anywhere in the world for a similar class of service.

"A campaign was organized last year for the prevention of accidents, and I am submitting herewith a list of the recommendations which were adopted at a general meeting and sent to all members who for the most part have in turn sent them to all of the officers of their vessels with instructions that these recommendations be put into effect. These recommendations were amplified this spring and the additional instructions have been sent out to all of the ships in the association.

"There has also been appointed this year a committee on sanitation, which has taken up the matter of the clean and sanitary handling of food supplies and the matter of sanitation aboard ship, and I submit to the commission a copy of the circular which has been issued to all dealers in food supplies around the Lakes who make a practice of furnishing the vessels with these commodities, and also a copy of the circular which has been sent to all of the vessel owners to be transmitted by them to the masters of their vessels for their guidance. We have also sent to all of the dealers in food supplies furnishing the vessels a reprint of the circular issued by the American Iron and Steel Institute with reference to the elimination of that common pest, the house fly. In fact, every effort is being made by our association to guard the health and the life and limb of every employee of the vessels in its membership.

"A Monthly Bulletin is published during the season of navigation, copies of which are sent to all owners and the masters and chief engineers of all vessels. Through this medium, in addition to the issuance of special circulars and telegraph bulletins, our association endeavors to keep all the men in touch with the activities and policies of the organization so far as they affect the safety of navigation, the operations of their ship, and the health, comfort, and safety of the men. As a sample of this bulletin, I will leave with the commission a copy of the first number for this season sent out from our office during the past week.

"I am glad to leave with the commission copies of forms and printed matter bearing upon our system of registration, and, if the commission desire, I shall be glad to explain our system and the use of these forms in detail."

(The bulletin referred to by Mr. Marr, "Bulletin of the Lake Carriers' Association," vol. 3, No. 1, May, 1914, and copies of numerous blank forms, were submitted in printed form.)

Mr. LEISERSON. You found that your experience or the experience of your association in depending on the unions to get you help was not satisfactory?

Mr. MARR. It was very unsatisfactory.

Mr. LEISERSON. You find at the present time that the system of assembly rooms that you have, and your recommendations of men by commissioners, is satisfactory?

Mr. MARR. I know of no reason to feel that there is any dissatisfaction with it at all. It seems to be entirely satisfactory.

Mr. LEISERSON. You know of no complaints on the part of the men against your present system of hiring men?

Mr. MARR. We have no system. You mean on the part of the men?

Mr. LEISERSON. Through your assembly rooms?

Mr. MARR. No; I don't know that we have.

Mr. LEISERSON. Well, take the work book that you have. You say that nothing is stated in the work book except the man's record, fair or good. What about the man who is not good; where is his record had?

Mr. MARR. In cases where a man does not perform good service—and I wish to impress upon you the particular reference to his service only, his competency—the officer of the vessel is not allowed to make any notation as to the character of his service other than to draw a line through the space provided for it.

Mr. LEISERSON. That is to say, any man who would not have in his book a statement, fair or good, would ordinarily be considered by a master of the vessel that he was not or did not have a good record?

Mr. MARR. Well, he might not have been on the vessel long enough to have made any kind of a record. I have seen a great many discharge books with that record which I, just for convenience, will call a noncommittal record. A great many of those books have had a noncommittal record, perhaps the first record starting out in the book. And after that the book will probably have a good record as long as the man has continued to use the book. In

many cases I have seen a noncommittal record following a good record and then being followed again by a good record.

Mr. LEISERSON. You have no other record in your various offices or assembly rooms in which the statements are made with regard to bad service or undesirableness of any of the applicants?

Mr. MARR. Well, it would be a natural thing, of course, for the commissioner to report to us, or for an officer of a vessel to report to us the conduct, and we do have such records as that in my own office.

Mr. LEISERSON. That is to say, then, those records of misconduct are in the main office at Cleveland?

Mr. MARR. Yes, sir.

Mr. LEISERSON. Would you mind telling us as to the things that you list under misconduct?

Mr. MARR. Well, these cases come to us rarely. Well, stealing from a shipmate, thieving on board the boat, or a proven case of gross misconduct ashore, such as burglary or highway robbery, or anything of that kind.

Mr. LEISERSON. Will you include in that list of misconduct agitators—labor agitators?

Mr. MARR. I would, if it were felt that the agitator were attempting to disturb on board ship the harmony of the relations between the employer and the employees. I would feel justified in doing that.

Mr. LEISERSON. You do that in cases of that kind?

Mr. MARR. There have been but one or two cases of that kind that I can recall.

Mr. LEISERSON. That is to say, under the old system, by which the union furnished the man, it was unsatisfactory to your association, as I understand it, that your association could not maintain the discipline? Was that the idea?

Mr. MARR. Very largely so. One of the great difficulties which the vessels had was in the case of a vessel arriving, we will say, at some port before the completion of the articles for which the man had signed, a sailor or several of them might wish to desert the ship and the master of the ship would probably refuse to pay them their wages, as he was justified in doing, I believe, and the men would go to their labor delegate, and he would come aboard the vessel and tell the master or chief engineer if he did not pay these men their wages that he would pull off his whole crew and see that he did not get another crew there. There were abuses of that kind. A good many of these things occurred before my connection with the association, but I had heard a good deal of them. There were also cases where the vessel, being in need of men, they would apply to the union headquarters in the usual manner for men. If men were scarce there would be no efforts made to furnish them, and even if there were a great many men in the assembly rooms or halls—union halls, as they call them—we would hear very frequently, "Well, send your vessel up here. Let's look it over," or, "Has she got café bars on the deck?" And you could not get men to go.

Mr. LEISERSON. Let me ask you this question: Does the present organization that you have enable you to maintain the open shop so that you won't have any difficulties at this time?

Mr. MARR. I have not heard of any difficulties of this kind since the open shop was established, and that is five years.

Mr. LEISERSON. That is to say, your system of employing men through these registration agencies would enable you, if union agitators attempted to organize trouble, to eliminate them?

Mr. MARR. Well, in the first place, I don't know that you have quite grasped the idea—the Lake Carriers' Association does not employ these men. They are employed by the officers of the vessels.

Mr. LEISERSON. This office sends them over to be picked out, just the same as any employment agency?

Mr. MARR. Yes; where the officer of the vessel asks to have the men sent over, that is done; but very frequently—let me carry that just a little further—very frequently, and what we have tried to encourage the officers of the boats to do, is to come to our assembly rooms and select their own men; and we encourage them to bring with them in the spring men who have served with them before, and whom they know, and in whom they have confidence as to their ability and stability and integrity, and everything of that kind—to come with them the following season.

Mr. LEISERSON. Let me put it this way: Your association was dissatisfied with the system of supplying men through the union?

Mr. MARR. Yes.

Mr. LEISERSON. Now, would you say that a strong union man would be dissatisfied with the system of hiring men that you have at the present time? He would, would he not?

Mr. MARR. Well, I don't know what exception he could take to it. I know this, that there are on the vessels of the Lake Carriers' Association a great many union men. We raise no question as to that.

Mr. LEISERSON. But if he tried to organize the men on the ships, he would be considered as a trouble maker?

Mr. MARR. Yes, sir.

Mr. LEISERSON. Then, from the standpoint of a strong union man, this would be an objectionable system?

Mr. MARR. I presume so.

Mr. LEISERSON. Now, then, don't you think that the most successful way of organizing the getting of the men to the places would be to have them not in the control either of the unions or of the employers, but both together, in order to be sure that neither one side nor the other controls the job in any way?

Mr. MARR. I can not quite grasp the situation.

Mr. LEISERSON. Well, let me put it this way: We have had experience in trade-union associations supplying help?

Mr. MARR. Yes, sir.

Mr. LEISERSON. And your association found that unsatisfactory?

Mr. MARR. Yes, sir.

Mr. LEISERSON. And so the unions could not maintain this work of supplying men. On the other hand, the unions at the present time would object to your system of getting the men for the vessels, because it interferes with what they consider their liberty to organize the men on the boat. Now, then, if we were to look for the most successful way of bringing the man and the job together, in which neither side should have any kick coming, don't you think the Government, where both would have an equal say, would be the best agency for doing this service?

Mr. MARR. I don't know that I could criticize the idea of having the Government act as the agency for doing this service; but I still feel that the man who has the investment in the property being worked, the man who is paying the wages, and the man who is paying for the service, should be the one who should be satisfied with the service to be rendered; and that the matter of organization, while we have no objection to organizations, and have never in any way attempted to discriminate against any man who was affiliated with any organization, really has no place. While a man is employed happily and satisfiedly, it has no proper place while he is at work.

Mr. LEISERSON. Yes. Well, now, let me ask you the expense of maintaining these assembly rooms where the captain might come to hire men and where the commissioners refer the men to masters of the vessels, that is maintained by your organization?

Mr. MARR. Yes, sir.

Mr. LEISERSON. And what does it cost, would you say?

Mr. MARR. About what does it cost?

Mr. LEISERSON. Yes, sir.

Mr. MARR. We have from 11 to 12 of those assemblies, and I think they average about 4,000 to 5,000 apiece.

Mr. LEISERSON. About \$50,000?

Mr. MARR. Yes, sir; somewhere along there.

Mr. LEISERSON. And your association considers that an expense well invested in order to be able to get the men?

Mr. MARR. Yes, sir; I should say so.

Mr. LEISERSON. That is, you don't get those dollars the men pay to the welfare association, that don't cover the cost?

Mr. MARR. That don't enter into that cost at all. That is not used for that purpose.

Mr. LEISERSON. So you say the position of your association is, that in order to be assured that you can get men when you want them, it is an investment well made to spend \$50,000 to bring the man to the job?

Mr. MARR. Yes, sir.

Mr. LEISERSON. That is all, thank you.

Chairman WALSH. Any questions?

Commissioner GARRETSON. What proportion of the tonnage of the Great Lakes does your association represent, Mr. Marr?

Mr. MARR. In the matter of tonnage——

Mr. LEISESSON (interrupting). That is, commercial tonnage?

Mr. MARR. Yes; in the matter of tonnage—well, you speak of commercial tonnage; I can not tell you by that name.

Commissioner GARRETSON. Well, as common carriers?

Mr. MARR. But under the registration, the Government registration, we have about 80 per cent of the registered tonnage on the lakes. That is, in point of tonnage; but in point of the number of vessels, about 20 per cent.

Commissioner GARRETSON. You have the large vessels?

Mr. MARR. Which indicates we have the large vessels.

Commissioner GARRETSON. Now, is there any other association of owners?

Mr. MARR. There is a lumber carriers' association which is composed of small vessels carrying lumber.

Commissioner GARRETSON. Now, do you exchange any information with them in regard to employees?

Mr. MARR. None whatever. In fact, I don't know the names of the officers of that association.

Commissioner GARRETSON. You speak of this book the man has, and the existence therein of a noncommittal record. If that noncommittal record was continued for quite a period, that would bar the man virtually from reemployment on your vessels?

Mr. MARR. I presume an officer of a vessel that received an application from a man having several of these noncommittal records would say, "Well, sonny, I guess there is something the matter with you, and I think I will try somebody else."

Commissioner GARRETSON. It would bar the applicant from employment with you just as if there was a full record in there in every instance?

Mr. MARR. I have no doubt. I have never seen a record of that kind, though—let me say.

Commissioner GARRETSON. How is that?

Mr. MARR. I have never seen a record of that kind.

Commissioner GARRETSON. Well, I assume, from the fact that it is a name that is thus familiarly described as noncommittal, that there are such?

Mr. MARR. There are such records, yes, as I stated before.

Commissioner GARRETSON. Now, you note the fact that if a man takes action that destroys the harmony of the relations between masters and men that he would be classed as an agitator, and such an entry would be made, probably, against him. Now, what would constitute agitation? Demands for more wages?

Mr. MARR. No, sir.

Commissioner GARRETSON. Better food?

Mr. MARR. No.

Commissioner GARRETSON. Better conditions?

Mr. MARR. It would depend upon the extent to which the demands were made. A man who attempts to stir up discontent and trouble on a boat, it would not be a single request or——

Commissioner GARRETSON (interrupting). Well, it might arise from any of those three, or all?

Mr. MARR. Yes, sir.

Commissioner GARRETSON. You spoke, prior to your connection with the board, of another and old arrangement for securing employees which was very unsatisfactory. Were all those things agitated by the men in those days—wages, conditions, and food—among the union men?

Mr. MARR. Why, no; I don't want to say they were agitated by the men——

Commissioner GARRETSON. Well, were they put forward through committees or otherwise?

Mr. MARR. Yes; they were.

Commissioner GARRETSON. They constituted a large part of the unsatisfactory conditions that you wanted to escape?

Mr. MARR. No; we did not attempt to escape from those. Where the Lake Carriers' Association found, or the vessel owners found, there were unsatisfactory conditions, as they do to-day, if they find anything the case—I would be very glad to have you note these recommendations made here by the Industrial Relations Commission, and adopted by our association. If we find any unsatisfactory conditions, the vessel owners are very prompt to remedy anything of that kind.

Commissioner GARRETSON. Since the adoption of the resolution you have read, how much agitation has come to the surface in regard to the men, in regard to their wages, their food, or their conditions? How many committees have waited on your association?

Mr. MARR. There have not been any.

Commissioner GARRETSON. I suppose not.

Mr. MARR. But where an occasional sailor has come in—by the way, I wish to say that the sailors have been encouraged to come to me and lodge any complaints that they may have, whether they are imaginary grievances or real ones. And in every case he has been given every consideration, and his cause has been taken up, even though I have had very strong reasons, from the things he has said, to believe that he was not telling me the whole truth; but his case has always been given very earnest, careful consideration, and has been taken up with the manager or with the officer of the vessel.

Commissioner GARRETSON. Any discrimination against the men belonging to the union?

Mr. MARR. Absolutely none.

Commissioner GARRETSON. Provided he don't work at it.

Mr. MARR. Well, even so; I will tell you, Mr. Garretson, we have two grades of sailors' registrations—that is, I mean, of seamen's registrations—aside from the ordinary man, which includes deck hands, porters, waiters, and, secondly, able seamen, which includes the wheelmen, enginemen, boatswains, firemen, oilers, etc.—the skilled class. And we have instructed our commissioners to register as able seamen only those who are able to show by credentials of some kind that they have had the requisite experience to call or qualify as able seamen. We have stated to them that as such credentials we will accept their salt-water discharges, or the statement of any officer of a vessel with whom they worked, the commissioner's own personal knowledge of a man, or their union book, or anything at all that would—

Commissioner GARRETSON (interrupting). Anything tangible?

Mr. MARR. Anything tangible, which would assure the commissioner that they had had the required experience.

Commissioner GARRETSON. Well, has the payment of this death or disability fund, or the acceptance of it, ever been pleaded by your association or the owners as a bar to the recovery of death or liability claim?

Mr. MARR. No; on the contrary, we have stated in the resolution—and, by the way, I can give you a copy of that if you want it—that that should not in any manner interfere with their recovery.

Commissioner GARRETSON. In no way affects the legal rights?

Mr. MARR. No, sir.

Commissioner GARRETSON. There are a great many of those institutions in the country that have been injurious in that direction?

Mr. MARR. Yes, sir; but we have endeavored to make it plain that it does not.

Commissioner GARRETSON. What is the attitude of your association toward the seaman's bill?

Mr. MARR. There are some features of it which we feel are very detrimental to the navigation interests.

Commissioner GARRETSON. The institution of these clubrooms, etc., really works out, from your standpoint, as philanthropy that pays dividends?

Mr. MARR. Dividends in effect.

Commissioner GARRETSON. In what you get for it?

Mr. MARR. Yes, sir.

Commissioner GARRETSON. I do not mean money.

Mr. MARR. Absolutely no.

Commissioner LENNON. Did I understand you, Mr. Marr, I think in your paper, to indicate that you object to seamen quitting work in a safe port?

Mr. MARR. Yes; when they are under articles.

Commissioner LENNON. When a man has agreed to sail from Chicago to Buffalo and you stop at Toledo, a safe port?

Mr. MARR. Yes, sir.

Commissioner LENNON. And half a dozen or one man wants to quit, do you object to it?

Mr. MARR. Yes, sir. The articles usually read—

Commissioner LENNON. Yes; I know what the articles read.

Mr. MARR. I know; in our particular case, I mean. From a lower lake port to the head of the Lakes and return. They are usually for a round trip, always for a round trip; that is better, although some vessels with headquarters at Duluth have their articles read from Duluth to Lake Erie and return—to the lower port and return to the upper end. An objection to the quitting in safe port would be the necessity of obtaining men, perhaps, in a port where men were not obtainable. The vessel does not stop always in a big lake port like Toledo. She may unload in Huron, where there is a port, but no vessels can secure men.

Commissioner LENNON. Isn't it a species of involuntary servitude?

Mr. MARR. I can not see that it is. It is not against a man's will that he signs the articles of that kind. He knows it fully when he signs. They are all alike; know absolutely just what is expected of them.

Commissioner LENNON. Would the master of the vessel have the right to discharge a man when he was in one of those ports?

Mr. MARR. For unsatisfactory service.

Commissioner LENNON. He would?

Mr. MARR. I presume he would have to pay him. I suppose——

Commissioner LENNON. Why can not they do that if a man wants to quit?

Mr. MARR. A master would not be likely to discharge a man when he was not able to secure others.

Commissioner LENNON. All right.

Chairman WALSH. Is there any other question?

Commissioner BALLARD. You say your work begins about April 1?

Mr. MARR. Yes, sir. It is only a seasonal occupation.

Commissioner BALLARD. What do the men do in the wintertime?

Mr. MARR. There are a great many automobile industries around Detroit. A great many men secure employment there and in other manufacturing institutions. A good many of them come down to the seacoast and continue to sail down here in their vacation. A good many of them go to the southern waters of the Ohio River or the Gulf of Mexico; and still there are a great many who live through the winter on the earnings of the summer, on their savings.

Commissioner BALLARD. You say that the unions in their furnishing of men and in their conduct of their business, in your business, is so unsatisfactory that the shipowners decided to have either the open shop or manage their own men themselves?

Mr. MARR. Yes, sir.

Commissioner BALLARD. What particular onerous features do the the men force on the shipowners that makes it unsatisfactory?

Mr. MARR. As I stated to Mr. Leiserson, in response to a question, there was this upholding of the men in refusing to sail. Very frequently on board of boats a man would refuse to carry out the orders that were given to him on the vessels by their officers, and desertion in ports before the completion of their articles, and their refusal to furnish men a good many times when the vessel owner was ready to leave port.

Commissioner BALLARD. If it was established that the union man had committed any acts not upheld by the union, would the union discipline that man?

Mr. MARR. We did not find it to be so. The union delegate was a little inclined to take the part of the man. I don't know whether to call it politics or not; but he would take the part of the man and come down and—to us at any rate—seemed to make improper demands.

Commissioner BALLARD. Did the unions ever refuse to handle any work on account of it being nonunion-made materials?

Mr. MARR. No; I never heard of it.

Commissioner LENNON. If a ship was being boycotted, they would not refuse to handle the tonnage of the ship?

Mr. MARR. I never heard of anything of that kind.

Commissioner HARRIMAN. From the point of view of your association, I would like to ask you: What is your opinion about the system of Federal employment bureau suggested by the commission? It has been asked more or less indirectly; but I would like to have your opinion in rather a direct way.

Mr. MARR. In answer to that I speak as a layman, and not as one who has had experience in the employment of labor and it would only be a layman's opinion. I can see a great many good features about it; but there is one thing that impressed me as being more prominent to me than any other feature, and that is this: That in the transfer of the men from one center

to the other, the transfer would be of the floating element, which is the unreliable, irresponsible element. The man with a home and the man with a family is not the man who would be transferred from Chicago to New York, or from New York to San Francisco, or anything of that kind. Still that would have its advantage to the home owner, too, owing to the fact that it would take those other men out of the labor market, and while those facts have been passing through my mind they are only put out as the thought of a man not experienced in the handling of labor—in the employing of labor from that point of view.

I have read your proposed plan very carefully, and another thing that has impressed itself upon me was the broad scope of what you termed an "employment agency" in your definition—that is, that it even included the housewife who recommended to her neighbor a servant girl—and I don't know where you are going to draw the line. That is a thing that is entirely out of my line; but it seemed to make the housewife who did such a thing as that a violator of the law.

Then, in reading it over, there was another thought that came to my mind: You say that no employment office shall be opened in, over, or adjoining a saloon; but some provision would have to be made for preventing the saloon from opening in or adjoining the employment office later. Those are only matters of detail that undoubtedly can be worked out in a broad, general proposition of this kind.

Commissioner HARRIMAN. Do you think it is feasible as a whole—as a scheme?

Mr. MARR. Yes; I should think it would be. May I say a word further, Mr. Chairman?

Chairman WALSH. Yes.

Mr. MARR. Mr. Blatchly, one of the gentlemen who spoke yesterday, said that he thought in connection with this labor exchange there might be adopted such a book as was used on vessels in the salt water. That book, I believe, is somewhat similar to the one we have in the Lake Carriers' Association, and I can say with reference to that that I have a good many times learned that the sailors value these books during the wintertime, and that they present them to employers, to railroads, to express companies, and to the large employers of labor as credentials, showing that they are used not only from boat to boat but also with other large employers entirely outside of our lake business.

Chairman WALSH. Mr. O'Connell would like to ask you a question.

Commissioner O'CONNELL. Do you have any jurisdiction over the longshoremen the same as you do over the sailors?

Mr. MARR. I beg your pardon?

Commissioner O'CONNELL. The longshoremen and dockers, do they all come under your jurisdiction?

Mr. MARR. No; we have nothing to do with them. They are employed by the dock companies. Most of the coal and oil is handled to or from the vessel by the dock companies—by the shippers. The different large coal shippers have their own docks. The different large oil shippers have their own docks. They employ the longshoremen.

Commissioner O'CONNELL. The change from the system of employing your help through the unions, getting your help through the present system, and the declarations which you read into the platform of your association for the open shop, etc., was that the result of a strike or something that had occurred between your association and the employees?

Mr. MARR. No; it was a condition that had gradually grown up to the point where the vessel owners thought they could stand it no longer. They had lost control—they had lost the discipline of their ships to a large extent. It was almost impossible to have the orders executed on board the boat.

Chairman WALSH. That will be all. What arrangements have we for taking care of these exhibits?

Mr. LEISERSON. We have taken care of that.

Chairman WALSH. Do you ask the witness to leave them here or leave them outside?

Mr. LEISERSON. The idea was they would be left with the reporters for them to make any extract from them.

Chairman WALSH. Is the witness notified by anybody that that is expected of them?

Mr. LEISERSON. No.

Chairman WALSH. Well, I think it should be done with each witness. If you will, kindly leave those with the stenographer.

Mr. MARR. I want to say that one of the advantages of this registration system has been that we have been able to prepare certain statistics which were found to be of value not only to ourselves but to such commissions as yours who might have use for them. There is a statement which gives the ages—this has been carefully prepared from the records—the ages of the men employed, the nationalities of them, the number in each nationality, the number of each, age of, experience, and things of that kind of the different classes of employment. I would be very glad to leave that with you.

Chairman WALSH. Well, I understand that you are to leave all of that data.

Mr. MARR. I will be very glad to leave it all.

Chairman WALSH. Thank you.

TESTIMONY OF MR. UMBERTO M. COLLETTI.

Mr. LEISENBERG. State your full name.

Mr. COLLETTI. Umberto M. Colletti.

Mr. LEISENBERG. And your official position.

Mr. COLLETTI. General manager of the Society for Italian Immigrants of the immigration office, Italian immigration office.

Mr. LEISENBERG. How long have you been in that position?

Mr. COLLETTI. Going five years.

Mr. LEISENBERG. Will you state what the purpose of this Italian immigration office is?

Mr. COLLETTI. You mean the purpose of the Society for Italian Immigrants?

Mr. LEISENBERG. Yes.

Mr. COLLETTI. It is a protective association and aiding institution for the Italian immigrants and the resident laborers, Italian laborers of the United States and Canada.

Mr. LEISENBERG. Who supports it?

Mr. COLLETTI. The laborers themselves; the subscription and subvention of the Italian Government.

Mr. LEISENBERG. Subvention of the Italian Government?

Mr. COLLETTI. Yes.

Mr. LEISENBERG. What is the total budget, about?

Mr. COLLETTI. A little over \$20,000—\$23,000.

Mr. LEISENBERG. How much of that does the Italian Government pay?

Mr. COLLETTI. One-third.

Mr. LEISENBERG. And how much do the men pay?

Mr. COLLETTI. One-third.

Mr. LEISENBERG. And one-third is voluntary subscription?

Mr. COLLETTI. Yes.

Mr. LEISENBERG. Now, in connection with your work, you maintain an employment office?

Mr. COLLETTI. The employment office, you are acquainted with the situation about three years ago here in New York. The Italian Government had a labor-information bureau for Italians.

Mr. LEISENBERG. Yes; that is what we wanted to know about.

Mr. COLLETTI. I am not connected with that. The two members of Parliament who came from the other side here, two members of the Socialist Party, were sent to investigate matters over here concerning matters of immigration, and went West; when they came here and saw that the most feasible thing of all was to have a central office in New York to protect Italians, and to have them, if possible, avoid the congested cities. Naturally, owing to lack of funds, they could not go ahead. The first year it cost them over half a million francs, \$100,000; the second year \$70,000. By degrees the subvention was reduced to 30,000 francs, \$6,000. That bureau informed the Government in keeping in touch with the different organizations here in the United States as well as with the Government office and the State government of New York, they informed the home Government about all the situation—if that is clear—about the situation concerning labor matters here.

Mr. LEISENBERG. Isn't that bureau now in existence?

Mr. COLLETTI. It is not any more in existence. The Society for Italian Immigrants was asked to absorb that bureau.

Mr. LEISENBERG. And do you maintain it now, Mr. Colletti?

Mr. COLLETTI. Well, we maintain the information part of it and the charitable branch of it—the employment, the charitable cases, so to speak.

Mr. LEISERSON. Well, isn't it your bureau that issues the Labor Market Bulletin in Italian?

Mr. COLLETTI. Exactly.

Mr. LEISERSON. We found in there last—only last winter—statements that you wanted so many men; that so many men were wanted in a construction job.

Mr. COLLETTI. Yes. Numbers never over 40, with two foremen. That was concerning some works, which were stopped afterwards, in the State of Massachusetts—Lee, Mass.

Mr. LEISERSON. You found, then, that it cost you too much for this Italian experiment; cost too much to maintain the employment agency.

Mr. COLLETTI. It cost too much. They saw that it did not pay. Their original idea was to give information to the Government about the labor situation over here, as well as place as many men as they could at work. During the winter it was quite easy to place men at work, but only for three or four days. But it was not worth while to the Government to send over \$2 per capita for every man placed at work. After all, the natural bureau of every Italian is his family residing over here. The agencies existing here are doing no work at all, and I dare say they are not labor agencies. They may be agencies for something else, but they are not labor agencies.

Mr. LEISERSON. You don't think it advisable, then, for the United States to have an employment agency for Italians to attract them to work?

Mr. COLLETTI. Well, to be frank, I am interested in both sides—the United States point of view and the Italian point of view. Now, I think that this arrangement about having several bureaus in the United States, or a central bureau, which will spread information concerning labor conditions, and everything, I might say from what I observe and from what Mr. Michael Reeves observed, conditions in the United States are marvelous as a rule, even when they are in a depressed condition. You would find yourself in conflict with your contract-labor law, the alien contract-labor law.

Mr. LEISERSON. But take the Italians or any class of people that are here. How would it conflict with them to give them information as to where they might get work in other parts of the country?

Mr. COLLETTI. Obviously because the Italians who reside over here would quickly inform their people on the other side about the surety and certainty of finding work and being protected by the Government.

Mr. LEISERSON. Well, would there be any surety in that any more than your Labor Market Bulletin, in which you state the opportunities for employment in different parts of the country? Does that assure the men they are going to get employment?

Mr. COLLETTI. No; because following the information bulletin there is a report suggesting the immigrants not to sail in great numbers and only address themselves to their relatives.

Mr. LEISERSON. Well, could not that same statement be made through any bulletin, an information bureau of this kind, that would state that these jobs are vacant, can be had only through the employment offices, and before you come looking for them apply to your local office to find out whether it is open or not, or whether it has not been filled?

Mr. COLLETTI. Yes.

Mr. LEISERSON. Would not that obviate the difficulty that you had in mind?

Mr. COLLETTI. It might obviate the difficulty. Well, you know, the agents of immigration on the other side are rather brayish; they are too skilled, too able at times; but they will always be taken in, anyhow.

Mr. LEISERSON. Can you tell us anything about the system of hiring men through the padrones? The system by which the padrones operate in that system here?

Mr. COLLETTI. Yes; it is simply an order in the—except the South. In the South—I know slightly about the conditions of labor in the South, because the southern United States, because I think they are opprobrious; but so far as the situation up North and near West, the padrone arranges this way: They generally are allied through politics to some individual or some company that has a big contract. They are supposed to manage some Italian vote or other. As a matter of fact, they do not, or they do very slightly; but through some favoritism or other they get in touch with the contracting company or the person who

exploits the railroad or starts the railroad or mine, or whatever it is, and they get from this person the grant to employ all laborers for those labor camps. They only reserve for themselves the commissary part of the work and furnish food and clothes at times, and shanties, and so on. The question of employing labor is entirely in their hands, bureaus or no bureaus. Still these people will lend a helping hand to the padrone. Though I may say there are several honest individuals among the padrones who make their 20 per cent out of it, others make 100 per cent out of it here in the State of New York.

Mr. LEISERSON. Wasn't it the idea of the original Italian labor bureau, of which you spoke, to supplant the padrone?

Mr. COLLETTI. Exactly. They did not have the right support.

Mr. LEISERSON. And they did not succeed? Why?

Mr. COLLETTI. They did not succeed because a fight started. You know how the foreign race is in the United States. They have different cliques and different organizations, so to speak, and some of the papers stood rather undecided on the idea of having a central bureau for Italians, etc. But, of course, other parties attacked those newspapers—

Mr. LEISERSON. You mean there were cliques among the Italians?

Mr. COLLETTI. Yes; like among any nationality. And finally they had to give up any view of influencing—

Mr. LEISERSON. Well, didn't you have the necessary influence?

Chairman WALSH. Had to give up what?

Mr. COLLETTI. Had to give up the idea of influencing the Italian organization and come directly to the immigration bureau for Italians.

Mr. LEISERSON. Don't you think the United States Government, if it attempted to do what your Italian labor-information office attempted, might succeed, especially if provision were made as in this proposed plan that there must be no passing of consideration between employer or his agent and the person whom he hires?

Mr. COLLETTI. Yes; but you will have to use much force with Italians.

Mr. LEISERSON. Would you advise the use of force in order to eliminate it?

Mr. COLLETTI. Unlimited; certainly.

Mr. LEISERSON. You would?

Mr. COLLETTI. Legal, of course.

Commissioner O'CONNELL. Did you make any charges in any way for furnishing employment?

Mr. COLLETTI. None whatever, sir.

Commissioner DELANO. You said in the South conditions are different from the North and West. I did not catch what the difference was.

Mr. COLLETTI. The difference was that the Italians who often might engage in work down South, who might occasionally be engaged to do work down South, are never sure of the work they are going to. They are frequently dismissed, and they are not treated in the way they expect to be.

Commissioner O'CONNELL. How many positions, on the average, say, did you furnish?

Mr. COLLETTI. Very few; very small; because nearly all charitable cases, valiant men, strong men who have no relatives in the United States and who have not any home to address themselves to, they generally connect with the Italian consul's offices throughout the United States, and if they happen to be in the vicinity of New York City or New York State they generally come to us. They are valiant young men, strong, but do not know the language. We generally place about—there were 960 of about 3,000 applicants.

Commissioner DELANO. How did they happen to come if they had no member of their family here to ask them to? How did they happen to come?

Mr. COLLETTI. We don't know. That is another thing that concerns the immigration service. You see, they are related to, say, a cousin, but you know how it is with Italians, first, third, fourth, and fifth cousins, and they give the address of a cousin. Now, this cousin may live in Omaha, Nebr., where he is engaged in railroad work, but only for three or four months. And then he quits and goes to California, and the poor individual goes to Omaha, and does not find his relative, and falls into the hands of the usual petty banker, and drifts here and there, and finally has to come back to the great natural employment agency—New York City.

Commissioner O'CONNELL. Your work applies exclusively to the Italians?

Mr. COLLETTI. No; it is for the—the society works among the aliens, and I worked among aliens and Austrians as a laborer myself for some time.

Chairman WALSH. That is all.

TESTIMONY OF MR. C. E. MORTON.

Mr. LEISERSON. Will you state your name and official connection?

Mr. MORTON. C. E. Morton, manager of the New York and New Jersey branch of the National Metal Trades Association employment bureau.

Mr. LEISERSON. Will you state just what that employment bureau is and what its business is?

Mr. MORTON. It is a free employment bureau maintained by the manufacturers who are members of our association for the purpose of securing skilled mechanics employed in the metal trades.

Mr. LEISERSON. Only skilled mechanics?

Mr. MORTON. Only skilled mechanics.

Mr. LEISERSON. And you represent the New York and New Jersey branch?

Mr. MORTON. I am manager of the employing department of the New York and New Jersey branch.

Mr. LEISERSON. And then there are other employment departments in the country maintained by the National Metal Trades Association?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. About how many?

Mr. MORTON. Fourteen.

Mr. LEISERSON. Can you tell us what led the National Metal Trades Association to establish those employment departments?

Mr. MORTON. The need of securing efficient employees in the several industries which they represented.

Mr. LEISERSON. You could not get them through private employment offices?

Mr. MORTON. I don't know that they ever tried that.

Mr. LEISERSON. And they could not get them through the newspaper advertisements?

Mr. MORTON. Not efficient help.

Mr. LEISERSON. You think the system that you have enables you to pick out efficient help?

Mr. MORTON. It does.

Mr. LEISERSON. Will you describe briefly just what your system is that enables you to do that?

Mr. MORTON. My duties require me to interview, register, investigate, select, and send to the manufacturers who are members of our association any class of skilled help coming under the classification listed by the National Metal Trades Association. For that purpose we require every applicant who applies for employment to fill in an application form for employment, stating his full name, his address, the date, his age, whether he is married or single, his nationality, number of dependents, his occupation, and, if he has a specialty, the specialty.

Mr. LEISERSON. Union affiliations?

Mr. MORTON. Don't ask them about that.

Mr. LEISERSON. You have no questions on that?

Mr. MORTON. Nothing on our application blanks concerning that.

Mr. LEISERSON. Can you furnish us a copy of your application blank?

Mr. MORTON. Yes, sir. I haven't it with me, but I can send it to you.

(The blank forms referred to were submitted in printed form.)

Mr. LEISERSON. If you will, send it to the commission.

Mr. MORTON. I will do that. Then we require them to give the name of the last employer, the address, the length of time employed, in what capacity, why he left, and the wages he received; and we require them to give two additional references of concerns for whom they have been employed, covering the same information.

Mr. LEISERSON. Do you get reports from the employers every week or every month after the people that were discharged and hired aside from the men that come into your office?

Mr. MORTON. Yes; we get them daily.

Mr. LEISERSON. A daily report of the number of men hired and discharged?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. What is the purpose of that?

Mr. MORTON. The purpose of that is to enable us to assist employees who have been laid off because of slackness in his particular trade by informing him of an opening with some other member who might use his services, and to enable us to keep a record of a man's service with the company, so that

when he applies to us for employment we won't have to cause him to wait until we can investigate his record to see whether we can use him or not.

Mr. LEISERSON. That is to say, you keep up the man's record in this way without his actually coming to the office? You get your reports from the employer where he is at a given time, whether he is working in a place or discharged?

Mr. MORTON. As soon as he is employed by the members of our association.

Mr. LEISERSON. About how many men have you records of that were in your office?

Mr. MORTON. We have over 11,000; that is, who have made personal application at the bureau for employment. I don't know how many we have who have applied to the companies for employment and whose applications have been sent to us.

Mr. LEISERSON. You have those records also?

Mr. MORTON. Yes.

Mr. LEISERSON. Can you tell us the reason that this record is kept of skilled employees and not common laborers?

Mr. MORTON. The majority of the manufacturers that are members of our association employ only skilled mechanics. Some of them would probably employ only half a dozen laborers.

Mr. LEISERSON. Don't most of them have foundries?

Mr. MORTON. No; we have nothing to do with foundry help.

Mr. LEISERSON. The foundrymen are not in connection with you?

Mr. MORTON. No, sir.

Mr. LEISERSON. Aren't they in some of your agencies; for example, the Milwaukee agency of the Metal Trade and Founders' Association?

Mr. MORTON. I could not tell you that.

Mr. LEISERSON. You think the main reasons they do not take up common labor is because they don't employ enough of them?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. Can you give us any idea of your expenses to maintain your particular employment office?

Mr. MORTON. About \$3,500 a year.

Mr. LEISERSON. About \$3,500 a year?

Mr. MORTON. Yes.

Mr. LEISERSON. And you place approximately how many men?

Mr. MORTON. From 1,500 to 2,000.

Mr. LEISERSON. So that it costs you about \$1.50 per job?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. And your association, you charge nothing to the employee?

Mr. MORTON. Nothing to the employee.

Mr. LEISERSON. Your association considers that a good investment, in order to have records, so that you can get what you consider efficient help?

Mr. MORTON. Yes.

Mr. LEISERSON. Have you ever found any objection on the part of the men to patronizing your office?

Mr. MORTON. I beg your pardon.

Mr. LEISERSON. Have you ever found that the men objected to patronizing your office for any reason?

Mr. MORTON. No, sir.

Mr. LEISERSON. You only place from 1,500 to 2,000 men—what is the total number of employees, approximately, of all of the employers who are members of your particular branch?

Mr. MORTON. I can only give you the number coming under our organization.

Mr. LEISERSON. Yes.

Mr. MORTON. It would be from seven to ten thousand.

Mr. LEISERSON. From seven to ten thousand?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. You would say, approximately, how many employees do these employers hire every year in order to maintain the force of 10,000? You have a record of the men hired and dismissed? Approximately, what would that be?

Mr. MORTON. About 2,500.

Mr. LEISERSON. Do you mean to say that all of these employers that have 10,000 employees hire only 2,500 a year?

Mr. MORTON. I mean that the help would fluctuate in a year's time probably that many.

Mr. LEISERSON. I mean the actual hiring. How many people are actually hired by all those employers who employ those men in order to maintain a force of 10,000? Wouldn't it be almost 10,000 more?

Mr. MORTON. I can not answer that question directly in that way. Some employ as much as, for instance, in the machinery industry, in the tool and die line, one of our shops in particular has men who have been employed by them for six or eight years, and where they would employ 25 to 30 die makers, where they keep steadily employing 25 to 30, they might not have an opening for a man more than three or four times during a year.

Mr. LEISERSON. I am not considering particular instances. You placed in those firms, say, from 1,500 to 2,000 a year. Besides that, the firms themselves employ men at their gates. Approximately what number of men are hired at the gates? You have records of those?

Mr. MORTON. We supply approximately two-thirds. We supply approximately a little over one-third.

Mr. LEISERSON. Can you give a reason why two-thirds of the employees would rather go directly to the works than come to your office?

Mr. MORTON. That is because the plants where those men apply, rather than come to the office, are located so far from our employment bureau that we are unable to secure the help as rapidly as they need it. Most of them are emergencies, emergency requests for help. You understand we represent the ship-repairing industry, and before I came here this morning, at half-past 6, I had calls for 25 men in one of our repair yards. Those men will be laid off day after to-morrow.

Mr. LEISERSON. And when a man applies directly at a plant for a position and he is employed, that fact is transmitted by an officer of that factory to your office?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. His name and his record, his application?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. Do you look up his record in order to find whether he is an efficient man?

Mr. MORTON. We indicate on his record the fact that that day he entered the employ of that company.

Mr. LEISERSON. If you find in your record something against that man, do you notify the company of that fact?

Mr. MORTON. No, sir.

Mr. LEISERSON. You make no notification to the company of the man's record?

Mr. MORTON. Not unless there are some particular reasons. If a man has been discharged from a company for inefficiency in one line and we have that record noted on his card and we find that he has entered the employment of some other company, we would notify that company of that fact.

Mr. LEISERSON. Then why do you keep the record?

Mr. MORTON. So that, as I stated before, when a man comes to us for a position——

Mr. LEISERSON. I mean the other record, where the employee applies directly, his record is transferred to your office, as I understand?

Mr. MORTON. Yes, sir.

Mr. LEISERSON. Why is that record kept if it is not to assist you to tell other employers as to the qualifications of that man?

Mr. MORTON. It is kept, as I stated a while ago, so that when a man comes to us for employment we will not have to delay him in sending him to a position by looking up his references.

Mr. LEISERSON. It is not for the purpose of informing the employer who hired him with regard to his record?

Mr. MORTON. It could be used for that purpose.

Chairman WALSH. Is it used for that purpose in any case that you have ever known of?

Mr. MORTON. Yes.

Mr. LEISERSON. Have you ever had cases where the employer hired a man and you then notified the employer that this man had a bad record?

Mr. MORTON. I don't remember of any.

Mr. LEISERSON. You don't remember of cases of that kind?

Mr. MORTON. No, sir.

Mr. LEISERSON. If a man had proved dishonest in one place, that would be registered in your office?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. If that man afterwards secured a position with one of your members, would you notify the member that he had been discharged?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. You have done that in cases?

Mr. MORTON. I have not.

Mr. LEISELSON. But it would be done?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. What other reason besides dishonesty would convey—would you convey to an employer?

Mr. MORTON. If a man had gone to one of the members of our association which manufactured a certain product and he was found to be incompetent and was employed by another company manufacturing the same kind of a product, or if he was—I will not say employed, if it was asked of me if this man applying for employment to this company requested of me to inform them whether I had a record of him, and I found that he was incompetent in a shop manufacturing the same kind of a product, I would state to the company that he was incompetent.

Mr. LEISELSON. If a man were a labor agitator, would you inform the employer of that fact?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. Don't you think that gives your association a dangerous power over individuals?

Mr. MORTON. We have never had an opportunity of using it, so I don't know.

Mr. LEISELSON. But you would do that under those circumstances?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. Is that it?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. Have you read over our plan of a national system of labor exchange?

Mr. MORTON. I have.

Mr. LEISELSON. Have you any remarks to make about that?

Mr. MORTON. As it particularly relates to the mechanics and comes under our classification, I do not think that a Government free-employment bureau could do the work that our employment bureau is doing, for the reason that as a manager of an employment bureau for our association I am an employee of every manufacturing concern that is a member of our association, and a request upon me for help is virtually a demand. I assume a personal interest in seeing that the company in need of that help gets that particular help at the time it is most needed.

Mr. LEISELSON. Would not a State employment office do the same thing?

Mr. MORTON. I do not believe that it could, for the reason that the scope of work that would be covered by the State free-employment bureau or National free-employment bureau would be too wide for them to give the personal attention and the particular attention that any particular industry would require.

Mr. LEISELSON. That is to say, that your only objection is that it would be so inclusive that it would not give enough special attention to your particular department?

Mr. MORTON. Yes, sir.

Mr. LEISELSON. But if it were possible to so organize it that the exchange would be worked in departments with one person in charge of the metal-trade department, just as you are, do you think it could be worked under those circumstances?

Mr. MORTON. I do not believe that could be done.

Mr. LEISELSON. You have heard that the Boston Free Employment Office supplies members of your association in great numbers?

Mr. MORTON. Yes, sir; I have heard that. I am very familiar with those State free-employment bureaus. I had charge of the Indiana State Free Employment Bureau myself. I originated and brought into existence the systems that they use there.

Mr. LEISELSON. And your experience leads you to believe that they could not handle this work properly?

Mr. MORTON. They could not.

Mr. LEISELSON. Will you just state the reason?

Mr. MORTON. The reason as I stated—that is, my first reason, the one that I stated a while ago. Another reason is that in the experience I have had the scope of the work is too broad to be covered by these bureaus; and secondly, mechanics know that they would not receive the same attention they would in

a manufacturers' employment bureau. Consequently they do not go to those bureaus to register for employment.

Mr. LEISERSON. Have you known cases where there is a State employment office, and also one of your association offices, and where the State employment office does more business than yours—that is, with skilled mechanics—for your members?

Mr. MORTON. Please state that again.

Mr. LEISERSON. For instance, in the city of Milwaukee there is a national metal-trades' association, similar to yours, and also a State free-employment office; and the State free-employment office supplies more skilled men to members of your association than your own office does.

Mr. MORTON. We have no national metal-trades' association with an employment bureau located in Milwaukee. The manufacturers' association has a bureau there.

Mr. LEISERSON. The National Metal Trades and Founders' Association, Mr. Fairbanks has charge.

Mr. MORTON. It is an employers' association, is it not?

Mr. LEISERSON. Yes, sir; employers in the metal trades—not merchants and manufacturers, but the Metal Trades and Founders' Association—the local branch of the National Metal Trades Association.

Mr. MORTON. It was my understanding that that was an employers' association whose membership was composed of manufacturers that were not members of the National Metal Trades.

Mr. LEISERSON. No; members of the National Metal Trades.

Mr. MORTON. Possibly some of them were, but some of them were not.

Mr. LEISERSON. No; members are exclusively of the metal trade and doing business exactly as you do. But that is immaterial.

Mr. MORTON. I have a list of the 14 branches of the National Metal Trades Association: Boston, Chicago, Cleveland, Cincinnati, Hartford, Indianapolis, New Haven, New York, Providence, St. Louis, Springfield, Moline, and Worcester.

Mr. LEISERSON. Milwaukee is not included.

Mr. MORTON. No, sir.

Commissioner O'CONNELL. In these employment agencies you have given, these dozen cities or more, do you send information backward and forward to each other—exchange information as to employees that are not to be employed because of certain records?

Mr. MORTON. No, sir.

Commissioner O'CONNELL. Do not interchange at all the reasons why people should not be employed?

Mr. MORTON. None has ever come to my notice.

Commissioner O'CONNELL. If an employer employs a man at his shop without going through your office he reports that to your office, does he—one of your members?

Mr. MORTON. Yes, sir.

Commissioner O'CONNELL. If your records show that he for some reason or other is not a proper person to employ, he is then discharged, is he, by the employer, or let go?

Mr. MORTON. We have not had occasion to use it for that purpose.

Commissioner O'CONNELL. If one of the members had a strike, if his employees went on a strike—machinists, say—and another of your members wanted machinists, would they give these men on a strike for another employer work, or would that be a reason for not employing them?

Mr. MORTON. I don't believe that I understand you clearly on that. Will you repeat that?

Commissioner O'CONNELL. For instance, if one of your members had a strike over in Jersey and another member employing a similar class of skilled labor—machinists, say—in New York wanted machinists, would the fact that these machinists in New York had worked for one of your members and was on a strike be a sufficient reason for that employer in New York not employing them? Do you keep a record of any kind showing that?

Mr. MORTON. We keep a record of the employees, or of the members of the association. If this man applied to us for employment he probably would not be asked if he went on a strike, and he would be sent to this concern that needed this help.

Commissioner O'CONNELL. If it was ascertained that he did go on the strike, and that they were on a strike—having a strike—would he be employed if that was discovered?

Mr. MORTON. That would be up to the foreman or superintendent of the plant that needed the help. We would inform him that he had left the employment of the company, and had left because there was a strike, and ask him if he wanted to take the man.

Commissioner O'CONNELL. Do you keep a record in your office of the strikes of your members?

Mr. MORTON. We keep records of the strikes of the plants, but not a record of the employees who have gone on strikes at the plants.

Commissioner O'CONNELL. They are not checked up in any way by their cards or asked whether they are on a strike?

Mr. MORTON. No, sir.

Commissioner O'CONNELL. Any record made of them by questions when they seek employment as to whether they had been on strike in any place?

Mr. MORTON. In some instances we make a record of that sort. If a man has been particularly aggressive and has caused a great deal of notoriety because of that aggressiveness, we may remember that man; but the other men who go out on a strike we would not.

Mr. LEISERSON. Will you furnish the commission, please, with a full set of the forms and records that you keep?

Mr. MORTON. Yes, sir.

Commissioner BALLARD. Do you feel that perhaps while the State employment bureau might not take the place of your employment bureau, do you feel that the State employment bureau would be satisfactory for unskilled workers?

Mr. MORTON. Yes; I believe it could do a great deal of good in that respect.

Commissioner GARRETSON. I understood you to say that a system of Government employment agencies could not successfully serve the purpose that is now served by the agency of the type of yours. In your opinion, could any form of employment agency that could not be wholly dominated by men whom you represent as employer fill, in your opinion, that mission?

Mr. MORTON. No, sir.

Commissioner GARRETSON. That is all.

Chairman WALSH. Any other question? That will be all, thank you, Mr. Morton.

Mr. LEISERSON. Mr. Chairman, I would like to recall, for one question, Mr. Marr.

• TESTIMONY OF MR. GEORGE A. MARR—Recalled.

Mr. LEISERSON. Is there any system, Mr. Marr, of tattooing seamen in order to show the sort of people that you would not want to reemploy?

Mr. MARR. Absolutely no—that is rather an absurd question.

Mr. LEISERSON. May I ask you, have you any idea where that rumor is from?

Mr. MARR. I have seen it illustrated in a seaman's trade paper as a cartoon, and I think—speaking from memory, I think it stated that a system of that kind was followed in foreign countries, but I am quite sure that it never was for the purpose of branding a man as against reemployment or anything of that kind, but for the identification of dock laborers, whom they knew better by numbers than by names.

Mr. LEISERSON. Is there any system of identification, like that by tattooing, in your association?

Mr. MARR. Never; on the Lakes, every man that works on Lake vessels—

Mr. LEISERSON (interrupting). And you know that certainly?

Mr. MARR. Oh, absolutely; the thing is too absurd. Never could have been. The class employed on Lake vessels would not submit to that sort of thing; and no employer or vessel owner would want to degrade the man with a thing of that kind. Absolutely not.

Mr. LEISERSON. That is all.

Chairman WALSH. That is all, thank you, Mr. Marr. Call your next.

TESTIMONY OF MRS. S. J. ATWOOD.

Mr. LEISERSON. Will you state your name, Mrs. Atwood?

Mrs. ATWOOD. Sarah J. Atwood, No. 12 State Street, New York City.

Mr. LEISERSON. What is your business, please?

Mrs. ATWOOD. Employment agency business.

Mr. LEISERSON. How long have you been in the employment-agency business?

Mrs. ATWOOD. Twenty-two—nearly 23 years.

Mr. LEISERSON. What kind of help to you supply?

Mrs. Atwood. Everything that goes for dirt moving, railroad work, aqueduct and canal work.

Mr. LEISERSON. How many people do you employ in your office to do this work?

Mrs. Atwood. Well, in the New York office I have about five.

Mr. LEISERSON. Have you other offices?

Mrs. Atwood. No; at present, no. I have run from five to nine offices in different parts of the country up until the last two years.

Mr. LEISERSON. And approximately how many do you furnish?

Mrs. Atwood. I could not say. It is so different in different years.

Mr. LEISERSON. Say in the last year.

Mrs. Atwood. It would run anywhere from 2,000 to 15,000 according to the different years, and the demand, and the number of offices.

Mr. LEISERSON. The last year—1913—about how many?

Mrs. Atwood. I should say in 1913, perhaps, 2,200 to 2,800 of the unskilled labor; and I think about a thousand more of skilled labor—perhaps 1,500 more of skilled labor—that is, foremen and headmen.

Mr. LEISERSON. Any women?

Mrs. Atwood. Not at all. Occasionally a man and wife on a farm.

Mr. LEISERSON. And you charge fees—how much?

Mrs. Atwood. I charge common labor \$2, but that varies. In about one-half of the positions I fill the employer pays it.

Mr. LEISERSON. Do you not charge the workman when the employer pays?

Mrs. Atwood. Not at all when the employer pays it; only charge one side. In farm labor I charge \$2 to the employer, and nearly all of those cases they ask to have \$1 of it deducted from the employee on the first pay, making each one stand \$1.

Mr. LEISERSON. In order to supply 2,800 or approximately 4,000 you mentioned all together—

Mrs. Atwood (interrupting). Yes.

Mr. LEISERSON (continuing). You have to employ five clerks.

Mrs. Atwood. I have from three to five, sometimes six or seven. Part of those are roadmen.

Mr. LEISERSON. And you give your own services to it as well?

Mrs. Atwood. I do.

Mr. LEISERSON. So you have from six to seven people to place 2,800.

Mrs. Atwood. But you understand, that also carries the roadmen, the delivery men. The delivery man comes in and works out of the office. He goes out on the road—

Mr. LEISERSON (interrupting). You mean as a pilot?

Mrs. Atwood. Yes, sir. Consequently it makes about half that number at the office would be all that would be necessary.

Mr. LEISERSON. Can you give us a general idea as to the approximate cost to your office for every position secured?

Mrs. Atwood. No; I could not. It would differ so greatly that it would not be possible. The conditions are so entirely different under different conditions that it is impossible. I could not give it.

Mr. LEISERSON. Do you consider that the licensing and regulation that the State law provides is desirable?

Mrs. Atwood. Yes, sir—and no. I would consider that a law all over the United States for one license—one form, one contract, one law for each State to live up to, would be of great assistance; but I do not believe if you mean your law, your suggestion—that it is feasible.

Mr. LEISERSON. Well, will you give us your reasons?

Mrs. Atwood. First, I can see nothing in the bulletin system, for example. I heard yesterday, mentioned by one of the witnesses here, that they received a bulletin every two weeks. Suppose that bulletin is every day. I have received at my agency a specific order for a certain number of men. I do not go one man over that order, unless I have already telegraphed or telephoned those people to ascertain if they will increase that order before I fill the order. If an order is over 48 hours old when I get my men together I telephone or telegraph, and I ask them if that order still stands unfilled, and it may be that they have picked up 50 men in that time. But if not, then I ship my full crowd forward. Frequently circumstances change hourly. We are not dealing with goods on the shelf. I can not see how a bulletin stating that at a certain point 50 men were needed, why you couldn't judge anything about it; the men would drift in from all over the country.

Mr. LEISERSON. Wouldn't it be possible, if distributing the bulletin merely gives you general information that in this town so many people are wanted on this particular day. If you want to go there for this kind of work, apply to your local employment office, and find out whether that business is still open.

Mrs. Atwood. It might do. But, again, the particular kind of labor that I deal with would drift there just about once; and we go out and verify and make extra inquiries, and at the very small towns those people are not allowed to lie around and wait there for employment. When the season of unemployment comes, they don't drift into these towns to look up work, but they drift here to the city for the winters, where it is easy, and at the small places it would not be possible to cover every little town, and I think that the men who would drift to those places and in two days be disappointed, would be known all over the United States, and I believe it would be of great harm.

Mr. LEISERSON. Let's get back to the other question—

Mrs. Atwood. Yes.

Mr. LEISERSON. Do you consider the law which created the office of commissioner of licenses in New York City, and the licensing of your business and the regulating of it, a desirable law?

Mrs. Atwood. I do.

Mr. LEISERSON. Will you give us the reason for that?

Mrs. Atwood. I think that law, strictly adhered to, is enough to cleanse the business of everything that can be considered undesirable in connection with employment agencies.

Mr. LEISERSON. Is it strictly adhered to?

Mrs. Atwood. Oh, probably not. Employment agents, like the rest of citizens, are good or bad, you know.

Mr. LEISERSON. Well, I mean the regulation on the part of the State or the city—is that strictly enforced?

Mrs. Atwood. I think our license commissioners, as judges, have done their very best.

Mr. LEISERSON. Do you think they have accomplished the purposes of the law, to remove the undesirable features?

Mrs. Atwood. As fast as they could see it.

Mr. LEISERSON. Do you think they are slow in seeing it?

Mrs. Atwood. Perhaps not, when we change them every four years. Each one has got to have his time for experience, and I find that the first year in each case is given up to experience. I think that would be another thing with the organization by the Government. Your first three years will be a school for your employees. After three years, I consider the employee is getting worth keeping. You have got to train your employees first.

Mr. LEISERSON. Have you any other criticism besides those that you have made of the general plan?

Mrs. Atwood. Yes, sir. I would like to speak of the matter of reporting private agencies, if this goes into effect, of reporting to your main office, to your clearing house. It does not seem to me that would be a fair business proposition for a business man to ask for another business man to take his private business and report it every day to his competitor.

Mr. LEISERSON. Do you consider the furnishing of jobs is a private business?

Mrs. Atwood. I should consider that the books at my office are. I give them to the license commissioner each day, give them all the information I give to my particular employers, except what information I give to the laborer.

Mr. LEISERSON. Is it your idea that this information would require the details and names of people?

Mrs. Atwood. I understood so from your saying that each order should be reported daily and in full.

Mr. LEISERSON. No; but would you have any objection to stating the number of people wanting them, and the number of people placed, the occupations?

Mrs. Atwood. Yes, if you mean that I am to comply with the suggestion here that the business is to be—that an effort is to be made to secure all this business for the Government offices. I would be giving them to my competitors, and giving him an opportunity to make his offer—

Mr. LEISERSON. Without stating the name of your employer or employee.

Mrs. Atwood. There could be no possible objection to it.

Mr. LEISERSON. There could not be?

Mrs. Atwood. Not a possible one.

Mr. LEISERSON. That is what I thought, and what I had in mind.

Mrs. Atwood. At the present time we report daily to the license commissioner every man shipped, and where he goes; and so far the license commission office has not interfered in any particular that I have ever heard of with any agent.

Mr. LEISERSON. Then you would not object to a similar report being sent to the Government office?

Mrs. Atwood. No possible objection. Now there is one other point here—the \$1 fee. I do not think that would be fair to the agents. In most instances the men that come to me—I book 50 men, say, for an order, and ship them without the collection of any fee. I never register or keep no list of employees—only of a man's name whom I have a position for. The position comes first, and I employ the man afterwards. I book him and send him to the work, taking his name and address, and he signs a legal deduction sheet for his fare or fee, or whatever I may have to be obliged to deduct from him. In that instance there is no passing of any money. He does not even have to provide food on the way to the work, and the railroad or the contractor provides the railroad fare—

Mr. LEISERSON (interrupting). Now, on that point—pardon me—

Mrs. Atwood. Yes.

Mr. LEISERSON (continuing). Is there any difficulty to get the employers to advance the railroad fare?

Mrs. Atwood. Not at all.

Mr. LEISERSON. So that the question of distributing labor throughout the country would not be held up because of the lack of transportation?

Mrs. Atwood. Absolutely not; if they need the men they will put up the fare. And the contractor has placed himself in a position, if I may explain this, that he can not object to it. I want to give you just one example to make this plain. A year ago last spring there was an order came from near Albany for the canal works. I received the order in the afternoon, and I found out in an hour that that order was being filled all over the city. The order had been sent to six offices for 25 men. I immediately telephoned to find out whether they wanted 150 men or 25 men. I think every office in the city received that order, and there were many men went up there, and when they got to the employer he took the first 25 and the balance of them beat their way to New York City. If there had been any law to hold that employer liable it would have been a good thing, but there was no redress.

Mr. LEISERSON. That is, all these agencies sent forward men?

Mrs. Atwood. Yes; and while there was no responsibility upon the employer as to fare, that being done has gone broadcast. It was done two or three times. And to-day, when an employer comes to get men, we immediately say, "You will put up the fare," and he admits by his answer to that question that if he expects to get those men he is obliged to pay it, that fact showing that he needs the labor.

Mr. LEISERSON. Does that happen that offices will duplicate those orders—

Mrs. Atwood. No; it does not happen very often here because it could not. A man would not go to Brooklyn without his fare.

Chairman WALSH. At this point the commission will adjourn until 2 o'clock. And when we reconvene it will be in the reception room opposite the mayor's office, on the floor below, for this room is to be used for another purpose this afternoon.

(Thereupon, at 12.45 o'clock p. m., a recess was taken until 2 o'clock p. m., of Tuesday, May 19, 1914.)

AFTER RECESS—2 P. M.

TESTIMONY OF MRS. ATWOOD—Continued.

Mr. LEISERSON. Mrs. Atwood, you said you have a few additional statements you wish to make?

Mrs. Atwood. May I ask first, did you ask me the question how many common laborers, or how many carpenters I sent out during the past year?

Mr. LEISERSON. Common laborers.

Mrs. Atwood. That was my mistake. After I got onto it, I was asked that question outside, and I made a little list during my noon hour. My shipments during the year was 4,651 common laborers, 2,786 carpenters and helpers. The balance, made up of cooks and blacksmiths, 389 farm hands, 44 married couples, and the balance, making up a total of 8,557, from the New York office only.

Mr. LEISEN. Have you found out what it cost you to send them out?

Mrs. Atwood. No; I did not go into that to find out, because it varies so much, and it would almost have to be given to you in writing, as to the different places. In keeping the employees, probably one-half of those employees who were kept at the office would be road men, makes a list of about four to five at the office all the time, and others going and coming, working a day and out again. There is still one question asked me here. I was asked about how any one part of the country could be bulletined to know what was going on in any part of the country. In having my office, it may be of interest, I have kept the nine offices running, when I have one at Portland, Oreg., Butte, Mont., Ogden, Utah, Salt Lake, Denver, Kansas City, Omaha, and Chicago, then east as far as Philadelphia, New York, and Roanoke, Va. I found that if there was something rumored on the Bowery to-day, I could leave here this afternoon and go on, by day after to-morrow into Chicago, and my office was fully informed by what the men on the road call the Hobo Gazette; and really, the workingmen are better informed in these things than anyone, unless it is some of the large contractors in immediate touch with it, and the information is most accurate.

Mr. LEISEN. Are they informed accurately? Isn't it a fact that great numbers of working men travel across the country on rumors as to where positions are, and when they get there they don't find any?

Mrs. Atwood. They are pretty sure, and you can ascertain pretty near the condition of any camp; and I venture that I can go down to the Bowery to-day and give you the information in an hour of almost any camp in this country right from the men, and pretty near the conditions and wages. They know pretty close.

Mr. LEISEN. In regard to whether the position is open, you said this morning that these men might hear of a position, but when they get there it might not—

Mrs. Atwood (interrupting). That might be true of a bulletin, but speaking of how the workingmen know what is going on—when the double tracking of the Union Pacific Railroad was going on, when they built the Tidewater from Norfolk to Portsmouth, there was two years' work, steady work, and the condition of work on these lines would be perfectly satisfactory, for if they landed in Chicago in February or March, it would be just the same, and on all of that work contractors paid the fare, and if a man stayed 90 days, they gave it to him free, which gave him an incentive to remain, to stay, and if he left under 90 days, he understood he would lose that. There was one point more—perhaps I am skipping the question you would like to ask?

Mr. LEISEN. No.

Mrs. Atwood. I want to show that the employment offices are lowering wages, having that effect. I have found in each instance—in my Chicago office, I was there working in conjunction with the city agency, and in New York I worked just the same as I have in every city, with every charity organization, with the Prison Association Union, and if I can place a man I will help any one to do it, but I found that in every instance they called on me for help to place some one—I will only specify one instance here that may explain it. Yesterday noon, when I left this room, I went to my office and I found an order come in from the license commissioner's agency for a man and wife, which they did not have. The man in charge of my office during my absence started out with a couple. They simply stated the wage was \$35 a month for a man and wife on a farm. We naturally took it for granted they had inspected the whole matter and found it approved. When we arrived at 29 Lafayette Street they said the man and wife would have to go to a gentleman away out in Harlem again. They took another train and went. At \$35. Now, without knowing the conditions, asking nothing, we carried them out and back again, but when we got there we found it was \$35 a month and a house, three small rooms that would have to be fitted up for them to live in and board themselves, buy all the food and pay their own railroad fare out there, and they might have what they raised on a small piece of garden. If an employment agency, licensed in New York, did that, they would take our license away to-morrow.

Mr. LEISEN. Of course, you don't mean to say every employment office would absolutely have to be run as inefficiently as you stated this particular case was handled?

Mrs. Atwood. It would not have to be, oh, no; but you have got to pick your man, and he knows and takes his orders, and it is his business and he has got

to be required by law to do it, and in our work we send out blanks and I must know all the particulars.

Mr. LEISERSON. That is to say, if the same rule were enforced by the license commissioner against the private employment agency, they should be enforced against the free agent?

Mrs. Atwood. Yes; and in the case of \$35, I would reject the order at my office, because the first question I would ask them would be the wage. Experience would learn me. They test a man for six weeks' or three months' experience. When I had been in the business three years I found out how little I knew, and when I have 13 years' experience I just began to find out I knew something about it, and then I had nine offices, too. I found out very much, indeed. Now, the others thought the interchange of labor——

Mr. LEISERSON. The point you want to make there was that in offices, whether run by private or public authority, they need people experienced in them?

Mrs. Atwood. It is not. I have got valuable men, been with me three and four years, and I do not consider a man under a year or two of proper character; no.

Mr. LEISERSON. What is the next point?

Mrs. Atwood. The next point. There is one thing I want to bring, a complaint. There was one yesterday. A complaint. One hundred and fifty complaints or abuses, it was termed yesterday. I would hardly consider it fair to the employment agencies of this city, whom I believe rank with other citizens around the country—my experience has learned me that—to say that 150 complaints was 150 abuses. I think 100——

Mr. LEISERSON (interrupting). You don't seem to imply that 150 complaints were all?

Mrs. Atwood. Abuses; not at all.

Mr. LEISERSON. Or that that was all the complaints that might have been made against the business?

Mrs. Atwood. I think among the foreign element, that if one man has a complaint and that complaint is heard and credited, you might have 150 inside of three days, which would, all of them, upon investigation, turn out not to be correct. To give an example, during Mr. Bogert's term here I had 15 subpoenas served on me by a gang of Greeks who came from what they call the border line between Turkey and Greece. They are very ignorant. Our law requires that a man shall have a contract in his own language that he can read. And I sent these men out. There was but 1 man in 16 men who could read or write, and I hunted the town almost over to find some steamship agent who understood their vernacular and could make it understandable to these men. They were gone about two weeks and then I got—without hearing from them—I was called upon by an investigator, and I wrote out and found that this was the gang. I took interpreters of the Greek language that I had hired for them, and after the other side had been all heard and a Greek lawyer whom they produced found out that 15 of them could neither read nor write, but we could not keep them out of work on that account.

Mr. LEISERSON. What was the result of that case?

Mrs. Atwood. That was dismissed, but there would have been what we term 15 abuses, and it was not. We couldn't learn them to read nor write, and we gave it in English; but Mr. Bogart, of course, dismissed the case, stating to the lawyer that he should have made it understood in the beginning that he could not come in; but I think there is something there that perhaps the local agent suffers from when he is not to blame.

Mr. LEISERSON. If you will take up the next point that you have in regard to our plan.

Mrs. Atwood. The case of a dollar fee being charged. If I send a man seven or eight hundred miles out, it would be a very hard thing to ever collect it back. In my business it would touch me very little; I can see instances where it would be ruinous. My contractors cover me with deductions, or else pay it themselves. The only men from whom I collect is skilled laborers, carpenters, and foremen.

Mr. LEISERSON. Why should the fee be more than \$1 for common laborers?

Mrs. Atwood. It should.

Mr. LEISERSON. In the West it is common all through there for common-labor jobs?

Mrs. Atwood. In the summer it is so scarce that if the employment agent keeps the contractors' work they have to make that a fluctuating scale in order to get the men quickly.

Mr. LEISERSON. In the summer time when work is plentiful you charge \$1? One dollar might be charged?

Mrs. ATWOOD. Yes.

Mr. LEISERSON. In the winter, when there are few jobs, very many people unemployed, then the private employment agencies raise the fee so that it becomes still harder for those unemployed to get work, is that the idea?

Mrs. ATWOOD. In my office I never made any difference whatsoever, except this: In New York they do not do that at all. It does not have to be done. In this part of the country when an employer calls for labor, when it is scarce, he says, "You have to pay the office fee and make some particular concession, and make it more attractive to him." In the western country the employer never pays for his men west of the Mississippi; in fact, very little in Chicago. There I have had a contractor come to me and say: "My work will close down; will you give me 100 men free of charge? Get them of all kinds of nationality—anything you can get—to relieve the situation." Then we have to put up a sign and take everything, what we would consider bums, what at other times we would not take at all.

Mr. LEISERSON. Have you any other suggestions in regard to our plan?

Mrs. ATWOOD. There is one suggestion that I think is the only one myself that would properly settle the question. That is, by the years, from Alaska to Mexico, from California back. In the winter there is no place for you to trade your labor from one State to another. It is cold everywhere. In three years of the 22 years that I have been in business I have found that business was good, that called for men all winter, things like the Tidewater, like the Union Pacific, the building of the East Coast; but those years were active all over and any man could get work. There is a list of unemployables who go into the large cities for the winter, not to obtain work but for easy living during the winter. There is no remedy for him.

Mr. LEISERSON. That is, that your idea is that employment offices can not make work?

Mrs. ATWOOD. No, sir; they can distribute the work. If the United States Government would take one piece of the Mississippi levee that could be worked all winter; if there were one piece of road work where it was sufficient to give work in the middle of December, for three weeks, and then let every man who wanted employment apply and go to work for the regulation wages. If he did not want employment, take him and lock him up for 90 days. In that way you would give him a strong habit and a good body and good feed.

Mr. LEISERSON. How about the work of cutting ice and in factories, like the steel mills, the metal trades, that ordinarily do not have seasonal employment? How about that for work in the wintertime?

Mrs. ATWOOD. The steel mills are very close in the winter. They cut very closely. The woods take a very small per cent, probably more in Chicago for the North Woods and up in Michigan, but they have very little. There is very few of those men that are fitted for the work. The per cent is extremely small that can go up into the North Woods and do that work. If we had 200,000 unemployed this winter, we had 100,000 unemployable.

Mr. LEISERSON. What would you suggest?

Mrs. ATWOOD. If there is employment made, and those men are taken and given good, wholesome, outdoor work, portable buildings can be put up, rock crushers can be started. Those men can be well fed, and in 90 days would learn the habit of industry, and some of them, perhaps, might begin a very different life.

Mr. LEISERSON. That is all.

Commissioner O'CONNELL. Do your agencies handle men for steamship companies?

Mrs. ATWOOD. Some.

Commissioner O'CONNELL. Are you in the association?

Mrs. ATWOOD. I am not in the association with any of those. I have steamship companies. The men come here, they drift here. For instance, the Finnish, such a line, and the North German Lloyd, but that is all. There are steamship agents on the other side that are loading us up pretty well with high-priced men with inflated ideas of this country.

This is one plan I would like to suggest. I have just an order blank, a copy of one that I use.

Mr. LEISERSON. Will you hand that to the stenographer, and it will be marked as an exhibit to your testimony?

Mrs. ATWOOD. Yes, sir.

ATWOOD'S EMPLOYMENT AGENCY.

Mrs. S. J. Atwood, proprietor.

12 State Street, New York.

-----, 191---

ATWOOD EMPLOYMENT AGENCY.

DEAR SIR: We hereby give you an order for ----- men, to be sent to our work at -----

We will take these men from (State, city, or town, if you will accept them from any point we can obtain them).

What nationality preferred ----- If unable to secure above nationality, we will accept ----- What kind of work ----- How many hours per day ----- What are wages ----- How long will work last ----- How much is board ----- Can men board themselves ----- If men board themselves, what do you charge for camp, and what do you furnish them? State fully as possible ----- What is hospital fee ----- Is there a strike ----- Will you advance railroad fares ----- If so, in what installments will you take it out of their wages -----

Remarks -----

(Signature.)

Mrs. Atwood. I think the order blanks I have found that should be required, and they are put on and filed in my office, and they are ready for the license commissioner or anybody who wishes to look at them.

Commissioner O'CONNELL. If an employer sends to you from a distance, do you ascertain whether there is any kind of trouble—a strike, for instance?

Mrs. Atwood. Absolutely.

Commissioner O'CONNELL. It is necessary for you to have that information?

Mrs. Atwood. I would not send a man unless I knew about it.

Commissioner O'CONNELL. If you found there was——

Mrs. Atwood. I do not fill strike orders ever. I keep out of it entirely.

The question has been asked a number of times about investigating camps. I think there is a little wrongful idea on that subject. Many of our people who go to investigate a camp go from a steam-heated apartment in New York City to a camp. They do not find the conditions and they at once denounce the camp. I have lived for 14 months following up train work. I have followed the laying of the pipe lines in Iowa and have lived in a tent when the temperature was 28 below, and we had 2,000 men, and I never found any trouble; we put in good stoves and we had good food, good wages, good clothing for the men.

Commissioner O'CONNELL. What do you call good wages?

Mrs. Atwood. We gave \$1.75 for nine hours. Their food cost them nothing. A commissary was run on the work by an American.

Commissioner O'CONNELL. What did it cost the men?

Mrs. Atwood. We worked there Austrians, Polish, Germans, Finnish. The ordinary men run from \$3 to \$4.50 a week, and he ate good.

Commissioner O'CONNELL. One of the gentlemen here yesterday spoke of the ice camp.

Mrs. Atwood. Yes, sir.

Commissioner O'CONNELL. About some straw thrown into a tick, and the men slept there and had blankets. Do you consider that good?

Mrs. Atwood. I don't know that one of those laboring men would know a sheet and a pillowcase if he saw it. I would like to see somebody that could show me 50 men that I could hire that would take those accommodations and stay over night. Men will not go to those places and stay on the work; no. They know there is better, and they are taking them.

Mr. LEISERSON. Your statement is that the men will not stand for the better conditions?

Mrs. Atwood. They will not stand for the frills, as they would consider white sheets and pillowcases.

Mr. LEISERSON. Do you know that last week the Northern Hemlock & Lumber people had a meeting, in which they appointed a committee for the purpose of improving the camp conditions and laying down standards as to what was required in the camp?

Mrs. Atwood. Yes, sir.

Mr. LEISEN. And they stated that it came out in their proceedings that there were many of the smaller contractors to clear a certain amount of land that had accommodations that were not fit for the men to be in, and that the lumbermen themselves, both in the North and in the South, are now seeing the necessity for putting in sanitary conditions in the camp and admitting that they did not have sanitary conditions previously?

Mrs. Atwood. I would like to state what we were——

Chairman WALSH. Please answer the question.

Mr. LEISEN. Do you know about that?

Mrs. Atwood. I know that the North Woods camps, the ice camps, which are temporary camps——

Chairman WALSH. No; he asked you if you knew about a certain action?

Mrs. Atwood. I did. I heard of it from Chicago.

Chairman WALSH. That is all. That is all that was asked. Was there something else that you wanted to say?

Mrs. Atwood. The camps we considered had a good stove, a good table, and a place for the men to wash and clean, and a place for their laundry, when they wished to do it. We considered that that was all that they found necessary; and, in fact, when sheets are put on they generally disappear as fast as they are put on. The men do not want the frills. I have always found the contractors willing to put them on; at least, not adverse to it; but the men do not care for them.

Chairman WALSH. If there are not any other questions, that will be all. Call your next.

We are obliged to you, Mrs. Atwood.

STATEMENT OF MRS. S. J. ATWOOD.

I am deeply gratified to be asked to express an opinion before this body to-day, and for many reasons I believe that this meeting has been called to try to earnestly and honestly solve the problem of the great mass of unemployed, which at a certain season of the year comes before us so urgently, and again because, having dealt with the workingman for over 20 years, I am most deeply interested in his welfare and in seeing this problem solved as we should solve it, to be doing our duty to each of our fellow men, and I hope that my view of this matter may be of a little assistance and have at least some weight in forming a plan of action to alleviate the present conditions.

My experience, perhaps, makes me realize more deeply than many of you present the necessity and demand for practical action.

For over 20 years I have, through employment agencies, handled laborers for building railroads, dams, aqueducts, canals, and farm work. I have had offices at Portland, Oreg.; Butte, Mont.; Ogden, Utah; Denver, Colo.; Omaha, Nebr.; Roanoke, Va.; Kansas City, Chicago, and Philadelphia, as well as in New York City, and besides these laborers, have gathered laborers and distributed them to every city in the Union, as well as to Canada, and south into Mexico. For about five years I also boarded and ran the commissary stores for all laborers employed by the Oregon Short Line Railroad. This boarding outfit usually carried from 1,500 to 2,500 men on its roll steadily, and many times was far in excess of that number, consequently I have come in direct contact with the various classes which you are here to-day to discuss.

When the investigator of labor relations of the United States Government called upon me he showed me a short chart, giving different plans which were to be discussed at this meeting, and asked which I favored. My instant reply (about which I have seen no cause to change my mind) was, "None of them."

In the first place, there are two causes for the condition which annually strikes all cities in the United States of unemployment. Those who wish to work, but find all farming and railroad labor closed for the winter, and those who, for many years, have come to the great centers, profited by the bread line and the lodging houses, and make their calculations of tiding over a cold winter without work in the open. There is but one practical solution of this problem, and that is work. Establishing official centers, putting out daily bulletins, either through postmasters in various parts of the country or through an agency for that purpose, can not work any great reform, as during the summer time it is not necessary, for it is almost impossible to find laborers to meet the demand, either for farms or railroad work, and in the winter, when there are no demands for labor in one part of the country there seldom is in another. Only three winters since I have been handling laborers have large works started and been kept up continuously through the winter and employed all the labor

which we could obtain, and when these very active winters were demanding the labor in one part of the country, I noted that the same activity was taking place in all parts of the United States, and that there was very little use in trying to induce men from any other part of the country to travel for miles to any particularly large contract—there was plenty of work for them nearer home.

The keeping of these bulletins or statistics by the Government at Washington, of the great army of unemployed would, it seems to me, only be creating labor for clerical help, and would be a very fine source of appointments for some noted politician to hand out, but I can not understand where it would help the laborer who is waiting outside for a job. It reminds me most forcibly of a so-called charitable institution which, some two or three winters ago, during the idle season, placed an "ad" in the morning papers for all men needing employment to call at their office early next morning. Men lined up for blocks, were kept in line by the police from 4 o'clock in the morning until nearly noon. They passed into the office in rotation to be handed blanks requesting their name, address, nationality, number of their family and class of work which they could do. Toward noon the matter was investigated officially, and inquiry made as to what it was done for, and the answer was, "To get statistics as to how many unemployed there was in the city." It occurred to me that it was a good deal like a scientist impaling an insect. I can not understand where these pretty theories and statistics are going to be of any possible aid in furnishing employment to the laborer.

Another thought of the Government is "back to the soil." This is a splendid idea; but I have noted that wherever I have shipped a laborer who in his heart was a farmer, who wished for that work, and who ever wanted a home, he has always found his particular piece of ground to till, whether he was sent to the wilds of Idaho or the glades of Florida, for while he handled a pick and shovel his mind continually roamed to that home which, in imagination, he knew was waiting somewhere for him, and he has been ready to toil and save and find his place in the world.

The larger percentage of the foreign element who come into this country will not farm. It is impossible, during the farming season, to commence to fill our orders for farm hands at even the very best of wages, and many of them are then incompetent and unwilling to learn. In this connection I would say I held upon my books for many months three distinct places where I could send families, fare advanced. The places were furnished with horses, a cow, pigs, seed, and the living for the first year until the crops were harvested, and every opportunity given to own their own home. Any nationality accepted if they were real farmers. The result was one German family sent in eight months. This family, by the way, have made exceedingly good money and done well. As a rule, all foreigners wish day wages and regular pay days and no sense of responsibility. I see but one possible suggestion, and that is, making the employment and not scattering the laborer to that which is already in progress.

If the State of New York would open at least two pieces of work—and we certainly have a demand for highway improvement—and be ready for this work to commence as the general work of the country begins to decline next fall, I think this problem would be solved in so short a time that we would be amazed at the results. I would suggest work which could be readily furnished by our State engineers where there is rock to be handled. In many places in this State immense rock cuts have taken the entire winter, and the rock underlying this part of the country is handled even better in cold weather than in summer. If for this work, as an experiment, the State or city does not wish to incur the expense of a large plant, there are several large firms from whom rock crushers, steam shovels, and all implements could be rented at nominal figures. On one piece of this work I would use all unemployed men who are willing to work and can not obtain it, and this can be done at the ordinary wage schedule which prevails in this State to-day of \$1.60 for eight hours. Good portable buildings at very cheap rates can be placed on this work, organizing a good, up-to-date camp and doing this work at a lower rate than any contractor in the State can possibly handle it for.

The second piece of work, which should be opened at the same time, should be as near as possible to the city. There are several places I have in mind where large crushers are needed, where the rock can be prepared, except for a few days, during any ordinary winter, and at any time can be distributed along the line where it is to be used.

For this second camp I would use the unemployable man who refuses work, frequents the lodging houses and the bread line. I would have him arrested for vagrancy. Thirty days' good work in the open air, with proper food and proper

sleep, would make a workingman out of a street "bum." Jailing a man for vagrancy does not do this. While this second camp would have to work under guard, these camps can be made sanitary, homelike, and cheerful and not a place of punishment, but one which will send out better men physically and mentally when their time is up.

If there are married men at either of the above camps, then I would suggest that a certain percentage of their money be turned over weekly to their families. In this manner we are taking the burden of the families from the charitable organizations of the city; we are taking the man from the sound of the charity organizations, or being supported by the taxpayers in jail, and making him a self-supporting man, as he should be. I do not believe that we should make a single human being a mendicant. He has the right to be a self-respecting, self-supporting man, and if conditions have brought about the present state of affairs, then we should right about face and at once find the remedy, which is self-respecting work, and strong, healthy people who will not work willingly should be made to do it. Idleness is simply a habit.

I note that the Government investigators seem to think that the cities are only crowded in winter because men come here to look for work. This is not so. Small towns and the country will not tolerate idle men who are discharged from the farms and work, lying around all winter, and the men state frequently and frankly that nowhere can they live so easily and well as in the large centers. To show that the matter of road work is perfectly feasible and can be done in a satisfactory manner, and also with a saving of money to the State, I would like to quote a few figures. I find in the reports of the State highway commission of New York for 1912 that the ordinary work through this State, where there was only a little earth grading, runs from \$12,130 up to \$52,078 per mile. I find, again, in the comparative figures on work done in 1909 in the United States, compiled by J. E. Pennybacker, jr., that the cost per mile of roads varied, and was the least in Arkansas.

	Gravel.	Macadam.	Bituminous.
Arkansas.....	\$240	\$325
California.....	1,375	5,375	\$8,575
Pennsylvania.....	1,575	9,164	10,000
Virginia.....	2,200	4,920
New York.....	5,950	9,496

You will note in the foregoing table of prices that work in New York is much higher per mile than any other State for the same line of work. This, I am positive, is not necessary, as the material for good road making is very near at hand; and if a good competent engineer were put in charge and work handled in a businesslike manner by checking all accounts through an auditing committee, so that only actual expenses need be met, and graft could not exist, I think better roads for less money will be found to be an actual fact and the taxpayer profit by it.

There has been within the past 60 days a little over 48 miles of new roads contracts let in this State, at an average price of \$19,400 per mile, or at least this would be the price of the lowest bidder, and it is not possible that the city or State, taking charge of one of these pieces of work, could not handle it at the same figures or less and work out this great problem of employment which is calling the attention of the world.

Many States in the West are already building roads with prison workers, and found it not only feasible but that they saved the men, morally and physically, as well as saving money. I note in an article of the department of justice in the State of Iowa that they are working men at a wage schedule of from \$2 to \$2.50 per day; that the cost of the maintenance of their prisoners, which covers both guards and food, is \$1.01 per day; that the balance of the wages, in cases of families, is being turned over to them. Where there is no family it is all laid by for the man when his term ends, giving him a start of a few dollars instead of being a mendicant.

In Colorado, where prisoners are used upon both farming and road work, I find by the report of the warden, Thomas J. Tynan, that he speaks in terms not at all uncertain of the good that has been accomplished. I would quote one paragraph from his report:

"By working convicts on public highways we have saved the State many thousands of dollars, and the taxpayers have received the benefit of this tre-

mendous saving. To give an idea of the great saving to this State, I wish to quote a few figures based on actual facts: 'During the year 1909-10 we built 57 miles of finished roadway, saving the taxpayers of Colorado \$223,479.26 in actual cash; the above figures based on contractors' estimates. The cost to maintain these men was 32 cents per day per man, and not only are they building good substantial roads under competent overseers, but they are gaining a knowledge and physical condition that will enable them to earn honest livelihoods.' "

You understand, in Colorado these prisoners working on the road are nearly all State's prisoners under long sentences and are worked in honor camps without guards, and the watchword of the Colorado prison has been reform and not punishment, and they are realizing to-day and sending into the world a class of men with better habits, mentally, morally, and physically, than ever before.

I worked for many years with the Prisoners' Aid Association, and my experience has been that the man, whether a prisoner or free, who is obliged to do good, wholesome work and is made an economic factor and wage earner as well as consumer, is the man who counts, not only in dollars and cents, but in his own estimation and self-respect, and every man taken from the great army of the unemployed and made to work for 60 to 90 days systematically and regularly, well fed and housed, has acquired a habit that will raise him to higher citizenship and make him a man in every sense of the word.

I was in Colorado many years ago when the Coxey army made their headquarters there, arranging for their trip to Washington. Up to that date it had been very easy to fill orders for railroad work with the English-speaking class, a large percentage of these being, of course, Irish, Swedish, and German-Americans. This army formed at a time when a wave of unemployment swept the country. This class, without exception, drifted into the Coxey army. They demanded something for nothing—food and shelter, without work, and became, from workingmen, in every sense, hoboes. Many of these men I had placed on work for years, and I was interested enough to keep track of them afterwards, and when the army was disbanded I found about 5 per cent of these men ready for employment again. The balance were divided into two classes—one demanding positions and wages which they were not at all fitted to take and claiming that they were too good for common labor; the balance formed the army of tramps and hoboes that for many years infested the Western States and have not entirely disappeared. Those who before that time would have been ashamed to accept charity had acquired the habit of indolence and getting something for nothing.

Another point: I find that many of the immigrants who come to this country fully understand that there are all sorts of charitable institutions which will carry them on if they have simply enough to land here. For example, one Russian was only in this country some two weeks when his wife was in the confinement ward of an East Side free hospital, three children were in various charitable institutions, and he himself had received aid. On questioning him I found that friends in this country had urged him to come and save all expenses which it would have cost him in the old country, and that all of the immigrants from his part of the country had been informed the same—that there was no expense in this country, as we were very anxious to receive them. He fully believed that Roosevelt's policy was certainly a winner for the immigrant families.

In conclusion, I firmly believe that one year's trial of this plan would lessen the number of unemployed in this city to such an extent that you would feel the problem solved. I believe that if the United States Government would open one large piece of work on the Mississippi levee in the same manner, they would find that nothing more was necessary, and I am sure you will all agree with me when I say that every dollar of money which both State and National Governments can spare should go to the making of employment and not to theories and statistics. No chain of agencies formed in the United States, whether private or Government, can give work when no work is to be had. Each State has been working out its own problem, and can not take care of those within its borders, while each State would like to obtain labor from some outside source and can not find it. The table of prices of road work which I read to you some time ago shows that road work to-day in New York State has been let at higher prices and costs this State more than in almost any other State in the Union, while statistics show that New York has more unemployed than any other State. It seems to me that these two assertions should be taken to heart by thoughtful people and be made to solve our problem.

Other States are finding that they can do their road work at less than it is costing New York by the same process, and if we were to make prisoners of those refusing legitimate employment and giving work at the ordinary price to those who are willing to accept it we would get the much-needed work done at a lower price; make the existence of a municipal lodging house unnecessary; cut out the bread and pie lines from the East Side; take the burden of supporting the families of the unemployed men from the charity organizations; relieve the taxpayers from boarding and caring for vagrants in the jails; and compel every consumer to be a producer, whether he wishes it or not. This should be done in all States, but I speak particularly of New York City, because it is the landing place and dumping ground of the immigration of the world; and the first place where these immigrants land they are almost certain to return to; and hundreds of them when sent to distant States for employment will stay only a certain length of time, when they must return to New York City; and if compelled to work when they came here to winter a great number would not return, and I fancy that other surrounding States will very soon have to start work in the same manner to protect themselves from New York's overflow, which will stampede to other centers as soon as compulsory work is commenced here.

I can not see where there should be any aversion to prison labor. Because a man is arrested, he is not out of existence. He is still a consumer, a unit to be figured upon, and he should not only be allowed but compelled to be a producer.

I find in the yearly report of John A. Benschel, State engineer, that the State and county roads under improvement for one year show: "State and county roads improved during the year, 3,578 miles; State and county roads under contract for improvement, 1,627 miles; expedited roads (not contracted for but which is contemplated), 298 miles; remaining State and county highways to be improved, 6,483 miles; total mileage of public roads in the State of New York, not including New York City, 80,000 miles."

Does it not seem that of all these miles of road for which big money is being paid to the contractors, who do all their work in midsummer, that at least 10 or 20 miles could be reserved by the State and done in midwinter, and thus furnish the unemployed of this city with proper work and for ordinary prices, and thus solve the problem of building roads, clearing our prisons, lessening our charities, and stop making our brother a beggar?

TESTIMONY OF MR. BENJAMIN JOHN JONES.

Mr. LEISERSON. Mr. Jones, will you please state your name?

Mr. JONES. B. J. Jones, chief of the employment bureau of the B. & O. Railroad.

I have made here in duplicate an exhibit—in duplicate—one of which I will leave with the commission and one I want to read into the record.

Chairman WALSH. Which one do you want to read into the record?

Mr. JONES. This is it. They are in duplicate.

Chairman WALSH. This is gotten up so very well, might you not submit this?

Mr. JONES. I will be very glad to.

Chairman WALSH. And then make any statement you desire.

Mr. JONES. I would be very glad to.

Mr. LEISERSON. Have you any additional points that you would like to make? Any statements in regard to them that you would like to make?

Mr. JONES. No, sir.

Commissioner O'CONNELL. Give us the headings.

Mr. JONES. The beginning of the statement shows the establishment of the bureau of employment, how we maintain it. It shows since we established it we have record of 321,464 men. Of that, there are 72,404 in the service, or active records, and 248,087 inactive, who are out of the service. Then, we show in this record our circulars outlining the manner of the establishment of the bureau, and we also show the work of the labor bureau.

The next shows 25,077 men, pretty near all unskilled, sent out by the labor bureau.

The next is the organization.

The next is the requirements of employees entering the service.

Then follows in succession the various forms, the form of the incentive or beginning of the record, and as it continues on to the present time. Each form is explained on the opposite sheet with as much detail as possible.

Chairman WALSH. Does that give the number of men you have handled?

Mr. JONES. Yes, sir.

Chairman WALSH. For instance, the statistics that you consider significant?

Mr. JONES. Yes, sir.

Mr. LEISERSON. How long have you had that bureau?

Mr. JONES. The employment bureau was established November 1, 1912.

Mr. LEISERSON. Prior to that time you used private employment agencies?

Mr. JONES. No, sir; the employment bureau and labor bureau were two different things.

Mr. LEISERSON. Explain the difference, please.

Mr. JONES. The employment bureau is a bureau which investigates applications for skilled men. We also deem firemen and brakemen skilled men.

Mr. LEISERSON. Something like the metal trades, as was spoken of this morning?

Mr. JONES. Yes; only we include firemen and brakemen.

Mr. LEISERSON. Then, the labor bureau?

Mr. JONES. Unskilled men.

Mr. LEISERSON. How long has this been in existence?

Mr. JONES. About two years.

Mr. LEISERSON. Prior to that time you used private employment agents?

Mr. JONES. Wherever we could get them.

Mr. LEISERSON. You did not find that satisfactory?

Mr. JONES. No, sir. We found it essential to have our own bureau.

Mr. LEISERSON. Just what was the reason that led you to consider the private agency unsuccessful in supplying you with that help?

Mr. JONES. We just had the same advantages as the other men. We thought that by placing our own employment bureaus we would have the advantage over the other men, inasmuch as we could go right into the field and secure men first-hand, and that we would not have to depend on the labor agent. Another thing, we do not exact the fee from the men. We send him to the point of the work.

Mr. LEISERSON. Do you have trouble getting men?

Mr. JONES. Not now. When labor is scarce we have the same trouble as other people have.

Mr. LEISERSON. Your own labor bureau has the same trouble as it had prior to the establishment of the bureau?

Mr. JONES. We have the advantage of putting men on the job without exacting from him anything. The disadvantages—when a man wants to take a trip in the direction of a job, the man takes advantage of our free transportation and does not work.

Mr. LEISERSON. Can you give us an idea how much it costs your company to maintain a labor bureau. Is it in the record?

Mr. JONES. No. I should say, at a rough guess, labor bureaus scattered around over the system, cost, in wages, \$500 a month; \$600 a month; and an expense, including rent, light, and heat, possibly \$300 a month.

Mr. LEISERSON. About—

Mr. JONES. About \$1,000 a month.

Mr. LEISERSON. About \$12,000 a year?

Mr. JONES. About that; yes, sir.

Mr. LEISERSON. That supplies you with approximately how many laborers?

Mr. JONES. In the year there—my statement here shows—we shipped out during 1913, 25,077 men.

Mr. LEISERSON. Of course, that total number did not go to work?

Mr. JONES. No, sir; not by a long shot.

Mr. LEISERSON. You consider that investment that you put in there, of \$12,000, worth while?

Mr. JONES. Yes, sir; very much so.

Mr. LEISERSON. In what way? What results does it bring to you?

Mr. JONES. The results, as I said before, we get the men now first-handed.

Mr. LEISERSON. Do you get any better men than you got before?

Mr. JONES. No, sir; I don't think so. We get the men on the job. As I say, we have the advantage over the other men, and we deal direct with the men instead of going through a second man, a middle man, and then we do not exact the fee, which helps some.

Mr. LEISERSON. What would be your position in respect to having this particular work done for you by the State employment office, which would give the same service to every other line.

Mr. JONES. The same service; it would be, it seems to me, a very good scheme for unskilled men.

Mr. LEISERSON. Have you gone through the plan?

Mr. JONES. Yes, sir; I have, thoroughly.

Mr. LEISERSON. Have you made any suggestions?

Mr. JONES. I should prefer to write to you and go into it more in detail.

Mr. LEISERSON. Thank you.

Chairman WALSH. Have you any provision made for communicating with Mr. Jones?

Mr. LEISERSON. Yes, sir; we have.

Chairman WALSH. Thank you, Mr. Jones?

Mr. JONES. You will find that statement gives everything.

Commissioner GARRETSON. Let me ask Mr. Jones one question.

Chairman WALSH. Go ahead, Mr. Garretson.

Commissioner GARRETSON. Those figures that you gave as showing "active," I think, men with the service——

Mr. JONES (interrupting). Men with the service.

Commissioner GARRETSON. That includes men that were in your service prior to even the establishment of your——

Mr. JONES (interrupting). No; men in the service at the present time.

Commissioner GARRETSON. Regardless of whether they were secured by the bureau or not. If they were in the service before the institution of the bureau, they are included in the figures?

Mr. JONES. Yes, sir.

Commissioner GARRETSON. That is all.

Mr. JONES. The pamphlet explains that. We have two files, the active file and the inactive file, and the pension file, and in the active file are the men in the service at the time, and the inactive men are those who have been in the service.

Mr. LEISERSON. Without regard to who they are.

Mr. JONES. Yes.

Mr. LEISERSON. That is all, thank you. I would like to say that Mr. Jones appears also for Mr. E. E. Hamilton, who has charge of the work for the Baltimore & Ohio.

Chairman WALSH. Yes.

Mr. LEISERSON. The next witness will be Mr. Larson.

TESTIMONY OF MR. A. H. LARSON.

Mr. LEISERSON. Will you state your official position?

Mr. LARSON. I am statistician of the New York Milk Commission at present.

Mr. LEISERSON. You are, or you were in charge of the work of the National Employment Exchange for how long?

Mr. LARSON. One year—that is, one branch of the office—the labor office.

Mr. LEISERSON. Manual-labor office?

Mr. LARSON. Manual-labor office.

Mr. LEISERSON. Do you know the purpose of the National Employment Exchange, so far as the manual-labor branch is concerned—what it started out to do?

Mr. LARSON. I think so.

Mr. LEISERSON. And can you tell us briefly what that purpose was, and, from your experience, whether it succeeded or not? What were the reasons, if you know, that it did not succeed?

Mr. LARSON. As I understand it, the purpose of the National Employment Exchange was to conduct an exchange for the common laborer, honestly, and thereby eliminate the dishonest agency.

Mr. LEISERSON. Was it your experience that there were many dishonest employment agents?

Mr. LARSON. I can not say that it was. There are employment agents whose ethics are not very high, perhaps, but I do not believe that the general run of employment agents are particularly dishonest. To be absolutely honest in the employment business and make a living—that is, with common laborers—I am inclined to think, with exceptional cases, is hardly possible.

Mr. LEISERSON. Your idea is that it is impossible for a private employment agent to make a living and be honest in placing common laborers?

Mr. LARSON. Yes, sir; that is right. I wish, however, to qualify that by saying that I believe Mrs. Atwood is absolutely honest; that she is making a living.

Mr. LEISERSON. Will you give us your idea as to the results of the National Employment Exchange experiment?

Mr. LARSON. My idea of the result of the National Employment Exchange was or is that we started out doing a certain thing without knowing enough about it. We did not know what per cent or to what extent employment agents in general were dishonest or honest. Also, we overlooked the vital problem in the difficulties of the common laborer, and that was the commissary camp. You can have the best efforts you can get anywhere in your employment agency, and if you are disregarding the commissary camp you can not possibly get beneficial results.

Mr. LEISERSON. Will you explain how it should be regarded?

Mr. LARSON. The commissary camp should be run for the benefit of the laborer and not for the benefit of the contractor or padrone.

Mr. LEISERSON. Will you explain how it is run at times?

Mr. LARSON. Quite a number of contracting and engineering companies conduct their own camps. I believe that when they put in a bid on a job that they figure in that bid what percentage of profit they are going to make on their commissary.

Mr. LEISERSON. Pardon me—that is to say, they make a profit not only directly on the labor of the men, but also on the feeding of the men.

Mr. LARSON. Yes. In instances where the commissary is not conducted by the contractor or the engineering company it is let out to a padrone, generally or invariably of the same nationality as the men required on the job. This man pays the contractor a certain fee. That is, he buys the concession of the commissary privileges.

Mr. LEISERSON. Have you any idea what they pay for that?

Mr. LARSON. No; I have not.

Mr. LEISERSON. But it is considered valuable?

Mr. LARSON. It is valuable. That is one thing that should be eliminated from the——

Mr. LEISERSON (interrupting). Let me get your idea on that. You think it should be prohibited to a company to charge people for board when they directly employ them in their own works.

Mr. LARSON. I feel that it should; I may be wrong.

Mr. LEISERSON. Would you say that the fact that you can not get enough men—Mr. Carpenter this morning made the statement that they can not get enough men to do this kind of work. Would you consider that the practice of the commissary department had something to do with the unwillingness of the men to go to work?

Mr. LARSON. It certainly has.

Mr. LEISERSON. You think that is one explanation of the inability of the National Employment Exchange to get men to go to these places?

Mr. LARSON. Not only with the National, but with all of them.

Mr. LEISERSON. Will you give us some of your other reasons for the National Employment Exchange not accomplishing what it started out to accomplish?

Mr. LARSON. Well, one reason is that the common laborer, with exceptions, is sent to the job by an agent of his own nationality. This agent does little favors—at least, alleged favors—for the man, such as receiving his mail and forwarding it to them, etc.; and some of them have a little banking business on the side; save his money for him, or otherwise.

Mr. LEISERSON. And the employment exchange did not do that?

Mr. LARSON. Did not do that.

Mr. LEISERSON. Will you mention some other reason?

Mr. LARSON. Directly with the National?

Mr. LEISERSON. Yes. But what we are trying to get at is whether the experiment of the National Employment Exchange failed and what the reasons for the failure are, so that a similar experiment would not be started making the same mistakes.

Mr. LARSON. Well, the only explanation I can give you, Mr. Leiserson, is that the National Employment Exchange——

Mr. LEISERSON (interrupting). Would you say that it would be advisable for another experiment similar to the National Employment Exchange—I mean a philanthropic agency of that kind, designed to pay for itself but not to make big profits, but to pay for itself as it goes along.

Mr. LARSON. No; I would not.

Mr. LEISERSON. You would say that it is not practicable to do that?

Mr. LARSON. I would not say it is.

Mr. LEISERSON. Would you say it was necessary to have some kind of employment office?

Mr. LARSON. Yes; it is.

Mr. LEISERSON. And what kind of employment office, then, do you think, is necessary, as a result of your experiences?

Mr. LARSON. If you could eliminate all—or at least largely eliminate—the more or less unscrupulous private agents and establish State and national agencies as substitutes; then get your conditions such that you will get the men, that the men will apply to you.

Mr. LEISERSON. Why couldn't the National Employment Exchange do that? Do you think the fee interfered with it?

Mr. LARSON. No; not particularly.

Mr. LEISERSON. What was it?

Mr. LARSON. Nationality more than anything else.

Mr. LEISERSON. That is, the foreigners would come to the National Employment Exchange?

Mr. LARSON. I think so, largely.

Mr. LEISERSON. Would not that be possible by interpreters to get them?

Mr. LARSON. Interpreters were employed.

Mr. LEISERSON. And they could not get them? Well, how could a State or National agency get them to come?

Mr. LARSON. If the agent of the same nationality as the applicant was out of the business the applicant would necessarily follow the source of demand.

Mr. LEISERSON. Would you advise putting the private agents out of business?

Mr. LARSON. I would, for common labor; yes, sir.

Mr. LEISERSON. For common labor, absolutely. You think the private employment agents do not perform service to the community for common laborers?

Mr. LARSON. I do not—I do not believe they perform a service that is in sufficient demand. That is the nature of the employment business.

Mr. LEISERSON. You stated before in your own way that it could not pay for itself honestly. Would you give that as the reason for abolishing it?

Mr. LARSON. Necessarily, yes. I do not want you to misunderstand my term "honestly" in this case. Though the conduct is not absolutely honest, it is probably a minor disregard of ethics.

Mr. LEISERSON. Did you get a copy of the plan; the proposed plan?

Mr. LARSON. Yes.

Mr. LEISERSON. Have you any criticisms or suggestions to make on that?

Mr. LARSON. On page 8, paragraph 17, that is part two, I believe, dividing fees prohibited. You speak there of the prohibiting of the agent from dividing fees with the foremen and superintendents. I do not believe that this practice is very general. I want to call your attention to the recent more or less unpleasant exposures of the State road get-rich-quick practices of New York State, where the political henchman was exacting a percentage or fee from the laborer. I think probably that is more important. If the contractor's bond on public work was, or automatically became, involved when such practices were discovered on the job, it is quite probable that would eliminate the practice.

Mr. LEISERSON. Let us get your idea. That paragraph proposes to prohibit any employer from charging his employee for work, and also to prohibit the private employment agent from paying the employer simply to get the men there—

Mr. LARSON. Yes; I know.

Mr. LEISERSON. And you would add to that a provision to prohibit the political officeholder from getting any pay, either in the fee or any contribution from the contractor. You would add that?

Mr. LARSON. Yes, sir.

Mr. LEISERSON. Have you got any other suggestions?

Mr. LARSON. I want to say something about the homeless man—that is, the unemployable that we hear something about.

Mr. LEISERSON. Yes; we would like to hear about that?

Mr. LARSON. Estimate was made last winter, I believe there were two estimates, that there were 300,000 unemployed in New York City; another estimate was made that there were 300,000 in the United States. I don't know which one was correct. I doubt one or both. The conditions leading up to the homeless unemployed rests largely on the environment to which he is introduced in the commissary camp. This is not original, but I want it on

the record, because I think it is important. Take, for instance, a young American who is brought up on a farm; he comes to the city. He has only a few dollars, and he may go to a cheap lodging house, and pay 15 or 20 cents for two or three nights, until he gets a job, and goes out on contract work. He lives in a commissary, that, originally, the contractor may have intended to be sanitary, but when you get an aggregation of men in a commissary it is quite difficult to keep it in a sanitary condition unless it is strictly supervised.

Mr. LEISERSON. Do you state from actual experience with people in camps?

Mr. LARSON. Yes, sir.

Mr. LEISERSON. State how you got your experience.

Mr. LARSON. I got my experience from taking them to jobs from New York City from 1909 off and on until 1912. When a man lives in an insanitary camp, usually he works there four to six months, and he lives in filthy conditions. At one end of the bar he gets his sardines and his loaf of bread and comes back to the middle of the bar and gets his bottle of beer, and that is his dinner. Then he comes back to New York, and the cheap lodging house on the Bowery is not nearly as repulsive to him as it was the first time he came to the city. He will stay around a lodging house for a few days, each morning going out and looking for work. When he has been there a week, probably, it suddenly dawns upon him he is about the only man in the lodging house looking for work, and he wants to know the reason, and then he is instructed by acquaintances he has made how to live in New York City without working. You heard something last winter about men being sent out on snow from the municipal lodging house, and that they would not work. I refuse to believe that those men would not work because they were underfed. Eighty per cent of the men going to the municipal lodging house are physically capable of doing ordinary manual labor.

Mr. LEISERSON. Will you state just what experience you had in the municipal lodging house that caused you to speak of this particular point?

Mr. LARSON. I was social secretary there for two years.

Mr. LEISERSON. And that—

Mr. LARSON (interrupting). As such I tried to get work for the men and help runaway boys to get back home, and so on. Sixty-five per cent of the best men applying at the municipal lodging house—I say the best men, because I did not have time to interview any but the men that I felt I had the biggest chance of doing something for—consequently I picked out the best men I saw in line; I asked them to come to my desk. Sixty-five per cent of the best men applying at the municipal lodging house were there through intemperance. Don't get that confused with the statement that 80 per cent of the men are capable of doing physical labor. The fact that a man is down and out through drink does not necessarily mean that he has been able to earn enough money to drink enough whisky to break his physical constitution. But it does mean that through his environment at one point or another he has reached a point or he has reached a stage of disregard of moral respect—

Mr. LEISERSON. Would you put the responsibility for that lapse on the part of that—that lack of self-respect on the part of the man—on the conditions in the camps—the commissary conditions, and so on?

Mr. LARSON. Starting with the labor camp and graduating in cheap city lodging houses.

Mr. LEISERSON. You think that those conditions manufacture these men who are unwilling to work?

Mr. LARSON. I certainly do.

Mr. LEISERSON. Have you thought of any remedies for that particular evil?

Mr. LARSON. The only effective remedy I have been able to evolve is a universal identification card, which in a country of our alleged free institutions would probably be unconstitutional.

Mr. LEISERSON. Did you hear of the work book that the Lake Carriers' Association have, as testified to this morning?

Mr. LARSON. I know of the book. My idea—

Commissioner O'CONNELL. What would the card indicate?

Mr. LARSON. The card would only substitute the book or the card would be in book form. The idea of the card is that a man is given a card with his name and age, etc. He goes to work for a man. Supposing we had a national employment exchange system. A man, when he was sent out on his first job, would be given a book. The book would state for whom he was going to work, and when he got the job he would turn his book in at the office, and when he was discharged or quit the employer would enter the data when he left, with the nature of the work, the wages paid, and a word or two as to his efficiency.

By doing that you are giving a man a record to hold up. In other words, you are giving him something to live up to. There isn't a seaman anywhere who is not proud of his book, if it is in good shape.

Mr. LEISERSON. Do you consider this sort of card or book, then, as a reference for the character of the man?

Mr. LARSON. Yes, sir.

Mr. LEISERSON. Do you consider the possibility of that book being abused in such a way—that is, the employer might have a grudge against a man and, by not specifying good service, could prevent that man from ever obtaining employment?

Mr. LARSON. There are few employers that would take a grudge out on a man for any personal dislike.

Mr. LEISERSON. Might it not be used in times of labor disputes, Mr. Larson? That is, might it not be used as a blacklisting scheme at times to eliminate what the employer considers labor agitators?

Mr. LARSON. I have not studied the question. I don't believe that if such a book were introduced that it would not be possible to evolve methods of obviating any irregularities of that kind.

Mr. LEISERSON. Wouldn't it be possible, if you have a system of national employment exchanges, for the employment office to keep the records of every man that it got work for, similar to the National Metal Trades Association business or the Lake Carriers, to keep it in the office, and without having it beyond public control, in which labor and capital has an equal share in the management; that would avoid the difficulty of one side or the other using this card or record of the man in his struggle for control of industry?

Mr. LARSON. It would; but you will lose 50 per cent of the effectiveness of the card.

Mr. LEISERSON. You think the card itself is valuable in keeping the man up to standard?

Mr. LARSON. I think so. It is valuable for this reason—I am speaking now from the police end: Supposing a man goes to the municipal lodging house more than three nights in one month, which is alleged to be the limit of his privilege, and he is taken to court and he shows the magistrate his book. The book shows that he has been industrious; he has worked conscientiously and faithfully; the magistrate is not going to send him to the island or farm colony. Supposing the man has no book; supposing he tries to make out that he is an industrious man without the book; there is, nevertheless, a suspicion against him.

Mr. LEISERSON. At the present time is a man bagged without any reason in that way, from your knowledge?

Mr. LARSON. No; I don't believe there is anyone being sent to the workhouse that should not be there. But if we had a book system of this kind we could clear away or largely clear our cheap lodging houses of the element in them, because of the fact that they would not have the book; they would not have the records; they would not have anything to show who they are or what they have been doing.

Mr. LEISERSON. You think it would simplify the problem of vagrancy and put them in a class to be treated as vagrants and not unemployed?

Mr. LARSON. Yes; and it would be an incentive to themselves to get out of the class. There isn't anything in the world that is as easy to do as to drift, and when they get into the drifting environment, when these men get in with the men that have drifted, or panhandle on the street for a night's lodging, or a cup of tea, alleged, they start going down, and it is only a matter of time until they are practically irreclaimable.

Mr. LEISERSON. You stated that the main reason was the lodging houses and camp conditions that made these men into casual and unwilling workers. Do you think the ease with which the men can ride on the freight cars has anything to do with it?

Mr. LARSON. Well, it has something, but it is a matter of bad judgment that is hard to control. The greatest longing for anything that I ever had in my life was when I was following a plow and seeing a freight train go toward the city.

Mr. LEISERSON. Would you think that it would help the situation any if there were cheap methods of transportation by which a man could go in the regular form—say, work trains attached to freight trains, rather than having to steal a ride, as it is at the present time?

Mr. LARSON. I am doubtful; I believe that your solution, the solution of beating passage on a freight is better solved by intensive education at railroad division points and terminals in rural districts.

Mr. LEISERSON. Well, it is necessary for people to travel, especially these men of this class, to travel from one part of the country to another to obtain work at times, isn't it?

Mr. LARSON. No.

Mr. LEISERSON. You think not?

Mr. LARSON. No.

Mr. LEISERSON. You think it is not necessary for great numbers to travel to the woods and the harvest fields in order to get work at certain seasons of the year?

Mr. LARSON. Yes; it is.

Mr. LEISERSON. Don't you think the fact that they have no particular means, no direct means of getting there and that they have to beat their way, that that encourages tramping?

Mr. LARSON. Yes; I think it does.

Mr. LEISERSON. And don't you think, then, an effective way of stopping that encouragement would be to have them directed to a specific job and have a low rate of transportation for them?

Mr. LARSON. Certainly. I wish to correct that, Mr. Leiserson. In my first comment, or in my original comment, I have in mind the country boy that takes his first ride to the city, or the boy. There is no question but if you can arrange a transportation system that would carry men down from Oklahoma through Nebraska and the Dakotas and through the wheat fields and through the harvests, that you are going to do a great favor to the men as well as to the farmers.

Commissioner GARRETSON. Mr. Larson, has your experience ever brought you in sharp contact with the black list?

Mr. LARSON. No; it has not.

Commissioner GARRETSON. Then you haven't any practical knowledge of what a devilish agency this card could be if applied as a black list? Have you ever taken notice of the fact that every one of the States has a law against black-listing?

Mr. LARSON. Yes.

Commissioner GARRETSON. Well, don't the existence—wouldn't the existence of that law in all of the States be accepted as reasonable evidence of the universality of the practice at some period?

Mr. LARSON. Undoubtedly.

Commissioner GARRETSON. And has it occurred to you that if an identification card of this character was utilized in that direction how many men it would put on the hog, or make bums of them?

Mr. LARSON. There is a good deal of talk of men being driven to vagrancy. We get in semisociological and fiction stories characters of men so being driven. Personally, I am inclined to doubt that source of vagrancy. I have sufficient confidence in humanity or the employer to doubt that he would, at the present time, to any extent, resort to a malpractice with the work card.

Commissioner GARRETSON. Well, I will admit that I envy you your confidence. I have dealt with employers for 30 years.

Mr. LARSON. I have employed a few men, not many. The Pennsylvania Dutch—there was a gang of Pennsylvania Dutch who were the best men I ever had work for me. I have had Italians—

Commissioner GARRETSON (interrupting). I belong to them.

Mr. LARSON. Good. And I may be wrong, but I hope the employer is not taking undue advantage of an honorable record card.

Commissioner GARRETSON. If I were to say to you as one of these Pennsylvania Dutch, that I have known a hundred instances where a man was driven from a pursuit that it took him years to learn by a cunningly concealed black-list system, would you be disposed to recognize the fact of such a system existing?

Mr. LARSON. I certainly would.

Commissioner GARRETSON. And all men in one pursuit. Well, with this system made universal—those men, or most of them, took refuge in other pursuits; they were driven out of one they had learned as a life calling, but they, in most instances, embarked in some other pursuit, but with a universal card, can you understand that it would close the door to the other pursuits, and in most of the instances the only offense that man was guilty of was trying to better wage or condition? I am giving it a charitable name.

Mr. LARSON. I understand.

Commissioner GARRETSON. Now, can you recognize that, assuming that there is such agencies existing, what a deadly weapon this card would be made? You heard—were you here this morning?

Mr. LARSON. No.

Commissioner GARRETSON. It was testified in two instances here that in an elaborate system of records kept, one of them, this book that was referred to, the seaman's books that agitation for labor organizations—that is, betterment of wage and condition—constituted one of the grounds for entry and exchange of reports. Assuming that to be correct, could this card or book be made a deadly agency for making tramps, instead of redeeming them?

Mr. LARSON. I should think the effort could be made; I still doubt that it would be successful.

Commissioner GARRETSON. That is all.

Chairman WALSH. That is all. Thank you, Mr. Larson.

TESTIMONY OF MR. OTTO T. BANNARD.

Mr. LEISERSON. Will you state your full name and connection?

Mr. BANNARD. Otto T. Bannard.

Mr. LEISERSON. You are connected with the National Employment Exchange?

Mr. BANNARD. I am the president of it since the beginning.

Mr. LEISERSON. What we should like to get from you, Mr. Bannard, primarily, is the experience of the National Employment Exchange; whether you think it is successful or not and what the reasons are?

Mr. BANNARD. I have been listening with much interest to former employees as to why it failed, and I am very glad to have an opportunity to state the experience. It was organized about five years ago as the result of an investigation made by the Sage Foundation, which resulted in a report. It seemed as though there was a field of usefulness not occupied as a medium between employers and employees, for the sake of obtaining employment, and that the existing agencies were more or less irregular, and that an agency which was not entirely bent on profit might find its field. With that end, we acquired some working capital, knowing that it was not likely to be a profitable enterprise, and opened up a manual labor office, down at Castle Garden. We placed more men the first year than we ever have since, and that was because of market conditions. Where there is very little employment we can not make it or find it; and when there is a great demand for men, they don't need us, apparently—the capable ones—they find it themselves. Nevertheless, we did our share of placing them. I think, confining it to these contract laborers—manual laborers—we placed, I should say, up to last October, about 13,000. It is not much, but I don't think—

Mr. LEISERSON (interrupting). In how many years?

Mr. BANNARD. That would be four years, a little over—four and one-half. No agency does a very large business, I apprehend—a private agency. One reason why we do not place more is that we are not national, as our name implies. We took that name, hoping that some day we might obtain a Federal license. We are confined to our own location. When the men go to Wilkes-Barre, and get through the job there, we can not move them to Scranton, outside of the State, and get any fee for it. We charge the \$1 and \$2 fees. We made up our mind not to go into commissary or hospitaling or housing or exchange, and for that reason we are deprived of the profits of the business. In many cases one is unable to collect the fee. You will deliver men to work, and the employer will subsequently report that they did not all remain, and you have to take their word for it unless you keep a man there, which is unprofitable.

Mr. LEISERSON. You think the ordinary manual-labor employment agency makes a good deal of its profit from the commissary department which enables it to be successful?

Mr. BANNARD. Commissary, housing, hospitaling, and exchange, in some cases, like the Italians.

Mr. LEISERSON. Money exchange?

Mr. BANNARD. Yes.

Mr. LEISERSON. That is to say, these other sources of income enable it to exist as an employment agency also?

Mr. BANNARD. Yes.

Mr. LEISERSON. Otherwise a pure employment agency business, it might not be able to exist?

Mr. BANNARD. Yes. And then they will send a gang to one section of a railroad, and when the necessities of the railroad require the men to work on the next section, they charge them another fee, and move them along.

Mr. LEISERSON. Can you tell us why your experiment did not become national, why you did not—

Mr. BANNARD. We had no Federal license. We are confined to the location in which we have a license by our State laws.

Mr. LEISERSON. Well, you sent people from this State into other States; wouldn't it be possible for you to take a license in the State of Illinois?

Mr. BANNARD. We could obtain State licenses.

Mr. LEISERSON. Just why didn't you do that?

Mr. BANNARD. On account of the expense.

Mr. LEISERSON. You did not find it a paying proposition?

Mr. BANNARD. No.

Mr. LEISERSON. As a result of that experiment, would you say that it is impossible for any ideas such as you had, without putting it into a more or less philanthropic organization, to succeed?

Mr. BANNARD. Yes. There are several branches of this subject. We have more than one office here. We have a mercantile bureau.

Mr. LEISERSON. Clerical, bookkeeping?

Mr. BANNARD. Last month we placed 200 people there, all the way from an office boy to a technical engineer, doing useful work. In our labor office, we placed what I call the retail business, 100 singles—stationary engineers, gardeners, watchmen, janitors, all kinds of men, one at a time, who could not very easily find these positions if it were not for us. The difficulty with the gang-labor business, which is what I call wholesale business, is that the market controls it so largely. A really national agency could accomplish a good deal more than we could, but I think that it is very clear that the service would be valuable as a clearing house and as a distributor of information rather than as an actual operator, because in the office where you operated men, you would be making contracts, you would require interpreters for different nationalities, and you would have to ship a man on the train he would want, and advance fees from time to time, which you would find quite an undertaking if you attempted to cover many portions of the country with your operating offices.

Mr. LEISERSON. Would it be possible to distribute reliable information without going into these other phases of the business—making contracts and employing interpreters, etc.?

Mr. BANNARD. I think so; but you have had an office on Bowling Green for some time where you did something of that kind under Mr. Green.

Mr. LEISERSON. Yes; the Federal Government.

Mr. BANNARD. Yes.

Mr. LEISERSON. Do you say that it is possible for this to be done successfully?

Mr. BANNARD. I think so. I should think your clearing-house idea is a good one.

Mr. LEISERSON. Do you think it would be possible, under a clearing house, to give merely general information that men are wanted at a particular place, and distribute that through the clearing houses? Have you ever run across any dangers of that? That is, where an employer does not give a definite order for 100 men, but some one says that 100 men are wanted at this particular place, then when you come to verify that particular statement you find that the men are not wanted. Has that happened within your experience?

Mr. BANNARD. Very infrequently they have applied for men in several directions, and by the time you get your men around they have already filled it.

Mr. LEISERSON. So that if you had a system of giving information, there would be great danger of duplicating the information so that more men would be sent to a place than were actually needed; and further, if you did not have this other machinery for making contracts and interpreting, isn't it possible that hundreds of men might flock to a place where the demand was for 10, each one thinking that nobody else was going?

Mr. BANNARD. Well, in dull times there would be a race for it, unquestionably.

Mr. LEISERSON. And that is a distinct danger, unless you have a regular employment business in connection with it.

Mr. BANNARD. Yes. We tried to start a clearing house in this city, but we found the other agencies were jealous of us, and in order to be successful it should be an outside undertaking.

Mr. LEISERSON. You would think the Government was the party to do that?

Mr. BANNARD. I should say the Government or State; preferably the Government.

Mr. LEISELSON. That is, the Federal Government?

Mr. BANNARD. I should think so, in a large way. There are two branches of this subject—the wholesale and the retail business. Most of the retail business requires references and investigations, and that is expensive and requires the delivery of good goods to secure the order.

Mr. LEISELSON. You think it is not possible or advisable for the Government to go into this retail business, as you call it?

Mr. BANNARD. I should think that was very doubtful wisdom. We have to look up about five references for every employee, and it has to be done carefully, and somewhat expensive on the whole. And when you send that employee, the place may be filled before he gets there.

Mr. LEISELSON. You don't think it would be a legitimate expense for the Government to go to?

Mr. BANNARD. It is legitimate; I don't question that; but I fear that to go down into the fine points of the retail branch is a matter for you gentlemen to consider.

Mr. LEISELSON. But the wholesale branch, you think, ought to be undertaken by the Federal Government?

Mr. BANNARD. I think you might do very useful things in connection with it.

Mr. LEISELSON. Do you contemplate giving up your wholesale branch?

Mr. BANNARD. Not really; but because at our labor office, as I say, we are placing one hundred or more men one at a time, I thought by reducing the expense, and increasing the number that we might be able to make it self-supporting. I don't think we shall bend any energy toward increasing the gang labor, because, as I say, we can not find work when there isn't any, and when there is plenty of work they seem to find it themselves, and it is only in the intermediate time when it is well balanced that we seem to have any usefulness, any great usefulness.

Mr. LEISELSON. Your retail branch—do you consider that successful? I mean, from the standpoint of what it costs you to run it, is it a paying proposition?

Mr. BANNARD. Of course, when we started it was all outlay, and we made the mistake of general registers, which might interest you. We assumed that every man ought to be registered, and it took a great force. The office was open until 9, 10, and 11 o'clock at night, registering men. They all heard of the new office and swamped it. As the result of our experience, we only register about 60 per cent of the men now, men and women who apply to us. Where a man is palpably unfit for the occupation he seeks, it seems like a waste of clerk hire and record to register him. Many of those whom we registered we were utterly unable to find again when we would send them a postal card telling them we had found a place for them, and we would have no reply.

Mr. LEISELSON. Did you get a copy of our proposed plan?

Mr. BANNARD. Yes.

Mr. LEISELSON. Have you any suggestion to make in regard to that?

Mr. BANNARD. I am speaking of the subject of registers with that in view, compulsory registration of every man who comes to our office to find work.

Mr. LEISELSON. Would that be inadvisable?

Mr. BANNARD. It should be safeguarded in some way. We found that we were wasting money and wasting time registering everyone who came. A man who is intoxicated and asks to be a technical engineer at \$3,000 a year seems to us is wasting his time and ours. He may be a good engineer, but we could not recommend him.

Mr. LEISELSON. Have you any further suggestions in regard to that plan?

Mr. BANNARD. It might be possible to make different licenses and different bonds for different classes of employment offices. You must remember there are domestic servants, which we have not spoken of here to-day, so far as I know.

Mr. LEISELSON. Would you classify them?

Mr. BANNARD. Factory hands. We have had nothing to do with either branch.

Mr. LEISELSON. Any other suggestions?

Mr. BANNARD. Wholesale and retail.

Mr. LEISELSON. Let me ask you one final question. Do you think that the State or Federal Government could succeed better, assuming that it was advisable to try the experiment of the National Employment Exchange, could succeed better than you did?

Mr. BANNARD. The Federal Government?

Mr. LEISELSON. Yes.

Mr. BANNARD. I don't think they could on the retail business. Our retail business is self-supporting, I am happy to announce to-day; I don't know whether it will remain so. It is the first time it has been so.

Mr. LEISERSON. But on the wholesale business, Mr. Bannard?

Mr. BANNARD. I think the wholesale business—of course, they could operate on a much larger and more useful scale than we have ever done. We just tried to firmly establish one local office; that is all we have undertaken.

Mr. LEISERSON. That is all?

Mr. BANNARD. Yes.

Chairman WALSH. That is all for you, Mr. Bannard. Thank you.

TESTIMONY OF MR. WALTER LINCOLN SEARS.

Mr. LEISERSON. Will you please state your full name and official connection?

Mr. SEARS. Walter Lincoln Sears, superintendent of the State free employment office at Boston, Mass.

Mr. LEISERSON. Will you tell us just a little bit about the Massachusetts free employment offices? When they were started and what their purpose is?

Mr. SEARS. Twenty years ago this month I became interested in free employment offices and by petition and agitation before the Massachusetts General Court. The first seven years I was alone, and we weren't successful, but subsequently, in 1906, the law was passed, and on December 3 of that year the Boston office was opened.

Chairman WALSH. What year was that?

Mr. SEARS. December 3, 1906. In September, 1907, our Springfield office was opened; in October, 1907, the Fall River office; September 15, last year, our Worcester office. We have four, approximately 50 miles apart, taking in the geographical railroad and industrial centers of the State. When we opened the Boston office we hadn't any system or anything to copy from. We had to devise our own system and do it in our own way. The Massachusetts offices, as I might say, are under civil service, and every appointee is appointed from the regular classified civil-service list, including the superintendent. But I don't know that you want to go into that question, particularly. We realized in the beginning that we have had many prejudices, possibly, to live down. For example, one element said that it was a socialistic proposition; another element of my labor friends said it would be a strike-breaking establishment; another element said, "Well, it is a charity, and no self-respecting person will patronize a public office, because it is a charity." And different arguments were made. Those are the principal ones. Realizing all of that in the beginning, we aimed at the employer. Every employment office necessarily has, as its basis, the confidence of the employer. Without him no one could succeed in getting positions, and to get him and retain him, he must get the service. That service must be the best that can be obtained anywhere, and if you give the service at the Government office you will get the business. That is all there is to that. Now, so far as it being a strike-breaking establishment is concerned—

Chairman WALSH. Being what?

Mr. SEARS. So far as its being a strike-breaking establishment is concerned, our position is one of absolute neutrality. If we learn that there is a strike on anywhere, we make a note of that fact on the card and advise the applicant for the position verbally; and then if he decides to accept—and he very seldom does—we stamp on that card that there is a strike on at this establishment, so that he hears it verbally and in cold type.

Mr. LEISERSON. Are your unions satisfied with that particular arrangement?

Mr. SEARS. My assistant is practically secretary of the Boston Central Labor Union. Yes. Our methods of conducting the affairs in the case of strikes and lockouts has stood the test now for seven years and a half. No complaints have been made by employers, employees, organized labor, or anybody.

Mr. LEISERSON. Can you give us an idea of the total business you do?

Mr. SEARS. We have now more than 27,000 individual employers, located, I am free to say, all over the world—all over the United States and Canada.

Commissioner O'CONNELL. To keep the record straight—has the establishment of this board eliminated private employment agencies to any important extent? Have you succeeded the private agencies?

Mr. SEARS. I can not say as to that. There were 130 agencies when we started. There are now less than 100. But conditions differ. We have two classes of licenses in Boston. There is the general or State law, but our licenses are regulated locally by the municipality. In Boston the city makes

its own rules and regulations, and that may be taken up, as I understand, by somebody else. But there are two classes of licenses. The first pays a fee of \$50 and the second a fee of \$25. And the fees charged are for the weeks' employment or a percentage, according to the class; and when you speak of the number of licenses, one agency may hold a first and second class license. I think there are not many. But I will say that there are at least 25 or more less agencies in Boston to-day than when we started in business. The better class of agencies have remained. The more unscrupulous ones have gone out of business.

Mr. LEISELSON. You started to say that you had 27,000 employers——

Mr. SEARS. As patrons representing every kind of business and industry. We placed last year, ending November 13, 1913, 21,000 positions—we filled 21,000 positions.

Mr. LEISELSON. You sent out or actually referred to employment how many?

Mr. SEARS. I could not remember that without looking at my report to the commission.

Mr. LEISELSON. But it runs several times the number——

Mr. SEARS (interrupting). I should say it was at least two to one.

Mr. LEISELSON. Twice the number actually furnished?

Mr. SEARS. Yes, sir; about two to one.

Mr. LEISELSON. Do you do more business than any other agency in the city of Boston?

Mr. SEARS. So far as I know; yes.

Mr. LEISELSON. You do the largest business of any agency in the city of Boston?

Mr. SEARS. Yes, sir; but I have no knowledge of the amount of business done by the largest private agency which is represented here, and their representative can tell you that. I haven't any figures. I don't know.

Mr. LEISELSON. You heard the statement made this morning that a public employment office could not place skilled help as well as an employers' office could.

Mr. SEARS. Well, that was probably said without knowledge.

Mr. LEISELSON. What is your experience?

Mr. SEARS. Sixty per cent or more—more than 60 per cent—and you will understand why that is when I say that more than 60 per cent of the persons we place require previous skill or training—must be experienced. If you wanted a dishwasher or a night watchman, or ordinary help, you can without very much difficulty get that kind; but if you want a fellow who can do something—not a fellow who can do anything—you've got to go and hunt for that fellow. That is why the agencies exist.

Mr. LEISELSON. How many people have you employed in your office?

Mr. SEARS. Eighteen on the pay roll.

Mr. LEISELSON. Can you tell about what proportion of those worked actually placing skilled help?

Mr. SEARS. I have a skilled male department in charge of a man and an assistant. I have a skilled female department in charge of a lady. That is all.

Mr. LEISELSON. Do they do more or less business, say, than the National Metal Trades Association?

Mr. SEARS. Oh, surely; oh, surely. We furnish help to the National Metal Trades Association in Boston and Providence.

Mr. LEISELSON. And you do more than they do in skilled help?

Mr. SEARS. Yes, sir.

Mr. LEISELSON. And so there is nothing in the nature of the public employment office that would prevent your doing that kind of work?

Mr. SEARS. No; for this reason. Mr. Joseph Holland, of 520 Butler's Exchange, Providence, came to my office four years ago with Mr. O'Hearn, who does the general hiring for the General Electric Co. at Lynn. They were compelled to secure more men at once, and we asked Mr. O'Hearn to give us a trial, which he did, and there has been no question, so far as he is concerned, since. Mr. Holland, whom he met many times, wanted to get some help, and he says, "Why don't you try the Boston office?" "Oh," he made an insinuating remark, "You couldn't get any decent help there." But he finally came up one afternoon about 3 o'clock, after telephoning that he was coming. I placed an ad in the paper, and there were several hundred machinists and assistants—some "near" and some real—but he was there interviewing them until a quarter of 5, his train time, and he pronounced himself as pleased with the office, and he wanted to know how we could get so many men; and Mr. D. F. S. Clark, of the

Boston branch of the Metal Trades was there with him, and they could not understand why we could get so many men when he said he was unable to. I says, "Don't you think it is possibly because of the feeling or suspicion that the Metal Trades is blacklisted?" and he said possibly that was so.

Mr. LEISERSON. The working people have confidence in the public office—that it is impartially run—whereas if it is by the employers they are suspicious of whether it is run for blacklisting or not.

Mr. SEARS. Well, I spoke of the Metal Trades.

Commissioner O'CONNELL. Wouldn't that same suspicion carry out with the local private agency?

Mr. SEARS. I could not say as to that; maybe that it is not in the case of some of the better class of agents. We have some in Boston that are under a cloud and some are very good. In Boston the license board, or excise board, lives pretty well up to the law.

Mr. LEISERSON. How about the statement that the employees of the State offices, not having a direct interest of a fee, will make no effort to push the work and to please the employer and to fit the man to the job the way the private agent does.

Mr. SEARS. I can not say as to that. I think you are dealing with the human family and with human nature. Some individuals are interested in their work and some are not. I don't think that particularly applies to your employees if they are under civil service and are appointed on the merit system.

Mr. LEISERSON. You find your employees are as interested in the business as the ordinary private employment agent is.

Mr. SEARS. I do. I have the appointing of my assistants. Mr. Charles F. Gettamer, of the bureau of statistics, allows me to make all my appointments, and I am very careful in their selection.

Mr. LEISERSON. And they are certified to you by—

Mr. SEARS (interrupting). By the civil service. Well, the names are certified, three for each one wanted, and I make my selection or call for a new list, giving the reasons why—the reasons for the three first certified not being satisfactory.

Mr. LEISERSON. Is there any objection on the part of the working people to apply there because it is a charity, being free.

Mr. SEARS. Not a particle. I have had railroad auditors, I have had dentists, attorneys, embalmers, civil engineers, and all those men apply there—a number of them. We are in touch with all the typewriting agencies, the Massachusetts Institute of Technology, Harvard College Placement Bureau, and other organizations that have the placement of people so that almost as quickly as the telephone can reach the individual or reach the office we are in touch with them all the time. We cooperate with all the organizations that are allied with or nearly related to our work.

Mr. LEISERSON. Will you explain just how you get orders for men? In the first place—that is, how you get your business.

Mr. SEARS. My contention has always been that if you make good and render the service, you can rest easy; you will get the business. We have no solicitors outside of the office and never had any. I do not believe in them. Not because I do not believe in it; I never advocated it and it has never been done. We make good. My instructions are to the clerks never to send a person to a place who they do not believe would meet the requirements of the employer. Better not send anybody. He can then only complain that he did not get anybody; but if he gets an undesirable person, that is a black eye and hurts. Of course we are particular in the first instance to get the fullest information as to the kind of service the employer demands, and then endeavor to meet his requirements.

Mr. LEISERSON. You make detailed inquiries in regard to just what the hours are, and what wages are paid—

Mr. SEARS. The wages, the nationality, religion, telephone number, hours, tenure, conditions, and all that sort of thing.

Mr. LEISERSON. And then from that you make an effort to pick the man to fit the job? That is, if you have one man unemployed a longer time than another, do you make any kind of preference?

Mr. SEARS. We can not do that. When we first opened, I aimed to give preference to those who had dependents upon them—married men—those who had others dependent upon them; but it did not work out in practice at all, for this reason, for instance, I have an opportunity for a machinist. Or I will give an illustration: I had an opportunity for a porter in a restaurant and a

friend of mine who had been hounding me, and making my life miserable for some time—it was some years ago—called on me, and I said, "Joe, I'll see what I can do for you." So an opportunity came up for a porter in this restaurant, and I had enough men for the place—six men—this man and five others, whom I notified for the following morning. And at noon I met this same individual in a lunch room, and he said, "I was just coming down to see you, as to whether you would advise me to go down and take that job." Now, here it was at the noon hour and he was just thinking it over. And in a day or two there was mail came back, "no address; moved." Waited another week or so, and a letter came from some place in New Hampshire, saying, "I got your letter, Mr. Sears. Do you think I had better come down and see the place? Is it open now?" Of course that is obviously wrong. It is too slow.

Employers haven't any sentiment—that is, most of them. There is mighty little sentiment in their make-up—that is, charity. It is business inside of the office. Outside he may be one of the most charitable persons in the world; but inside it is business, and you must make good. It has been done, as said this morning, or yesterday, that the employers will telephone several agencies, and place orders with several concerns, and maybe advertise in the newspaper, and maybe some of the men in his employ in the shop will realize that he wants somebody, and so you have several agencies endeavoring to fill that place, and the one that gets there first and makes good is the fellow that gets by. A public agency must be prompt and expeditious. They have not time, as experience shows. Our experience has shown that they haven't the time, unless it is a particularly highly skilled person whom the employer is looking for, to wait. But ordinary help, the employer wants quick service, and we want to get the man there first.

Mr. LEISERSON. And your men pick out the man then that fits the job, and make no discrimination for any reason whatever—that is, as to being married, or a resident of the city, or anything of that kind?

Mr. SEARS. Why, we haven't the time for that.

Mr. LEISERSON. You heard the statement here that the employment office is not of much help in the winter to people because there is not enough work. What have you to say about that?

Mr. SEARS. Well, along that line, of course it is obvious to you and to the commission, or to any student of the problem, that if you have got in a given area, we will say a million hours to turn out the product of any given area, and you've got enough help there for perhaps 100,000 more hours, you can not take care of all the people. Obviously you can not do it. And that is true in the wintertime. September is the busy time in the fall; April and May in the spring; and in between you have these spaces of dullness. And then there are the seasonal occupations, the garment workers, the longshoremen, and other trades of course are affected. Our climate, to some extent, affects the building and structural lines.

Mr. LEISERSON. Without employment offices, would many people get out of work during the slack seasons that now you actually do get work for?

Mr. SEARS. Why I think they would; yes.

Mr. LEISERSON. You consider that, besides bringing the man to the job during the busy season, you also do a work getting people work during the slack season that would otherwise miss that work?

Mr. SEARS. I think we shorten the time; I think we aim to shorten the time between the time when the person first becomes unemployed and the time he gets a position.

Mr. LEISERSON. That is the main service that an employment office accomplishes.

Mr. SEARS. Yes; instead of the man or the woman or the individual going around from place to place, blindly looking for work, it is easier for them to get it through an employment office. And I have always been of the opinion that if the employers can centralize the demand for help at one clearing house or central place, it certainly has an advantage over scattered or divided offices, and much better results can be obtained from that. For example, if an employer has to go to one place for firemen and another place for a teamster and another place for a stenographer, and so on, it is much less advantageous than where he can say to a clerk, "Go to So-and-so, employment office," or whatever may be the central office, and you can get anything you want there, from a sandwich man that takes the signs on the street, and the women that act as collectors for the Salvation Army or the Volunteers of America, or the men that

act as Santa Claus at Christmas, or the lawyer, or the dentist, or the railroad accountant, or whatever it may be. We have them all, or if we haven't them on the list we know where to get them.

Mr. LEISERSON. The statement was made this morning that the general agency run by the Government could not be successful, because it could not take care of all classes of work. Will you describe how your office is subdivided into departments to take care of that?

Mr. SEARS. Why, it is simply placing in one building the different kinds of offices that have been referred to.

Mr. LEISERSON. How many departments have you?

Mr. SEARS. We have five departments. We are going to have 2,000 feet more space in July, and then I will arrange to have nine departments.

Mr. LEISERSON. What are your departments?

Mr. SEARS. Three female and two male departments for skilled labor, and all minors under 21 years of age are under the charge of a vocational counselor, vocational guide, a Harvard man; and then I have a department for handling help—but not sending people out—for handling handicapped persons sent in by public benefactors. That includes the charities and churches, and all kinds of handicapped people. The man in that department looks after those cases especially.

Mr. LEISERSON. What other departments are you going to put in?

Mr. SEARS. Going to put in a mercantile department to handle mercantile help, and divide my skilled department into two, placing all the metal trades and engineers and firemen in that one department, and then have another department for the building trades, and the printing trades, and the boots and shoes, and other small trades.

Mr. LEISERSON. You do mainly a wholesale business or what Mr. Bannard called a retail business?

Mr. SEARS. Well, in placing men in gangs, wholesale, we do not—not that large wholesale construction-gang business.

Mr. LEISERSON. Practically all yours is what is called the retail business. And what is the total cost for your Boston office?

Mr. SEARS. I would have to look at the book and see.

Mr. LEISERSON. You haven't got it with you?

Mr. SEARS. Now, the per capita, which is a very unfair proposition for the reason that in some States the city or town would furnish the offices free, whereas we have to pay for it.

Mr. LEISERSON. Aside from the comparisons with others, we would like to know your total—

Mr. SEARS (interrupting). No; I haven't got the report here.

Mr. LEISERSON. Is it about \$21,000—

Mr. SEARS (interrupting). Yes; about 86 cents per capita, I think.

Mr. LEISERSON. It costs you about 86 cents per job?

Mr. SEARS. Eighty-six cents per capita per job. That includes absolutely every expense—all the printing, rent, all the janitors' salaries, and every expense—nothing is omitted from that at all.

Mr. LEISERSON. And so far as you know the people of your State, the State of Massachusetts, are in favor of spending that amount of money in order to get the people and the jobs together?

Mr. SEARS. We get all the money we ask for; whatever we ask the legislature for, we get it.

Mr. LEISERSON. How have you avoided politics in your office?

Mr. SEARS. Why, it has not been brought in.

Mr. LEISERSON. A charge was made that in two ways politics might creep in: First, the contractor or employer that was in touch with the political party in power would be favored as against the other; and, second, the people of the political party in power would get jobs whereas the others would not.

Mr. SEARS. So far as the male clerks in the office are concerned, I am personally a Republican, and my six male clerks are Democrats—every one of them.

Mr. LEISERSON. You think the civil service requirements have eliminated all possibility of politics?

Mr. SEARS. I take the clerks on their merits. It is to my interest to do that. I want the bureau to succeed. I take them on their merits, irrespective of their politics. In regard to politics in the office, of course if they suspicion one minute that we were playing politics, and that men were asked what their

politics were when applying for positions, the whole structure would fall. It would not last a minute. I know that.

Mr. LEISENBERG. Did you get a copy of the commission's report?

Mr. SEARS. I did.

Mr. LEISENBERG. Will you criticize that or make any suggestions that you have?

Mr. SEARS. In anything that we do toward establishing a national labor exchange it should be kept—the machinery part of it—as simple as possible to avoid too much system; too much machinery. You must move quickly. In handling a labor question you know that, and the commission know that, that you must move quickly, and if you get too much machinery to get there and get the individual in touch with the job you are failing in what you started out for; and if we have that in mind in the beginning I think it would help a great deal. I don't believe in an advisory council. It may be advisable so far as selecting the help for the office is concerned. That has some merits. But the advisory council to advise with the superintendent of the office—I do not believe in it. Appoint an official and have a direct, central, responsible head, and put it up to him. If the office is not a success and goes wrong he is to blame, and he can not shove that off onto anybody else's shoulders. I believe in the centralization of responsibility, absolutely.

Mr. LEISENBERG. How about maintaining impartiality in labor disputes?

Mr. SEARS. We have no trouble of that sort, as I explained a while ago.

Mr. LEISENBERG. You have a member of the labor organization in your office—

Mr. SEARS (interrupting). Yes, sir.

Mr. LEISENBERG. Was that accidental or how?

Mr. SEARS. No; the chief of the bureau appointed him for that purpose, believing that organized labor should have representation there. I approve of that, and I think that principle should be carried out in the national exchange.

Chairman WALSH. Did your civil-service law permit that action to be taken?

Mr. SEARS. No.

Chairman WALSH. Or allow for an exemption of that sort?

Mr. SEARS. Why, he happened to be on the list; that is all. He was among the—

Mr. LEISENBERG. Then, don't you accomplish, by having that labor man in the office, what the council would—

Mr. SEARS (interrupting). I know what you are driving at. Prove your case. The labor man in there satisfied the members of organized labor. I have found a great deal of trouble and labor, due to misunderstanding—due to a refusal on the part of the employer often to confer or open up the books and say, "There! There is the story. We can not pay any more wages than that." On the other hand, he keeps the books closed, and refuses to disclose anything, and the employee is working in the dark and in mystery and want of confidence. And I believe if the employer would place more confidence in the employee, and would do the things which would win his confidence, less trouble would prevail—obviously.

Mr. LEISENBERG. Then this advisory council, by bringing this business open to both employers and workmen, would not that tend to avoid any suspicion of strike breaking or blacklisting that is ordinarily the case around such offices?

Mr. SEARS. I get your point. We accomplish that now without any advisory council. Instead of having a number of theorists—and there are very many of them in the community—telling how to run the office, we listen to what they have to say and use our own judgment.

Mr. LEISENBERG. Is it your idea that an advisory council would be any more than an advisory body?

Mr. SEARS. I am afraid they would want to run the office after a while.

Mr. LEISENBERG. Do you know of the advisory councils in European countries, attached—

Mr. SEARS (interrupting). I understand they are, but I do not believe we ought to go to Europe for our ideas. I believe we can get them right here in the United States.

Mr. LEISENBERG. Do you know that they have an advisory council in the Wisconsin office?

Mr. SEARS. I understood they had. I don't know how it works out, I am sure.

Mr. LEISENBERG. They are in an entirely advisory capacity, and it has worked out very satisfactorily, eliminating any suspicion on either side that the office is not working on the square.

Mr. SEARS. Well, we do not have any in Boston or in our offices, and I think if an investigator or an impartial person were to visit all the organizations, philanthropic, paternal, or whatever they might be, and labor organizations, they would find that all of them, or practically all of them, have no fault to find with our office. We cooperate with them.

Mr. LEISENBERG. Going to the next point?

Mr. SEARS. Now, in regard to "Offices and branches," that is all right. "Civil-service appointments," that is all right. "Duties, powers, and authority of the bureau," that is all right.

I don't believe in the "Clearing houses." That is to say, the sectional clearing houses. It is too slow, and not responsive enough. A local office sends to the clearing house and the clearing house gets them together, sends them to Washington, and Washington gets them together and distributes the information all over the country. It is too slow, and not quick enough.

Mr. LEISENBERG. It would not be necessary to send all of them to Washington, you know. Here may be a private employing agency that could have an order in the city of St. Paul, and they can't get enough men there, and they send an order, or split the order, as they call it, and send to Chicago and Milwaukee and other places, giving each one a quota, to fill that order. Now, can that not be accomplished through the clearing house? In other words, let the superintendent of the office here give the superintendent the power to give such publicity to the opportunity as the situation warranted. If the position is a particularly difficult one to fill, it might require a wider publicity and a larger number of offices, and it might not require any publicity. It might be able to be filled in the local office.

Mr. SEARS. Truly. We do that. In regard to "Reports," that matter came up this morning—the reporting of private agencies. You are going to have a lot of duplication—duplication in the number of employers' applications and the number of persons called for, which was brought out this morning; the employer placing his order with 36 places; and then you will have the same thing with the employee, and so it will be difficult to analyze it. You would have to get the name of the individual and sort out the duplicates and eliminate and cut down the business possibly to only one. There would be the trouble.

Mr. LEISENBERG. Then, you would say that the reports from the private agencies are not of any particular value.

Mr. SEARS. Why, they are for certain information. I don't believe that the information with regard—I think the Indiana law covers that pretty well. I am very much in favor of that part of the Indiana law.

Mr. LEISENBERG. The Indiana law requires direct reports once a month from each employment agency in order to keep tab on their business. What do you think of the next one?

Mr. SEARS. A very good idea—a "Labor market bulletin," I believe, is needed. We have done it for years—for the seven years since we have been in business; we get one out every month—a labor-market letter, just as we get these financial-market letters, or letters of the dry-goods business, or boots and shoes. I think there is also a need in the labor market. What I want to say is this: That we set forth the conditions of the labor market as viewed from our office, and then submit that rough draft, barring, of course, the statistics which stand for themselves, but I show the letter to the various department clerks to verify and see if my opinion in regard to the matter is correct. So that it is a picture and a graphic illustration of the views of the employees that have to do with the handling of the help. "No disqualifications"; that is all right. "False statements by applicants" is all right. "Representations to be accurate"; that is good. "Dividing fees prohibited; no fees to employers," section 18, is a mighty good one. "Licenses and bonds" is all right. "Permits" is all right. "Revoking licenses or permits"; that ought to be there. "Children not to be referred"; that is good. Section 23, "Schedule of fees to be filed"; well, if you had a national law would a fee be uniform throughout the country?

Mr. LEISENBERG. That is the idea of making them file them, because it would not be uniform, so that they have to file their fees, and then they are not permitted to charge any more or any less than that fee. It is the same system the Interstate Commission has for the filing of rate charges.

Mr. SEARS. Having a fixed fee over the country or each charge what he pleased, provided he did not exceed a certain amount.

"Contract to be filed." In regard to "Superintendents and assistants," I believe the commission should get a labor man. I do not believe the labor man

should be at the office. I am not prejudiced on that. I think my attitude in the last 30 years in public life will satisfy anybody on that score. But I believe a labor man should be an assistant. My reason for that—if we had a labor man at the head of the office there are many employers I know, in our State at least, would not patronize the office. There would be suspicion.

Mr. LEISERSON. Let's get that clear. Isn't that the difficulty? You say a labor man should be in the office. There is a tendency in the trades-unions to put somebody in there to represent their crowd—right in the office. Then there is a tendency on the part of organized employers to put somebody in there. And then, when they do these things, there might be a tendency on the part of the political party to do the same thing. Now, can't you avoid all that by having a strict civil service, regardless of whether a labor man is at the head or not, and then have the interests represented in the advisory council, where they could fight out all their difficulties, right in the open?

Mr. SEARS. Maybe so. Now, in the matter of "Registration," section 82. When our office opened we used the register—no; we did not when the office first opened. We commenced December 1, 1907, and we registered every applicant for employment who came in there for the first time, and as long as he remained unemployed that registration stood. We had that on a pink slip. We had it colored because every man couldn't remember whether he had ever registered there or not, but he could remember the color and could remember whether he had made out one of those when he could not remember the name or anything else; that is, in any case. But that does not show anything.

We tried that from December 1, 1907, until July, 1913, and they gave it a good, fair, and square trial, and it was not only an expense, as Mr. Bannard has said to-day, accumulating a lot of records; and what value are they? It does not show the amount of employment in any given area, because all the unemployed do not come into the office, and even if they did, they might come to-day on account of its being a pleasant day, and if it rained to-morrow they wouldn't come; or, if you advertised in the paper for certain classes of help, you might have a big crowd the next day, and if you did not you would not have a large crowd. So I do not think it would indicate anything.

Mr. LEISERSON. Your point is, then, that it is impractical for an agency to try to register every applicant for employment?

Mr. SEARS. Yes.

Mr. LEISERSON. But the registry only goes to those for whom there is a possibility of securing a position?

Mr. SEARS. I do, on that line, sure. I believe the private officers should file one similar to the Indiana law; that is, under section 38.

Mr. LEISERSON. That is all, Mr. Chairman.

Chairman WALSH. Does anyone want to ask him any questions?

Commissioner GARRETSON. Mr. Sears, in regard to this statement that was made earlier in the day, that employment agencies were of no use in the winter. Has your conclusions led you to believe that the placing of one man when jobs are absolutely scarce has more social value than 10 when there are plenty?

Mr. SEARS. Decidedly.

Commissioner GARRETSON. Therefore, if they were administered through Government channels, the smaller number that were placed is more than an excuse for their existence during the lax period, and the expenditure connected therewith?

Mr. SEARS. Yes, sir.

Commissioner GARRETSON. During your own experience, is there any legitimate function performed by an employment agency, legitimate function that can not be performed as well by a State or Federal conducted system?

Mr. SEARS. I don't know of any.

Commissioner GARRETSON. That is all.

Commissioner BALLARD. Do I understand you to mean that on the average one receives employment for, on an average, two persons who seek employment?

Mr. SEARS. We aim to give the employer a selection, and send sometimes two or more where one is wanted. We aim to learn from the employer how many he actually wants, not how many he wants us to send him. The record we make is of how many he actually hires. Sometimes he will say:

"Send down four or five boys." We want to know what his absolute demand on the office is.

Commissioner BALLARD. You can not say there are two men for each position?

Mr. SEARS. We aim only to send one, to make the selection carefully, and, among our older employers, the men who have charge of this work, know what the employers want, and usually the first man sent lands. When it is a distance from the office we aim to send only one, because it would be unfair to the second man, but we make sure that the man is going to go. We have rules for the punishment of that fellow, a copy of which your commission has. It may be considered as a black list, but it is not. If we send an applicant out and he agrees to go to an employer, and he does not, we say, "Nothing more doing." If he gets provoked and wants to make complaint, we say, "I will tell you what we will do: you go to that man, and if he will give you a letter stating that you went there, come back." If he goes to an employer and says, "I will report next Monday morning," and does not do so, we will take care of him in some way. We bar them from the privileges of the office. When the story circulates that we do that, it will give the public confidence in us.

Mr. LEISENBERG. You do not bar him for all time?

Mr. SEARS. No, sir.

Mr. LEISENBERG. Just for a certain period?

Mr. SEARS. Just for a certain period. We give him the benefit of the doubt, always.

Commissioner HARRIMAN. I want to ask a question. In sending out, the suggestion that we have in our outline, the suggestion of sending out bulletins, do you see any point of weakness there? That perhaps it would make it possible for the man to go straight for his job instead of going to the employment bureau?

Mr. SEARS. I have viewed that thing for 15 years. I think there is an advantage to it.

Commissioner HARRIMAN. You see an advantage or a weakness?

Mr. SEARS. I see an advantage. I am a believer in publicity. I believe that publicity will do more than all the machinery you can get together on this matter. You can see—I have several charts on this matter; Mr. Leisenberg and Mr. Barnes, your investigator, have seen them—indicating how and where those people can go. For example, in Chicago, we will have assembled, knowing that there are more than 500 people wanted, or 500 people wanted for building trades or factory work, whatever it may be, that will be indicated by the figure 1 in a circle. If there are more than 500 unemployed in a certain industry, it will be indicated by the figure 1 in a triangle around the city of Chicago, and that map is there in the post office, in a conspicuous place, and in conspicuous places throughout the country, the same as the weather map.

(The papers were received and marked "Sears Exhibits 1 and 2." The exhibits were submitted in printed form.)

It says on there—it gives the information; the individual goes down to the post office and looks on there and sees they want some carpenters out in Chicago, California, Galveston—wherever it may be—and he says, "I guess I will go there"; and the moving-up process, the leveling, so to speak, takes place automatically.

Commissioner HARRIMAN. What is going to keep the employment people from being put out of business if they go direct from the post office, or wherever they see this chart? What is the employment bureau going to draw on for that information? If people do not come through them, how are they going to know anything about it?

Mr. SEARS. I don't believe the employment office is going to go out of business, by any means.

Commissioner HARRIMAN. How will they get that information? They get the information from the employers applying to them and the employees. If the employees go direct from where they see this chart to the place where the job is offered, they do not go to the employment bureau at all.

Mr. SEARS. I have a plan which I presented to your commission through your counsel. That is a long story, but if the commission want me to go into detail in reference to it I will.

Commissioner HARRIMAN. The only question was, I asked if there was any weakness there?

Mr. SEARS. I don't see any.

Mr. LEISENBERG. I think I can develop that point.

Commissioner HARRIMAN. Yes.

Mr. LEISENBERG. I would like to read this into the record. This is a sales map issued by a bureau showing where it is advisable for business men to go to sell goods and where it is not advisable. That does not tell the salesman, however,

what particular firms to go to. It does not eliminate the salesman. The same way a labor conditions map might be issued of this kind, and yet in order to take advantage of that information the wage earner would have to go through the regular channels of an employment agency.

Commissioner HARRIMAN. That is what I wanted to bring out.

Commissioner GARRETSON. He would go to a section and then avail himself of the employment agency.

Commissioner HARRIMAN. Don't the transportation cost and everything else go in there?

Mr. LEISEN. Yes; it would be very important to indicate if in this part of the country—in the Northwest—if a job is advertised, carpenters wanted at \$6 a day, it would be important to state that it cost \$10 a week for board, because a person who pays \$4 a week for board in the East and he hears that they pay \$6 a day for a carpenter out there, he might conclude that the cost of living would be the same, and it would be important to state that.

Commissioner HARRIMAN. Are you going to say all that on the bulletin which is posted in those different places? If they are going to get all that information, why are they going to go through an employment agency?

Mr. LEISEN. We do not tell them what particular firms to go to or the details. The purpose of an employment agency is to distribute reliable information. That is, to tell the details—just the kind of work, just the kind of men that is wanted. The trouble with information that is distributed now in an unorganized way—this is done now: When an employer can not get workmen he sends for a reporter and the reporter says, "Five hundred men wanted in Oshkosh," and 500 men go there, and none of them, perhaps, can do the particular kind of work. With this map, a commercial agency distributes bulletins that describe briefly in this way, and on here states the cities of the country, but the details are not given. So that if a man wants to know whether it is really advisable to go there he would have to come to some one—to an agency—to find out just what kind of work is there.

Commissioner HARRIMAN. That is the point, exactly, that I wanted to bring out.

Chairman WALSH. That is all; thank you. Call your next.

STATEMENT OF WALTER LINCOLN SEARS.

The possibilities of your commission for good in the communities are large and far-reaching.

How dignified and significant one's life becomes when he discovers his special capabilities and learns that he really has a work and that he can do it. No man may complain that his place to-day is small, his opportunities meager, when his effectiveness will depend almost wholly upon what he makes his place and opportunity.

Nonemployment, or unemployment, is the paramount question of the day. It is a question too high for modern industry, and almost too big for American statesmanship. It has engrossed the attention of the civilized world for generations.

I shall endeavor to call your attention to the causes of unemployment, the various remedies proposed for their relief, also what I believe to be the duty of organized society—the Government—and the real remedy.

Among the many causes of idleness or unemployment may be mentioned lack of work or material, unfavorable weather, strikes and lockouts, disability, stock taking, adoption of labor-saving devices or machinery, failures, consolidations, and repairs. Many of these causes can not be removed.

There are two kinds of relief, emergency and permanent. The agencies employed for the relief of distress in times of emergency are: The permanently established relief agencies of town and State, such as the poor department; municipal departments of public works, temporarily used for furnishing work relief; private charities; special relief committees; labor organizations.

There is no one of these agencies which can be relied upon to the exclusion of others; the importance to be given to each is a matter of grave concern; and, if a community has decided that it is necessary to undertake extraordinary measures for the relief of unemployed persons, the most serious question to determine is, To whom shall these relief measures be intrusted? The selection of the proper agencies of relief involves not only a question of principle, but a question of practical expediency.

There are but few who would leave all measures of relief to the overseers of the poor alone.

There are a few who believe that the relief of the unemployed can be made entirely through the extension of public works, of the establishment of workshops. The difficulties of providing for employment upon public works are many. The financial conditions of our municipalities and the necessity of making departmental plans months in advance, operate against the practicability of utilizing employment upon public works promptly and easily for the benefit of inexperienced men, very many of whom would not be physically competent.

The movement known as the organization of charities has been of great value to society; not only lessening the pecuniary burdens placed upon society, but also by developing and educating humanitarian enemies into new and more fruitful fields. It is a movement intended for the benefit of all elements in society, but from which, nevertheless, a considering element stand aloof. Constant care must be taken to prevent imposition; and, indeed, this is one of the principal reasons for the associating and coordinating of the charities of a city. Unfortunately, this is regarded by many as its chief function, and a certain element will not distinguish between friendly visiting and charity.

On the other hand, it is held that at certain times, special conditions arise which have to be met with special methods. It seems to me very clear that the problems of "employing the unemployed," and "of relieving distress," and "relieving pauperism" had better be, so far as possible, kept absolutely distinct. I do not approve of the expediency of treating these as one compound problem. I do not, therefore, see how it would be wise to send all the unemployed men and women who are in want to the various societies which are organized to deal with distress, want, and suffering. It should be very unwise to oblige the laboring men and women out of work to submit to the ordeal of the usual charity application.

I do not believe in the establishment of special relief committees, for the reason that it would be better to utilize the ordinary agencies of relief. They understand the situation more intelligently, can detect and prevent imposition or fraud, are in possession of records which at times are invaluable, and have at hand more or less expert service for investigation.

Organized relief agencies should broaden their boards of management and introduce representatives who would bring them into closer contact with industrial conditions.

As for relief of the unemployed through workingmen's organizations alone, it must be remembered that a large number of laborers, both men and women, particularly the latter, do not belong to labor organizations. A few of the more skillful trades-unions have introduced an "out of work benefit" into their administrations; many labor organizations have the machinery for intelligent relief, but as no funds are accumulated by the larger number of these societies which can be drawn upon in periods of non-employment, they can do little for the financial relief of their members.

Among the permanent measures which have the possibility of relieving the distress of the unemployed by methods which will so change the social or industrial conditions that there will be a smaller amount of involuntary non-employment in proportion to the total population are: Removal of residents of cities to the country and farms; removing the competition, and hence displacement of free labor, occasioned by the labor of inmates of reformatories and penal institutions; shortening the hours of the day's labor; restricting of immigration; extension of vocational training; improving the intelligence and employment offices, or establishing free employment offices.

The progressive labor legislation enacted during the past decade has done much to shorten the hours of labor, and naturally that means greater employment. I have found employers, generally speaking, perfectly willing to live under any law which applies alike to his competitors. Labor laws should be national in scope and passed by the Congress of the United States.

I believe that the evil of nonemployment is in a considerable measure due to irresponsible, ill-advised, and ill-adapted immigration. It is found in many of the larger cities of the United States that a large proportion of those who need assistance during industrial depression are immigrants who have recently arrived. It should be the duty of the Federal Government to be able at a moment's notice to give information to those requiring it, concerning every opportunity for employment and conditions of the same in every part of the United States.

I agree with the former Secretary of the Department of Commerce and Labor in that we should not exaggerate our industrial prosperity abroad. We can be conservatively optimistic without misstating actual conditions. We welcome the best immigrants, ethically and industrially. If glowing accounts are sent abroad about the prosperity which does not exist it means an increased alien population in our cities at a time when we can with difficulty scarcely care for the needy at home. I believe in protection to American industries, and I also believe in protection to our American workingman at home from competition at home in cheap alien's labor.

A considerable part of the evil of nonemployment is associated with the lack of skill or training on the part of industrial workers who can not easily and promptly adapt themselves to new conditions when displaced by new machinery, new processes, or changes in the condition of production. There is an unsatisfied demand for better skilled workmen, while at the same time the lower grades are overcrowded. The remedy is vocational schools, fitting boys and girls for some real work in life. Adaptability is the industrial need of the time.

During my seven and a half years' experience at the Boston free employment offices, I have been deeply impressed with the great number of applicants who have no vocation, and the apparent necessity of adding something to the present school curriculum, which will make the youth ambitious, diligent, and self-reliant to better prepare himself for the responsibilities of the future. Both in the home and in the school there is too much leniency in the care of the disobedient child, and a want of discipline somewhere, which results in a disrespectful, lazy, unruly youth, deficient in application after the school year. Parents and guardians are flagrantly careless and neglectful of the ethical and industrial training of the child. There can be no permanent improvement until we have produced a better man, one who will do his utmost to improve his own condition and better that of his brothers.

Free public employment offices are agencies supported by the Government out of general taxes, and designed to bring employee and employer together for the purpose of furnishing employment to the former and help to the latter. The employment agency as a private institution is of long standing. As a department of philanthropic work it is found as far back as 1835, when the Industrial Aid Society of Boston opened its free employment office. From a plain business standpoint it has been proven that a public employment office affords great possibilities for usefulness in every large community.

Free employment offices, labor bureaus, or exchanges, as they are termed in foreign countries, maintained by the Government, were first established in continental Europe more than a generation ago. Such offices are now located in Austria, Belgium, Canada, Denmark, Finland, France, Germany, Great Britain, Luxemburg, Netherlands, New South Wales, New Zealand, Norway, Russia, Sweden, Switzerland, and West Australia. Germany and England have the most extensive systems. It has been said that Switzerland has the most comprehensive scheme for dealing with the problem of unemployment.

The first free public employment office in the United States maintained by the Government was established in Ohio in 1890, mainly through the efforts of organized labor, who desired to do away with the unscrupulous private agencies.

Most of the free public employment offices in the United States are under the jurisdiction of the bureaus of statistics or labor departments of the respective States; there are few municipalities financed and managed by the respective local authorities.

Offices under State control in the United States are located in the following-named cities: Colorado Springs, Denver, Pueblo, Col.; Bridgeport, Hartford, New Haven, Norwich, Waterbury, Conn.; Chicago (3 offices), East St. Louis, Peoria, Rockford, Rock Island-Moline, Springfield, Ill.; Evansville, Fort Wayne, Indianapolis, South Bend, Terre Haute, Ind.; Topeka, Kans.; Louisville, Ky.; Boston, Fall River, Springfield, Worcester, Mass.; Detroit, Grand Rapids, Jackson, Kalamazoo, Saginaw, Mich.; Minneapolis, St. Paul, Minn.; Kansas City, St. Joseph, St. Louis, Mo.; Helena, Mont.; Lincoln, Nebr.; Cincinnati, Cleveland, Columbus, Dayton, Toledo, Ohio; Guthrie, Muskogee, Oklahoma City, Okla.; Providence, R. I.; Pierre, S. Dak.; Wheeling, W. Va.; La Crosse, Milwaukee, Oshkosh, Superior, Wis.

Cities having offices under municipal or citizens' control are: Los Angeles, Sacramento, Eureka, Cal.; Duluth, Minn.; Kansas City, Mo.; Butte, Great Falls, Mont.; Newark, N. J.; Cleveland, Ohio; Portland, Oreg.; Aberdeen, Everett, Hoquiam, Seattle, Spokane, Tacoma, Wash.

There are offices in the Hawaiian and Philippine Islands. The offices in Canada are located in the following-named cities: Winnipeg, Montreal, Quebec, Sherbrooke, Ottawa, London, Hamilton, Berlin, and Edmonton.

Owing to the fact that changes are taking place in the number of these offices certain allowances must be made for corrections in the above list.

Free public employment offices—are they really useful, needed institutions? It is desirable, in the first place, to learn whether the principle itself is right; whether on the broad ground of common sense the idea of a public-employment office is a practical one; whether, if intelligently carried out, it will confer direct benefit upon any considerable portion of the community. All society, it may be said, is composed of employers and employees, each of which is continually seeking the other.

In the absence of any system of supplying reliable information and grouping of opportunities, each side, in looking for suitable help or employment, must depend largely upon blind personal effort, at an expense of time and energy, which might otherwise be devoted to accumulation. This waste, however insignificant, though often large, should be lessened. Anything which tends to concentrate the wants of the buyer and the seller of labor and helps to fit them together is necessarily in the interest of economy and public convenience.

This principle enters into various commercial organizations which are conducted, not as a private enterprise for profit, but for the mutual good of all those interested in the buying and selling of certain commodities—the members paying their proportion for the benefits enjoyed in union of effort. As a labor exchange is provided for the convenience of society as a whole taxation becomes the fairest and most feasible means of equalizing the expense.

The time lost to the average wage earner between the loss of one position and the finding of another would, if any means existed of compiling the statistics on the subject, foot up to an enormous amount annually in dollars and cents.

Private initiative can not be relied upon to furnish all possible assistance to the unemployed seeking employment for the reason that it must make merchandise of men's necessities to an extent that is socially harmful, even when conducted as a legitimate business and entirely free from extortionate charges.

The Massachusetts Free Employment Offices were created by an act of the legislature approved by Gov. Curtis Guild on May 31, 1906, and are under the supervision of Director Charles F. Gettemy, of the bureau of statistics. Offices were opened at Boston on December 3, 1906; Springfield, September, 1907; Fall River, October, 1907; and Worcester, September 15, 1913, and each one is in charge of a superintendent.

When the Boston office was opened the cynics predicted that it would be used as a political headquarters; some thought it would be a strike-breaking establishment; others tried to discredit it by saying that it represented an obnoxious form of socialism; failure at the end of a year or two was predicted; it was alleged that it was a charity and that no self-respecting person would patronize it; that the office might possibly be serviceable headquarters for unskilled labor, but that high-grade help would never be among its patrons.

We realized from the beginning that if an office was to succeed and accomplish what its friends desired, it should be free from all suspicion of favoritism toward any class in the community and likewise be free from the suspicion of being an adjunct of, or influenced by, partisan politics, but that the office should be conducted with the sole aim to render the highest service to the employing public. We knew that if the employing public had confidence in the office, the unemployed could then be assisted. That was our policy on the opening day; it is our policy now; and we are thus enabled, because of adhering strictly to it and with the strong arm of the Government behind us, to render eminently disinterested service, free to all and, I believe, equal to the best anywhere.

In regard to the office being a strike-breaking establishment, I ought to explain a part of our system relating to furnishing help in case of strikes or lockouts. Whenever the office receives information from a reliable source that there is a strike or lockout at a certain establishment which makes application to us for help, we stamp on the employee's introduction card that fact, so that he is at liberty to accept or reject the offer, knowing the condition before he leaves the office. We make no comment, neither advising him to accept nor to reject the offer. We have handled very many serious strikes, some of which were bitterly contested. We have received orders from employers, sent help to take the place of strikers, and not one word of criticism has ever been made to the office by employer or employee or organized labor.

As to its being a charity—my conception of the word "charity" is the giving of some material aid free. Our office simply furnishes information as to where employment or employees may be obtained; it does not furnish or guarantee to furnish employment itself, and is no more a charity than the public libraries or public schools. In answer to the prediction that no self-respecting person would patronize the office, I can prove conclusively that our office is equipped to supply, and does supply, the highest grade of help.

The workers should be regarded as in no way objects of charity, but should be deemed in all respects free and independent citizens. This point is absolutely vital. If the system had ever so little the flavor of charity, no diplomacy or cleverness could prevent its flat failure. No working man or woman should be made or permitted to feel that in applying to the State free employment office for work he or she has in any way compromised dignity or self-respect.

Not one single prediction of our critics has come true. On the other hand, all, and more than was anticipated by its friends, has resulted.

For obvious reasons, I am of opinion that public employment offices should be exclusively under the control of the State, independent of city government, and all appointments made should be from the classified civil service. The headquarters should be accessibly located and well ventilated. The system should be as simple as possible, consistent with efficient service, with separate divisions for the different grades of male and female help, skilled and unskilled. Absolute neutrality should prevail to insure the support and confidence of the employer and employee alike, and also to avoid the complications likely to arise during strikes and lockouts.

After all is said and done, the success of the free employment office, like any other business, depends on efficient administration. This can only be attained by persons possessing a knowledge of human nature, with good judgment, and large sympathy.

To-day no one who has given any thought whatever to the subject can doubt the advisability of centralizing the demand for help as well as by the supply at the free public employment offices which are maintained by the government, free to all. If the employer is required to apply at one office for an errand boy, at another for a stenographer, and still another for a mechanic instead of at one central office, obviously the argument is strongly in favor of the central bureau with the strong arm of the government back of it, which guaranteed disinterested, impartial service free to all.

Massachusetts leads in practically every line of social endeavor for the education, uplift, and betterment of mankind.

The first free public school was established in Massachusetts. The first shot for freedom from the yoke of the English rule in America was fired here. We all know the efforts of Charles Sumner, Wendell Phillips, and William Lloyd Garrison for universal liberty and freedom of the slaves. We have the best labor laws in the United States. We took the first step for and have the best child-labor laws. We lead in organized charity work. Our State institutions are the best, and it is only natural that Massachusetts should lead in the matter of public employment offices.

Boston can justly claim the credit for the first vocation bureau in the world. The Boston free employment office is the first to have a vocational counselor to advise the youth as to the best business to enter. We claim credit for the first and only office which has a department for handicapped persons. We claim credit for establishing the first public employment office under civil-service law, with departments in charge of efficient clerks for the handling of all classes of skilled and unskilled male and female help and minors.

There are 10 cities in the United States and 3 in Canada using our forms and system. The Massachusetts offices are known all over the world, and frequently we receive inquiries from foreign countries regarding our system and method of doing business.

The Boston office has now over 27,000 employers as patrons from 22 States and Canada, representing nearly every kind of business. We filled more than 21,000 positions in 1913, more than 60 per cent of which required help with previous training or experience.

The forms and system in use in the Massachusetts offices are of our own creation. When the law creating free employment offices in Rhode Island was passed, Commissioner Webb visited Boston and paid us a high compliment by adopting our forms and system. Former Commissioner Scoville, of Connecticut, soon learned of the efficient system which we had and discarded the one in use in his State and adopted ours. In the fall of 1910, Factory Inspector Guyon

of the Province of Quebec in Canada, visited our office, among others throughout the country, and in April, 1911, adopted our blanks and system, simply translating them into French.

Mr. William M. Leiserson, an expert for the Wainwright Commission on Unemployment of New York State, in 1910, paid a high compliment to our office by stating in his official report, after visiting public employment offices in this country and abroad, that "the Boston office was the most efficiently managed." Since that time, Mr. Leiserson has been appointed superintendent of the free employment offices in the State of Wisconsin, and, with very slight modifications, they have adopted our forms and system, if anything, their forms are not as simple as ours. So it will be observed that Massachusetts still leads in the big problems, the problems which are demanding the attention of the world's ablest geniuses.

Comparisons of the cost for the operation of these offices should not be made upon a per capita basis for reasons which must be apparent to anyone familiar with their management and operation.

THEIR DUTY TO SOCIETY.

From the experience of the foreign public employment offices, some of which have been in operation for a generation, we should be able to learn a good deal, and adopt such ideas as may be applicable to conditions in this country. American labor conditions are obviously different and we should choose only such methods as are suitable to our needs. We should discourage all plans which might result in making the individual dependent. While it may be the duty of the Government to assist the unfortunate individual in every proper way, we ought not to adopt any scheme which would be likely to make him dependent upon the Government or society for support. I favor the giving of information relative to help or employment, but not of any material thing which savors of charity, or tends to pauperize the individual. The methods and practices of the foreign offices, I fear, tend to make the individual dependent, and this should not be permitted to enter into our scheme of furnishing information as to where help or employment may be obtained. Paternalism has its advantages, and also its disadvantages, but there is a limit which we should not attempt to reach too rapidly.

In regard to the matter of charging a fee for service to either employer or employee, or both, on the theory which has been advocated that it would make the office self-supporting and tend to keep away the undesirables, the idea is fallacious. For further information in regard to the matter of fees, see Massachusetts Public Document No. 80 for 1907.

There is no department of the Government which could be made as beneficial in its results as the successful establishment and proper management of free public employment offices in coordination with the Federal Government. Their establishment and proper management would, in my judgment, do much in normal times to reduce the number of idle, shiftless, intemperate, immoral, and criminal, and it would make for better citizenship, and a respect for our laws and civic institutions.

PLAN FOR DISTRIBUTION.

Labor distribution is a problem that has taxed the ablest minds of the world for a generation. The efficient distribution of labor is a vital matter, and doubtless the public employment office, labor exchange, or clearing house, is an important factor in the solution of the question. Well-managed public labor exchanges or employment offices can render valuable service by cooperation with the Federal Government in an effective scheme for distribution.

There are millions of employables in the United States who are unemployed some time during the year, even during periods of greatest industrial activity and prosperity, and while this vast army of willing workers are idle—honestly seeking employment—thousands of employers are vainly seeking help. In the absence of reliable information they do not know where to look for such help as they may need. This state of affairs could not exist to-day if those public officials who are responsible would, without fear or favor from either capital or labor, put into operation an effective plan for the distribution of labor.

It is the duty of the Federal Government to institute some plan by which to reduce idleness—to shorten the time between the loss of one position and the procuring of another for every individual who is so unfortunate as to become idle, and thereby increase the number of producers.

It is the duty of the Government to furnish country-wide authentic information to the public as to where help or employment may be secured, so that either the seeker for work or help may readily learn where to apply.

Practical, prudent publicity will accomplish results, and as one means toward that end I recommend a bulletin of opportunities to be issued by the Federal Government, similar to the Weather Bureau map. The judicious publicity of opportunities for employment in this country obviously would result in a leveling, so to speak, a nation-wide equalizing and betterment of labor conditions. This bulletin could be posted in such places as expediency and experience proved advisable.

During the panic of 1907-8 a certain metropolitan city appropriated a considerable sum of money by which to relieve conditions then existing in that city, which fact was published broadcast. A large number of people went to that city, the money was soon expended, and the people for whose relief it was appropriated did not receive their full benefit; and conditions thereafter were very much worse. The same would doubtless be true of the labor market, were information relative to opportunities in one city only made public.

Publicity should be given to opportunities duly where a considerable number of a certain kind or kinds of help were idle or wanted; I have arbitrarily set the figure at 500, for the reason that a smaller number could be taken care of locally. If there were 500 or more persons representing a particular trade idle or wanted in any locality, the bulletin would show that fact, so that all who were interested might readily learn just what to do.

As a means of obtaining the required information, I recommend that the chief executive of each city in the United States, having a population of over 50,000, appoint a representative committee, consisting of himself and a representative of the chamber of commerce, the charity board, the labor organization, the postmaster, and if there is an immigration office or public-employment office in the city, they also should be represented on the committee. This committee could, under proper rules and regulations, prepare information relative to the condition of the labor market in their respective locality and report to the Federal Government on specially prepared blanks as required.

Each report should be certified to by a notary public, thereby assuring its authenticity. The committee should be exceedingly careful not to misrepresent labor conditions.

The matter of publishing the bulletin in certain languages, together with other pertinent details, such as wages, hours, and tenure, while important, are of secondary consideration and can doubtless be perfected as the result of experience.

I feel certain that the idea can be made peacefully operative and highly beneficial to both capital and labor. It should be a country-wide graphic illustration of labor conditions. Obviously the Federal Government is the only proper party to prepare and disseminate this information.

TESTIMONY OF MR. J. L. MCGREW.

Mr. LEISERSON. Will you state your name and official position?

Mr. MCGREW. J. L. McGrew, Assistant Chief, Division of Information, Bureau of Immigration, Department of Labor.

Chairman WALSH. Located where?

Mr. MCGREW. Washington.

Mr. LEISERSON. Will you tell the purpose of that bureau or division?

Mr. MCGREW. Under the law the purpose of the division is to promote a beneficial distribution of admitted aliens among the States and Territories desiring immigration.

Mr. LEISERSON. How long have you been connected with the division?

Mr. MCGREW. Almost four years.

Mr. LEISERSON. Is that as long as it has been in existence?

Mr. MCGREW. No, sir.

Mr. LEISERSON. How long has it been in existence?

Mr. MCGREW. The law was passed in February, 1907. I think the bureau or division was organized the 1st of July following.

Mr. LEISERSON. Do you maintain a regular employment office in connection to do that work, or is it merely to distribute information generally?

Mr. MCGREW. We do not call it an employment office; we call it a distribution branch located in New York City.

Mr. LEISERSON. You have a bureau only in New York City, or in other places?

Mr. MCGREW. We cooperate with regular immigrant stations in some other cities.

Mr. LEISERSON. But the main office is in New York City?

Mr. MCGREW. Yes, sir.

Mr. LEISERSON. Can you give us a reason why you do not call it an employment office? Don't you do a regular employment business.

Mr. MCGREW. The inspector in charge of the distribution branch at the present, and who will be here later, can better explain.

Chairman WALSH. Chief Powderly, isn't it?

Mr. MCGREW. Powderly.

Mr. LEISERSON. Do you mean C. L. Green?

Mr. MCGREW. No.

Mr. LEISERSON. What particular part of the work are you most familiar with?

Mr. MCGREW. I am interested in the administrative end of the division at Washington.

Mr. LEISERSON. Can you give us any idea as to the number of people that are distributed by your department?

Mr. MCGREW. I have the figures.

Mr. LEISERSON. If you please.

Mr. MCGREW. If you will allow me to refer to them. I find that from July 1 to June 30, 1913, there were 25,299.

Mr. LEISERSON. Distributed?

Mr. MCGREW. Direct to specific opportunities.

Mr. LEISERSON. Now, let us get definitely what you mean by direct to specific opportunities. Were those men sent to work?

Mr. MCGREW. Sent to specific employment; yes, sir.

Mr. LEISERSON. Have you a method of following up to see that they actually get to work?

Mr. MCGREW. Yes, sir.

Mr. LEISERSON. Mr. Sears testified here, and it is the general experience of all the employment offices that have been called upon, that about half, very seldom more than half of the people who are sent to work, actually get the positions. Is that taken care of in your figures?

Mr. MCGREW. This is the net number accepting positions.

Mr. LEISERSON. That is the number that were verified that actually went to work?

Mr. MCGREW. Actually went to work.

Mr. LEISERSON. What kind of work is that? Have you any idea of the classification of occupations?

Mr. MCGREW. The annual reports show—I have them all with me.

Mr. LEISERSON. You will file that as your report?

Mr. MCGREW. I can say that the two main groups are foreign laborers and unskilled laborers.

Mr. LEISERSON. Can you give us an idea of the total last year?

Mr. MCGREW. Yes. The total number direct for the fiscal year, 1913, was 5,025.

Mr. LEISERSON. Direct? Does that mean merely sent out?

Mr. MCGREW. Actually sent out.

Mr. LEISERSON. Can you describe to us any system by which you verified the fact that they went to work?

Mr. MCGREW. Yes, sir. Mr. Green will place in the record the card which is returned by the employer to his division.

Mr. LEISERSON. Can you give us an idea of the total cost to place those 5,000 into employment?

Mr. MCGREW. It is merely a matter of appropriation.

Mr. LEISERSON. What is your appropriation?

Mr. MCGREW. It is segregated. It is a part of the immigrant fund. I can easily put that into the record later. I haven't it with me.

Mr. LEISERSON. Can you tell me approximately?

Mr. MCGREW. I would not want to say approximately; no, sir.

Mr. LEISERSON. You say that about 5,000 were placed last year?

Mr. MCGREW. Yes, sir.

Mr. LEISERSON. Can you give us any reason why the work is not more extensive when you have the whole country to take care of, whereas in Boston they place annually 15,000 or more?

Mr. MCGREW. I couldn't offhand. I think I would rather have that explained by the gentleman in direct charge of the operation of the office, Mr. Green, of the New York office.

Mr. LEISEN. Did you get a copy of our plan?

Mr. MCGREW. Yes, sir.

Mr. LEISEN. Have you got any suggestions or criticisms?

Mr. MCGREW. Yes, sir; I have a brief statement on the subject.

Mr. LEISEN. If you will, please.

Mr. MCGREW. In this connection I wish to say that the request which I received, dated May 2, stated that the subject of the hearing was "State mediation and arbitration of industrial disputes," whereas the subsequent letter, dated May 14, stated the subject to be "Employment offices and unemployment." Therefore I have had very short time for preparation of this.

Mr. LEISEN. Were you requested to appear on State mediation and arbitration of industrial disputes?

Mr. MCGREW. Yes, sir, originally.

Mr. LEISEN. That was a mistake.

Mr. MCGREW. If you have no objection, I will read this.

Mr. LEISEN. About how long will it take you?

Mr. MCGREW. About 10 minutes.

Chairman WALSH. How many pages are there?

Mr. MCGREW. Six and a half pages.

Chairman WALSH. We have tried to make it a rule that where a written statement, where it was written out, to simply submit them and then make any verbal suggestions that you care to, of subjects that you think are of striking importance in that paper or outside of that paper.

Mr. MCGREW. I will read the important paragraphs.

Chairman WALSH. Not read it, but just state them.

Mr. MCGREW. Yes.

Chairman WALSH. Each member of the commission gets a copy of that.

Mr. MCGREW. At the outset I wish to have it distinctly understood that any statements I may make at this hearing are the expressions of my own opinion and are not to be taken as the voice of the Department of Labor, with which I am connected.

In reference to Paragraph I of the proposed plan I would suggest that the name of the organization be changed to "Bureau of Employment and Distribution." Not that I object to the term that you have adopted, or had suggested to you, but I would like to see the word "distribution" added, and I think if you had a name, "National Bureau of Labor Exchanges and Distribution," it would be rather long. Therefore I would suggest the name of "Bureau of Employment and Distribution."

My object in suggesting this change of name is because of my belief that the Division of Information should be a part of and the nucleus of this new bureau.

I approve of having such a department in the Department of Labor, referring to Paragraph II; the method of the appointment of a director is not stated. I wish to go on record in favor of the appointment of a director by the Secretary of Labor and in accordance with Civil-Service rules.

Mr. LEISEN. Does not Paragraph V state that the director and all subordinate officers—

Mr. MCGREW. Yes, sir; that states they should be merit appointees.

In respect to Paragraph III, I appreciate the necessity of maintaining impartiality in disputes that might arise between capital and labor, but it would seem, under certain conditions, that such an advisory council, especially one composed of several members devoting their entire time to the duties of the office, would prove unnecessarily expensive, particularly if composed of a large number of persons devoting their entire time to it.

Mr. LEISEN. No; this is entirely unpaid, to meet only once a month.

Mr. MCGREW. The number of persons composing the advisory council is not stated; but in view of the method of selecting a chairman, it is not seen how the council could be composed of less than six members.

Mr. LEISEN. The idea is to have 10 or 20.

Mr. MCGREW. In my opinion, an advisory council, composed of as many as six men, instead of assisting the directors on all matters pertaining to the management of the bureau, to determine the policies and the selection of subordinate employees, as this plan suggests, might become a hindrance by interfering with the director in his work and causing friction and divided responsibility.

Mr. LEISEN. Have you had any experience on such a council?

Mr. MCGREW. No, sir.

Mr. LEISENBERG. A council of 20 in the city of Milwaukee, where there has been no difficulty whatever, on this board, and the British labor exchanges all have large advisory councils.

Mr. MCGREW. In this connection I desire to call attention to that portion of section 8 of the act of March 4, 1913, creating the Department of Labor, which reads as follows:

"That the Secretary of Labor shall have power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever, in his opinion, the interests of industrial peace may require it to be done."

In view of the foregoing provisions of law, I do not see the necessity of providing for another body to "see to it that the bureau was impartial in disputes between labor and capital."

Mr. LEISENBERG. This is not with the idea of mediating disputes at all. This is merely to see that the employment offices is so run impartially, as, for example, Mr. Sears's office is, merely to watch that it is not used by one side or the other in labor disputes.

Mr. MCGREW. It occurs to me that if the method of appointing the directors is above suspicion and you get the right director, that that ought not to occur.

Mr. LEISENBERG. The idea of confidence on both sides is important?

Mr. MCGREW. Yes, sir.

Mr. MCGREW. In reference to Paragraph VI, I would have a provision under Paragraph VI transferring to the proposed bureau the personnel of the Bureau of Information, together with all the powers and duties of said division, as enumerated in section 40 of the law of February 20, 1907.

Mr. LEISENBERG. You would suggest transferring it?

Mr. MCGREW. Absolutely.

Mr. LEISENBERG. Would you?

Mr. MCGREW. Yes, sir.

In reference to Paragraph VII, clearing houses; in my opinion, these clearing houses mentioned in Paragraph VII should not be only clearing houses for all information regarding labor-market conditions in the district, but should, in addition be clearing houses for information concerning lands offered for rent or sale to nonresidents.

Mr. LEISENBERG. Wouldn't that be included under the purposes of the bureau which gives it "to make known the opportunities for self-employment in the United States"? That is in section 6, subsection 1.

Mr. MCGREW. I differentiate a little between self-employment and investment in land, either as buyer or renter.

Paragraph VIII seems to be all right.

Paragraph IX provides that the several clearing houses shall compile and publish the information relating to their districts, and that the central office in Washington shall compile the information from the clearing houses and publish it in a labor market bulletin covering the whole country in the English language, and in any other languages that may be necessary or desirable. This presents what appears to me to be an unnecessary duplication of work, and, therefore, a needless expense. I accordingly recommend the elimination of the requirement that clearing houses shall publish information, and that the matter of publication be placed solely in the hands of the central office in Washington. It is believed that a publication along the lines of the Farmers' Bulletin of the United States Department of Agriculture would be sufficient to meet the needs of the situation. In thus restricting the publication to the central office in Washington, I am using the word "publication" in a limited sense as referring to a printed publication, and do not by this statement wish to be understood to advocate the prevention of the dissemination of information by clearing houses as provided in Paragraph X.

Part 2 of the proposed plan, Paragraphs XIII to XXVIII, inclusive, refers to legislative rules, and I am inclined to agree with the statement in Paragraph XXVII that it will never be possible to cover all the cases of wrongdoing by direct provisions of law. I recommend, therefore, that the law be so drawn as not to only prohibit fraud, misrepresentation, and improper practices, but to give the bureau broad and general powers, to make rules and regulations, to carry out such intent and purpose of the law.

In conformity with my previous recommendation on the subject, I urge that the bureau be given jurisdiction over individuals or agents engaged in selling lands to nonresidents of the State in which such individuals or agents are located.

Mr. LEISENBERG. You would not connect that directly with the employment business, would you?

Mr. MCGREW. I would connect that directly if I would put in there the division of information, because the information we give to aliens relative to agricultural opportunities as well as of employment.

Mr. LEISENBERG. That is to say, you would have a division of information whose business it would be to give them opportunities in agriculture, or any other information regarding agriculture, or any other opportunities, as a distinct and separate kind of work from the ordinary employment business? Where a man is referring to work, etc.?

Mr. MCGREW. I should say the bureau—I should give the bureau the power to do that, because the same field force would collect the information in respect to land that it did with respect to opportunities for employment. I am not clear that a separate division would be necessary:

The comment with respect to the advisory council would apply in the same way to Paragraph XXVIII in reference to the advisory committee.

Mr. LEISENBERG. Just for the purposes of the record, that Paragraph XXVIII ought to be the first paragraph under Part III. That was a mistake.

Mr. MCGREW. I see; yes.

Mr. LEISENBERG. That is the same proposition that you spoke of in regard to the advisory council.

Mr. MCGREW. Yes. I just wanted to make the same comment.

I made some notes, somewhat in detail, about the first. I don't know whether you would care to take the time to take that up. It is all in the statement.

Mr. LEISENBERG. No, no. If you will hand your statement to the stenographer.

Mr. MCGREW. This concludes the statement which I had to make.

STATEMENT OF J. L. MCGREW.

At the outset I wish to have it distinctly understood that any statements I may make at this hearing are expressions of my own personal opinion and are not to be taken as representing in any way the views of the Department of Labor, with which I am connected.

Taking up, seriatim, a discussion of the "proposed plan of a national system of labor exchanges," which the commission forwarded to me a few days ago, I desire emphatically to state that I approve of the plan in most of its essential particulars so far as it goes, but I strongly advocate that there should be included in its scope and operations further duties and powers, which I shall endeavor briefly to enumerate.

Commencing with paragraph 1 of the proposed plan, I would suggest that the name of the organization be changed to "Bureau of employment and distribution." I have no objection to the name "National bureau of labor exchanges," except that I should like to see added to the title the words "and distribution," which would render the name too long, hence my preference for the name "Bureau of employment and distribution."

To the outline of the purpose of the proposed bureau as set forth in paragraph 1 I urge that there be added the following: "It shall also be the duty of said bureau to promote a beneficial distribution of aliens admitted into the United States among the several States and Territories desiring immigration."

My object in recommending a change of name and enlarging the powers and duties of the proposed bureau is based on the belief that such a bureau should take over the work which is now being performed by the Division of Information in the Bureau of Immigration, Department of Labor, and that the present Division of Information should form the nucleus of the organization of the proposed bureau. Right here let me commend as strongly as I may the proposal to have this body established as a bureau in the Department of Labor. The propriety of such action seems to me to be so apparent that I shall not consume your time by presenting arguments in favor of it.

Paragraph 2 as drawn appears to be all right in the main. It is noted, however, that the method of appointing the director is not stated. I wish, therefore, to go on record in favor of the appointment of the director by the Secretary of Labor in accordance with civil-service rules.

Referring to paragraph 3, I appreciate the necessity of maintaining impartiality in disputes that might arise between capital and labor; but it would seem under certain conditions that such an advisory council, especially one composed of several members devoting their entire time to the duties of the office, would prove unnecessarily expensive. The number of persons composing the

advisory council is not stated in the proposed plan, nor is any provision made as to how this council shall be appointed. In view of the method of selecting a chairman, it is not seen how the council could be composed of less than six members. In my opinion an advisory council composed of six members, instead of "assisting the director in all matters pertaining to the management of the bureau, the determination of policies, and the selection of subordinate employees," as this plan suggests, might become a hindrance by interfering with the director in his work and causing friction and divided responsibility. In this connection I desire to call attention to that portion of section 8 of the act of March 4, 1913, creating the Department of Labor, which reads as follows: "That the Secretary of Labor shall have power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever in his judgment the interests of industrial peace may require it to be done." In view of the foregoing provision of law, I do not see the necessity of providing for another body to "see to it that the bureau was impartial in disputes between labor and capital," and I therefore recommend the elimination of paragraph 3 from the proposed plan.

In connection with paragraph 4, I wish to urge what I regard as a most important addition to the duties there imposed on the agents or correspondents. That is, I advocate with all possible earnestness the provision that these officials be required to inspect and report on all lands or other properties in their respective localities concerning which the bureau may make inquiry. The object of this requirement is to prevent, so far as possible, the abuses which are continually coming to public notice of the selling to nonresidents of practically worthless lands through misrepresentations and misleading or false statements. I believe that if the machinery were provided for obtaining the actual facts with respect to land offered for sale to nonresidents, not only would fraud and abuse in this respect be practically eliminated, but much of the money which now goes to foreign countries for the purchase of lands would be kept in the United States and safely invested in the best of securities, to wit, land at a fair market price. This would also tend to relieve the congestion in the cities and counteract the drift from rural to urban communities.

Paragraph 5, in my opinion, contains important provisions and is well drawn, with the exception that the mode of appointing the director is not stated. I reiterate my recommendation that the director should be appointed by the Secretary of Labor in accordance with civil-service rules.

I recommend that a provision be added to paragraph 6 transferring to the proposed bureau the personnel of the Division of Information of the Bureau of Immigration, together with all of the powers and duties of said division as enumerated in section 40 of the act of February 20, 1907.

The clearing houses mentioned in paragraph 7 should not only be clearing houses for all information regarding labor-market conditions in the district, but should, in addition, be clearing houses for information concerning lands offered for rent or sale to nonresidents.

I have no comment to make with respect to paragraph 8, aside from the fact that it meets with my approval.

Paragraph 9 provides that the several clearing houses shall compile and publish the information relating to their districts, and that the central office in Washington shall compile the information from the clearing houses and publish it in a labor-market bulletin covering the whole country, in the English language, and in any other languages that may be necessary or desirable. This presents what appears to me to be an unnecessary duplication of work and therefore a needless expense. I accordingly recommend the elimination of the requirement that clearing houses shall publish information, and that the matter of publication be placed solely in the hands of the central office in Washington. It is believed that a publication along the lines of the Farmers' Bulletin of the United States Department of Agriculture would be sufficient to meet the needs of the situation. In thus restricting the publication to the central office in Washington, I am using the word "publication" in a limited sense as referring to a printed publication, and do not by this statement wish to be understood to advocate the prevention of the dissemination of information by the clearing houses as provided in paragraph 10.

Part 2 of the proposed plan, paragraphs 13 to 28, inclusive, refers to legislative rules, and I am inclined to agree with the statement in paragraph 27 that it will never be possible to cover all the cases of wrongdoing by direct provisions of law. I recommend, therefore, that the law be drawn so as not only to prohibit fraud, misrepresentation, and improper practices, but to give the

bureau broad and general powers to make rules and regulations to carry out such intent and purpose of the law.

In conformity with my previous recommendation on the subject, I urge that the bureau be given jurisdiction over individuals or agents engaged in selling lands to nonresidents of the State in which such individuals or agents are located, and that the prohibition against false statements and misrepresentations by employment agents as provided for in paragraphs 15 and 16 be extended to include individuals or agencies engaged in interstate sale of lands.

There hardly seems to me to be any necessity for the advisory committees as provided in paragraph 28. In any case, I would not make the appointment of an advisory committee mandatory, but would leave it to the discretion of the Secretary of Labor as to whether or not such a committee should be appointed.

Part 3, paragraphs 28 to 33, inclusive, relates to proposed regulations for public employment offices. Referring to paragraph 29, I would suggest that the superintendent of all public employment offices, whether maintained by the bureau or otherwise, be required to furnish a bond in a sum to be determined by the director, which in each case shall be equal to at least twice the amount of money which said superintendent is likely to have on hand at any one time as advances for transportation or other purposes.

The question of the advancement of funds for transportation does not appear to be covered by the proposed plan. I would recommend that provision be made for the handling by the superintendent of funds advanced for transportation by employers or others, and that the several States be urged to appropriate money to be used as advances for transportation, the same to be refunded to the States through the superintendent by the employer or employee, as may be agreed upon.

Part 4, paragraphs 38 to 50, inclusive, presents regulations for private employment offices. Referring to paragraph 38, I recommend that the bond in the penal sum of \$1,000 may be increased, in the discretion of the director, whenever it shall be found that the amount of money on hand in the nature of advances for transportation, registration fees, etc., shall exceed the sum of \$500. In other words, the bonds should be at least double the amount of the funds that are likely to be in the hands of the employment office at any one time.

Referring to paragraph 43, I would recommend that an applicant for a permit to engage in the business of an employment agent, but not for profit, be accompanied by a bond in the same manner as provided in paragraph 38.

Paragraph 47, relating to the time at which a fee may be accepted from an employee, does not appear to me to be clear. It is stated in that paragraph that "no fee shall be collected from any employee who applies to an employment agent for employment until said employee shall actually enter upon the duties of the employment secured through the agency of the licensee; provided, however, that a sum not to exceed \$1 may be collected at the time when the applicant for employment is sent to apply for work to an employer or at or after the time when an applicant for employment is engaged by an employer at the office of the licensee." It will thus be seen that the proviso is in direct conflict with the first part of the statement. Attention is also called to the fact that in paragraph 25 of the plan it is proposed that a registration fee may be charged upon the written consent of the bureau.

Chairman WALSH. At this point the commission will adjourn till to-morrow morning at 10 o'clock sharp, to meet in this same room.

(At 4.30 p. m. an adjournment was taken till May 20, 1914, at 10 o'clock a. m.)

CITY HALL, BOROUGH OF MANHATTAN,
New York City, May 20, 1914—10 a. m.

Present: Acting Chairman Garretson, Commissioners Lennon, O'Connell, Ballard, Harriman, and Delano.

Acting Chairman GARRETSON. The commission will be in order.

Mr. LEISERSON. Mr. Green.

TESTIMONY OF MR. C. L. GREEN.

Mr. LEISERSON. Will you state your name to the commission?

Mr. GREEN. C. L. Green.

Mr. LEISERSON. Official position?

Mr. GREEN. Inspector in charge of the New York distribution branch of the Division of Information of the United States Department of Labor.

Mr. LEISERSON. How long have you been in that position?

Mr. GREEN. Since January, 1908.

Mr. LEISERSON. Is that ever since that office has been in existence?

Mr. GREEN. Since the practical distribution has begun; yes.

Mr. LEISERSON. You conduct practically an employment office, is it?

Mr. GREEN. Well, some of our results are the same as those of an employment office, though primarily our work is that of securing and distributing information. Incidentally we do give information to people who do secure employment.

Mr. LEISERSON. What kind of information do you give them?

Mr. GREEN. We make a specialty of information concerning agricultural possibilities. We also keep data of interest to agriculturalists, who are already so engaged, and we issue agricultural reports, soil surveys, maximum and minimum temperatures, and rainfall, and all that sort of thing of interest to people; the prices of land, general crops grown and the value of them, and various other data.

Mr. LEISERSON. That is the greatest part of your duty?

Mr. GREEN. That is the part that we aim to put to the front.

Mr. LEISERSON. And the distributing of working people over the country is a minor matter in your department?

Mr. GREEN. No; that is incidental to it. We do not slight it at all. The object of giving the information that we do give is to get people from the congested centers into the rural districts, where needed. That might be for the farm hand or might be for the common laborer. And we encourage aliens particularly to return to the farm where they have been in agricultural pursuits in Europe, instead of going to the mines and industrial pursuits, where they must learn a new trade. We try to encourage them with that advantage they already have.

Mr. LEISERSON. Mr. McGrew testified here yesterday that you directed to employment about 5,000 people last year.

Mr. GREEN. Yes, sir.

Mr. LEISERSON. Does that mean 5,000 actually placed in employment?

Mr. GREEN. That means that it will average about 5,000 a year; that would be about the average. That means out of nineteen or twenty thousand people who get information of various kinds, that we have positive information that this number have actually accepted employment due to the information that we have furnished; that is, those that we have positive knowledge of.

Mr. LEISERSON. Does that include people who have gone out and bought farms, or just those that have gone to work?

Mr. GREEN. Well, those that have gone to work; and then very few of them buy their farms through us. That feature of the thing we prefer to do through the State representatives. If a man comes to us and says he desires to buy a farm, we ask him first where, which State, which section of the country, and which county, if he knows, he wishes to go to. I try to let him please himself. If he does not know, we have a pamphlet of opportunities which will give him information as to all the States and the crops raised, and various data that might be of interest to him. Then, when he has made his selection, we refer him to the proper officials of the State he elects to go to.

Mr. LEISERSON. This 5,000, then, includes not only wage earners, but also people who want to buy farms?

Mr. GREEN. No; we would not include that man until we knew that he actually might purchase, and I don't know when they have actually purchased.

Mr. LEISERSON. Then those are mostly farm hands.

Mr. GREEN. And croppers, as we call them—people working on farms on the share basis.

Mr. LEISERSON. And do you include in that 5,000 also the common laborer?

Mr. GREEN. Yes; they are also included.

Mr. LEISERSON. In what kind of work?

Mr. GREEN. Principally in quarries, barge canal, and public works, and road construction, and things of that sort. Very little of anything else. Among the admitted aliens who apply you will find many who have had no agricultural training at all. Those men must be looked after; and with those, even, I tell them that perhaps eventually they will become interested in agricultural pursuits, but for the present it would be well, "since you have to have money to pay the loan that you have secured to come to this country"—most of them come that way—"it would be better for you to take up what you are fitted for until you become fitted for the customs and ways of the country." And there are those

among them that will not accept anything but labor. They are not looking for anything else.

Mr. LEISERSON. Do you consider that you have the adequate machinery for securing many of these men employment?

Mr. GREEN. That depends upon what you mean by adequate machinery.

Commissioner O'CONNELL. You might bring that out—what kind of machinery they have.

Mr. LEISERSON. What is your whole scheme of distribution?

Mr. GREEN. Our scheme of distribution is this: We first secured our opportunities in the beginning. We began with at least 30,000 township correspondents over the United States; sent them postal cards and otherwise notified them of the division's organization, and through them let it be known to the farmers and other employers of help that the Government had organized this division. That brought in a number of inquiries that were taken up and followed up. We have a system of post cards that we mail and distribute through the courtesy of the Post Office Department to all the rural delivery routes. The carriers distribute the cards, one in each box that receives mail by rural delivery. This card states briefly that if they are interested in the securing of farmers or other help they should notify the department on the return mail card that is attached, and they will receive the proper blank. Then a blank form containing what we consider the proper questions to bring the right information is mailed to that man. That is bulletined. This is done from Washington. That is bulletined and sent to me in New York. From that data we give the information to the man that is looking to be placed—the applicant. First we register the applicant. In other words, we could try to ascertain what he is before we let him know what we have to offer. We have found that if you do not do that a great many of them will make themselves out farmers, when they know nothing of it. He is the sufferer in that case, for the farmer will not tolerate him any more than any other employer of labor would tolerate an unskilled mechanic who represented himself to be skilled. Having his qualifications on the one hand and the wants of the prospective employer on the other, we try to make them fit. It is a question, then, of finding out where the man is willing to go and whether the wage conditions, the class of the work, and the section of the country are pleasing to him. We make every effort to give him his way in everything, in order to prevent his being dissatisfied on arrival.

After he sees that this would suit him we give him a letter of introduction to his employer and write to the employer a certain man has stated a desire to work for him and that he is on his way. With the immigrants it is necessary, if they do not speak English, we have to go so far as to tag some of them in order that the conductors will know where to put them off the trains. That is not necessary with English-speaking people of intelligence. Those who come in and can read and write English, we will give the name and address of the employer and say to him to write to the man and see if he can come to terms, and to notify us as to the results. A few do.

Mr. LEISERSON. You have sources of information from about 30,000 correspondents?

Mr. GREEN. I suppose three times 30,000. Now, that was the original source. Now, the postmasters and most all the public officials all over the United States have worked with us.

Mr. LEISERSON. Yes; and despite all that the best you could do was to send 5,000 people to employment?

Mr. GREEN. No, sir; that is not the best we could do. That is all we did. There are some thousands of them that I would not direct.

Mr. LEISERSON. What we would like to get at is why you would not direct any more?

Mr. GREEN. In the first place, a great many of those who applied were not fitted for the work we had to offer.

Mr. LEISERSON. You mean there was no place in the United States for any kind of work they might do?

Mr. GREEN. No, sir; we do not claim that at all, because mechanical lines and trades we do not fool with.

Mr. LEISERSON. Why not?

Mr. GREEN. Because we believe there are organizations and things of that sort that have a pretty good equipment for that sort of thing, and there have been from time to time expressions made that they think it is not a part of the functions of the Federal Government to interfere in those things.

Mr. LEISERSON. Is that the attitude that your division has taken on this question?

Mr. GREEN. I can not tell you about the attitude of the division. I can only say that that is the impression that I have received from instructions which I have received. The attitude and the policy of the division you will have to get from Mr. Powderly, who will be here to-day.

Mr. LEISERSON. The impression that you have received is that the placing and the distributing of semiskilled or skilled workers is fairly well taken care of, and that you are not to meddle with that?

Mr. GREEN. I would not say that; I want to say that is the impression I received. I only work with the bulletins they send me. I do not put the bulletins out. You will have to ask some one higher up.

Mr. LEISERSON. You do not directly attempt to get in touch with the employers? But that comes to you through Washington?

Mr. GREEN. We solicit nothing.

Mr. LEISERSON. Do you consider that a good way of doing business?

Mr. GREEN. I consider the proper way to do business is to do it in the way I am instructed to do it.

Mr. LEISERSON. Leaving that aside, if you were establishing yourself an agency for distributing labor, would you do it in that way?

Mr. GREEN. That is a question. I don't know what I would do. I suppose if I were running an employment agency as the average one seems to be run, I suppose I would go for the dollar as long as I could keep out of jail. That seems to be their method.

Mr. LEISERSON. Is it the general practice among reputable employment agents who are successful—is it the practice to do business in that way?

Mr. GREEN. I am not acquainted with the methods—that is, in that particular.

Mr. LEISERSON. Can you give us any idea of what it costs to maintain your branch?

Mr. GREEN. Our branch?

Mr. LEISERSON. Yes.

Mr. GREEN. The principal item of dollars is \$11,000 a year.

Mr. LEISERSON. How many people have you working?

Mr. GREEN. Nine.

Mr. LEISERSON. Nine?

Mr. GREEN. Nine persons. The number is due to a great extent to the fact that we have to cover so many languages. There are five or six men there because of their languages. Three stenographers and myself. The work, if you could have one man that would speak all the languages or two men that could speak all the languages, I could get along with less employees. When there is a great amount of correspondence, that requires more help, because the Government has its own peculiar way of answering all correspondence, regardless of whether it is of interest or not.

Aside from the salary, my allotment for expenses of running the office—I think my last allotment was only \$1,800 a year.

Mr. LEISERSON. \$1,800 a year?

Mr. GREEN. Yes, sir.

Mr. LEISERSON. That is a total of about \$13,000?

Mr. GREEN. Roughly speaking; yes, sir.

Mr. LEISERSON. As a result of that you place about 5,000 people?

Mr. GREEN. As a result of that we give information to about 20,000 people each year. And of those that we give the information to, we have positive knowledge that about 5,000, an average of 5,000, receive benefit from it. How many of the others received the benefit I can not tell you. We have no way of telling, because they won't advise us.

Mr. LEISERSON. Wasn't the original plan of the Division of Information to cover the whole country in the distribution of information and then directing the people to them?

Mr. GREEN. I think Mr. Powderly can answer that better than I can. Mr. Powderly is well acquainted with what was intended at the time the division was created, and I think he can answer that question more intelligently than I can.

Mr. LEISERSON. Did you get a copy of our proposed plan of organizing a system of labor exchanges?

Mr. GREEN. Yes.

Mr. LEISERSON. Will you give us your criticism of that?

Mr. GREEN. I don't know of any great—I haven't given it any study, particularly, but I don't know of any great changes which I would make in it, except

that there are a number of small details that you will have to work out. For instance, you have a lot of things prohibited, and that shall not be done, but you have no penalties. That is one of the principal things. It is in the minor details. They will have to be worked out.

Mr. LEISENBERG. From the standpoint of the administration of that kind of a scheme, you have had experience now with administering a distribution office. I would like to know your ideas.

Mr. GREEN. I think the scheme is very practical, and I think it should be productive of splendid results. It is a thing that I have myself recommended time and time again, is a chain of branches for our division.

Mr. LEISENBERG. What reason have you to believe that, after this plan is adopted, supposing it is, that at the end of 5 or 10 years we shall not be in the same position that your division is in now, only handling about 5,000.

Mr. GREEN. 20,000, I beg to correct you.

Mr. LEISENBERG. I mean, giving information to 20,000.

Mr. GREEN. Yes, sir.

Mr. LEISENBERG. But about 5,000 actual?

Mr. GREEN. You probably will be, if you work under the same restrictions—that is, having one distribution office—and then handle farm hands practically only and some few laborers. There was a period of two years that we handled absolutely nothing but agriculturists.

Mr. LEISENBERG. Then your idea is that this kind of a bureau must have a free hand to handle all kinds of labor?

Mr. GREEN. Free hand and unlimited publicity.

Mr. LEISENBERG. Have you any other suggestion to make in regard to the plan?

Mr. GREEN. No, sir. I think it is a very ably drawn plan. I think the plan is a good one, and I think that the only personal suggestion that I have is a chain of branches, you might call it. You would have to have headquarters, then subbranches reporting into this, to handle the country and territories, to avoid duplication of orders and duplication of work.

Another suggestion I would make is the adoption, in case you have this chain, a plan I would use, of having a subbranch send carbons of all correspondence, of all detail routine matters of the office to the branches each night. I do that in Washington; keep them all posted.

Mr. LEISENBERG. That is all I have to ask.

Commissioner LENNON. I would like to ask you what you found to be the principal obstacle in the way of placing agricultural laborers and those who desire to farm on shares? Was it lack of means or what was it?

Mr. GREEN. Lack of means.

Commissioner LENNON. Then, in view of the fact that other people, aside from this commission, are studying the question of help in that direction, it would require the cooperation between the department formed of this character and of the financial help and the farmers. That would require some plan of cooperation between the two to make it most effective?

Mr. GREEN. I think that such cooperation would help, but I am under the impression that one of the greatest assistance would be to have some plan similar to that of the Canadian Government—of getting the kind of help and being able to move the people at the time they need it. For instance, you can leave Montreal and go to any point in Canada where farming is done, for harvesting, for a nominal sum. It amounts to practically nothing. He pays the fare one way. When the harvest is over, if he can produce a certificate from any farmer in that region to the nearest railroad agent that he has worked 30 days in harvest time, he has his transportation back free. That is thoroughly practical, because the station agent knows all of the farmers immediately surrounding him, and he has to bring his notice from the farmer, who is personally known to the station agent, usually, so it can not be defrauded. That allows for the seasonal work; that is, harvesting and things of that sort. If such a thing were possible, to get a reduced rate to the farmer, and it is possible if you can get the legislation—I know that, because I have canvassed the railroads in New York, Mr. Brown, and the president of almost every railroad in New York City, I have interviewed them personally on the subject, and they are perfectly willing to establish what they call a laborers' rate, farm and other laborers seeking employment, at a reduced rate, but the Interstate Commerce Commission said it would be class legislation, and it was not adopted.

Commissioner LENNON. Then those are the principal problems that you came up against, transportation and the lack of means to help themselves when they got to the land?

Mr. GREEN. Yes. The one, lack of means, covers both cases, really. There seems to be a willingness on the part of the people to go to the work.

Commissioner LENNON. Do you believe that if those two things were covered that the number you could have handled and secured employment for would have been increased considerably?

Mr. GREEN. Perhaps trebled, especially to the Middle West.

Acting Chairman GARRETSON. Have you made any investigation of the existence of that industrial and agricultural rate in Canada?

Mr. GREEN. The only investigation I have made I wrote on and asked them to send copies of their circulars, and I have those circulars, and mailed them to Washington with this data I secured from the railroad. They have a large bulletin.

Acting Chairman GARRETSON. Did they have means to guard against the abuse of it, first the laborer himself, and then those charged with its issuance?

Mr. GREEN. By providing the certificate from the farmer.

Acting Chairman GARRETSON. There are other abuses that might come into it largely. You are aware that a rate of that kind could not exist here without governmental authorization?

Mr. GREEN. Of course.

Acting Chairman GARRETSON. Under the Hepburn Act?

Mr. GREEN. Yes, sir.

Acting Chairman GARRETSON. You haven't given any thought to the devising of a means to guard against abuses of that kind?

Mr. GREEN. Yes; I think I could devise a plan by which it would not be abused.

Acting Chairman GARRETSON. If you can, we will be glad to have you furnish it in written form.

Mr. GREEN. I will be pleased to do so; suggestions merely; the details of it will have to be worked out.

(Received.)

Acting Chairman GARRETSON. That is one of the things that seems to be a stumbling block.

Mr. GREEN. Yes; that is a stumbling block.

Acting Chairman GARRETSON. We desire, if possible, by intelligent means, to guard against it.

Mr. GREEN. Yes.

Acting Chairman GARRETSON. Maybe your experience has demonstrated—you talked about croppers. Has your experience given you any knowledge of whether the practice of cropping, this farming on shares, is largely decreasing or increasing, in general?

Mr. GREEN. I think it is decreasing, especially in the North. It is decreasing. In the South, it seems to be holding itself, but not as formerly.

Acting Chairman GARRETSON. To-day it is conducted on a different basis than it ever was.

Mr. GREEN. Yes; a different basis.

Acting Chairman GARRETSON. That is all, Mr. Green. Thank you.

TESTIMONY OF MR. FRANK B. HOMANS.

Mr. LEISERSON. Will you state your full name and your position?

Mr. HOMANS. Frank B. Homans. I established the Mercantile Reference and Bond Association, 387 Washington Street, Boston.

Mr. LEISERSON. Will you tell us when you established this agency?

Mr. HOMANS. Thirty years ago, about.

Mr. LEISERSON. What was its purpose?

Mr. HOMANS. To furnish mercantile help to the employer, and it was the first office of the kind, so far as I know, in the known world.

Mr. LEISERSON. What made you think there was a field for that kind of work?

Mr. HOMANS. I did not know whether there was or not. I knew there was a field for me to do business, so I did.

Mr. LEISERSON. What kind of business? Just what was your idea?

Mr. HOMANS. Simply to supply the merchants with their help. Boston is well known to be the most unreceptive city in the world for new ideas; consequently the hardest place to start it in, and our reception was a very cold one; for the first six months I did not turn a dollar, but I believed in the plan

and stuck to it, and now the merchants are the most loyal in the world to the business.

Mr. LEISERSON. You have been in business for 30 years?

Mr. HOMANS. Thirty years.

Mr. LEISERSON. And how much business do you do? How many people do you place?

Mr. HOMANS. Last year we placed approximately 15,000.

Mr. LEISERSON. Almost all in mercantile lines?

Mr. HOMANS. Mercantile lines and hotels.

Mr. LEISERSON. You also have a hotel and restaurant clientele?

Mr. HOMANS. Yes; no nurses.

Mr. LEISERSON. No nurses?

Mr. HOMANS. No. Our business extends from California to Florida and Bermuda to Nova Scotia.

Mr. LEISERSON. Are you regulated by the State of Massachusetts?

Mr. HOMANS. Certainly.

Mr. LEISERSON. And licensed?

Mr. HOMANS. Yes.

Mr. LEISERSON. And your experience is that it is necessary for the State to do that?

Mr. HOMANS. Absolutely.

Mr. LEISERSON. Will you give us your reasons?

Mr. HOMANS. Well, when I opened this business, the employment business, which was then restricted to the domestics, was in a most deplorable condition. And the rules and regulations at that time were not sufficient, and they were not lived up to, and I conceived the idea that the business could be raised to a high standard and all this fraud could be eliminated; and my 30 years' experience has proved that to be true, for there have been commissions established in New York and Chicago and Boston, who have made a canvass of the entire United States in this business, and they have all pronounced Boston the cleanest city in the United States for the employment business, and it is simply due to the fact that they can not do business on a crooked basis and live.

Mr. LEISERSON. Will you give us your reasons why you did not extend your business to the country labor branches?

Mr. HOMANS. Perhaps social reasons. I did not care to mix with it, and I do not think it is mixable. You would have to open separate offices, and all that sort of business.

Mr. LEISERSON. You don't think the two can be run together?

Mr. HOMANS. Why, not successfully. That is, I would not consider it a nice way to do it.

Mr. LEISERSON. Do you think it is necessary that such a bureau be established to handle manual labor in each city?

Mr. HOMANS. I don't think I get that question.

Mr. LEISERSON. Do you think that it is necessary that there should be a bureau for bringing manual laborers in touch with the jobs in the same way that you bring mercantile help?

Mr. HOMANS. I think it would be very nice to have it.

Mr. LEISERSON. Well, do you think it performs a service that is worth while? That justifies the expense?

Mr. HOMANS. You are speaking now about your plan, I suppose?

Mr. LEISERSON. No; any plan.

Mr. HOMANS. Well, justifies the expense in my own case, and I presume it would in every other.

Mr. LEISERSON. Well, would it in manual branches?

Mr. HOMANS. Well, I suppose, I know they do, because they make more money than I do, but I don't know the methods of making money in that line of business.

Mr. LEISERSON. Can you give us an idea of the fees you charge in your agency?

Mr. HOMANS. We charge one week's pay for a permanent situation. That is a flat rate to everyone. If the situation terminates inside of six weeks, we take one-sixth of the amount earned during the time of service. Should it extend over that, why, we have no interest in it.

Mr. LEISERSON. Are there any other agencies in Boston that handle the same kind of work that you do?

Mr. HOMANS. There are 122 agencies in Boston, domestic and mercantile, and 36 of those offices have two licenses—what they call a first and second class—

for handling mercantile and domestic, both. Of course, they do handle the domestic and mercantile both in one office in a great many cases. There are only 7 exclusively mercantile offices in the city, the rest, the 29, have the both kinds. And then there are 65, I think, or 70, that only handle domestic and laborers.

Mr. LEISERSON. You say you charge a week's pay for a permanent position. Do you think the service that you render is worth that amount?

Mr. HOMANS. Why, I know that it is.

Mr. LEISERSON. Don't you think the people could find the jobs on their own account?

Mr. HOMANS. Yes. I want to make this statement: That all the free offices in the United States, together with the private offices, and all the labor unions put together, never touch the unemployed. That condition, and that is the condition I think you are trying to get at—they don't all of them put together really touch the situation. That is quite a broad statement, but it is absolutely the fact. Your plan will never touch the unemployed, on the plan that you have drawn up.

Mr. LEISERSON. Will you just give us your reason for that?

Mr. HOMANS. The unemployed is the man out of work. When you have secured a man a position, he is not out of work. I say, without any egotism, I think the plan which I established 30 years ago—and by the way, I will say this: That I established the terms and plans 30 years ago. There have been a great many changes in the police commission since then, and they have all tried to improve those terms. There have been a great many changes in the licensing board, and each new licensing board has tried to change it. There have been a great many changes in the legislature which changes every year, and for 23 years they have persistently tried to make a different set of terms and rules than I have got, and they have never yet been able to budge them a whit from what they were 30 years ago, and I told them they could not, and I told them to-day that they can not because they were built and established on the golden rule, and you can't find a better one. And for that reason people come to us and want to get help, and love to come, and I have never had a complaint in 30 years.

Mr. LEISERSON. You made the statement that your agency or any other employment agency does not help the unemployed. We would like to know what you mean by that.

Mr. HOMANS. I will tell you what I mean. To reduce it down to a small statement, we will say that there are 100 vacancies in New York City to-day. Of course there are 10,000. There would be not less than 10 men or women for every position. Now, then——

Mr. LEISERSON. Pardon me. Do you mean in the mercantile line?

Mr. HOMANS. I mean in any line.

Mr. LEISERSON. In any line?

Mr. HOMANS. Yes; any line.

Mr. LEISERSON. Would that be true in common laborers?

Mr. HOMANS. I think perhaps more so.

Mr. LEISERSON. Were you here when the statement was made by Mr. Carpenter that under ordinary circumstances they could not get enough help?

Mr. HOMANS. That applies in my business and everyone's business. It is not because they can not get enough help; they can get enough people dressed in pants and coats and dresses, but they are not fit to work, and they don't want to work. But to come back——

Mr. LEISERSON (interrupting). Your idea, then, is that there is always an oversupply of labor, but at the same time there are positions open which the unemployed do not fit into?

Mr. HOMANS. Do not fit into. For instance, I have to-day probably 2,000 orders for help on my book. I had Monday morning, before lunch, come into my office over 2,000 people, which we talked to in the proper manner. And out of the 2,000, probably 2,500, perhaps 3,000—but to be conservative I will say 2,000—out of the 2,000, we did not place over 60 people; and yet we had over 2,000 orders. That was simply because they either did not want work or were not fitted for the position.

Mr. LEISERSON. Well, which would you give as the main reason? Is it because they did not want to work or because they were not fit?

Mr. HOMANS. Just about half and half.

Mr. LEISERSON. Well, why did they come to your office if they did not want the work?

Mr. HOMANS. That is a question that no man has ever been able to solve.

Mr. O'CONNELL. Was it wages, hours, or conditions of employment that entered into it, or anything of that character?

Mr. HOMANS. I should say they are very fussy about the hours. They don't want to begin before 8, and must quit at 5, and must have their Saturday afternoons and holidays, and they ask all those questions before they want to know anything about the work at all.

Mr. LEISENBERG. Then, the reason that the half that you speak of don't want to work is dissatisfaction in some way with the conditions of employment?

Mr. HOMANS. Yes.

Mr. LEISENBERG. The other half you say are misfits in some way?

Mr. HOMANS. Yes.

Mr. LEISENBERG. Have you ever thought of anything that might be done in order to make them fit? In what is it that they are lacking that might make them fit?

Mr. HOMANS. Well, every employer has his own idea of what he wants to employ, and while he might sometimes be more elastic in his ideas than he is, we can not regulate it. Sometimes they do stretch a point. As a rule—for instance, we frequently have an order. This is one case that comes to my mind, although it happened over 20 years ago. A man sent an order. He did not want a married woman. He did not want a poor writer, and he did not want a person living out of town. Well, if any of the ordinary clerks had waited on this party that I speak of, they would not have sent her, because she was a very poor writer and a married woman, and she lived out of town. But I sent her, with a little note, because I knew she had the brain ability, and notwithstanding his specific orders he hired the woman. Those are the orders that come to us. All kinds of frills like that that they won't have, and we have to respect that.

Mr. LEISENBERG. Well, aside from the employers' wishes in that way, there are the conditions of the employment which are open that require certain qualifications that these unemployed don't have; is that the idea?

Mr. HOMANS. Yes.

Mr. LEISENBERG. Do you think any kind of training would make them fit for that kind of work?

Mr. HOMANS. Well, yes; but you have to begin over.

Mr. LEISENBERG. That is, you think that a system of industrial training that took into consideration the positions that are opened, such as are registered in employment offices, might fit a larger number of these unemployed into the industries?

Mr. HOMANS. If taken in time; yes. You must remember that machinery is displacing a great many men. For instance, a man has spent years and years learning how to do a certain kind of engraving by hand, and a machine comes along and puts him out at 40 or 50 or 60 years of age, with that trade on his hands, and nobody wants him.

And then there are a great many other men who reach the age of 60 and 65 years and nobody wants them, and they have experiences of perhaps—they are printers, and ink, working on ink, makes them sick; and painters, and they can not work on painting any longer; and bookkeepers, and they can not use the pen any longer on account of paralysis of the hand—and all such things as that disqualify a great many men for lines that they have worked in all their lives.

Mr. LEISENBERG. Don't you think, if there were an employment office that did a general line of business, not only mercantile and hotel, such as yours, that some of those people might fit into other occupations, other kinds of employment?

Mr. HOMANS. No, sir; I don't think the employment office would have anything to do with it. Those people necessarily have to find positions through the kindness of some one who will take them in. We do a great deal of that.

Mr. LEISENBERG. That is, you mean when they are not able to do a day's work?

Mr. HOMANS. Yes; or are not able to do what they would like to have them do. They put them at something else, and make them useful in some other way.

Mr. LEISENBERG. In other lines of work they may be capable of doing the man's work, perhaps?

Mr. HOMANS. Yes; yes.

Mr. LEISENBERG. And if you had an employment office that was connected with all kinds of work—of employment—it could be in touch with other available positions?

Mr. HOMANS. That is possible. I don't think it would help solve the question very largely, though.

Mr. LEISERSON. Have you any suggestions or criticisms to make on this plan that we outline?

Mr. HOMANS. I don't know whether you care to hear my opinion, but there are four very important things that come under the province and within the scope of this bureau, which, if you care to listen to, I will be glad to tell you. First, you have it within your power to place on the pages of ancient history this condition of unemployment; second, it comes within the scope of this bureau for you to protect every foreigner that lands on the shores of America from innumerable frauds that are perpetrated upon them to-day, largely by their own people; third, you have the possibility of eliminating off the face of the globe the conditions that engender and bring about strikes; fourth, last and least, the opportunity of bringing employer and employee together.

I say least, because it does not matter whether there was an employment office in the world or not. There are vacancies that are going to be filled. Somebody will fill them; and what difference does it make to the United States Government or to the State whether Jones does it or Smith does it? It will be filled. The man won't do without his employee, and all these offices, either private or public, they are simply facilitating matters; that is all.

Mr. LEISERSON. Well, if they filled them a week earlier than they might be filled, doesn't that make a good deal of difference?

Mr. HOMANS. Yes; sometimes a month earlier, certainly. But you leave the unemployed out of the question in all of these plans. You leave the unemployed out of the question. That is to my mind a great mistake. Now, as I started out to say, I think the plan which I formulated comes the nearest to doing that of anything, and that does not do it. I have never taken over 10 cents out of any man's dollar for my own pocket, my own salary, and the other 90 cents is spent for expenses in the most scientific manner possible, with 30 years' experience, to take care of the next man—procure the next man a position. For instance, I advertise for bookkeepers; I advertise for a bookkeeper and 10 men apply for that situation, and I give the first man the situation at \$10. I take \$9 of that money and spend it getting the next man a position, and I take \$9 of his money getting it for the next man, and so on, until I have gone down the line, and there are 10 men right behind starving to death, so that that is the question that you want to bring into this plan, and which has never been brought into any plan that has been formulated yet.

Mr. LEISERSON. Would you suggest how it should be done?

Mr. HOMANS. Well, I think that might take longer than you would care to listen to.

Mr. LEISERSON. Can you briefly state your idea?

Mr. HOMANS. No; not briefly so you would understand it.

Mr. LEISERSON. Would you be willing to write it out and submit it to the commission?

Mr. HOMANS. I will do the best I can. I will be glad to give the commission along these lines my ideas about the taking care of the unemployed and the foreigners landing on our shores. I think those are important.

Acting Chairman GARBETSON. We will be very glad to have you submit those in writing, on each of those subjects.

Mr. HOMANS. I will be glad to, or if the commission could not get my point I would be glad to meet them any time or anywhere where it will take several hours to talk it over comprehensively.

Acting Chairman GARBETSON. It is difficult for the commission to take it up as exhaustively as that in open hearing.

Mr. HOMANS. Yes; I know it is.

Mr. LEISERSON. That is all I have.

Mr. HOMANS. I want to say, if you will permit me, that I believe heartily in this plan, and have long looked forward to the day when the Federal Government would take charge of this matter and conduct it and do it on the right basis. I don't know, but it seems to me it is a larger proposition than you have the slightest idea of. It will cost a mint of money, and I would suggest that if you decide to do anything about it, that you let it grow rather than to plunge.

Mr. LEISERSON. In any scheme of dealing with unemployment you would think that some scheme like that was necessary as the first step.

Mr. HOMANS. Well, I think that one of the important steps to bring into the plan. But, as I say, the greatest obstacle I think that you will find will be competent material, experienced material, to operate such a comprehensive

plan as you have got there. They are scarce. I find in the 2,000 people that come into our office, it takes me a month to find one smart man that I want for my office. I don't know where you are going to find the thousands you have taken there.

Commissioner O'CONNELL. You say that one day last week you had 2,000 people at your office one morning?

Mr. HOMANS. Every day, every week.

Commissioner O'CONNELL. And that you gave them a hearing, a proper hearing, and so on?

Mr. HOMANS. Yes, sir.

Commissioner O'CONNELL. Was it possible for you to do that in the morning, to hear 2,000 people?

Mr. HOMANS. Yes, sir.

Mr. LEISERSON. How many employees have you?

Mr. HOMANS. Forty. We have seven departments; divided into departments. We have seven departments. You see, that is only about 300 to each department, and we have 40 people, which would be six people to each department.

Acting Chairman GARRETSON. Eight minutes a visit.

Mr. HOMANS. It does not take—some it does not take—really, we can handle two and three a minute, with some.

Commissioner O'CONNELL. It would be pretty good speed, if you shook hands with them.

Mr. HOMANS. No; because we know the people. They have been to us before and they are not failures.

Commissioner O'CONNELL. You say you take the first week's wages as a price for a job?

Mr. HOMANS. Yes, sir.

Commissioner O'CONNELL. What would be, approximately, the average—\$10 a week?

Mr. HOMANS. Our average for 29 years has never averaged us a fee of \$5—an average fee.

Commissioner O'CONNELL. Five dollars?

Mr. HOMANS. Never averaged \$5. Sometimes we get as high as fifty.

Commissioner O'CONNELL. I mean the average; you would say the total of their wages would amount to \$10 a week that you suggest positions for?

Mr. HOMANS. Well, I can't state just offhand about that. The average of \$10? No; I think, perhaps, \$8. It runs from \$6 to \$50, but of course—

Commissioner O'CONNELL. Ten dollars would be a pretty fair average. Did you place 15,000 last year, you said?

Mr. HOMANS. Yes.

Commissioner O'CONNELL. That would be an income of \$150,000 at \$10 each.

Mr. HOMANS. But it was not.

Commissioner O'CONNELL. You employ 40 people in your office?

Mr. HOMANS. It never averaged \$5. Last year our receipts were only a trifle over \$60,000.

Commissioner O'CONNELL. Your receipts were only a trifle over \$60,000?

Mr. HOMANS. Yes. So, as I say, every year it has been less than \$5.

Commissioner O'CONNELL. What were your expenses?

Mr. HOMANS. Last year somewhere between \$40,000 and \$50,000; I think \$45,000.

Commissioner O'CONNELL. What is the investment?

Mr. HOMANS. No investment; a couple of thousand.

Commissioner O'CONNELL. What is your investment in the business?

Mr. HOMANS. A couple of thousand dollars.

Commissioner O'CONNELL. A couple of thousand?

Mr. HOMANS. Yes.

Commissioner O'CONNELL. Your net receipts were then—

Mr. HOMANS. Divided between four. That net profit is divided between four of us. I have three partners at the present time. I was alone in the business for a great many years, and I thought it was going to be too much for me to carry, and I did not want to. I said it was more profitable to lose it to the clerks, and I took in three of my best clerks as partners.

Acting Chairman GARRETSON. Then you would advocate minimum-wage laws which would help your office?

Mr. HOMANS. What is that?

Acting Chairman GARRETSON. The application of minimum-wage laws, then, might help your office?

Mr. HOMANS. That is exactly one of the points I have in mind when I say you can eliminate strikes.

Commissioner O'CONNELL. Do you connect yourself up in any way in furnishing labor in times of strikes?

Mr. HOMANS. We cut that out entirely. If we know there is a strike, we won't send a man there.

Commissioner O'CONNELL. Do you make inquiry if there is any labor trouble?

Mr. HOMANS. Yes.

Commissioner O'CONNELL. If an application is made for help?

Mr. HOMANS. Yes.

Commissioner O'CONNELL. If there is, you notify the party in interest?

Mr. HOMANS. We simply do not talk about it at all. We don't take the order. We are in a position to know when there is a strike, nine times out of ten. Something in the nature of the order, the size of the order and peculiarities of it—and if there is anything suspicious we telephone right to the town where it comes from and see what is going on, if we don't know otherwise.

Commissioner O'CONNELL. Does the Massachusetts State law require you to return a fee if a position is not secured for a party?

Mr. HOMANS. I got that law passed myself. I also got a law that I have been trying for five years to pass, which counsel has a copy of, which is along the lines here, compelling the return of the fee. I also say that I had the law passed making it illegal to collect advance fees, but that law is not respected in Massachusetts.

Commissioner O'CONNELL. Suppose you send a party outside of the jurisdiction of the State of Massachusetts and then he did not secure the position he was sent to, and he had paid you a fee, would you return that?

Mr. HOMANS. If he did what?

Commissioner O'CONNELL. If he went outside the State of Massachusetts, outside the jurisdiction of Massachusetts, and you had collected a fee, and he did not secure the position you sent him to—you send them outside the State?

Mr. HOMANS. Yes, sir; but we never collect a fee until a man has earned the money.

Commissioner O'CONNELL. You never collect a fee in advance?

Mr. HOMANS. No, sir; and we only take one-sixth, to insure him a living. If he receives \$12 a week we only take \$2, leaving him \$10 to live on.

Commissioner O'CONNELL. Do you purchase transportation to send them to any other city?

Mr. HOMANS. It depends on the circumstances. In most cases we do. We give the fare one way.

Commissioner O'CONNELL. How do you protect yourself against a party getting transportation out of the city and then not going to the job?

Mr. HOMANS. In this way: We always send a man to the station and put the party on the train and give the ticket to the conductor.

Commissioner O'CONNELL. You do not trust the workman with the ticket at all?

Mr. HOMANS. Never. No man would think—well, of course, I would not say we never do. In a great many cases, perhaps, but as a rule we have some one go with them to see that they are on board the train and the conductor has the ticket, or we guarantee them the money.

A great many are perfectly willing to take our guaranty, and we say, "When you get there send us this postal card," and we have furnished them with a postal card, "that you have arrived, and we will send you a check for the money." We do that in some cases.

Commissioner O'CONNELL. You are dealing largely on the hypothesis that a fellow is rather not to be trusted in the first place? Isn't that the basis of it?

Mr. HOMANS. We think it wise not to put the temptation in their way.

Commissioner O'CONNELL. He has rather the same respect for you, I suppose?

Mr. HOMANS. I would say that it would be difficult to find a man that has lived in Boston two weeks that would not come in and leave his money on deposit with us without a receipt.

Commissioner O'CONNELL. You have a good reputation?

Mr. HOMANS. We have the best in the world.

Mr. LEISEN. Do you make any investigation of the places you send people to?

Mr. HOMANS. How is that?

Mr. LEISERSON. Do you make any investigation of the places you send people to, as to whether the conditions of employment are good, or as represented?

Mr. HOMANS. I would not say that we did, except our New York conditions. Of course we know every hotel in the country almost; that is, that hire help throughout. We know all the firms in New England that hire help from us. There might be changes, there might be new firms.

Mr. LEISERSON. You have no regular system of inspecting places to work?

Mr. HOMANS. No, sir.

Mr. LEISERSON. That is all.

Acting Chairman GARRETSON. That is all.

Mr. HOMANS. Do you want to hear my criticism on this proposed plan?

Mr. LEISERSON. If you have anything to develop briefly; otherwise we would prefer to have it in writing.

Mr. HOMANS. I will submit it in writing, then.

TESTIMONY OF MR. TERRENCE V. POWDERLY.

Mr. LEISERSON. You are Chief of the Division of Information of the Bureau of Immigration?

Mr. POWDERLY. Yes, sir.

Mr. LEISERSON. How long have you been in that business?

Mr. POWDERLY. Since July 1, 1907.

Mr. LEISERSON. Is that when the bureau was organized?

Mr. POWDERLY. When the division was organized.

Mr. LEISERSON. Can you tell anything as to the ideas that led to the organization of the division and what the purpose of it was?

Mr. POWDERLY. I don't know that I could do that, because that was the idea—the idea of the commissioner general at that time, Mr. Sargent; he believed that the incoming immigrants should be met on arrival and informed of the conditions in this country and then directed to places of employment. He and I had talked it over before he recommended it, and I know that was his idea.

Mr. LEISERSON. And you started out in organizing the division with that purpose in mind?

Mr. POWDERLY. With that in mind, and with the purpose of ascertaining from different parts of the country—from all parts of the country—what the conditions of labor were and where these immigrants would fit in. The law said that the information which we collected should be given to admitted immigrants who might ask for the same, and to such others that might desire it. The trouble right there was that the immigrant landing in this country could not be expected to ask for what he knew nothing about. So we had to tell him—to meet him and tell him.

Mr. LEISERSON. You were able to overcome that defect in the law through the aid of the Secretary and the department?

Mr. POWDERLY. In a measure; yes.

Mr. LEISERSON. Now, as the result of your close to seven years' experience, would you say that that purpose has been accomplished by your division?

Mr. POWDERLY. It has not.

Mr. LEISERSON. Will you give us the reasons why it has not?

Mr. POWDERLY. In three words—lack of appropriation.

Mr. LEISERSON. You think the lack of money was the only reason?

Mr. POWDERLY. Not the only reason, but that was the principal reason.

Mr. LEISERSON. Well, what were the others?

Mr. POWDERLY. Well, the others would be lack of sufficient force and lack of cooperation with the State departments of labor and immigration and of agriculture and of the trades-unions.

Mr. LEISERSON. You think the trades-unions interfered with your carrying out the purpose?

Mr. POWDERLY. No; they did not interfere. The only purpose they had in view was to carefully scrutinize the work of the division to see that it did not send the men to where they should not go, and that they should not be sent to places that were not profitable, or to employment that was not profitable. We found instances where employers would be very glad to dismiss all their men and have the division of information send these men, these freshly arrived immigrants to them for less money per day.

Mr. LEISERSON. Well, you would not have considered that a purpose of your bureau, in the first place, to supply immigrants to take the places of others, would you?

Mr. POWDERLY. The law says the duty of the Division of Information is to promote a beneficial distribution of admitted aliens and others; and when you send a man to take another man's place for less money than that other man had, or to take the place of a man who is on a strike for more money, or against some act that he does not concede to be right, that would not be a beneficial distribution of aliens or of anybody else.

Mr. LEISERSON. Then you do not think there is any vital defect in the idea upon which the division was organized?

Mr. POWDERLY. No.

Mr. LEISERSON. That, in so far as the trades-unions objected to your sending men to take other people's places, it is not interfering with the work of the division because the division would not do that; is that the idea?

Mr. POWDERLY. We would not do that. But let me have a word of explanation. Very early in our work we encountered opposition of the employment agencies, and one of them was shrewd enough to circulate a rumor, and they did it through the industrial organizations, that the Division of Information supplied a firm with workers and that it was an unfair firm. Then it also notified the trades-unions that we were doing that. We investigated—both sides investigated—and found there was no truth in it, but it served its purpose, because it received wide publicity at the time.

Mr. LEISERSON. Did you go over the plan of organizing a society of labor councils?

Mr. POWDERLY. I deferred that. I was a little bit misled by the letter I got. I got the idea I was to look up the subject of mediation and arbitration, and made a lot of notes on that; and then I laid them away on my desk. Then I got the letter the last Saturday, and then I was obliged to take the train immediately after getting the letter, so I had no time to look it over carefully.

Mr. LEISERSON. You have a plan of your own, as I understand, that you have made public several times, for extending the work of your division through the post office in some manner, have you not?

Mr. POWDERLY. Some years ago I recommended to the Secretary—three years ago, I believe—that inasmuch as the Weather Bureau collected information each day concerning the condition of the weather, and was able to notify not only the people of this country, but certain parts of the world as well, that there was no reason why the Department of Commerce and Labor—as it was then—should not know the condition of labor at the end of every 24 hours. I was met with this objection, that it would cost money. From my standpoint money can not be expended for a better purpose than keeping people profitably and constantly employed. So that I thought we ought to have the reports sent to the department or Division of Information, or whatever it may be called, just as often as possible, as to the conditions; and that in connection with the Post Office Department there should be a clerk assigned to duty in each one of any towns of prominence at all, whose duty it would be to keep a record of men unemployed, and of men who desired workmen. It would take two card-index cases. And if John Smith is dismissed this morning, or his work ends this morning, nothing more for him to do—call him a carpenter or a blacksmith, a village carpenter or blacksmith, or a worker of any other kind—he immediately goes there and registers, giving his name, occupation, and residence, what he can do, and what he expects to get for his labor. Tom Brown wants a man of that kind, because a man of just that character left him this morning. He is an employer, and he comes to the post office and registers his wants. While he is there he looks over the list of the workmen seeking employment, and he finds Smith. The data answers his purpose. He has his address, and either sends for him or writes him. Smith need not be out of work over 24 hours, and Brown need not be in need of a workman over 24 hours; and in neither case is it necessary to have a man come from out of town to take the place.

Now, that being done, there is no need of sending to another city or town a record of the unemployment of John Smith, neither of the fact of the employer needing some one. That need not be sent out of town. That is one case.

But there are numberless instances where men are wanted for certain large work, public work, or something of that kind, and they can not be supplied in the town. Then, through the State bureaus of labor or agriculture, all that kind of thing—and they have all signified their willingness to cooperate with the Federal Government; in fact, I called a meeting of them in Washington two years ago last November, and there were 34 States represented by delegates or representatives; and we had letters from all of the other States where they had agricultural bureaus or departments, or immigration bureaus. They all signi-

fied a willingness to cooperate with the Government in the work of ascertaining where there were places for men, and we could ascertain where the men were to send them.

Mr. LEISERSON. You think it is as simple a proposition as that—to have a clerk——

Mr. POWDERLY (interrupting).. Well, that is; of course——

Mr. LEISERSON (interrupting). A bureau to do that; or would it not require a rather elaborately organized employment office, with specialists in fitting the man to the job in each city, to collect in their men from the country around there, for example, as Mr. Homans testifies here, that there were 2,000 people needed for a certain class of jobs, 2,000 jobs, and more than 2,000 applied; but that in all that number he could not fill but 60; now, unless you had a man of Mr. Homans's character and with all his clerks, who are trying to fit the man to the job, the word would go out that they needed 2,000 men, say, in the city of Boston, and you might have 2,000 more coming, of which not more than 60 would be able to get the positions, so that in order to supply the accurate information you would have to have an elaborate organization—an employment office along the character described by Mr. Homans?

Mr. POWDERLY. You would have, of course, to have a larger force than I indicated or referred to in the beginning.

Mr. LEISERSON. Could you do it through the post office?

Mr. POWDERLY. We could do it through the post office; yes.

Mr. LEISERSON. Would it be possible to develop in a city of the size of Boston, in order to handle 15,000 people, for which you would need 40 clerks, would it be possible to develop the work on a scale that would really make itself felt in handling the unemployed—on a scale large enough to do that?

Mr. POWDERLY. I was not thinking of a city like Boston, or New York, or Philadelphia, but of the smaller places, when I recommended that; and in addition to that I should recommend that there would be a branch of the employment or information division in each large city with a staff sufficient to cope with the circumstances.

Mr. LEISERSON. Then, your idea is that all the larger cities would have regularly organized employment agencies similar to those in the division?

Mr. POWDERLY. Yes.

Mr. LEISERSON. And in the smaller towns there would be agents who might be placed in the Post Office Department?

Mr. POWDERLY. Yes.

Mr. LEISERSON. Have you any other suggestions to make along this line for the ordinary——

Mr. POWDERLY (interrupting). Of course, you will understand that my work for the last six or seven years has been among immigrants. Our own citizens, though they come in and ask for information, but yet as a rule they know how to get it without coming to us very much. Still we are able to supply a great many of them information. In fact, we have done a little of that, and it is growing every year. But I do not favor the idea of letting the immigrant come into this country the way he is coming at the present time without a single iota of knowledge of the conditions.

Mr. LEISERSON. Let me get your idea. You would have this information that came through the employment offices——

Mr. POWDERLY (interrupting). No.

Mr. LEISERSON. To go abroad?

Mr. POWDERLY. No.

Mr. LEISERSON. You would restrict immigration?

Mr. POWDERLY. Now, don't put that word "restrict" in, or "educational" in, or anything of the kind. I am an employee of the Federal Government, and I do not want to have a Member of Congress tell me I am interfering with his business. What I have in mind is this: That before a man starts for this country he ought to declare his intentions there as to what he is to do in this country. We have men coming direct from the farms who know nothing about anything else in the Old World—and they are going into the coal regions, and they are sick at heart before they are there a week. And I have gone into the mines and talked to them, and I have gone into their homes and talked to them. I made a practice of doing it every year and would have done it this year if I had been strong enough after an attack of grip, and, indeed, expect to do it yet. Now, pardon me—there are consular agents and agents of the Government all over Europe. These people should be required to state what they can do before they leave their town, and the condition of health, and

should secure a doctor's certificate, and all that. It would avoid the sending back of those men who come here and are declared to be unfit even before they set foot on American soil, and would spare them a great deal of misfortune. I recommend that. You may think it is not practical, but I believe, however, that some day or other it will be done; that at each station we should have a fitting station as well as an immigration station inland; a fitting station where they might be detained, and that they should not be allowed to go away from there for at least 10 days or 2 weeks—until they have demonstrated just what kind of work they can do. It will cost money, of course, but it is costing us a great deal of money to-day in unfit citizenship that we have to deal with. In such a fitting station we could find out what every man could do. I have talked with the people of California, and they are about to establish one there, and they are going to ask the Federal Government to permit the immigrants to stay there a couple of weeks until they can test their capacity before they are permitted to go haphazard throughout the country. Then they may come to friends, and if they have friends to go to, why, I don't think, perhaps, we could restrain them; but another thing, we should bear in mind there; that is, the friend can not keep them always, and whenever the money they have is worn out or expended their welcome is worn out, too. We should bear in mind that the welfare of this country is involved, and when one man stands looking for another man's job in this country it is dangerous to all the people.

Mr. LEISERSON. In order to make an intelligent statement as to the kind of work the immigrant wants to go into in this country, in order to make that statement abroad, wouldn't you have to furnish him information as to the opportunities in this country abroad?

Mr. POWDERLY. I could tell him on shipboard. I would not tell him beforehand, because that would stimulate him. If he has made up his mind he is coming, he is coming.

Mr. LEISERSON. In giving the information, wouldn't you have to give information as to whether there are opportunities or not?

Mr. POWDERLY. Why don't you have him give information as to what he can do? I would try him on that before he would be sent inland.

Mr. LEISERSON. Wouldn't you suggest that if he wants to go into a line of work that happens to be depressed in this country at a particular time, or overcrowded, that he be not permitted to come?

Mr. POWDERLY. That would be another matter, but I would tell him that conditions were not what they ought to be.

Mr. LEISERSON. Wouldn't you have to have your information in regard to the condition of employment in this country told to the immigrants abroad, when they wanted to make their choice?

Mr. POWDERLY. I doubt the wisdom of that, because they will come anyway. They look on this as the land of promise, and they are coming.

Mr. LEISERSON. That is all I have to ask.

Chairman GARRETSON. Do you desire to ask him any questions, Mrs. Harriman?

Commissioner HARRIMAN. Mr. Powderly, is there some such arrangement as Mr. Leiserson spoke of now in the Canadian law? I mean don't they have the people examined before they leave the other side?

Mr. POWDERLY. They do more than that; they send people over to scour two or three countries, but they are very careful where they get immigrants from. They won't take them from all countries, but those that they do ask to come come from the British Isles principally. They do not put them to a very severe test, but they simply question them. Of course, they speak the same language. They know about what to expect of them when they come into their offices. They have a very good law over there; that is, I think it is; I won't say that it is a good law, but you will understand why I think it is a good law. When the agents of the Government in Canada report that the labor market is overcrowded and that they should not come in numbers any more, the commissioner of immigration and the department of labor in Canada is authorized to suspend immigration for a certain period.

Some such law in this country would not be a bad one to have, because we know that men are being deceived as to conditions in this country every day, and they come here to find that they are grievously disappointed. I don't know how we could do it, unless it would be that the Department of Labor should ascertain the conditions in some way such as I have indicated and then by proclamation on the part of the President suspend immigration for a stated

time. Some such plan as that would work, I think. But that is just a new thought to me now, or a few days ago, and I would not want to express that as an opinion, or such an opinion as I would agree with later, or such as I would advocate. But it looks like a good thing.

Commissioner HARRIMAN. Isn't Canada getting a high grade of immigrants?

Mr. POWDERLY. She thinks she is. Some of them who come over to us are not such a high-grade class. They stay there for a while and then come across here. The idea is erroneous that all good people are going to Canada and staying there. A lot of the good people are going to Canada and come over here every year. I have been in correspondence with a number of them, telling them that it would be just as good to seek a better climate in the first place, and that they should ask before going to Canada. We have pamphlets in regard to that.

A man named Spencer took his family to Alberta—no; north of it—and I knew him personally. I met him a year afterwards in this country. I asked him if he was back on a visit, and he said, "No, I am here to stay." "I thought you were not going to come into the United States any more." He said, "I didn't think I would myself." "What is the trouble?" He said, "Nine months of the year are winter and the other three are so darned late in fall that it is mighty uncomfortable." He said, "Can you do anything for me?" I sent him to Georgia. He owns a farm in Georgia now. He should have gone there in the first place, and he would have saved money by so doing. I am not booming Georgia at all; I don't want to do that, especially in the presence of people from Wisconsin. But some place in the United States is good enough for him.

Commissioner LENNON. Mr. Powderly, do you believe that any of these attempts by legislation to get the men connected up with the job is in a measure a solution of the problem of the unemployed?

Mr. POWDERLY. Hardly. I know a man here who is bigger than any one of you, excepting, possibly, your chairman, Mr. Garretson, and I guess he would fill out a bigger suit of clothes crossways than Mr. Garretson; I can get the man a job and he would not take it, and no matter what it would pay him. He won't work. I make it a practice every winter to go on the bread line here in New York City.

Commissioner LENNON. You get hungry once a year?

Mr. POWDERLY. I get my coffee and my bone just the same as the other tramps once a year here in this city, and I meet men who won't work—a few—I have tried them. I meet those who are sick and can not work, those who are injured and are just recovering, men who are too old to work, and I meet the middle-aged men who, by reason of our present system, are thrown out at a certain age or if they get out at a certain age they can not get back in again over that age. I do not blame those men for being on the bread line, if they want to save a little for their families. But I meet men on the bread line—a few—that if you would offer them the choicest job, the highest-priced position in the world, they would not work at it. Unemployment among that class you can not solve at the present. I think it would take a surgical operation to do it.

Commissioner LENNON. Are you prepared to perform the operation?

Mr. POWDERLY. I am not. But I am in favor of having some test made of men who are idle and who will not work. Of course, the number is very few, and I do not blame them. There is some condition in life that has caused it.

Mr. LEISERSON. How can you find out whether they won't work or not?

Mr. POWDERLY. I have given them the addresses of men who wanted workmen just to see, and I went there in the morning to meet them and they have not come. I have had such an experience with men that I have been told that I ought to be a good judge of character. I am. Out of 12 men I won't be deceived in over 11.

Chairman GARRETSON. That is very close.

Mr. LEISERSON. That is to say, you need an agency like an employment office that will offer people work that they can do in order to test, on a large scale, whether men won't work?

Mr. POWDERLY. I had not thought of that.

Mr. LEISERSON. How can you test, if there are 100,000 unemployed in the city, what number of them want work and what number of them will not work, unless you have an agency for offering work to those who want work?

Mr. POWDERLY. That was in answer to a question that was put to me, so I gave that off hand. That was a curbstone opinion.

Commissioner O'CONNELL. The free employment agencies—what effect have they upon the men that will not work in securing?

Mr. POWDERLY. You mean under State auspices?

Commissioner O'CONNELL. Your opinion as to the difference between the Government controlling the proposition free and a private agency that charges?

Mr. POWDERLY. I believe every private agency should be, if it sends workers across the State lines, should be under the jurisdiction of the Department of Labor or obliged to report to it, anyway, and it should also be under the jurisdiction of the State, which cooperates with the Department of Labor.

Mr. LEISERSON. The question, as I understood it, Mr. Powderly, was this: So far as the effect on unemployment is concerned, which is handling the proposition the better, the private employment agent that charges a fee or the State free employment office?

Mr. POWDERLY. The State. I am not favorably impressed with the private employment agencies. One case—nine Croatians were sent from Chicago to Missouri by a private employment agency. Not knowing our methods of travel, they had transportation there and money to pay it themselves. When they got there, through some arrangement—I was never able to get the evidence that would prove collusion—but they worked just about a week and were thrown out of employment and another set of men were sent on from Chicago to take their places and those nine men walked backed to Chicago. We got that evidence. We followed the others up. I have not a very high opinion of our private employment agencies. They want the fee.

Mr. LEISERSON. From your experience in this division of information, you speak on that?

Mr. POWDERLY. From my experience I am warranted in saying that I do not regard them as strictly honest in their dealings with men or employees.

Mr. LEISERSON. A private employment agency, as a means of bringing the men and the job together, is not the proper agency, is that your view of it?

Mr. POWDERLY. I don't think so. My experience would indicate that the main object is to bring the employment agency and the \$2 fee of the man who wants a job together.

Mr. LEISERSON. You would suggest, then, that the necessity for establishing State or national agencies to take care of them is here?

Mr. POWDERLY. Undoubtedly.

Commissioner BALLARD. You said the average immigrant in his home looks upon this country as a land of promise. Is that because his relatives have written him that this is a glorious country and they are doing well, or is it because of the rather attractive advertisements of the steamship companies?

Mr. POWDERLY. I have seen the attractive advertisements of steamship companies very rarely in Europe, but I have seen some. I have read letters from relatives, but there are numbers of men who go back to the old countries, and they are not all under oath when they go, not strictly obliged to stick to the truth when they get there; they have good clothing, look well, have money in their pockets, and blow like all creation about what America can do.

That stimulates others to come. The steamship company does its work through its agent, but not so openly as heretofore. I could take you to Scranton, a man there, unfortunately he was killed in a mine not long ago, and a man who had more relations in Minooka than Adam could claim if he could come back on earth now and look them all up. He would write over for a cousin, an uncle; he would have cousins and uncles. He did not bring in any of his female relations, no aunts that I know of, but he had uncles and cousins in all mining towns of Lackawanna. He acted for the corporations, and they were all instructed before they came here what kind of a mark they were to see on him when they came. When they got here, they could describe their uncle in a minute, as having a blue mark over that eye, with other distinguishing features. He must be a relative, because he tells all about it. To my own knowledge he had over 50 cousins. I looked them up at one time. I did believe there was a certain percentage of race suicide in Europe as compared to that in this country, but my ideas were dissipated when I ran across this case.

Commissioner LENNON. That is a case of the employer getting his employee to bring laborers over to him?

Mr. POWDERLY. Yes, sir.

Commissioner LENNON. That would make three sources of supply the employer had? Getting them from the steamship companies and from the immigrants who told their friends about this country—

Mr. POWDERLY. Yes, sir; and the letters sent abroad. I saw a letter in Southern Italy, a letter that had gone to some 24 miles of different little towns and had been read by one man to the people who were assembled in a certain house on a certain evening to hear that letter read and hear about the conditions.

Commissioner LENNON. You saw it?

Mr. POWDERLY. I saw it.

Commissioner LENNON. Your predecessor spoke of the immigrants when they land here having the absolute necessity of going to work here because they had borrowed money to come. Doesn't the law require that each immigrant have a certain sum of money?

Mr. POWDERLY. No; it does not require that he shall have a certain sum of money. It should show, I believe, that he is possessed of \$50. I am not familiar with that, as I am not dealing with that part of it. There is a better way. Am I taking your time?

Commissioner BALLARD. Not mine.

Mr. POWDERLY. I will relate one instance when I was Commissioner General, and then I will stop. When I was Commissioner General here some years ago, I was at Ellis Island, or rather at the Barge Office, because our work was done there at that time. I heard an outcry and asked what the matter was, and they said, "This young man out here objects to being sent back; we are to deport him." "Why?" "He is without money. He has no friends in this country and he can not speak a word of English." "What is he?" "German." "Bring him in." He came in. He had a loose woolen shirt, belt, no vest, coat, and soft hat in his hand, blond moustache, blue-eyed, strong, strapping looking fellow. I asked him his name and he told me. I said, "Take off your coat." He had heard about this country. I suppose he thought I wanted it. He took it off reluctantly. I asked him to roll up his sleeves, which he did. I went through the motions to indicate what I wanted him to do, and also spoke to him through an interpreter, told him to double up his arm, and felt of his muscle. I said, "Don't send him back." "But the ship is waiting." I said, "There will be another." I wired to a friend of mine, Conrad Schrader, a German. I asked him if he could find work for a German who had no money. He telegraphed back to tag and send him. I did so, and the man is a foreman to-day and has one of the responsible positions up there. He had no money. Had he been sent back it would have been a loss to this country. He took no man's place, and I knew he would not. So you can not test by looking at a man or feeling his pocket as to whether he is good or not.

Commissioner BALLARD. I thought that by law he had to have a certain sum.

Mr. POWDERLY. No. As I said, I am not familiar with the amount.

Commissioner BALLARD. That is all.

Acting Chairman GARRETSON. Mr. Powderly, the statement has been repeatedly made this morning that a measure of this character would not in any way touch the problem of the unemployed. In your opinion, would a plan general in its character—I am not referring to the specific provisions of the plan—but a plan of that character, would it exercise a desirable influence in connecting the positions that may be open, the opportunities for work with the man who wants to work?

Mr. POWDERLY. Most undoubtedly.

Acting Chairman GARRETSON. Could any plan be devised that will make a man who does not want to work, work, whether or no, except the thumbscrew?

Mr. POWDERLY. I don't know of any that will.

Acting Chairman GARRETSON. Take the type of man that you described.

Mr. POWDERLY. No, sir.

Acting Chairman GARRETSON. No position could be made attractive enough for him?

Mr. POWDERLY. I don't know of anything that could be. I speak from a limited acquaintance with him. You know in the labor movement I never meet loafers.

Acting Chairman GARRETSON. One other question. You referred to the attitude of the labor unions and the employers toward the division. Is it not a fact that efforts were made to utilize the division when it was first organized, for just the purpose you named, to replace men?

Mr. POWDERLY. No, sir. I have no knowledge of it. There was a question raised of that kind at one time, that the men coming over should be directed to it, and that we should be notified or rather apprised of vacancies here and there by corporations who wanted men, and these men notified to come to them, but when it came to such large numbers, it struck me it was a bad plan.

Acting Chairman GARRETSON. I probably phrased the question unfortunately. I will put it in another way. Did you or did you not have reason to believe that effort was being made to use the department for the displacement of men with immigrants at a lower wage in some instances?

Mr. POWDERLY. No, sir. I have never heard of a single case. I have heard rumors of it, but when I investigated I found there was nothing in it.

Acting Chairman GARRETSON. I have heard a few cases cited.

Mr. POWDERLY. Yes, sir; but I have looked them up.

Acting Chairman GARRETSON. Two came under my personal attention is why I asked the question.

Mr. POWDERLY. That was not true, though. We went to the bottom of it and found it was not true.

Acting Chairman GARRETSON. That is all, Mr. Powderly. Thank you.

Mr. LEISENBERG. I will call Mr. Carroll.

(No response.)

TESTIMONY OF MISS ANNA HERKNER.

Mr. LEISENBERG. Will you state your name, please, and your occupation?

Miss HERKNER. Miss Anna Herkner; assistant chief of the bureau of statistics and information in Maryland.

Mr. LEISENBERG. Assistant chief of the bureau of statistics and information in Maryland?

Miss HERKNER. Yes.

Mr. LEISENBERG. Miss Herkner, the point was brought out here yesterday several times that there were many men among the unemployed who were unemployable, who did not want to work, and that one of the reasons was that conditions in the camps have manufactured those kind of unemployable men. Have you any material that would tend to show that conditions of employment for children would have any bearing on this question? Will you state, first, just what your duties are in regard to children?

Miss HERKNER. The Maryland Bureau of Statistics and Information shows the employment certificates given to the children in Baltimore—Baltimore city—that work in the industries in Maryland has centered for the most part in Baltimore city.

December 1, 1912, a new child-labor law went into effect, which required a new employment certificate for every new position. This gives an opportunity to regulate children in industry and to collect information about the changes they make in their positions.

In 1913, some 6,504 children entered regular industry. That is, children 14 to 16 years old. Of those 3,590, I believe, or nearly 4,000, two-thirds, changed positions within the year.

This year, to date, there have been 2,500 or more certificates issued, and 1,400 or more of those children have changed positions.

Mr. LEISENBERG. Just a moment; this year from January to May?

Miss HERKNER. Yes.

Mr. LEISENBERG. Two thousand five hundred certificates were issued to children between 14 and 16?

Miss HERKNER. Yes, sir.

Mr. LEISENBERG. To permit them to go to work?

Miss HERKNER. Those were original and subsequent permits.

Mr. LEISENBERG. During this same period of four months 1,400 of those have already changed their positions?

Miss HERKNER. One thousand four hundred of those children changed positions. May not have been those same ones, but there were that many changes of occupation among the children.

Mr. LEISENBERG. Can you give us any of the reasons why they changed?

Miss HERKNER. Yes, sir. We get the reason from the employers; we get the reasons from the children. In general, children can not analyze very intelligently what the matter is with the job, and the inclination on their part is to say they do not like the job, or they want a better one. As far as it is possible we try to get down to a more definite reason. There are some objections to hours, for we have practically an unlimited day for children to work in. There are still more objections to some feature of the industry. The work is either too hard, it is too heavy; they are asked to work on machines that they are afraid of, or in the tin-can and tin-box industries; the tin cuts their hands. In the needle trade, in the small, dark shops, the industry is hard on their eyes.

Sometimes it is too much standing, as errand boys and girls. In large establishments there is too much running up and down stairs all day long.

I have those classified in my table. Those are the general ones as I think of them.

Mr. LEISERSON. Can you summarize what your tables say on that?

Miss HERKNER. The work this year gives more attention to the change of children in industry. I am not going to speak for the tables for this year; just for the first four months of the year.

By far more of the children leave of their own accord than are discharged. The reason for children leaving as we find it in Maryland is due to the child's dissatisfaction with the job, rather than the employer's dissatisfaction with the child. The child probably leaves before the employers have a chance to be dissatisfied with them.

Mr. LEISERSON. Can you give the relative figures—the number that are discharged and the number that quit of their own accord?

Miss HERKNER. Out of 1,400 plus children who left work in four months, over one-half left voluntarily. That was the reason the employer gave. The child left; I don't know why; over half. One hundred out of 1,400 were laid off either because of seasonal employment—the season was entirely over where that is the case—or because the season was slack, or the place had closed down entirely. Only 152 were discharged.

Mr. LEISERSON. Out of 1,400?

Miss HERKNER. Out of 1,457; yes, sir. Those were the employers' reasons. Out of the children's reasons, the largest single group gave a dull season as reason for leaving; that is, the work was slack, and they were not earning enough. Probably they were on piecework. The second largest single group complained that the work was too hard, or too heavy, and that includes being put on heavy machines or dangerous machines. It includes such objections to an industry as hard on the eyes or hands, sickening odors, or excessive heat.

Mr. LEISERSON. Was there any objection to work on the ground of speeding up?

Miss HERKNER. We have a few children that leave because it is piecework. They say specifically piecework. In the tin-box industry and the tin-can industry, which is quite extensive in Baltimore, the children obviously do leave because they are speeded up. In the tin-box industry they are paid by the piece, so much a thousand; but, in addition to the natural speeding up of a piece-rate system, two boys have to keep a machine that is geared at a certain rate of speed, which is an additional stimulus to them, and we find that the boys there change constantly; then we have pretty nearly as many going out as go in right along.

The one definite objection that they advance for the industry is that it cuts their hands, and when you argue it out a little more and say, "Can not you go more slowly, so it would not cut your hands?" then the other objection comes out, that you have to keep up with the machine.

Mr. LEISERSON. Can you give us an idea of the kind of work that those children have to do? I do not mean the industry, but the character of the occupation?

Miss HERKNER. In the two years' experience, we have classified the industries fairly well on the basis of those entered by children.

In the department stores the boys are bundle and wagon boys, and the girls are bundle and cash girls in the store.

In the large establishments both boys and girls are generally called errand children—errand boys and girls. They carry bundles from one set of operators to another. In the cotton goods and button and trim, cut off the threads. They do operate some light machines, such as the sewing on of buttons and simple things of that sort. In the cotton mills they do the usual things children do there. More boys go in. In the biscuit factories it is largely just the packing of crackers in boxes. In candy it is largely packing of candy. In the wooden-box industry the boys take off of the saw. We have not been able to remove from that position in Maryland, because the wooden-box industry threatens litigation, and the bureau has had so much other work that it thought it could not neglect to prepare itself for a long-drawn-out trial, but their work is both dangerous and heavy. A certain amount of lumber is cut off, and even though carried in small sizes the boys complain that in the course of a day they have to carry a large amount of lumber. The work is not only dangerous but heavy.

Mr. LEISERSON. Out of the total children that you gave permits to, can you give us any idea what number have an opportunity to learn any trade?

Miss HERKNER. I should say that the child-employing industries place children in positions doing very light work, that does not lead to anything.

Mr. LEISERSON. These children that you speak of, 14 to 16, when they drift from one place to another, when they leave a department store, do they ordinarily go back to another place where they can learn a trade, or do they go into another child-employing occupation?

Miss HERKNER. The vast majority of the children must, of course, go into child-employing industries. That means merely simple jobs that the children can do. There are a very small number only of those industries where children can learn trades. As a matter of fact, most industries to-day are not skilled.

Mr. LEISERSON. Up to what age are children ordinarily employed in those occupations that you have mentioned?

Miss HERKNER. Up to about 16.

Mr. LEISERSON. And after 16 they would have to quit those employments?

Miss HERKNER. They would not have to, but employers tell me they can not get a boy of 16 to work, and when you go into it with the employers more, you will find that generally his industries are not such that a boy entering young can advance from one to the other. You simply skip. For instance, in the wooden-box factory, you skip from taking off saw and helping on the wagon to sawyer, which is a man's job, and there is not any in-between for them.

The same is true in the tin-can and in the tin-box industry largely. There are certain simple occupations that are considered children's occupations. Then one skips from this to what is a man's or a woman's work.

Mr. LEISERSON. Your idea, then, is that at 16 the boy ordinarily takes this higher occupation?

Miss HERKNER. No, sir; he does not. He is not quite ready for a higher one.

Mr. LEISERSON. What happens during that period?

Miss HERKNER. Well, the boys of 16 make up, more than any other age, boys of corner crowds—the large crowds of boys that are always found loafing in certain sections of a large city, and they are drawn on during the rush seasons of some industries. For instance, in Baltimore, we have several allied industries that all have a rush season at one time. During the canning industry, not only the canning factories are calling for a large supply of labor, but the tin-can factories, the wooden-box factories are, the transfer men demand a lot of help to load trains; then label factories are very busy. During that season when several industries at one time have a rush season, these boys from 16 to 18 are drawn on, and a great many of them do not work more than just a few weeks in that season.

I have known personally any number of boys, who are older now, who have just loafed for the most part through two or three years of their life.

Mr. LEISERSON. What is the cause of that—unusually high wages?

Miss HERKNER. Yes, sir. When the season is at its very height, then there is a recklessness about paying wages to a few additional people, because it is only going to run two or three weeks more, or three or four or five weeks at the most.

Mr. LEISERSON. Then you have periods of unemployment there for the classes of juveniles—first, 14 to 16 year old children, who are constantly changing places. Can you give us any idea of the length of period of unemployment between places?

Miss HERKNER. I can, if it has been recorded for those four months. You want the length of time employed or between jobs?

Mr. LEISERSON. Between jobs.

Miss HERKNER. Out of the 1,400, 600 got jobs in less than a week again; 200 and over were idle between one and two weeks.

Mr. LEISERSON. What is the total over a month?

Miss HERKNER. Over one month?

Mr. LEISERSON. Yes.

Miss HERKNER. About 200.

Mr. LEISERSON. Two hundred out of one thousand four hundred?

Miss HERKNER. Yes. Unfortunately, there were 300 that were not known in January, the first month when our system for checking on all this was not completed; a good many were unknown, about 200.

Mr. LEISERSON. Would it be a conservative estimate to say, then, that one-seventh of them, when they are changing jobs, lose a month between jobs?

Miss HERKNER. A month to a year.

Mr. LEISERSON. From one month to a year?

Miss HERKNER. Yes.

Mr. LEISERSON. That means the total time lost between their various jobs?

Miss HERKNER. No, sir; that means between two jobs.

Mr. LEISERSON. That means between just two of the jobs?

Miss HERKNER. Yes, sir. We get the information when the child comes for a subsequent payment, and we find out how long it has been since he has worked.

Mr. LEISERSON. That is to say, among those other six-sevenths they lose from one to three or four weeks?

Miss HERKNER. To four weeks.

Mr. LEISERSON. And those same ones may lose that one to four weeks three or four times a year?

Miss HERKNER. Yes, sir; and sometimes 12 times a year.

Mr. LEISERSON. Have you any record as to the total amount of changing that is done? How many jobs a child has in a year?

Miss HERKNER. I have not that here now. There will be a report on that at the end of the year.

Mr. LEISERSON. Then the other class of boys, from 16 to 18, when they graduate from the permit class and they are not ready to go into the adult or workers' class, about how much time do they lose? Have you any idea?

Miss HERKNER. We haven't any track of that.

Mr. LEISERSON. You found in many cases where they merely worked during the usually busy periods in seasonal industries?

Miss HERKNER. Yes, sir.

Mr. LEISERSON. Have you made any investigation as to the effect on the character of those children during the periods of unemployment in changing jobs?

Miss HERKNER. There has been no systematic study made of those.

Mr. LEISERSON. What is your impression as to what happens?

Miss HERKNER. My impression is, of course, just based on seeing the children at the office that come for permits and what I see of them living in that neighborhood. The thing that probably impresses me most about them is they lose all respect for work because of the way that it treats them, speeds them, and offers them undesirable conditions while they are on the job; and it is constantly throwing them out of work and sending them on long searches for a new job. About the time the boy is 16 he does not care whether he works or not. During those two years he has made so many changes—that is, the majority of the boys have—that they have learned so many things about industry that are a delusion to him. He has only known about the wages before he entered. He has learned so many other things that are not to his credit that at the time he is 16 he not only has become dependent in the family but he has lost so much respect for the work that he had when he started out.

Mr. LEISERSON. You think one effect of unemployment—unemployment and changing between jobs—is to make them unwilling to work?

Miss HERKNER. That is one; and it develops the habit of unsteadiness—or, rather, destroys the habit of steadiness they had. If a boy had to change twelve times, he begins to get the habit of changing.

Mr. LEISERSON. You mean he acquires the habit where after a while he can not work more than a month or so?

Miss HERKNER. Yes, sir.

Mr. LEISERSON. Another thing. What do you think specifically of the conditions of employment that make these children quit? Do you think that if there are any possibilities of advancement there, they would not quit?

Miss HERKNER. Yes; I think they would stay. In the first place, positions are not made in industry for children with any view to training them as skilled adult workers. They simply are put on jobs that are simple because they are cheap. For instance, we have had two wooden-box men grant that the occupation of taking-off boy is dangerous, but that 16-year-old boys do not care to work, for one thing. In the second place, they demand more wages; that the sawyer believes his wage should be in a greater proportion than the boy's wage; and if the boy's wage is higher, the sawyer's should be; and that it would mean more money is the only reason the small boy is held there in spite of the danger. And also the work is heavy, and because he costs less in the course of a year.

Mr. LEISERSON. Have you any way of telling whether these boys from 16 to 18, when they get out of the class where they can only do the ordinary children's employment, gravitate into the casual laborer that does the railroad work or the construction work?

Miss HERKNER. I do not believe that we have any records in Maryland to show that.

Mr. LEISERSON. How about your employment office in Maryland?

Miss HERKNER. That is only in the statute; it is not in operation or existence. That does not do anything. We have this year a law passed by the legislature that compels the registration with us of all establishments employing five or more people, and we have drawn the registration card so as to show how many of those will be boys from 16 to 18. That information is not at hand and I can speak from personal observation only.

Mr. LEISERSON. Have you followed up any cases of those boys from 16 to 18, as to what work they go into later? What becomes of them?

Miss HERKNER. Well, a good many of them loaf around for two or three years until they can command a man's job and a man's pay. Those that are not spoiled by the loafing, those who rather rest up from that exhaustion that the speeding up from 14 to 16 leaves with them, go, of course, into the industries that call for most people. Clothing is our leading industry, and quite a number go in it. I know that among them the boy, the young men who really develop into steady workers, are looked upon as exceptions. For instance, young men of 20 will say, "We never expected that boy to be steady on the job. Why, he is the only one of his gang that is around and working steady. Others have disappeared." Along the water front, and we have considerable of water front, and that part of our population very near it, that offers casual employment, and some of the boys go in there when there is an extra demand for men. That, of course, is casual work in itself.

Mr. LEISERSON. That is to say, a small proportion of the boys do go into industry, but others drift into casual occupations, like longshore work, or other work of that kind?

Miss HERKNER. Yes, sir. A good many of them I have known have gone into the Navy. Some have loafed around until they were big enough and the family would not have it any more, and I have known half a dozen of one gang that went into the Navy.

Mr. LEISERSON. It is your opinion, then, from your experience with children, that occupations without a future tend to make them shifty and unsteady and that that tends to make them have shiftless habits which later puts them into the casual and unemployable class?

Miss HERKNER. Undoubtedly it does that with many, especially where the home does not exercise a great deal of discipline on the child. It needs a lot of counteraction on the part of the home to overcome the undoing of the character.

Mr. LEISERSON. Ordinarily, are the parents of these children in a position to give that counteracting influence?

Miss HERKNER. Generally speaking, they are not. In Baltimore, Md., particularly, where the canning industry is very extensive, where many of the mothers of these children are at work a large part of the year, the children are deprived entirely of any home discipline.

Mr. LEISERSON. Have you any suggestions in your mind as to how we might or what the remedies might be to prevent the manufacturing of these casual and unemployable wage earners?

Miss HERKNER. My experience with the administration of the child-labor law in Maryland convinces me that for the child's good practically very few children should be admitted into industry, and only when there is a future in the industry for the child. It seems to me, besides directing children where there are jobs, it is more important there than with adults to study the industry, to see what future there is there, because the children still have a future, and many of the grown folks don't, and you might prevent the unemployable, because it does exhaust their energies and rob them of their energies, and destroys any steady habits the children may have acquired from home.

Mr. LEISERSON. Let's take it up in this way: Suppose you have a juvenile employment agency in connection with the employment offices. That would shorten the period between those jobs for those children, might it not?

Miss HERKNER. Yes.

Mr. LEISERSON. So that, so far as merely keeping them somewhat more steadily employed, that might be accomplished by a juvenile employment exchange?

Miss HERKNER. I don't believe that with a child the time between employments is so important. It is the fact of the constant change that is bad for the child, whether he goes right from one to another or not. The losing of

time to the adult is an important thing, but to the child I think it is rather a detriment—

Mr. LEISENBERG (interrupting). Now, what you would do further, you would have this agency which would try to get them, not so much jobs, as to find out two things, first, where they might get into an employment that affords opportunities that they don't have in these ordinary children's employments?

Miss HERKNER. Yes.

Mr. LEISENBERG. And, secondly, to advise them not to, or to have a law to prevent them from going into occupations where there is no future for them?

Miss HERKNER. Well, I think it would have to be based on a study which would show what speeding up does to the child.

Mr. LEISENBERG. That is, you would suggest a study being made as to what speeding up or other conditions in ordinary children's industries, what effect that has on the character of the children, is that it? And then if that is found to have a bad effect, you would prohibit the children from going into that?

Miss HERKNER. The two things, the speeding up, and then the deadening of the brain by monotonous work, for much of the work is simple, and the speeding up is not really as injurious as the fact that the child's mind has absolutely no chance. From infancy, a child can do a very small sum, little numbers, and repeat it 70,000 times a day. That is not hard. It might not be excessive speed, but in order to keep that up and in order to keep even pace with the machine, the child must suppress every tendency, every mental and muscular activity, in order to keep doing his particular little task all the time. There is nothing more deadening. I presume that a great many of the men who do not care for any kind of a job have had all their mental activity or their ambition killed in just that way.

Mr. LEISENBERG. And if there was a chance for advancement for those children in the industry, he is offered a less monotonous position where he would get some idea of a trade at some high-skilled occupation, you would think there would be some incentive for them to stay steadily at work?

Miss HERKNER. Yes; except that where one occupation is monotonous, they are all apt to be. Take a tin canning factory. There is a style of machinery there called a line; and every person on that line—there may be 11 of them—performs his task the same number of times that every other one does. The job of the line of machinery is from 65,000 to 70,000 cans a day, and no matter what a person does, he does his task that many times. Some of the tasks may be a little more responsible than others, but what the child does is to drop in the bottoms on one side of the line of cans and on the other side the tops. Now, that line of machinery there would be no advance for that child, because all the work is of the doubly monotonous kind, and so in the industries where the work is monotonous it is probably all that and the brain and body of the adult, that has had a chance to develop, does not suffer as the child does. You see, the child is restraining every second of the time an inclination to activity, where the adult does not, or that the child does a double job. The task may be easy, but the child works twice as hard on it as the adult.

Mr. LEISENBERG. Exclude them from those occupations?

Miss HERKNER. Yes, sir.

Mr. LEISENBERG. Would it be possible for the industry to get along if it did not have them?

Miss HERKNER. Well, I think whatever a child can do an adult can do. It is just a matter of money.

Mr. LEISENBERG. You think there are plenty of men to do that kind of work?

Miss HERKNER. If there is any truth in the report that there are a large number of unemployed in the country, there are certainly enough men to take those jobs.

Mr. LEISENBERG. Then you would have the State deny these children the right to go in these industries somewhat as the State denies a given public utility a certificate of convenience and necessity?

Miss HERKNER. I would have them deny it in the same way they deny the child the right to work in a dangerous occupation. There is certainly harm coming to the child, though it is much more subtle and less tangible. It is just as injurious, it seems to me, for a boy to lose his ambition and his adaptability to better classes of work as it is for him to lose one or both of his hands.

Mr. LEISENBERG. You see all States deny now a child, up to 18 in many cases, the right to work in many dangerous occupations, and many States deny children under 21 from carrying messages at night, because it is dangerous to their morals; and on the same theory you would, because it is a danger to their character, deny them the right to work in those unpromising occupations?

Miss HERKNER. Yes, sir.

Mr. LEISENBERG. Have you any other suggestions to make along this line?

Miss HERKNER. I don't believe that I have.

Mr. LEISENBERG. Will you leave that document as an exhibit with the reporter?

Miss HERKNER. Yes, sir.

(The document here referred to was marked "May 20, 1914, Herkner Exhibit A.")

Commissioner BALLARD. You spoke of a number of children of 14 leaving school and going out to work. Now, has it developed that after they have worked two or six or even eight months or a year that many of those children go back to school?

Miss HERKNER. Some few do, but very few. Our schools in Maryland do not have any industrial training. These children of that age comes from an environment that recognizes the value only of industrial work, and there is not much in their life to send them back. They simply take a chance on changing around. But some few do go back, but that is specially true of children who come from homes where the parents recognize the value of schooling, but could not make the child see its value before.

Commissioner BALLARD. We have heard that boys and girls are frequently changing. Have you records that will enable you to testify whether the boys change more or the girls?

Miss HERKNER. The boys change more than the girls. That may be because there are more boy-employing industries in the community than the girl-employing industries.

Commissioner BALLARD. Has it ever occurred to anyone in that section where they have these canning industries and seasonal occupations—I understand they have a great number of tomato pickers and peas and other vegetables?

Miss HERKNER. Yes.

Commissioner BALLARD. Has it ever occurred to people in those districts that the school might close for that particular period of time, and then resume, allowing the children to work in the fields and industries and then resume their schooling?

Miss HERKNER. In Maryland the large number of workers in the canning industry, even though scattered all over the State, come from Baltimore city; and the effect of the opening of the canneries is not felt so much in the city except through the loss of these children who go to the country. The country schools do not close down, because the country children do not work in the canneries to any large extent, unless they are colored; and we look upon those the same as we do upon the foreigners. From Baltimore city it is the foreign population that largely supplies the labor for the canneries. That has occurred to some people, but it has not worked out.

Now, this is what does happen: Those children are, for the most part, Polish, Bohemian, and some Italians are beginning to go into the canneries. They attend parochial schools, and the parochial schools do close down when the canning seasons open. For instance, the parochial schools in Baltimore now have closed down for the most part, and only the higher grades are running. But the school does start a little earlier, and they are always three months behind in the fall, and they leave one month earlier, and the trouble comes when they apply for a permit and they are supposed to have finished the fifth grade, and they can not make the fifth grade when they are always behind.

Commissioner BALLARD. You speak of children and the long hours. Is it usually an 8-hour day, or longer?

Miss HERKNER. Much longer. We have practically an unlimited day for children in Maryland, and it is generally 10 hours.

Commissioner BALLARD. They have never passed any law prohibiting children working over eight hours?

Miss HERKNER. No; it is a 10-hour day for children and women in some industries, but not in the canning industries. They may run 15 hours a day, and they do not come under the 10-hour law.

Commissioner O'CONNELL. These canning industries, where they take children out from the city to the cannery, do they have living camps for them?

Miss HERKNER. Yes, sir.

Commissioner O'CONNELL. And keep them?

Miss HERKNER. No; the canner furnishes the shelter and the straw for bedding. The people bring out their own bedding, their own cooking utensils, and they keep house for themselves. They get whatever vegetables are being canned, I think. They use condensed milk, and the bread wagons do come through the camp two, sometimes more, times a week. Some camps are situated in little towns, so that they can get their supplies there.

Commissioner O'CONNELL. Have you visited any of these camps?

Miss HERKNER. I have gone through them in the State of Maryland three times.

Commissioner O'CONNELL. Can you give us any idea as to the conditions of the camps and their sanitary conditions and general conditions? You say they furnish straw for bedding.

Miss HERKNER. The conditions of those camps are improving somewhat. Two years ago it was seldom you would find a camp in which a family had a room to itself. For the most part the camps were old barns or buildings, in which the farming machinery was stored during the rest of the year. These were divided into small apartments by boards about 12 inches wide, standing on edge. That was the partition between one stall and another—about 12 inches. The width of it would depend on the family that had to be housed or slept in this stall. The farmer divided off the floor of the stable or shed into these stalls and threw straw into the bottom of them, leaving a wide aisle down the middle of the building; and when the family arrived they stuffed their bed-covers in on top of the straw. They generally bring their possessions in a large wooden chest or trunk, and this stands in the aisle at the base of the stall, and is locked. And in that the smoked meat and canned milk, and such things as the family brings out are kept; and the clothing is just hung around on the rafters. Now there is a tendency to provide beds for the people that come out, and these beds are in long, narrow buildings, divided into individual rooms, and each family have a room. The beds are much the same; sometimes they are double-deckers.

Commissioner O'CONNELL. Is there always a family?

Miss HERKNER. For the most part.

Commissioner O'CONNELL. And no boys without being members of the family?

Miss HERKNER. Well, not much. I think they generally come with some family. Very few go out as individuals. Usually, they come out by families and, of course, the inducement is the high wages an entire family earns.

Commissioner O'CONNELL. The entire family works?

Miss HERKNER. Yes, sir.

Commissioner O'CONNELL. What wages do they earn, approximately?

Miss HERKNER. The man works time work, 10 or 12 or 15 cents an hour. The women generally work by piecework. They get 4 or 5 cents per bucket—it depends on the season—a 40-pound bucket of tomatoes. That is, they skin two bucketfuls to make one bucketful of skinned tomatoes.

Commissioner O'CONNELL. Approximately, what does it amount to in dollars and cents?

Miss HERKNER. It is pretty hard to average. The season lasts six or eight weeks, and they take out the help as soon as they can, and probably the first families will go out before they get to running full, and probably will get one day the first week and perhaps two days the second week, and three days the third week, and then there will be three weeks of full-time work, and possibly some night work. Twenty buckets a day, I consider, would be a fair average for a woman to do a day if she had worked right along, but you see they don't hardly work any part of the first week, and then for three or four weeks, I think the best of them earn \$3 a day, which is a large amount for a woman. Some days they may do that, but it is somewhat exceptional. They would earn from \$2.50 to \$3 a day, the best of them.

Commissioner O'CONNELL. What do the children get?

Miss HERKNER. They work piecework, and get 4 or 5 cents a bucket. They can not keep the speed up as long as the women can. The children will tire earlier in the afternoon, whereas the women will keep it up all day. But a child can make a dollar a day in the busy season.

Commissioner O'CONNELL. Do you consider conditions of housing, and the putting of them in the stalls, satisfactory, and is any attention paid or any sharp contrast drawn between the male and female workers?

Miss HERKNER. None whatever. I have looked in a shed like that, where there were 57 families without one partition higher than a foot from the floor.

Commissioner O'CONNELL. No very sharp contrast drawn then?

Acting Chairman GARRETSON. In regard to these boys between 16 and 18, have you had enough personal knowledge to determine what one of the great factors in the case of a boy of that age is effective in causing him to refuse to work? May it lie in the fact that with the natural period of development arising then, the boy earns the children's wage and is not able to secure the man's wage?

Miss HERKNER. I think that is a very important factor.

Acting Chairman GARRETSON. Any other questions?

Mr. LEISERSON. That is all.

Acting Chairman GARRETSON. That is all, thank you, Miss Herkner.

Mr. LEISERSON. Mrs. O'Connell will take the witness chair. It appears here on our program as Mrs. Mary O'Connell; it should be Mrs. P. J. O'Connell.

TESTIMONY OF MRS. P. J. O'CONNELL.

Mr. LEISERSON. Are you connected with the Alliance Employment Bureau?

Mrs. O'CONNELL. Yes, sir.

Mr. LEISERSON. Explain to the commission just what that Alliance Employment Bureau is, and what it does?

Mrs. O'CONNELL. It is organized for the purpose of placing girls and women and, later, boys under 18, in factory and in clerical positions, largely—but we place about three-quarters of our people at trades.

Mr. LEISERSON. Will you describe the methods by which you get the opportunities in which you place them?

Mrs. O'CONNELL. Naturally, we try every means we can for getting places; but when employers come to us—we send out no applicants until some one from our office has visited the place and made a careful investigation as to the wages and conditions there, and whether they are up to the standard in that particular trade, and as to the sanitary conditions, and as to whether or not the labor laws are obeyed. We have no exceptions.

Mr. LEISERSON. You have special investigators who do that particular work?

Mrs. O'CONNELL. Yes; those who have been trained in our own office.

Mr. LEISERSON. You send no one to a place except you know definitely what the conditions of employment there are?

Mrs. O'CONNELL. As much as can be found out by a visit of investigation.

Mr. LEISERSON. How many people do you place annually?

Mrs. O'CONNELL. Only about 1,300 or 1,400, probably.

Mr. LEISERSON. And what proportion of those are children?

Mrs. O'CONNELL. Offhand, I should say, probably one-fourth.

Mr. LEISERSON. About 40 per cent?

Mrs. O'CONNELL. One-fourth.

Mr. LEISERSON. Oh, one-fourth; and what does it cost to do that work?

Mrs. O'CONNELL. Costs about \$7,000.

Mr. LEISERSON. To place about 1,300 or 1,400?

Mrs. O'CONNELL. Yes, sir.

Mr. LEISERSON. And can you tell how many employees you have?

Mrs. O'CONNELL. Seven—six besides myself.

Mr. LEISERSON. How many do this investigating work?

Mrs. O'CONNELL. Four.

Mr. LEISERSON. And the other three are in the office?

Mrs. O'CONNELL. Clerical; yes, sir.

Mr. LEISERSON. And who supports the bureau?

Mrs. O'CONNELL. It is affiliated with perhaps 25 settlements, who aid in its support; but the support largely comes from people who are interested in the question of employment.

Mr. LEISERSON. That is, by private subscription?

Mrs. O'CONNELL. Yes—oh, I beg pardon; we also charge a fee.

Mr. LEISERSON. How much is the fee?

Mrs. O'CONNELL. No fee less than 50 cents; otherwise 10 per cent of the first week's wages, but nothing less than 50 cents. You must realize that we are dealing with children who often do not get \$5 a week.

Mr. LEISERSON. Have you any other fees?

Mrs. O'CONNELL. Our registration fee is 25 cents, but that comes out of the regular 10 per cent. Of course, we don't charge that to people who are not working.

Mr. LEISENBERG. You charge everyone a fee, but if they have not got it you wait until after they have got work?

Mrs. O'CONNELL. Yes, sir; we do that partly as a source of income, and a little bit more because we think the service that is paid for is better appreciated.

Mr. LEISENBERG. What proportion of your expenses of \$7,000 comes from fees, and what proportion from voluntary contributions?

Mrs. O'CONNELL. We take in from \$1,000 to \$1,200 in fees, and the budget last year was about \$7,000.

Mr. LEISENBERG. Do you think it would be possible for the State to organize an employment agency of your kind to do work on a larger scale?

Mrs. O'CONNELL. Why, certainly I think so.

Mr. LEISENBERG. Do you think it ought to do it?

Mrs. O'CONNELL. I don't think they should do it in any other way. I think the most important thing about an employment bureau that is to help anyone is the investigation.

Mr. LEISENBERG. You think the State would be justified in spending for every 1,300 people \$7,000 in order to get them in touch with positions?

Mrs. O'CONNELL. I doubt if that would be necessary in running a bureau on a larger scale than we do. For instance, if we placed 300 more a year we would not expect it to cost proportionately higher. You see, we have three clerical workers, whose work is recording the results of these investigations by these four investigators. I think we could place three or four hundred more without bringing up the expense accordingly or proportionately.

Mr. LEISENBERG. You refuse to place anyone where your investigators have found conditions not up to standard?

Mrs. O'CONNELL. Yes, sir.

Mr. LEISENBERG. What are your standards?

Mrs. O'CONNELL. That the sanitary conditions are good, that the labor laws are kept, and that the wages are up to standard in the trade. I speak particularly of the trades now, rather than office work.

Mr. LEISENBERG. What proportion of your applicants are placed in industries where there is a definite skilled trade?

Mrs. O'CONNELL. Why, I don't think I can say that, because there are so few skilled trades for girls and for boys up to 18.

Mr. LEISENBERG. Most of these people that you supply, are placed in positions, have they any definite training or are they unskilled?

Mrs. O'CONNELL. The girls over 16, called adults, have already been spoiled by the injurious conditions related by the last speaker. By that time, 16 or 17, they have become unskilled workers, with ability only for unskilled jobs.

Mr. LEISENBERG. That is, the condition Miss Herkner described with reference to Baltimore you find prevails in New York?

Mrs. O'CONNELL. They apply very largely.

Mr. LEISENBERG. You find the same conditions—the constant changing of the boys under 18 that you place?

Mrs. O'CONNELL. No; I can not—not offhand.

Mr. LEISENBERG. Can you tell us about how many boys under 18 you place?

Mrs. O'CONNELL. No; I can not.

Mr. LEISENBERG. About what proportion are under 16?

Mrs. O'CONNELL. No; I can not tell that.

Mr. LEISENBERG. Do you place any under 16?

Mrs. O'CONNELL. Yes; we do—from 14 to 18.

Mr. LEISENBERG. From 14 to 18. Can you give us an idea of the reasons that led you to go into this child placing—the placing of juvenile labor?

Mrs. O'CONNELL. Why, no; that is what the bureau is for; that is what the bureau is organized for. It was organized not only for the children, but later we enlarged the work to include the boys.

Mr. LEISENBERG. I mean, did you have any idea of directing children into employments where they would not be injured in this way that Miss Herkner has described as pertaining to these unpromising industries?

Mrs. O'CONNELL. Well, the bureau is a bureau 23 years old, and nobody had those ideas 23 years ago.

Mr. LEISENBERG. Recently, have you taken on that idea of vocational guidance?

Mrs. O'CONNELL. Very considerably; yes.

Mr. LEISENBERG. Will you describe just what that idea is?

Mrs. O'CONNELL. Not vocational guidance so much, since most of that should come before the children reach us. But, rather, the placing of children under

16—girls, let us say—boys are more difficult. That is another aspect; but girls under 16 we try to place where we can in trades. Of course, there we come up against the opposition of the parents, who are not always willing to place a girl at a trade where she will earn something less—at a trade possibly where she will earn a dollar less than the unskilled job will pay, where the girl will learn nothing. It is not always a financial reason, but it sometimes is greed.

We also try to follow the child up just as much as possible—as much as our time will permit.

Mr. LEISERSON. You try, then, what Miss Herkner has recommended here, to keep the children out of the employments that offer no future? Your bureau attempts to direct them away from those employments?

Mrs. O'CONNELL. Yes.

Mr. LEISERSON. You stated before that the vocational guidance should come before they came to you. Have you any ideas on that subject? Just what you mean by that?

Mrs. O'CONNELL. Why, I don't believe I can qualify very much further. My work is so strictly employment work. But I think I may say here that pre-vocational training—

Mr. LEISERSON. Give us a reason why you think it is necessary that children, before they come to your employment office, should have some kind of guidance and training. What is the condition that makes it necessary?

Mrs. O'CONNELL. Well, I think the child that has had some instruction before that won't come in and say they just want a job. They will have some definite ideas as to the opportunities in certain lines, and perhaps will not, just as about nine-tenths of the boys now do, say that they want to be electricians.

Mr. LEISERSON. What is the objection to a person coming in and just saying he wants a job?

Mrs. O'CONNELL. It puts it up to us rather hard, because we know nothing at all of that boy's capabilities. We know nothing at all of what he might be best fitted for, and can judge very slightly from our interviews with him. If his abilities had been studied a little beforehand, if, for instance, in the public schools, the teacher when he had passed on his studies and his information, had passed on the boy's abilities, and had tested them out, and that had been carried on from the beginning until he left school at 14, he would have some idea, not only of what he would like to do, but what he was best fitted to do.

Mr. LEISERSON. You think he would not drift in the way these boys are in the habit of doing, from place to place?

Mrs. O'CONNELL. No. As it is, a boy may come in and we may put him in the wrong place—the very worst place.

Mr. LEISERSON. Do your records show a constant changing of boys in their positions?

Mrs. O'CONNELL. Yes, sir; more than the girls. Well, I should not say that, because we handle more girls.

Mr. LEISERSON. What is the reason for changing, ordinarily?

Mrs. O'CONNELL. To state that would be just to duplicate what Miss Herkner has said—just about the very thing she stated. They don't like the job, or they have to get down too early; and the boys state that they have to sweep the floor, and the girls state they were asked to do things they were not hired for. We get that more often, however, from the office girls.

Mr. LEISERSON. How do you interpret that? What do you think is back of all that?

Mrs. O'CONNELL. The first reason back of it all is, that the children of 14 haven't any business to go to work.

Mr. LEISERSON. You would raise the school age?

Mrs. O'CONNELL. Yes.

Mr. LEISERSON. To what?

Mrs. O'CONNELL. Sixteen, at least.

Mr. LEISERSON. Just why would you do that?

Mrs. O'CONNELL. Because I don't think a child of 14 has any business to go into the industries.

Mr. LEISERSON. Does the fact that the opportunities of the industry itself, in teaching them and in working them might be of value, or do you think the schooling the boy would get now is more valuable to him than the training he would get in an industry?

Mrs. O'CONNELL. It would certainly be, if our schools were properly organized—to teach the habits of industry, and then he would not find himself in grade FB, when he is 14.

Mr. LEISERSON. You think that the work that the children do between 14 and 16 does not develop habits of industry?

Mrs. O'CONNELL. Not as it is working out here in New York City; no; by no means.

Mr. LEISERSON. I don't mean the schools, but the industry. What would you do in order to inculcate habits of industry in those children?

Mrs. O'CONNELL. I don't know—not if you speak of industry—unless you could have the children part of the time in an industry and part of the time in school. I would not know any remedy except to keep them in school.

Mr. LEISERSON. Then you would raise the working age to 16?

Mrs. O'CONNELL. Yes, sir; by all means.

Mr. LEISERSON. In school all that time?

Mrs. O'CONNELL. My mind does not go back quite so far, but far enough until there was a time in New York when children went to work at a much earlier age than now.

Mr. LEISERSON. That would not be any very distinct hardship on the people if the school age was extended to 16?

Mrs. O'CONNELL. No; not in the large majority. Even so. Even if the State had to step in, even so, I don't see why the children 14 years of age should support themselves.

Mr. LEISERSON. You stated that a juvenile employment exchange of the kind that you run on a small scale would be desirable for the State to assume. Can you give us any ideas of the ways on which it ought to be managed, just as you have described how your women's employment agencies are handled?

Mrs. O'CONNELL. In the first place, I don't think I limited it to a juvenile employment exchange. I think that an employment agency that puts any person in the job without knowing what he is doing has not done the individual any particular good. To go back to the juvenile question; why, I don't know of any better plan than the plan we have worked out here. It sounds egotistical, but I don't know anyone that is doing it in this city. I don't know any better plan than we worked out, of continually investigating places of employment to better the children.

Mr. LEISERSON. Will you describe what you do in the follow up of the children?

Mrs. O'CONNELL. Our cooperation with our employers is pretty good—so good that the morning the child is absent the employer will telephone and say, "this boy is not here to-day, or this girl is not here to-day." It becomes our business to set everything aside, practically, and look up that child, and get the child back on, if possible. We may be able to do it through the agency which sent the child to us, we may be able to and we may not. We may be able to do it ourselves. We have to depend for visiting the homes on our own efforts, and some member of the staff will make it her business to visit the child's home to see her. Sometimes the parent does not know the child is not at work—the child has gone out with his lunch in his hand.

Mr. LEISERSON. During what age do you follow children up that way?

Mrs. O'CONNELL. We do not make any limit as to age. We would just as soon send out for a girl of 17 or 21 years old, as a younger child.

Mr. LEISERSON. Ordinarily, the employer who hires an adult would not notify you that the person was absent a day and have you follow him up?

Mrs. O'CONNELL. He is very likely to; he is more likely to in the case of the young girls than if they are over 16.

Mr. LEISERSON. But you would not advise that for adult men?

Mrs. O'CONNELL. Oh, no; certainly not; they don't need supervision. Some of them do, but still—

Mr. LEISERSON (interrupting). You would advise a regular system of care for the children up to what age; for boys, for example?

Mrs. O'CONNELL. I don't think you can advocate it much for boys over 16. I think for girls perhaps a little longer.

Mr. LEISERSON. What is the exact purpose of following up children in that way?

Mrs. O'CONNELL. Just to do away with the irregularity of employment. If the boy stays away from work, he is a little bit afraid to go back the next day, and it is always easy to give up a job, you know.

Mr. LEISERSON. And you carry on that work for about 800 children, do you?

Mrs. O'CONNELL. Yes. Understand a number of those stay where we put them, and with a number of employers we do not get the cooperation.

Mr. LEISERSON. That is to say you have children—a system of aftercare or follow-up for children?

Mrs. O'CONNELL. I can not say we have an organized system of doing that, but we do it as it fits into our business.

Mr. LEISENBERG. Do you consider that as important as any juvenile exchange?

Mrs. O'CONNELL. Yes.

Mr. LEISENBERG. It is not so much getting a job for a boy as seeing he stays there and learns something?

Mrs. O'CONNELL. Certainly.

Commissioner DELANO. I was just going to say that in this very interesting follow-up work that you do, after the boy or girl has left this position without any apparent reason, would your investigator be inclined to put that child in some other work that may be more congenial? Maybe the child had been put first in some work for which he was not properly constituted or properly suited, and would you then put him in some other position in which he would remain? Have you considered that?

Mrs. O'CONNELL. Yes. With a child under 16 it takes quite a little while for a child like that to get settled down in industry. A child over 16 we might not do that for him for the time being. We might say, "You better look around for yourself. While we pick our places very carefully, you don't seem to appreciate what we are doing, and you better look around for yourself."

Commissioner DELANO. I mean find a position that particular child was suited to.

Mrs. O'CONNELL. Yes; it would not be fair to the child not to do that.

Commissioner HARRIMAN. In your experience how have you found the mothers' pension work?

Mrs. O'CONNELL. I don't know anything about that.

Commissioner HARRIMAN. You know nothing about it?

Mrs. O'CONNELL. No; we don't go into the homes so much. I know nothing about that yet.

Commissioner O'CONNELL. How do you raise this difference of the money in your budget?

Mrs. O'CONNELL. We have a list of annual subscribers, and then the members of our board are pretty energetic in raising the money. I will say it is very difficult to get money for an employment bureau. It is not work that appeals to people at large. I don't think they understand that it is quite as important to prevent—to do preventive work, as it is to do work afterwards. You can always get money for rescue work, but not for preventive work.

Commissioner O'CONNELL. Are any of your subscribers employers of children and girls in factories and workshops?

Mrs. O'CONNELL. A few of them are, but all of their own accord. They are not solicited. That would not leave us free.

Commissioner O'CONNELL. You mean, you furnish help for them?

Mrs. O'CONNELL. Yes. We also refuse help, if we want to. We don't ever ask for their subscriptions, but I think we have them. That has nothing to do with our placing the children. A place run by any of our board of managers, we visit the place just the same. We have no hesitancy, don't know anybody at all—we visit them.

Mr. LEISENBERG. Do you have any cooperation with the schools in regard to finding out about the children?

Mrs. O'CONNELL. Yes; they send their children to us, and send letters with them.

Mr. LEISENBERG. Do they keep any records for you?

Mrs. O'CONNELL. No.

Mr. LEISENBERG. Do any of the teachers ever do the visiting for you?

Mrs. O'CONNELL. I should not ask them to; I don't think it is their province.

Mr. LEISENBERG. You would not consider it advisable to have this follow-up work done by volunteer committees of teachers—people of that kind?

Mrs. O'CONNELL. I think that maybe the teachers have enough with their own jobs. I think that could be done from outside; but just the time you went to get a volunteer she might be somewhere else. You see, it has to be done the day the employee wasn't there. The different societies, the settlements, help, because they are willing to do it.

Mr. LEISENBERG. Have you any kind of organization of that kind of volunteer committees that will do the visiting for you?

Mrs. O'CONNELL. No. You have given me a good idea.

Mr. LEISENBERG. Are you familiar with the aftercare committees of the juvenile labor exchanges in Great Britain?

Mrs. O'CONNELL. No; I am sorry to say I am not.

Mr. LEISERSON. That is the idea that they work on. That is all, unless you have something to say.

Mrs. O'CONNELL. I have one or two things, and one of them is that you have so little in this bill on the question of investigation. That is one thing you have not gone into very deeply.

Mr. LEISERSON. Will you make your point clear? Do you think the places of employment should be definitely investigated by any institution established by a national government?

Mrs. O'CONNELL. Yes; especially in placing young people of both sexes and in placing women. I think the men are better able to look out for themselves; but I say that in placing young people of both sexes it should be done.

Then, paragraph 17, on dividing fees, is prohibited. You ought to make that very clear, whether the employment agencies might divide fees with each other.

Mr. LEISERSON. With each other?

Mrs. O'CONNELL. Yes; that has been frequently done, and is not always undesirable.

Mr. LEISERSON. What is the objection, if I have an employment agency, a private employment agency, charging a fee of \$2, and I can not get the men—what is the objection to coming to you and asking you to supply the men, and then we divide the fee up between us?

Mrs. O'CONNELL. I don't see any special objection. I only wondered if you considered that part at all.

Ms. LEISERSON. That paragraph was not intended to hit that practice.

Mrs. O'CONNELL. It does not hit it, and I wondered if it should; and it seems to me that license is much too high, or else you ought to make a difference to some agencies like our own, where we charge a fee, and there will be plenty of those. They are in several States now. And the regular agencies—

Mr. LEISERSON (interrupting). You would not classify them that way?

Mrs. O'CONNELL. No.

Mr. LEISERSON. Do you think it would be advisable for the national employment exchange, working in conjunction with State employment exchanges, to supplant philanthropic agencies of that kind, or do you think these have a distinct function to perform aside from any National or State system?

Mrs. O'CONNELL. Well, if we could imagine a national organization or State system doing just what agencies like ours are trying to do, I don't see why we need exist. But I can not imagine their going into it as intensively as we can. That is a dream and a vision, and I don't think they will. I think it could be done, but I doubt if it will be.

Mr. LEISERSON. You think, then, no matter what kind of system is established, there will be need for philanthropic agencies to do advance intensive work which may later be taken up by those agencies?

Mrs. O'CONNELL. They should do that. I thought payment of fees—I may be wrong there—that dollar fee, when a person is sent to a place to work, that fee is too much unless it is returnable, and there is nothing in the bill that it is so.

Mr. LEISERSON. The idea was it would be returnable.

Acting Chairman GARRETSON. The commission will now take a recess until 2 p. m. in this same hall.

AFTER RECESS—2 O'CLOCK P. M.

Acting Chairman GARRETSON. The commission will be in order.

Mr. LEISERSON. I will call Mrs. Rodgers.

TESTIMONY OF MRS. HELEN W. RODGERS.

Mr. LEISERSON. Will you give your full name, please?

Mrs. RODGERS. Mrs. Helen W. Rodgers.

Mr. LEISERSON. What official position?

Mrs. RODGERS. Director of the Boston Placement Bureau.

Mr. LEISERSON. Director of the Boston Placement Bureau?

Mrs. RODGERS. Yes, sir.

Mr. LEISERSON. Will you explain what the Boston Placement Bureau is?

Mrs. RODGERS. The Boston Placement Bureau is trying to affiliate with the public schools in fitting into suitable positions young people who are just entering industrial and commercial life.

Mr. LEISENBERG. That is, you stand as the gate to industry as the boy leaves the school?

Mrs. RODGERS. We try to bridge the gap from the schoolroom into the shop—to bridge a safe passageway by which they may be taken from the school into the work which they apparently at the time seem best fitted for.

Mr. LEISENBERG. Can you tell us the machinery that you have to do it?

Mrs. RODGERS. We try to do three things—to keep just as many children as possible in the schools. Out of the total registration of 2,300 children, in round numbers, registered between June 20, 1912, and the 1st of May, this year, 577, that is, one fourth of them, were put back into school. That is the first object of the bureau—to return them to the school. It makes, of course, the name of the bureau a misnomer.

The second thing, if placement becomes necessary, is to fit the worker and the work together by knowing just as much as we can about the child, his school record, his general characteristics and special aptitudes, and by knowing as much as we can about the industry, the opportunity in which we are trying to fit him. We find out as much as we can about the building construction, light and heat conditions, chance of promotion, etc.

And the third thing, and perhaps the most important of all, is that we follow up the children who are placed with a view not only to remedying our own mistakes, inevitable mistakes of placement, but in order to help the child develop while he is at work. We are in touch with the employer, get his opinion of the child as an employee, and try to bring him in touch with our evening and continuation schools and with the evening centers, in every way developing him as a citizen as well as an employee.

Mr. LEISENBERG. Let us make the first purpose of getting the boys back into the schools, or the children—let us make that plain first. Will you tell us just why you consider that very important?

Mrs. RODGERS. We find the question of juvenile maladjustment; we feel that the children coming out of the public schools, the elementary schools, are not properly equipped. There are very few opportunities for the boys of between 14 and 15 worth while. For that reason we feel that, although they may be ambitious, we ought to lengthen the time of education. We had expected, before the bureau was organized, to do only placement work and vocational counsel—

Mr. LEISENBERG. Will you tell us what that is?

Mrs. RODGERS. We found very shortly that the vocational council were not able to spend enough time with the children to keep them up. So we very soon began to develop this plan of pushing back by averages. Sometimes it only means a conference with the parent or child; perhaps the parent wants the child to continue in school, but the child does not want to go on in the same kind of school he has been in. We take him, perhaps, into a school of mechanics, and he changes his ideas right away. It is more to his own liking. We try to encourage them and make them see it in a better light. Then we find that oftentimes employment, either during the summer vacation or during after-school hours or on Saturdays, would make it possible for the child to go back, possible financially, and because the boy himself is only half interested in school, if he has worked the other half, he is perfectly well satisfied. Then we are putting more and more stress on meeting, if we can, the real financial necessities of the families in case of bright boys. Through the Natural Relief Agency we are getting scholarships for the private individuals.

Mr. LEISENBERG. Would you think it advisable to prohibit some of the children from going into employment if your advice were not accepted—that they should go back to school?

Mrs. RODGERS. There are many children who should not, of course, go on.

Mr. LEISENBERG. Have you many cases of that kind, where you have advised children to stay in, going to school, and they insisted upon going to work?

Mrs. RODGERS. Yes, sir.

Mr. LEISENBERG. What do you do in cases of that kind?

Mrs. RODGERS. We have sometimes felt, if it is physical inability, we appeal to the physician, perhaps, or to the—in case all the family is under probation, we have been able to bring the pressure of the court to bear, but it has been only done in individual cases and through haphazard methods. We are trying not to register; we are trying to crowd back all children between 14 and 16 in school; but in Massachusetts, of course, children are allowed to work, of course.

Mr. LEISENBERG. Will you explain who supports your bureau?

Mrs. RODGERS. It is supported cooperatively by the public schools and two women's organizations. The public schools, the school committee, give us official recognition and in addition to that free rent and office room, light, heat, and janitor service, but the salaries and other expenses are paid by two women's organizations. Our budget last year was \$7,000. This year it will be twice that.

Mr. LEISERSON. What will the budget be this year?

Mrs. RODGERS. About between fourteen and fifteen thousand dollars.

Mr. LEISERSON. How many people do you have actively engaged in the work?

Mrs. RODGERS. It has fluctuated between 8 and 20. Our busy time comes the 1st of May, when we register children who can not go into high school—say they can not—and the placing is over by the 1st of August.

Mr. LEISERSON. You do not place anyone during the other period?

Mrs. RODGERS. Yes; we place all drop-outs.

Mrs. LEISERSON. You have your office in the schools?

Mrs. RODGERS. In connection with the employment certificate office of the public schools.

Mr. LEISERSON. Who issues the employment certificate—the school authorities?

Mrs. RODGERS. The school authorities, under the laws of Massachusetts.

Mr. LEISERSON. What is the second kind of work that you do?

Mrs. RODGERS. Placement. Keeping in schools and follow up.

Mr. LEISERSON. Will you tell us how you carry that on; how you get your orders; and whether you inspect the places of employment, etc.?

Mrs. RODGERS. We first work in connection with the public schools, for we are allowed the records of the children leaving the schools. We now register only those children sent to us by the public-school officials. We are allowed their scholarship records, their physical conditions, etc. And then, through the chamber of commerce, there are many applications for children. We investigate the position which is offered. We have on file about 1,200 schedules of firms, schedules which have been given to us by private organizations already investigating. Then the same person who knows the child makes a study of his school record; also goes to see his physician, and patches the two together.

Mr. LEISERSON. The person who knows the child from his school record visits the place of employment and vacancy that is open to see whether the two fit?

Mrs. RODGERS. Yes, sir.

Mr. LEISERSON. That is the practical way in which you carry on that placement business?

Mrs. RODGERS. Yes.

Mr. LEISERSON. Now, do you follow the child up afterwards?

Mrs. RODGERS. The job is followed up in three ways—three factors to the follow-up work—the parents, the child, and the employer. We place no child without the consent of the parent, and we try to get the parent's opinion as to the position, whether it is satisfactory from his point of view. We then send out inquiry blanks to the employer, asking what grade of work the child is doing; whether it is good, fair, or poor; whether the child has any habits interfering with his efficiency; and if the employer can make any suggestions in which that efficiency can be increased. Those reports form the basis of the follow-up work. As to the employer, we feared he would have little interest in filling out this report and would regard it as an imposition, but we find that they are full of suggestions that are being sent to us, as detailed as this: We see that the boy goes to night schools, takes mechanical drawing, that he improves his handwriting, and so on. Then we send for the child or the parent to come to the Noble centers; we use the public libraries and the schools, also as centers. And there we talk over the way in which the boy can make the next step forward and in which he can improve.

Mr. LEISERSON. Your idea in placing these boys is to see that they have a place where there is some advancement for them?

Mrs. RODGERS. Yes, sir; so far as possible.

Mr. LEISERSON. Some possible advancement in the future?

Mrs. RODGERS. Yes, sir.

Mr. LEISERSON. Now, with the machinery you have, are you able to take care of all the children in Boston?

Mrs. RODGERS. Indeed not. We have registered 2,300 children only during the last two years.

Mr. LEISERSON. Can you give any idea of the number of children that are attending school there?

Mrs. RODGERS. Probably 10,000 of those ages.

Mr. LEISERSON. You get something like a fifth of them?

Mrs. RODGERS. Yes, sir.

Mr. LEISERSON. You have very many more than 2,300 school children there? You do not get them all?

Mrs. RODGERS. No; that includes the registration, the 2,300.

Mr. LEISERSON. What is the reason you do not get the others?

Mrs. RODGERS. In very many cases parents have positions for the children, and are in a position to direct and guide the child, which is, of course, the normal thing. I believe the parent should be the vocational counsel and guide; so there is a large class of children that we do not get.

Mr. LEISERSON. Do you make any inquiries to find out whether those parents are putting those children in "blind-alley" employment, and other employment—

Mrs. RODGERS (interrupting). No; not so far. Now, the vocational schools are beginning to make some inquiries.

Mr. LEISERSON. You would consider it important to see that those children that do go into industries on their own account are also followed up to see that they do not go into these occupations that pay relatively high wages while they are young?

Mrs. RODGERS. Yes; but we will have continuation classes under our law, which will apply to children between 14 and 16 in Boston after the 1st of September, and they will be followed up by the school authorities.

Mr. LEISERSON. Just what would the machinery be for following them up? What sort of people would do it?

Mrs. RODGERS. Every child between 14 and 16 must attend a continuation class. The teachers of these continuation classes in Boston will spend half their time in instruction in the continuation classes and one-half of their time in following up the children in the industries in which they are engaged. The placement bureau then would do the placing and replacing, but the teachers will do the follow-up work.

Mr. LEISERSON. So that when this law is in effect, do you think all the children will be met at the time they go into industries, and will get some kind of advice to put them into the occupation they are fit for?

Mrs. RODGERS. Between 14 and 16, but not between 16 and 21.

Mr. LEISERSON. Well, what would you suggest for minors between 16 and 21? It seems that there should be some agency—

Mrs. RODGERS. That the placement bureau could step in there and furnish the supervision with the help of private organizations for the group between 16 and 21, or as long as it is necessary. Some boys get very quickly adjusted, and get into the right path and do not need supervision after 17 or 18, depending upon the individual a little, I should say.

Mr. LEISERSON. That is to say, you would need to extend your agency—the placement bureau—to follow these children up after 16?

Mrs. RODGERS. Yes, sir.

Mr. LEISERSON. You do none of that work at the present time?

Mrs. RODGERS. Yes, sir; we have a great many we follow up and report back to the schools of every child sent to us. Now we are registering with high schools. Last year we dealt with only the group of elementary children, but now this year we are registering a large number from the high schools.

Mr. LEISERSON. Can you give us any idea of the occupations that you would recommend them to go into, and the kind that you keep them out of?

Mrs. RODGERS. I would have to generalize.

Mr. LEISERSON. Can you give us any specific instances of what you have done?

Mrs. RODGERS. The children fall into three types, roughly speaking—the manual type of child, and you might say the salesman type of child, and then the clerical type. You can not prophesy the exact place in the industries for each child. We simply try to get them into the kind—the mechanical child into some mechanical industry, and the salesmanship type of child into some store, and the clerical type are handled likewise. Personally, I do not believe there is any "blind alley" job provided you can get a boy out of it before he is conscious that it is a blind alley. I do believe that patience and perseverance and courtesy and certain virtues can be brought out in even positions that apparently have no future. If the boy stays too long in them, they have no future for him. But under good, clean business that is established, I feel that he is learning something which he can use in some other position. I would not hesitate at all about putting a boy in one position with a certain type of

firm, though I knew that at the end of the year I should have to change him into some other position.

Mr. LEISELSON. Let me go a little further into that. You do not object to a boy going into what is sometimes called "blind-alley" employment, ordinarily so considered, if you have the opportunity to take him out of there before the time that he gets sick of it and begins to drift around?

Mrs. RODGERS. Yes, sir.

Mr. LEISELSON. Now, are you able to, with your placement bureau, to take that boy out of the position that he is in and put him in a more promising position?

Mrs. RODGERS. Yes; through the follow-up system. I should say the placement without the follow-up system would be pernicious. But by the follow-up system we get him out of the position when he has gotten out of it all he can, and we keep him moving on.

Mr. LEISELSON. So that if you have a properly organized juvenile placement bureau, with the follow-up system, there would not be so much danger in having children work at these "blind-alley" employments?

Mrs. RODGERS. I don't think so.

Mr. LEISELSON. Particularly if they were required to go to school——

Mrs. RODGERS (interrupting). Yes, sir.

Mr. LEISELSON. Yes; during that period?

Mrs. RODGERS. Yes; and that they were being developed constantly by business classes and also the continuation schools. Some boys have not discovered themselves at 14, and the only thing you can do for them is to put them in any kind of work that is wholesome, and then watch them develop and change them from that into something better as soon as——

Mr. LEISELSON (interrupting). What is the relation between your Boston Placement Bureau and the juvenile department conducted in connection with the Boston free employment office?

Mrs. RODGERS. We cooperate.

Mr. LEISELSON. Do they work along the same lines that you do?

Mrs. RODGERS. They ignore the cumulative evidence of the school as to the child's individual characteristics. They get no school records to work on, and they do not investigate the positions into which they send the children, and they have no follow-up system.

Mr. LEISELSON. And you would consider that a bad way of placing children?

Mrs. RODGERS. I do; because it ignores the fact that the first few years of the child's life should be directed, it seems to me, by educational forces among the community.

Mr. LEISELSON. Now, what would be accomplished by that kind of direction which is not accomplished now without such direction?

Mrs. RODGERS. Please restate your question.

Mr. LEISELSON. Just what do you do? What is the effect of that direction as it acts, now, that you do not have now?

Mrs. RODGERS. You mean in sending people to employment?

Mr. LEISELSON. No; in the office where you have the direction and follow up, what do you accomplish by that that the other offices do not accomplish?

Mrs. RODGERS. I think we eliminate—judging by statistics—we eliminate, naturally, the unemployment of the group of children, because we see that every child who is not employed is put back in school under the new law. We report to the truant officer. By various means I believe we have been able to eliminate what is called adolescent restlessness in employment. We have made an intensive study of a group of children that have been under our supervision for one year. At the end of that time 65 per cent of the children were still in their first employment. They had made no change whatever, showing that these cases had been fitted in the place and were succeeding. Then, there was 25 per cent more than that made only one change, so that 85 per cent of the children that we have supervised had made no change whatever or only one change during the year. I have made no comparative study, but I feel sure that it is a larger proportion than is shown by the unsupervised children.

Mr. LEISELSON. That was the record of placements that your bureau made?

Mrs. RODGERS. Yes, sir.

Mrs. LEISELSON. And you have not made any comparison with what children, ordinarily, under permits——

Mrs. RODGERS (interrupting). No; we have not. But we are about to make that intensive study and see.

Mr. LEISENBERG. Testimony was given here this morning that in Baltimore, in the four months, some 2,400 permits were issued, and some 1,400 changes took place in those four months.

Mrs. RODGERS. Under the present system I think that we have been able to increase the efficiency of the employer; 95 per cent of the children of that same group were satisfactory from the standpoint of the employer. Only 5 per cent have been rated as wholly unsatisfactory and have been discharged. I have just made a second study of the last employers' reports and find this year that it is a little lower; that only 4.1 per cent of the children have been rated poor, and that 95 per cent and a fraction were either doing fair, good, or excellent work.

Mr. LEISENBERG. Let's get that now. The records of your placements on the part of the children showed 65 per cent of them stick to their jobs, and that 25 per cent more made only one change in the year—

Mrs. RODGERS (interrupting). That is right.

Mr. LEISENBERG. So that shows that the boy is satisfied with the kind of work that he has gone into, and that the ordinary restlessness that comes to the adolescent is more or less eliminated. On the other side is the fact that there are only 4 or 5 per cent of the children reported poor by the employer, which shows from the employers' side that you have succeeded in placing the boy in the position that he was fit for.

Mrs. RODGERS. Yes; I don't think the 15 per cent change should always be put to the demerit of the boy, because many change in order to improve themselves. An employer wrote me the other day on the reply card that a boy who had been with him a year had gone as far as he could in that establishment, and that he would like to have us put the boy—move him one step onward and send him another boy to take that place, to be trained and ready for the next step.

Mr. LEISENBERG. Can you tell us anything about the percentage of the children that are of immigrant parents or born in the old country?

Mrs. RODGERS. Yes; I could give you the proportion. Of the 2,297 children registered up to the 1st of May of this year, 1,780 were American born and only 508 were foreign born. We are just beginning to get through our connections this year the immigrant class. We have not had them up to this time.

Mr. LEISENBERG. Do you consider that without this kind of a bureau this restlessness that children have tends to put them into the unemployable class or into the casual labor class?

Mrs. RODGERS. I should say in the future. And also at present we are finding, of course, a great problem in placing the children coming to us from the evening schools, those that have been—distinctly minors. All of this does take a great deal of machinery, to place one, first, to find out through interpreters, what the young man has been doing in his own country, and then try to fit him into an American position in which he can succeed. We are finding that he belongs to what I should call the handicapped. I think underlying the failure of the State free employment bureau to meet the needs of the juvenile, it is really the ignoring of the fact that the bringing together work and worker is a very large field with many subdivisions, and that there is, in my mind, a very great difference between the work of the ordinary employment agency and the work of what I call, for want of a better term, a "placement agency." I should say a placement agency deals with a group of workers who need to be fitted together with the work more carefully, because they are handicapped for one reason or another. That is the immigrant who represents a group of men and women who are handicapped, or even juveniles, because of their not knowing the American conditions. Then you get the group of children who are handicapped because of lack of age and experience. That is the group we handle.

Mr. LEISENBERG. Let us go into that. You have an employment office for ordinary adults, Americans or others, that can speak English and know conditions, but that is only an information bureau that tells the man where the job is and tells the employer where the man is; and then they have to make their own bargain and get together?

Mrs. RODGERS. Yes. That is, presupposing that the adult is old enough or wise enough to choose from the opportunities.

Mr. LEISENBERG. And he is told all the conditions. But aside from those there are two classes of people who are not in a position to make their own choice—also the juvenile, for whom you have to have a placement bureau, where you not only give them information but you actually place them in the job—give them the job and you follow them up.

Mrs. RODGERS. Yes.

Mr. LEISERSON. And besides that there are the others who may be called children? That is, the recently arrived immigrants who do not know anything about the conditions in the country or the community, and they also would have to get more care and protection than merely granting them information of which they would not know how to take advantage?

Mrs. RODGERS. Then they have the other group, or the physically handicapped, both children and adults, and you also get the group of men on probation and boys on parole belonging, I believe, to that handicap class, needing especial care in fitting and special care in follow up.

Mr. LEISERSON. Can you give us an idea of the ideal arrangement in a placement bureau for children? That is, what part should the school play and what part should the employment office people play, and obviously the people who place them should know something about the condition of the industry, and so on?

Mrs. RODGERS. I believe that the ideal juvenile placement bureau, or juvenile labor exchange, should be attached to the school system, that it will hold fast to the school air, because the schools have the information, the cumulative information about the child for at least seven years of his life, and that information as to physical condition, as to scholarship, as to mental make-up or the characteristics of life, should be, it seems to me, moved along, and put in the hands of the vocational counselors and secretaries, to be used for the child's benefit as he stepped into industry. Then, because the first three years of the child's life are more or less tentative and he ought to be growing all the time, it seems to me the schools should still keep their hands on the child, by follow-up work, and bringing him in touch with the evening schools and evening centers. At the same time, it seems to me that the State boards of labor and industries should be in a position to furnish us with the information about industrial conditions, because our own board of labor industries has been recently organized, and is not equipped to do that. I have had to get from various sources information about industries, using students in making investigations, but I don't believe it is ideal.

Mr. LEISERSON. The point there is that the school authorities—ordinarily the vocational counselors would not be in condition to know the exact condition of industry, and it would be necessary to connect themselves up with some authority that does know.

Mrs. RODGERS. Yes; the trained workers.

Mr. LEISERSON. Yes.

Mrs. RODGERS. Should be constantly visiting the industries and telling us about the condition; and the State boards of labor and industry, the factory inspectors, probably, are constantly gathering that, and it seems to me that should be available for practical use by the school group.

Mr. LEISERSON. Are you familiar with the organization of the juvenile labor exchange in Great Britain, say, Edinburgh?

Mrs. RODGERS. Not from personal investigation, but through reading.

Mr. LEISERSON. Do you know just how the board of trade and the school authorities work together on that?

Mrs. RODGERS. The board of trade supports, in London, 20 juvenile labor exchanges. The school officials send children leaving the schools to those labor exchanges. That is, the bureau is really attached to what would be our board of labor and industry, and not to the schools. It seems to me that is the way. In Boston, perhaps, we have the advantage, because we have held fast to the school authorities.

Mr. LEISERSON. Do the school authorities of London have any say in the management of these juvenile exchanges?

Mrs. RODGERS. I believe not; except as they are represented on the advisory board and aftercare committees.

Mr. LEISERSON. Do you know the arrangements in Edinburgh where they have both together?

Mrs. RODGERS. They—the same group. The connection is very much closer, I understand, in Edinburgh. And then it would seem to me that the opportunities for employment should come through the State free employment offices. Those positions should be used by this group of workers working with the children. We have been able, in a few instances, to get the State free employment offices to do for us what, it seems to me, would be the ideal thing—to hold up a position until the placement secretary, who knows the child, could go and look at the opportunity and even fit the child into it. But under their present systems they send a great many young people to

one position to apply, they know nothing about the child, and they have not seen the opportunity. And when we ask them to give us the position and not to send anyone else to it until we can see whether or not our boy fits in, we are asking them, of course, to make an exception in their rule, which they have been willing to do in a few cases, but will not do ordinarily.

Mr. LEISERSON. Have you done anything along the line of having boys apprenticed to learn a trade?

Mrs. RODGERS. No; we have very few opportunities for apprentices. In Boston, however, we are just getting connections now with the Fore River Shipbuilding Co. We have one or two boys there and hope to have more, and with the General Electric Co., but we have not a large number.

Mr. LEISERSON. You think, then, there is very little opportunity for children to learn trades in the regular way of being apprenticed, but that they would have to be——

Mrs. RODGERS. Between 14 and 16—very.

Mr. LEISERSON. They would have to be over 16?

Mrs. RODGERS. Yes.

Commissioner BALLARD. Do you favor making 14 the age when children are allowed to leave school, or do you prefer 16?

Mrs. RODGERS. Sixteen; provided—if I may make an exception—provided the present school systems are able to hold the attention of the children in school and give them further training. Under the present conditions in Boston, I should say no. Probably a year later, and after the continuation schools have been established, and two special schools now in the making, I might be able to say yes. But if the schools can train the children up to 16 they should, with few exceptions.

Commissioner BALLARD. Do you find that these children at 14 who leave school and for whom you found places in many cases—do any appreciable number of those children go back to school after a few months or a year?

Mrs. RODGERS. I am quite happy to say many of them are willing to return in September.

Commissioner BALLARD. Are any appreciable number disposed to do that?

Mrs. RODGERS. A small percentage—not very large, I am sorry to say.

Commissioner BALLARD. Suppose we had started continuation schools in Boston, would it be good to have those schools in buildings owned by the community, or would they, perhaps, carry the continuation school into the factory and have the continuation work done there?

Mrs. RODGERS. They are already beginning part time work in the shops and part time work in the school, the academic work that is being done, in the case of salesmanship and in the case of clerical work.

Commissioner BALLARD. It could be done in a building owned by the community, or will they attempt to have some lessons in the factory itself?

Mrs. RODGERS. So far as I know, it is still within—the academic work, within the school building, and the practical work in the shop.

Commissioner LENNOX. Mrs. Rodgers, has there been a sufficient development of the results coming from the continuation schools to warrant you in having formed any conclusion as to their effect upon the successes of the children that you placed?

Mrs. RODGERS. No; because the continuation schools, whatever were started in Boston, the teachers are in training now, with very few exceptions. There were two or three classes, but the continuation schools under the new law do not come into operation until September. As I understand, from talking with the people in Cincinnati, that continuation schools do help to discover the boys' aptitude. For instance, a boy in the messenger service might, through the continuation classes, show a great deal of ability in wordworking, and at that time, where he discovers interest, he is to be replaced.

Commissioner LENNON. I wish you could visit the Cincinnati place. They found there that boys and girls that are placed where they don't seem to belong, yet, with the benefit of the continuation school, they make good even in a place where they are not just fitted to make good.

Chairman GARRETSON. If the vocational schools, not in the sense of continuation schools at all——

Mrs. RODGERS. Yes.

Chairman GARRETSON. But if the vocational feature was embodied in all the public school systems, would it exert any influence in the development of individual preference that is, in your opinion, on the part of the scholar, that

when he comes to the period of leaving school, whether it is 14 or 16—that there has been a personal preference developed—would it have any effect?

Mrs. RODGERS. Very much. I believe that the continuation schools are going to open the way to the need of coming into the elementary schools, not waiting until the child is 14, and goes on into the industry, but they are going to result in modifying the whole school system so that during the last two or three years of the boy's life, in the elementary school, he is going to have a chance to try himself out, but now it seems to me he comes out of the school perfectly guileless. I am not talking as a school ma'am, because I am not a school ma'am, I am talking as a visitor.

Chairman GARRETSON. Have you noticed this: That the vocational school does tend to strongly develop a personal preference, and to a certain degree indicate fitness, even in the immature child?

Mrs. RODGERS. Yes. We found the boys who come out of the schools where there has been some—there have been what we call in Boston pre-vocational classes in woodwork and sheet-metal work—they come out with a handle on them that we can get hold of. I mean, a boy has an interest. He may change his interest and we may have to modify it, but he does not come out saying, "I don't care what I do, I don't know." He comes out and says, "I think I would like to work with a roofer; I would like to work with sheet metal; I would like to go into a printing establishment." Although, later, it may prove that he is not fitted to printing; at least, we have had a chance to try him out through his own preference.

Chairman GARRETSON. Does he come to the stage where he wants to be a pirate or a policeman?

Mrs. RODGERS. That is the next stage.

Chairman GARRETSON. If you are confronted with the question, from your experience, which do you believe is of the greatest value, nationally speaking, conservation of the child or of the immigrant?

Mrs. RODGERS. You say, taking out of the immigrant the child—the immigrant class?

Chairman GARRETSON. Putting the child, whether it is immigrant or native, and contrasting it with the adult immigrant?

Mrs. RODGERS. Why should one have to choose, Mr. Chairman? Why should one have to choose?

Chairman GARRETSON. Well, many people have been put to it. I simply desire your opinion as to which meant the most, if you could not handle both, which would seem the most desirable?

Mrs. RODGERS. I understand; I should be prejudiced in favor of the child if, by that you mean—

Chairman GARRETSON. Would it necessarily be prejudice?

Mr. RODGERS. I mean, if you mean by that shall we choose between getting a comprehensive system of meeting the child at the school door and helping him over into industry for the first few years of his life, every child now in the public schools, and meeting those immigrants who come to us too late to modify, perhaps. I should say it was more important for our national life to get hold of the great mass of children coming out of school between the ages of 14 and 21.

Chairman GARRETSON. Another thing, as a result of your experience in the employment of children, especially preceding and during adolescence, has your experience led you to believe that treadmill performance, deadly routine, has a more depressing effect on the child or on the adult or has it not?

Mrs. RODGERS. Yes, sir; I should say that it has. We get a great many tragedies at 18, coming into the placement bureau, or from the great factories where those boys have gone at 14 at high wages, doing mechanical work. They have done it for four years. They reached the limit of income; that is, they reached their earning capacity there, and they come out to us at 18, deadly tired of it, and not having any idea of the next step. They have been doing treadmill work. They know nothing else but that one machine. They don't know what else is going on in industry. After four years of life in industry, they are as blind as the boy of 14 as to the opportunities there are for them to do. I should say in our placement work those 18-year-old boys are coming out of industry, they are great tragedies.

Chairman GARRETSON. Labor, then, for children at this age, if it was of a character that not only did not bind them to as deadly hours and speeds as that performed by older people, and if it furnished stimulation to the brain as well

as exercise to the muscles, it would not have the same injurious effect that it has?

Mrs. RODGERS. No, sir. It would be possible for the boy to be developing all those precious four years, which he is not doing now. I know one of my secretaries, in going through a great factory, she thought she knew what entered into the making of that article, and she asked the first girl who was sitting at the bench what part of that thing she was doing with the machine, what that part played in the completed article. The girl didn't know. The secretary went on down the line, not a girl knew what she was really making and several of them had been working three or four years at that occupation.

Chairman GARRETSON. She got to the stage where she didn't really care?

Mrs. RODGERS. She didn't know; nobody had told her.

Commissioner O'CONNELL. You have the 16-year-old limit in Massachusetts, haven't you?

Mrs. RODGERS. No, sir. Children between 14 and 16 are allowed to work eight hours a day only in factories.

Commissioner O'CONNELL. There is an effort now being made in Massachusetts to decrease it to 14?

Mrs. RODGERS. Last year there was an effort made, but it failed. I don't know how the present law will succeed.

Commissioner O'CONNELL. Have you any associations with the employers in any way, in connection with them, in getting children work in factories?

Mrs. RODGERS. If I may answer your question in a roundabout way, the board of directors is made up of representatives of the school committee, the chamber of commerce, because they represent the most progressive organization in industry in the city, one member of each, financing the experiment, and one teaching in the Boston schools. Through the interest of the member of the chamber of commerce, we have been investigated and indorsed, and we are constantly advertising through the publication, the weekly publication of the chamber of commerce. Then we also are in touch with the employment managers' association, a new organization. One of the members of my staff has been elected a regular member of that, and comes in contact with employment managers. Employment is found through advertisements and circularizing the chamber of commerce members.

Mr. LEISERSON. That is all, Mrs. Rogers.

Chairman GARRETSON. Call your next.

Mr. LEISERSON. I will call Mr. Cleland.

TESTIMONY OF MR. ALEXANDER CLELAND.

Mr. LEISERSON. What is your name, please?

Mr. CLELAND. Alexander Cleland.

Mr. LEISERSON. And what is your position?

Mr. CLELAND. Secretary of the joint committee on prison reform.

Mr. LEISERSON. How long have you been in this work?

Mr. CLELAND. Just one month.

Mr. LEISERSON. Prior to that time you were secretary of what?

Mr. CLELAND. Of the State Commission of Immigration of New Jersey.

Mr. LEISERSON. You were secretary of the State Commission of Immigration in New Jersey?

Mr. CLELAND. Yes, sir.

Mr. LEISERSON. How long did you work in that capacity?

Mr. CLELAND. Two years.

Mr. LEISERSON. Prior to that what was your experience?

Mr. CLELAND. I was chief investigator for the North American Civic League for Immigrants.

Mr. LEISERSON. Prior to that?

Mr. CLELAND. With the State, New York, Commission of Immigration, chief investigator.

Mr. LEISERSON. And your main interest in the immigration work was what?

Mr. CLELAND. The protection of immigrants; looking out for the welfare; finding out the best method of protection for immigrants; providing industrial and educational opportunities.

Mr. LEISERSON. While you were employed by the New Jersey Immigration Commission did you make an investigation of private employment agencies?

Mr. CLELAND. Yes, sir. We investigated 184, I think. There are over 200 in the State of New Jersey.

Mr. LEISERSON. You investigated 184 of them?

Mr. CLELAND. Yes.

Mr. LEISERSON. Can you tell us as a result of your actual experience, whether any employment agencies are necessary?

Mr. CLELAND. Yes, sir; I think we have got to have some information center.

Mr. LEISERSON. Will you give us just the reason? What is it that an employment agency accomplishes that makes them necessary?

Mr. CLELAND. They save the time of the man from wandering from factory to factory. They localize the source of information.

Mr. LEISERSON. Is that an element at all in the problem of unemployment? Does it eliminate any part of the unemployment at all, in your opinion?

Mr. CLELAND. Yes, sir; I think it does.

Mr. LEISERSON. A large part or a small part?

Mr. CLELAND. Quite a considerable part.

Mr. LEISERSON. You think a large part of unemployment is caused by men failing to connect?

Mr. CLELAND. Not a large part. I should say a considerable part.

Mr. LEISERSON. A considerable part of unemployment is caused by mere maladjustment?

Mr. CLELAND. Yes, sir.

Mr. LEISERSON. Of the man and the job not meeting?

Mr. CLELAND. Yes, sir; I think that is true.

Mr. LEISERSON. Can you tell us as a result of your investigation of the private employment agencies, do they perform those services? Do they do it well or badly, or how?

Mr. CLELAND. In my judgment, they do not perform the service at all. In very few cases they do perform the service. They are simply there to collect the fees and make a living. Finding employment or getting information is a secondary consideration.

Mr. LEISERSON. Can you give any examples or give any reason for your statement?

Mr. CLELAND. Well, in the first place, the ordinary employment agency in New Jersey violates in every particular, practically, the State laws governing the regulation of employment agencies. They fail to keep books; they fail to keep any record of the number of applications; fail to keep a record of the people who have been sent out to jobs; and fail to obey the State law in having a proper place to receive their applicants for positions. When you go into a private employment agency and try to get any information when a case of complaint comes to you, it is practically impossible in the majority of cases in New Jersey, because of the fact they keep no records. You have no idea—we have had many complaints of men claiming to have been exploited, and in going to the agency it was impossible to find that the man had ever been in the agency. The State law expressly says that the agency shall keep a record.

Mr. LEISERSON. Why is the law not enforced?

Mr. CLELAND. It is a State law and empowers the municipality to collect the license fee and see that it is obeyed. Only 15 of the municipalities enforce the license fee, or regulation, and in most of those 15 it was merely for the sake of collecting the license fee and not for the real purpose of regulating properly the agency.

Mr. LEISERSON. Do you have many cases of complaints against private agencies—private employment agencies—which you could not verify because there were no records?

Mr. CLELAND. Yes, sir; we had quite a number. And, furthermore, we went around to the agencies and investigated in every case as to whether they kept agency records or not, and we found that in a very, very small percentage such records were kept. Sometimes they were kept on pieces of scrap paper.

Mr. LEISERSON. Can you give us an idea of the character of complaints against the agencies?

Mr. CLELAND. Largely exploitation; taking fees, telling the applicant to come back after a certain period, and then failing to find employment or to return the money.

Mr. LEISERSON. Those were the complaints, in the main?

Mr. CLELAND. Yes, sir. The moral conditions in a good many agencies were deplorable.

Mr. LEISERSON. Some were?

Mr. CLELAND. Yes, sir; some for the immigrant women.

Mr. LEISERSON. What investigation did your commission make?

Mr. CLELAND. We recommended a State bureau employment agency—public employment agency—on the lines of the Wisconsin agencies.

Mr. LEISERSON. Do you think that it would be possible to eliminate those abuses of which complaints were made to you by any system of strict regulation of the agencies?

Mr. CLELAND. Absolutely. The moment you begin to strictly enforce the law I should say that 50 per cent of the agencies in New Jersey would be out of business. That is because they have not the proper equipment to live up to a decent law.

Mr. LEISERSON. Then your idea in regard to private employment agencies might be stated in this way: In the first place, they do not perform the service of bringing the man and the job together well. There are very many abuses, and if you try to enforce the laws the greater part of them would be put out of business, so there would be practically no attempt made to bring the man and the job together?

Mr. CLELAND. I think that is so.

Mr. LEISERSON. Do you think it would be possible for a good many men to run honestly a private employment agency?

Mr. CLELAND. Well, to answer that, there are probably about 28 employment agencies in Jersey City. I believe, under very strict enforcement of the law, probably only about a half a dozen would survive, and those men might make some money, but their power to really connect up the man with the job is very limited.

Mr. LEISERSON. That is what I wanted to know. Assuming you had a very strict enforcement of the law, would those that remain be able to perform this service, to remove this considerable amount of unemployment that you speak of, due to the inability of the men and the jobs to meet?

Mr. CLELAND. It might meet a local situation.

Mr. LEISERSON. So that, as a result of your experience, you would say that the private employment agency, whether strictly regulated or not, can not meet the situation?

Mr. CLELAND. I do not believe they can.

Mr. LEISERSON. Did you make any investigation of public agencies—those that are not operated primarily for profit, say, the Y. M. C. A.'s, or something like the national employment exchange?

Mr. CLELAND. We have nothing of that kind practically in New Jersey. There are so few of them.

Mr. LEISERSON. Didn't you have some experience yourself in connection with an employment exchange of the Y. M. C. A. in Chicago?

Mr. CLELAND. Yes, sir; I was four years employment superintendent there.

Mr. LEISERSON. Can you give us your opinion as whether it would be possible for a philanthropic agency of that kind to meet the situation?

Mr. CLELAND. No, sir; I don't think it would. In the first place, when I was in Chicago in charge of the agency the first thing put up to me was the fact that I had to make my own expenses, and in making my own expenses, with a limited number of applicants, it was practically impossible, and unless a philanthropic agency was very well subsidized I do not believe it could do the job. Furthermore, it would not have the source of information that a State department would have. There are a great many things that you will find out in operating an employment agency—that a philanthropic agency would not be in position to get the information that a State or Federal employment agency would get.

Mr. LEISERSON. Then if a philanthropic organization charges any kind of a fee, so that it might not be considered charity, do you think the charging of the fee interferes with the bringing of the applicant there for performing the service?

Mr. CLELAND. Yes; I have found this very often in Chicago in dealing with a number of young men. We dealt largely with young men. A young man would come in and we would tell him that we had a position and that he fitted it, but he failed to have the \$2 or \$3 necessary to pay the fee, and up against the fact that I had to make the expenses of that bureau I was forced to give the job to the man who was financially well equipped, but the other one had no money, and I was compelled to turn him down.

Mr. LEISERSON. Was it the conclusion of your commission that philanthropic agencies could not be depended upon to meet the situation?

Mr. CLELAND. That was our conclusion.

Mr. LEISERSON. Did you make any investigation as to employment agencies conducted by employers' associations?

Mr. CLELAND. I don't know of any in New Jersey. A great many of the men who find positions in New Jersey find them either in Philadelphia or in New York, and a good many of the agencies, at least several of the agencies that have been driven out of New York, have gone over to Hoboken, but there is no centralized authority in New Jersey where a man can secure any information. For instance, if he wants to find a job about a farming house very often he has to go over to the Federal bureau in New York, and then he is sent to southern New Jersey. He works two or three months and has to come back to New York to get information, and then he is probably sent back to New Jersey within 2 or 3 miles of where he previously left. If he works in southern New Jersey, he has got to go to Philadelphia for his information. If he works within 20 miles of New York, he will usually come here.

Mr. LEISERSON. Have you ever had any experience at all with employment offices conducted by employers' associations?

Mr. CLELAND. No, sir.

Mr. LEISERSON. Would you think it advisable to leave this function of bringing the man and the job together in the hands of employers' associations?

Mr. CLELAND. I would not.

Mr. LEISERSON. Why not?

Mr. CLELAND. I think the employer is a very interested person. I think if a man was to depend entirely on the employer for his information he would get the kind of information the employer wanted to give him. I am not saying the employers might not treat their men fairly, but there are employers who do not. I think the function ought to be either State or Federal.

Mr. LEISERSON. Would you, on the other hand, leave the function in the hands of the labor unions?

Mr. CLELAND. No, sir; I do not think I would.

Mr. LEISERSON. On the ground that they, too, are interested on one side?

Mr. CLELAND. Yes, sir. I think their vision is limited by their own job.

Mr. LEISERSON. Therefore the conclusion of your committee was that this is a State function in which all parties—employers and employees, and the public in general, consumers, foreigners—would have an equal influence in the conduct of the agency?

Mr. CLELAND. Yes, sir; I think they ought to. I go further than merely a State agency, because we found that even if we had State agencies there were forms of exploitation that State agencies could not eradicate. In cases exploited from Pennsylvania or New York and your State Department could not do much effective work unless he secured the cooperation of the Pennsylvania people on this side.

Mr. LEISERSON. In the course of your investigation have you run across any cases of collusion between an employment agent and the foreman and the boss that was hiring the men?

Mr. CLELAND. We have found a good many complaints, but found it very difficult to get the facts, mostly for the reason that the complaints were made by foreigners, and that while you were making the investigation they disappeared and go to another job. They did not hang around and wait until the complaint was investigated.

Mr. LEISERSON. Have you had many of that kind?

Mr. CLELAND. Quite a number.

Mr. LEISERSON. Where it was impossible to verify?

Mr. CLELAND. Yes, sir.

Mr. LEISERSON. Did you go through the plan of the commission for a national system?

Mr. CLELAND. Yes, sir. I have looked it over.

Mr. LEISERSON. Have you any criticisms or suggestions to make on it?

Mr. CLELAND. No, sir; I think the plan, so far as I have studied it, is a workable plan, and would be of great advantage to a man who is looking for a job. I think the bill is very well drawn.

Mr. LEISERSON. Did your commission make any investigation into conditions in places where men are sent from the employment agencies?

Mr. CLELAND. No, sir.

Mr. LEISERSON. You made no investigations of labor camps?

Mr. CLELAND. No, sir. At the present moment there are no labor camps to any extent in New Jersey.

Mr. LEISERSON. There are no industries of that kind in New Jersey that employ a large number of men and bunk them in railroad cars or barracks of any kind?

Mr. CLELAND. There is only one camp that I know of in New Jersey.

Mr. LEISERSON. Did you make an investigation of that?

Mr. CLELAND. Yes, sir.

Mr. LEISERSON. Can you tell us what you found?

Mr. CLELAND. Well, it was the usual bunk house there.

Mr. LEISERSON. Tell us what the usual bunk house is. We want to know about it.

Mr. CLELAND. Well, there were large sheds.

Mr. LEISERSON. What is the industry, and where was it?

Commissioner O'CONNELL. There is a difference of opinion whether they should have sheets.

Mr. CLELAND. It was on the Pennsylvania Railroad.

Mr. LEISERSON. Pennsylvania Railroad.

Mr. CLELAND. Yes, sir. Rahway.

Mr. LEISERSON. Railway cars?

Mr. CLELAND. No, sir; buildings especially built for the construction company when the job was going on.

Mr. LEISERSON. About how many men employed?

Mr. CLELAND. About 150 when I was there. I understand more since.

Mr. LEISERSON. Can you remember about the size of the place they were bunked in?

Mr. CLELAND. I think they were 24 by 18.

Mr. LEISERSON. One hundred and fifty men there?

Mr. CLELAND. Oh, there were several. I don't recall how many places there were, but the conditions were exceptionally good for a construction camp.

Mr. LEISERSON. Will you describe what you consider exceptionally good conditions? Did they have beds or bunks or bedding?

Mr. CLELAND. Each man supplied his own bedding.

Mr. LEISERSON. The man had to supply his own bedding?

Mr. CLELAND. Yes, sir. He supplied his mattresses, and so on, clothes, as I recall it.

Mr. LEISERSON. Was that two or three high?

Mr. CLELAND. Two, as I remember it.

Mr. LEISERSON. Two men in a bunk?

Mr. CLELAND. One man in a bunk.

Mr. LEISERSON. One man in a bunk?

Mr. CLELAND. Yes, sir. At the time we made the investigation of that camp it is hardly fair to go into extended talk on that, because it was a new camp at the time that we went there, and a place that probably later on would hold 12 or 14 men only 3 or 4 were in.

Mr. LEISERSON. We want to know what accommodations were furnished in the beginning; we want to know the good conditions as well as the bad. Have you any idea of the amount of air space that was given to each individual?

Mr. CLELAND. No, sir; I have not.

Mr. LEISERSON. There are no regulations in the State of New Jersey applying to camp conditions at all?

Mr. CLELAND. The State board of health has the power to enforce the proper sanitary laws. I don't know whether they are specific or not.

Mr. LEISERSON. Have you had in any other capacity dealings with men who generally board in camps?

Mr. CLELAND. No, sir.

Mr. LEISERSON. You have made no investigation of that?

Mr. CLELAND. No investigation; no, sir.

Mr. LEISERSON. That is all I have.

Commissioner O'CONNELL. You say that in the New Jersey investigation it was shown that the moral conditions were very bad?

Mr. CLELAND. Yes, sir.

Commissioner O'CONNELL. Do you mean that those offices were being used for white-slave purposes?

Mr. CLELAND. No, sir; but our investigators found that in asking if they could obtain services they could get the employment agency to furnish what were disorderly houses they were able to get women for that purpose, and our own investigators have been given the addresses to find employment in places that were assignation houses. In 19 out of 29 we found that it was possible to talk

to them about hiring servants for an alleged disorderly house. In one place we took 4 women out, and we gave the employment agent 18 months in a penitentiary.

Commissioner O'CONNELL. You found only the one case?

Mr. CLELAND. Yes, sir; because we were not a prosecuting body and had no funds. The State of New Jersey failed to appropriate any money for the commission of immigration, and the work was carried on as we got the money.

Commissioner O'CONNELL. Was there no other means of prosecuting them in the State?

Mr. CLELAND. Yes, sir; but we were a body to investigate, and we turned over a good deal of our stuff to the local authorities.

Commissioner O'CONNELL. Is it your opinion that that situation would follow pretty generally in the employment agencies throughout the country?

Mr. CLELAND. Throughout the country?

Commissioner O'CONNELL. Yes.

Mr. CLELAND. I don't know as to that. I would hesitate to make a statement unless I had thoroughly gone into it.

Commissioner O'CONNELL. You say when you were acting for the Young Men's Christian Association in Chicago the arrangement was that your expenses were to come out of the money that was secured from employment?

Mr. CLELAND. Yes, sir.

Commissioner O'CONNELL. If you had built up the business enough to make it pay profits, would you have got all the profit?

Mr. CLELAND. No, sir. After salaries and expenses were paid anything additional went to the association, to the general fund.

Commissioner GARRETSON. Are there any questions?

Commissioner LENNON. I want to ask one question. Perhaps it is not just pertinent, either. I understand you are connected with some prison-reform association at the present time?

Mr. CLELAND. Yes, sir.

Commissioner LENNON. Have you given any consideration to the matter of securing employment for convicts when their term expires?

Mr. CLELAND. No, sir.

Commissioner LENNON. Not at all?

Mr. CLELAND. No, sir. I have only been a month on the job.

Commissioner LENNON. That is all.

Commissioner GARRETSON. That is all I have.

Mr. LEISERSON. I will call Mr. March.

TESTIMONY OF MR. JAMES E. MARCH.

Mr. LEISERSON. Will you state your name, please?

Mr. MARCH. James E. March.

Mr. LEISERSON. Will you state your business, please?

Mr. MARCH. I am in the real estate business now?

Mr. LEISERSON. How long have you been in that business?

Mr. MARCH. Five or six years.

Mr. LEISERSON. Prior to that time you were in what business?

Mr. MARCH. I furnished the men for the Erie Railroad.

Mr. LEISERSON. You furnished the men for the Erie Railroad?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. You were in the employment business?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. You have not been connected——

Mr. MARCH. My brother runs it now.

Mr. LEISERSON. You turned it over to your brother?

Mr. MARCH. Yes, sir; but I am responsible for everything that goes on there.

Mr. LEISERSON. You are still connected with that business?

Mr. MARCH. Yes.

Mr. LEISERSON. In connection with your employment business, do you also have a commissary business?

Mr. MARCH. On the road; yes.

Mr. LEISERSON. On the road?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Will you explain to us how your employment business is run with the Erie? Do you have a contract with the railroad to furnish the men?

Mr. MARCH. I have been there about 28 years, and we established stores for the convenience of the men.

Mr. LEISERSON. Before you came to the commissary department, let us talk about the furnishing of the men. Do you have a contract with the Erie Railroad by which you supply the men?

Mr. MARCH. No, sir; not exactly a contract. We never drew up any contract.

Mr. LEISERSON. How do you mean, then, that you supplied them, when you say you supplied for the Erie Railroad?

Mr. MARCH. I went on the road as an usher first; then I went as train starter, conductor; then the time came when they used a great deal of labor, and they put me in charge and allowed me to put in a commissary, but I never had any written contract.

Mr. LEISERSON. The Erie Railroad asked you to supply them with men?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Do you have that privilege exclusively?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. No one else?

Mr. MARCH. Oh, well, there are four or five of us.

Mr. LEISERSON. There are some others?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Do you have to pay for the privilege?

Mr. MARCH. No, sir.

Mr. LEISERSON. Was there anything paid to you for supplying the men by the company?

Mr. MARCH. No, sir.

Mr. LEISERSON. You charged the men how much for the fees?

Mr. MARCH. According to the law 10 per cent of the first month's salary.

Mr. LEISERSON. What was the salary?

Mr. MARCH. Sometimes \$1.25, sometimes \$1.50, \$1.60.

Mr. LEISERSON. A day?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. You charged them 10 per cent of the first month's salary?

Mr. MARCH. Yes, sir. I do not charge always the full amount, and sometimes do not charge them any.

Mr. LEISERSON. You are permitted to charge up to 10 per cent?

Mr. MARCH. Yes, sir. According to the law.

Mr. LEISERSON. About how many do you supply a year?

Mr. MARCH. Of course there are times when we never charge anything, any money at all. Many times. Men go there and work for years; when they go a second time we never take a second fee, never make a second charge. Work for 25 years.

Mr. LEISERSON. What kind of men do you supply? Track laborers?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. If you send a man to work on the track, say this year——

Mr. MARCH. Yes, sir.

Mr. LEISERSON. And he works there three or four months——

Mr. MARCH. Yes, sir.

Mr. LEISERSON. And the gang breaks up and he comes back to the city and he comes back to your office again, two or three months later, if he goes out on the Erie Railroad, you do not charge him again?

Mr. MARCH. If he is an old man, yes, sir; I do not.

Mr. LEISERSON. You never charge a second fee?

Mr. MARCH. No, sir. Never charge a second fee.

Mr. LEISERSON. So that it is customary among employment agencies?

Mr. MARCH. Well, I do it. Especially the old men. We are glad to get them.

Mr. LEISERSON. How many are there of those old men?

Mr. MARCH. Maybe an average of one thousand or two a year?

Mr. LEISERSON. Do you keep a record of all your old men?

Mr. MARCH. I do not keep a record, but I know them pretty well.

Mr. LEISERSON. You would be able to tell 1,000 of them, or 2,000 men who have worked on the Erie road within the last year?

Mr. MARCH. I have a good memory.

Mr. LEISERSON. Suppose you had a matter of dispute, and a man came and said, "I have been on the Erie Railroad last year."

Mr. MARCH. I keep a record.

Mr. LEISERSON. You never charge them a second time? If he came the second year?

Mr. MARCH. I would not say that.

Mr. LEISERSON. How about it?

Mr. MARCH. We never charge a man if he left his work and came back within a week or 10 days or a month. I never charge him. If he comes back in a year or so, then he is a new man, but I do not charge him as much as I do the new man. We always charge him much less, and some of them we do not charge anything.

Mr. LEISERSON. This railroad does not pay you anything?

Mr. MARCH. No, sir; not a penny.

Mr. LEISERSON. About how many do you supply a year?

Mr. MARCH. May be 1,500 to 1,800.

Mr. LEISERSON. Does your brother do that now?

Mr. MARCH. Not for the last eight or nine months. About 200, I guess.

Mr. LEISERSON. Ordinarily about 1,500 or 1,800 a year?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Do you also supply other railroads?

Mr. MARCH. No, sir.

Mr. LEISERSON. You do this exclusively?

Mr. MARCH. Yes.

Mr. LEISERSON. How many of you are there there? You and your brother?

Mr. MARCH. Yes.

Mr. LEISERSON. Do you have clerks?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. How many?

Mr. MARCH. Five or six.

Mr. LEISERSON. Any others?

Mr. MARCH. About 10 inspectors.

Mr. LEISERSON. Inspectors?

Mr. MARCH. Yes, sir. Go up and down the road and look out for the welfare of the men.

Mr. LEISERSON. Those men go out on the railroads. Do they board themselves?

Mr. MARCH. Those that can board themselves, all right; but those that can not, we have to put a commissary store in.

Mr. LEISERSON. What nationality are they mostly?

Mr. MARCH. Well, for the last two or three years it has been almost half Americans, easily half Americans.

Mr. LEISERSON. About half of them are Americans?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Do the Americans board themselves?

Mr. MARCH. No, sir.

Mr. LEISERSON. They do not?

Mr. MARCH. It is hard to get them started. You have to feed them before they go.

Mr. LEISERSON. Are they the regular type of American hobo? White men?

Mr. MARCH. No, sir; there are some intelligent fellows among them.

Mr. LEISERSON. You do not mean to say the American hobo is not intelligent?

Mr. MARCH. What I mean is that you might find 10 per cent or 5 per cent of the fellows don't want to work, but I call those fellows hoboes because they go out for a ride.

Mr. LEISERSON. The only point I want to make is the general term for those men who regularly work on the railroad.

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Those known as hoboes in the West?

Mr. MARCH. No; not all of that type.

Mr. LEISERSON. The white men do not board themselves? How are they boarded?

Mr. MARCH. By the commissary department of the store.

Mr. LEISERSON. What does the commissary consist of? What do you do when you say you establish a commissary?

Mr. MARCH. Whatever they need, such as corned beef, roast beef, or anything I can can.

Mr. LEISERSON. How about sleeping quarters?

Mr. MARCH. Some places we have houses and some places we put them in cars with iron bunks.

- Mr. LEISERSON. Iron bunks?
- Mr. MARCH. Yes, sir.
- Mr. LEISERSON. And the houses have iron bunks?
- Mr. MARCH. Not all. We make them buy cots where we can.
- Mr. LEISERSON. You make the men buy cots?
- Mr. MARCH. Yes.
- Mr. LEISERSON. Does the company supply the cars—the bunk cars?
- Mr. MARCH. Yes, sir.
- Mr. LEISERSON. Does it supply the bunk houses?
- Mr. MARCH. No, sir; I build them myself.
- Mr. LEISERSON. You have to build houses for them yourself?
- Mr. MARCH. Yes, sir.
- Mr. LEISERSON. But the cars would be furnished by the company?
- Mr. MARCH. I put the bunk cars in myself.
- Mr. LEISERSON. Would you have to pay the company for the cars?
- Mr. MARCH. No, sir.
- Mr. LEISERSON. So you have three cars—now the bunks—or do you charge the men for sleeping?
- Mr. MARCH. A dollar, and we give them oil, a stove and a lamp free.
- Mr. LEISERSON. Also feed them?
- Mr. MARCH. Whatever they want to buy.
- Mr. LEISERSON. You don't have so much per week?
- Mr. MARCH. No, sir; whatever they get.
- Mr. LEISERSON. Who does the cooking?
- Mr. MARCH. They do it themselves.
- Mr. LEISERSON. Are the arrangements in the bunk houses?
- Mr. MARCH. The stoves; yes.
- Mr. LEISERSON. Or do they cook outside?
- Mr. MARCH. In the summer time they cook outside.
- Mr. LEISERSON. You have no regular cook employed for them?
- Mr. MARCH. No, sir.
- Mr. LEISERSON. Now, you have \$1 a month for bunking?
- Mr. MARCH. Yes, sir.
- Mr. LEISERSON. Have you any idea about what it costs the men on an average to board?
- Mr. MARCH. Whatever they buy. Some pay \$5 a month and some pay \$6. The American, of course, is a little higher; but most of them pay about \$5 or \$6. But, of course, they buy outside. I can not stop them—but they go to any of the other grocery stores, too, and if they want fresh meat or anything like that—
- Mr. LEISERSON. That is, if there is a store in the neighborhood?
- Mr. MARCH. Yes, sir.
- Mr. LEISERSON. Ordinarily they would have to depend upon you?
- Mr. MARCH. Yes.
- Mr. LEISERSON. Can you give us an idea of the prices that you charge as compared—
- Mr. MARCH (interrupting). Yes, sir; I couldn't give you that according to the price list.
- Mr. LEISERSON. Can you furnish the commission with a copy of the price list?
- Mr. MARCH. I will send them a price list.
- (Mr. March later submitted a price list which is printed as an exhibit.)
- Mr. LEISERSON. And you will address it to the commission?
- Mr. MARCH. Yes, sir; I will. There is another thing I want to state. I never allow liquor in any of those places.
- Mr. LEISERSON. Liquor is prohibited?
- Mr. MARCH. Yes, sir.
- Mr. LEISERSON. Any religious services?
- Mr. MARCH. Why, where they can go to church, they go. Some places they have to walk 3, 4, or 5 miles, you know.
- Mr. LEISERSON. Now, what other charges do you have besides the bunking and the commissary?
- Mr. MARCH. Nothing else.
- Mr. LEISERSON. Hospital fees?
- Mr. MARCH. No, sir; I never went into that.
- Mr. LEISERSON. Do you supply towels for the men?
- Mr. MARCH. No, sir.
- Mr. LEISERSON. Or soap?

Mr. MARCH. No, sir.

Mr. LEISENBERG. They have to buy it?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. Or if they feel the need of a towel they come to you?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. What do you give in the bed or bunk? What do you furnish it with?

Mr. MARCH. In the bunks—mattresses.

Mr. LEISENBERG. Mattresses?

Mr. MARCH. Some of them, and some of them they prefer to fill their own mattress, and buy the straw.

Mr. LEISENBERG. And you sell them the straw?

Mr. MARCH. Why, I let them buy it wherever they can themselves.

Mr. LEISENBERG. Yes; but ordinarily you are out on the road—

Mr. MARCH. Whenever they can not get it, I furnish it; yes, sir.

Mr. LEISENBERG. And you sell them the straw. But in the ordinary camp you have a mattress?

Mr. MARCH. Yes.

Mr. LEISENBERG. It is all sewed up?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. Do they use that year after year?

Mr. MARCH. No; I guess not.

Mr. LEISENBERG. What provision have you for cleaning the mattresses?

Mr. MARCH. Well, we have a man, the storekeeper—he is supposed to have them get the things out and clean them out every Sunday. That is the rule—they have got to clean their quarters and all the bunks must be cleaned every Sunday.

Mr. LEISENBERG. What provision do you have for seeing that the rule is enforced?

Mr. MARCH. The man in charge, the storekeeper.

Mr. LEISENBERG. Does he take all of them out?

Mr. MARCH. Oh, no; the men on Sunday.

Mr. LEISENBERG. The men have to do it themselves?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. Has he any power to force them to do it?

Mr. MARCH. Why, he does the best he can. They do it for their own convenience.

Mr. LEISENBERG. But ordinarily they do not feel inclined to do that?

Mr. MARCH. Well, they generally do it; in the last five or six years, especially where—take all the places where I have had to build those houses, with all the improvements, with running water, and necessities in the house. Make them do it. And my brother makes the men do it all over the line; and if they don't, we scare them once, and if they don't do it then, why, we fine them.

Mr. LEISENBERG. What do you charge in those houses? What do you charge the men?

Mr. MARCH. Same thing.

Mr. LEISENBERG. \$1 a month.

Mr. MARCH. Yes. There are some houses where those improvements are going in that we charge \$1.50.

Mr. LEISENBERG. What is that?

Mr. MARCH. The houses where we are putting the improvements in that the board of health wishes put in.

Mr. LEISENBERG. What do you consider improvements?

Mr. MARCH. Toilets, and so on.

Mr. LEISENBERG. The others don't have any provisions for toilets?

Mr. MARCH. Some places don't have any; it is impossible.

Mr. LEISENBERG. Don't you dig any vaults?

Mr. MARCH. Oh, yes; we dig those cesspools like you know. But in those houses we are putting up, places here. We have got to build them up to date.

Mr. LEISENBERG. Are all your camps in the State of New York?

Mr. MARCH. Not all of them; no.

Mr. LEISENBERG. Is there any authority over you that expects you to find if the camps are in a sanitary condition?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. Who is it? The board of health?

Mr. MARCH. Yes—wherever we may be.

Mr. LEISENBERG. The State board of health or—

Mr. MARCH. The board of health—take Garfield, the board of health of that town. They come after you.

Mr. LEISERSON. Locally?

Mr. MARCH. Yes, sir; and you have got to put up houses. You have got to go to the department, the same as New York.

Mr. LEISERSON. What else do you have besides mattresses in each bunk?

Mr. MARCH. We don't have anything.

Mr. LEISERSON. Do the men have to get their own blankets?

Mr. MARCH. Yes.

Mr. LEISERSON. Have to pay for them?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Now, if I were a hobo without any bedclothing, and I came into your office to-day——

Mr. MARCH. Yes.

Mr. LEISERSON. And if you had work on the Erie Railroad I would be offered how much a day?

Mr. MARCH. Well, now we are only paying \$1.25.

Mr. LEISERSON. I would be offered only \$1.25 a day?

Mr. MARCH. Yes, sir; that is all the pay.

Mr. LEISERSON. How many hours a day?

Mr. MARCH. Ten hours.

Mr. LEISERSON. In order to get work I would have to pay your fee?

Mr. MARCH. You don't have to pay anything until pay day.

Mr. LEISERSON. But, I mean, after I got the job, I would have to pay you one or two, or how many dollars?

Mr. MARCH. \$2.

Mr. LEISERSON. Out of that \$1.25 a day.

Mr. MARCH. Yes.

Mr. LEISERSON. It would be \$45 a month?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. No; \$40.

Mr. MARCH. About.

Chairman GARRETSON. How do you make it, when there are \$26 days in the month, at \$1.25?

Mr. MARCH. Well, they work Sundays, too.

Chairman GARRETSON. How do they clean the bunk houses, then?

Mr. MARCH. I don't say they work every Sunday.

Commissioner GARRETSON. Just in February.

Mr. MARCH. Oh, they make extra time, too.

Mr. LEISERSON. The average wage would be about \$35.

Mr. MARCH. Thirty-five; well, it would be more than that. They work extra time. They are paid so much an hour—12½ cents, and some days they may work 11 hours.

Mr. LEISERSON. That would be from \$35 to \$40 a month?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Out of that he pays you \$2 for a fee?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Then he has got to pay a dollar a month for his bunk?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. Does he have to buy the mattress?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. What does he pay for the mattress?

Mr. MARCH. Well, just whatever they cost me.

Mr. LEISERSON. Well, how much?

Mr. MARCH. About \$1

Mr. LEISERSON. Why do you say just as much as they cost you?

Mr. MARCH. Because we don't make anything on the mattresses.

Mr. LEISERSON. You don't make anything on the mattresses?

Mr. MARCH. No, sir; I do not.

Mr. LEISERSON. Any of them buy blankets?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. How many?

Mr. MARCH. Well, they buy one; it is a double blanket.

Mr. LEISERSON. How much is that?

Mr. MARCH. About \$1.75; double blanket.

Mr. LEISERSON. Anythink else that they ordinarily have to buy?

Mr. MARCH. I only tell the truth about it. Whatever it is necessary that they want to buy. Because the less they buy the less trouble I have; but whatever they want, if they want a pair of boots or shoes, they order them; that is, after working a month or so they buy whatever they like. I don't restrict them.

Mr. LEISENBERG. Do they have to pay their railroad fare up to the job?

Mr. MARCH. No, sir.

Mr. LEISENBERG. Isn't that ever done?

Mr. MARCH. No, sir.

Mr. LEISENBERG. What becomes, after the man quits his job, of those blankets?

Mr. MARCH. I think they take them with them.

Mr. LEISENBERG. Ordinarily he takes them with him?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. Do many people come into your office with blankets—mattresses?

Mr. MARCH. Plenty of them.

Mr. LEISENBERG. They carry them around?

Mr. MARCH. Yes, sir; plenty of them.

Mr. LEISENBERG. Have you any idea of the frequency with which the men quit? Take your ordinary camp. About how many men would you have there?

Mr. MARCH. Well, some 10 and some—

Mr. LEISENBERG. Take your biggest camp; how many do you have there?

Mr. MARCH. About 25 or 30.

Mr. LEISENBERG. Ordinarily how many men do you send up there every week in order to keep going?

Mr. MARCH. I wouldn't send any, unless somebody leaves.

Mr. LEISENBERG. How often do they quit?

Mr. MARCH. Whenever they get paid.

Mr. LEISENBERG. Every pay day ordinarily there are empties, and you have to ship up another gang?

Mr. MARCH. Yes, sir.

Mr. LEISENBERG. What I wanted to know is when a man works one month and gets his pay—

Mr. MARCH. Yes.

Mr. LEISENBERG. And comes to the city and blows it in and comes back for another job. I want to know whether you charge him another fee?

Mr. MARCH. No, sir.

Mr. LEISENBERG. Never? You are sure about that?

Mr. MARCH. Not if I see him myself. I never do.

Mr. LEISENBERG. You are not sure but what your clerks may?

Mr. MARCH. They may sometimes.

Mr. LEISENBERG. If we can find places in your records where they sometimes do charge—

Mr. MARCH. Sometimes.

Mr. LEISENBERG. Of course, now that you are out of it, out of the business practically, you would not be in a position to see them.

Mr. MARCH. No.

Mr. LEISENBERG. Now, ordinarily this class of labor does work only about a month, doesn't it, or two months?

Mr. MARCH. No; oh, no; no.

Mr. LEISENBERG. Well, a large number, say, when pay day comes disappear, don't they?

Mr. MARCH. Not many of them. Some. There may be 25 per cent.

Mr. LEISENBERG. What proportion disappear, would you say?

Mr. MARCH. Twenty-five or 30 per cent.

Mr. LEISENBERG. About 30 per cent disappears after pay day?

Mr. MARCH. Yes.

Mr. LEISENBERG. What proportion do you think work more than two months? Have you ever had any occasion to inquire into that?

Mr. MARCH. How long he has worked?

Mr. LEISENBERG. How long a man works on these railroad jobs?

Mr. MARCH. Well, some of them work for me for the last 20 years, 15, 10, 5.

Mr. LEISENBERG. I am not speaking of some. I am speaking of the ordinary camp. Will you find in an ordinary camp a man working, the average man that is working there for many months?

Mr. MARCH. Well, they work six or seven months, and then, of course, when they reduce the force, why, those that can be kept at work work the year round.

Mr. LEISERSON. Thirty per cent quit at the end of the month?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. That goes on month after month?

Mr. MARCH. Well, most of these fellows, you know, when they get the money they get to drinking and blow it in.

Mr. LEISERSON. That is what I mean.

Mr. MARCH. The steady citizen, he don't. The good citizen don't. He stays on the job.

Mr. LEISERSON. Would you advise a good, sober citizen to go and do that kind of work?

Mr. MARCH. Somebody has got to do the work. Anybody is a good citizen who——

Mr. LEISERSON. Does he have to do the work under those conditions necessarily?

Mr. MARCH. Well, I suppose they can't do nothing else until they accumulate a little money. Then they go into business.

Mr. LEISERSON. How much could they accumulate on the wages and what they have to pay?

Mr. MARCH. Well, some of them save—I know lots. You take my people, they are pretty saving. I can show many of them in business—that is, in the last 10 years—that used to work for me.

Mr. LEISERSON. I want to get this statement about what becomes of the goods they buy, the goods like bedding and blankets. Do they have any pillows?

Mr. MARCH. No.

Mr. LEISERSON. What is that?

Mr. MARCH. No.

Mr. LEISERSON. Nothing like that necessary?

Mr. MARCH. No.

Mr. LEISERSON. And those things, do they ordinarily pack them up and take them with them?

Mr. MARCH. The mattress they burn up when they get through.

Mr. LEISERSON. They burn it up?

Mr. MARCH. Yes.

Mr. LEISERSON. Can't they sell them back to you for anything?

Mr. MARCH. I would not be allowed to take them back.

Mr. LEISERSON. That means when the next gang comes up they will have to buy a whole new outfit?

Mr. MARCH. Yes. They would not have to, but——

Mr. LEISERSON (interrupting). That is quite sanitary.

Mr. MARCH. Yes.

Mr. LEISERSON. Also makes more sales?

Mr. MARCH. That is not all, at all, because they are unfit to use.

Mr. LEISERSON. And how about the blankets?

Mr. MARCH. They take them with them.

Mr. LEISERSON. Take the blankets with them?

Mr. MARCH. Yes.

Mr. LEISERSON. Ordinarily they carry them around with them?

Mr. MARCH. Yes.

Mr. LEISERSON. Can you give us any kind of idea what food these men ordinarily eat?

Mr. MARCH. Well, we send up, as I told you, corned beef, roast beef, in cans, and macaroni, Italian cheese for the Italians, and pork and beans.

Mr. LEISERSON. All canned stuff?

Mr. MARCH. All canned stuff.

Mr. LEISERSON. No fresh meat at all?

Mr. MARCH. They can get it outside if they want.

Mr. LEISERSON. They would have to go to a village or somewhere.

Mr. MARCH. Well, some places a wagon comes along.

Mr. LEISERSON. Mostly canned stuff?

Mr. MARCH. Yes. Macaroni, of course. They do their own cooking.

Mr. LEISERSON. Do you have many cases of trouble, stomach trouble, on the part of the men?

Mr. MARCH. No, sir.

Mr. LEISERSON. What do you do in case a man is sick?

Mr. MARCH. Take him to a hospital.

Mr. LEISERSON. What hospital?

Mr. MARCH. Well, wherever there is a hospital near, or we take him to the company's doctor.

Mr. LEISERSON. Does the company pay for that doctor?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. And you charge the man nothing?

Mr. MARCH. No, sir.

Mr. LEISERSON. When it rains does a man get paid for the work he does?

Mr. MARCH. Most of them do if they stay out with the foreman.

Mr. LEISERSON. I know, but ordinarily a man getting \$1.25 a day, if they have a rainy day when there is no work done, he does not get that \$1.25?

Mr. MARCH. They generally, most of them, get it, if they stay with the foreman, but if they go and stay in the camp they would not get it.

Mr. LEISERSON. What would the foreman want to take them out for?

Mr. MARCH. He generally takes them out and stays under the station while it rains. It don't rain all day sometimes.

Mr. LEISERSON. Sometimes it does.

Mr. MARCH. Then they don't go out.

Mr. LEISERSON. If it rains so hard in the morning the ground is hard and they can not work, they don't go, do they?

Mr. MARCH. No; but if it stops raining they go out and get paid.

Mr. LEISERSON. By the hour, they get 12½ cents?

Mr. MARCH. Yes, sir.

Mr. LEISERSON. I am trying to cut out your loss of time on account of the weather, and besides this \$35 a month—

Mr. MARCH. Sometimes.

Mr. LEISERSON. Besides the fee that comes out of it and the bedding they have to buy, they also lose time on account of the weather. That is what I wanted to get.

Mr. MARCH. Yes.

Mr. LEISERSON. Let me ask you a question that may be rather theoretical from your point of view. Do you think that the situation in the camp, these arrangements that you have of sending men to camps, and then living in those conditions, and working for these wages, is desirable?

Mr. MARCH. Well, I don't see. Some times you can not put them any other place.

Mr. LEISERSON. Do you think that is necessary? Can you get along with anything else? Could you have it otherwise?

Mr. MARCH. No; I don't see how, at some points you can.

Mr. LEISERSON. Wouldn't it be possible, for instance, to pay men \$2 and \$2.50 a day?

Mr. MARCH. Certainly it would, if they got better wages. Certainly.

Mr. LEISERSON. Wouldn't it be possible, for instance, to have the company furnish the board to the men?

Mr. MARCH. Well, that I never. I don't think they could control that.

Mr. LEISERSON. Do you know the practice in lumber camps? Did you ever supply men to the woods?

Mr. MARCH. No; I never did.

Mr. LEISERSON. Lumber camps pay \$35 and \$40.

Mr. MARCH. If you want my idea, and I think it is a very good one—

Mr. LEISERSON. I think before we get to that—the lumber camps pay \$35, \$40, and \$45 a month.

Mr. MARCH. Yes.

Mr. LEISERSON. And furnish the board?

Mr. MARCH. Yes.

Mr. LEISERSON. Themselves?

Mr. MARCH. Yes.

Mr. LEISERSON. And the lodging?

Mr. MARCH. Yes.

Mr. LEISERSON. And charge nothing at all for that. Now, wouldn't it be possible—that is the lumber camps in the Northwest. Wouldn't it be possible for the Erie Railroad to do the same thing?

Mr. MARCH. Well, some of the men would not work.

Mr. LEISERSON. And then you would get a better class of men there, wouldn't you?

Mr. MARCH. Some of the men they claim it costs too much to board that way.

Mr. LEISERSON. They don't board; the company gives the board for nothing, at \$35 a month.

Mr. MARCH. That would be all right. There would be no kick there; but the other way.

Mr. LEISERSON. Let me get the idea you started to give us.

Mr. MARCH. I say to-night we send 100 men, and in the morning when we get up there we feed them. I don't want to make it a little hard for them. They won't give anything, but I do that for them. Do that for them, when they first get there, but out of the 100 I get maybe 25 or 30 or 35. The others go to the State roads or the farmers, or other jobs and I lose a great deal during the year. I lose at least \$2,000 or \$2,500.

Mr. LEISERSON. Do you get a profit on the whole business? That is, at the end of the year, ordinarily, you make a profit, don't you?

Mr. MARCH. Not so much as people think.

Mr. LEISERSON. Have you any objection to giving the amount?

Mr. MARCH. Yes. Last year I could tell you I lost about \$1,000 a month since December.

Mr. LEISERSON. I mean ordinarily you make a profit?

Mr. MARCH. Had about 300 men; didn't use half; well, about 50 and 100 in the winter.

Mr. LEISERSON. You would not stay in the business if it was not profitable.

Mr. MARCH. If I did not have the buildings on that road I would let my brother get right out.

Mr. LEISERSON. Up to the present time you have made a normal—what you consider a fair profit?

Mr. MARCH. Yes.

Mr. LEISERSON. That is to say, the total business that you have done has brought you a profit so when these men quit you, and did not do the work, and beat you out of the board that you gave them when you fed them, the other fellows who paid the fee, paid for it all, didn't they?

Mr. MARCH. That offsets some; yes.

Mr. LEISERSON. That is to say, you had the profit, so it was not you that lost, but the other fellows that you charged it up.

Mr. MARCH. They have to pay according to the law.

Mr. LEISERSON. You make your fees large enough in order to get a profit, and it might be if all these people actually paid for everything you gave them, your profit would be so high that you would lower your fees? Might it not?

Mr. MARCH. You know I have got 10 inspectors that have to be paid for to go up and look after the welfare of the men.

Mr. LEISERSON. All I am trying to make of the point is that you make a profit on your business, a reasonable profit, whatever it is, and it is not you that is paying for the losses, but the other fellows who pay you the fees; that is the idea.

Mr. MARCH. Well, that offsets it some.

Mr. LEISERSON. Now, you have some ideas as to what you think ought to be done to improve conditions?

Mr. MARCH. Yes.

Mr. LEISERSON. Will you give us your ideas?

Mr. MARCH. Just as I told you with these men. You get them, you know, and 90 per cent haven't got a penny in their pockets.

Mr. LEISERSON. How much do you think ordinarily that you could have if you went to work under those conditions? That is, how much could there be left of \$1.25 a day, with money lost when it rains, with a \$2 fee, and paying the board and buying your bedding?

Mr. MARCH. Well, they have some left.

Mr. LEISERSON. How much?

Mr. MARCH. Well, I think you would have \$15 or \$18 left if you got \$35 or \$40.

Mr. LEISERSON. If you worked a month, as you said, in order to make \$40 you would have to work overtime and Sunday, and if you worked a month that way, away from the city, living in camps, you would want to spend some of that money on amusement and recreation.

Mr. MARCH. I don't think those fellows look for amusement, I don't think, and with hard work. I worked in this country for four years for my board and clothes up in the northern part of the State, and I did not look for amusement. I had to get up at 4 o'clock in the morning, on a farm. That is doing something.

Commissioner O'CONNELL. That is quite amusing.

Commissioner BALLARD. You could hear the birds sing in the spring. That is pleasant.

Mr. MARCH. Yes; you bet it is.

Commissioner O'CONNELL. You say they reduced the wages to \$1.25 on the Erie Railroad?

Mr. MARCH. What?

Commissioner O'CONNELL. You say \$1.25 is to be the rate paid?

Mr. MARCH. They reduced it last February.

Commissioner O'CONNELL. Still lower?

Mr. MARCH. No. In February the reduced from—in December from \$1.60 to \$1.50. Then in February they reduced to 12½ cents an hour.

Mr. LEISELSON. You stated, in your opinion, the conditions of these camps could not be much improved.

Mr. MARCH. Yes; they can be improved.

Mr. LEISELSON. What we want to know is what suggestions have you for improving them? The one you suggested was the State board of health, or the local board of health might compel you to put up better houses and give more air space and so on.

Mr. MARCH. Yes.

Mr. LEISELSON. What other things would you suggest for improving conditions?

Mr. MARCH. Well, keep their quarters clean is one thing. You know, even if you have a man go into the place as you said——

Mr. LEISELSON. Could you keep it clean without sheets?

Mr. MARCH. No.

Mr. LEISELSON. I mean they would have to spend more money for buying sheets.

Mr. MARCH. That is what that would mean; yes, sir.

Mr. LEISELSON. If they needed soap they would have to spend more money?

Mr. MARCH. Well, the soap they buy.

Mr. LEISELSON. Let me give you this. Don't you think it the fact that the men who live so cheaply, they haven't any sheets, don't very often use soap, don't often get a bath and so on, and that that has something to do with their willingness to work for \$1.25 a day?

Mr. MARCH. Well, if the men built these buildings and paid for them themselves, then they could have bathtubs, so they could take a bath.

Mr. LEISELSON. Why couldn't they do that in all cases where this work is done?

Mr. MARCH. You could not get 25 per cent to do it.

Mr. LEISELSON. Why couldn't you?

Mr. MARCH. Well, the only thing you could do would be to issue a rule and discharge them if they did not do it. Then you would be accused of discharging the men.

Mr. LEISELSON. The board of health compelled you to put in more sanitary houses, didn't it?

Mr. MARCH. Yes, sir.

Mr. LEISELSON. Wouldn't it be possible for the board of health to compel the company to put in sanitary conditions, to put in shower baths, etc.?

Mr. MARCH. Yes; but if you got the men to try—had a law that these men should be compelled or they would be discharged——

Mr. LEISELSON (interrupting). The rule is strictly enforced just the same.

Mr. MARCH. Yes; you do that and I will be very glad to see it done.

Mr. LEISELSON. Do you know cases where this has actually happened?

Mr. MARCH. No; I do not.

Mr. LEISELSON. Well, it is very often done in some of the western camps where the companies themselves put up shower baths and put up special buildings for the men for amusements and have graphophones there, and any man who violates the rules with regard to cleanliness is discharged, and it is effectively controlled.

Mr. MARCH. That is all right, but you can't do it in the case of these men—can't do it now, because these men may complain they were discharged for being put out of the gang for something, and they get dissatisfied, and I never done that in my life. I always wanted to get the men to stay as long as they can, because I would rather have the old men, not breaking the new ones in all the time.

Mr. LEISELSON. If I go up to one of your camps, as quite often happens, a man walks along the road and meets the camps and gets a job there, then do I have to pay you for the accommodations in the commissary just the same?

Mr. MARCH. If he comes along there, sure.

Mr. LEISELSON. Then, besides that, is the office fee deducted—that is, the labor-agency fee?

Mr. MARCH. Sometimes is and sometimes is not.

Mr. LEISELSON. Who decides whether it should be or should not?

Mr. MARCH. Well, if a man in town, we never do.

Mr. LEISELSON. That is, if he does not live in your commissary.

Mr. MARCH. I mean if he is a man living in town he might have come along and wanted a job, you know.

Mr. LEISELSON. Then he would work there and live in the town?

Mr. MARCH. Yes. Those fellows we never charge.

Mr. LEISELSON. But a hobo or a man who walks along the track——

Mr. MARCH. Yes.

Mr. LEISELSON. Comes there and gets a job on his own account; he finds it.

Mr. MARCH. Yes.

Mr. LEISELSON. Besides charging him the ordinary commissary fee \$2 is deducted for an office fee for you.

Mr. MARCH. We charge him only one-half, not all of the fee.

Mr. LEISELSON. But you do make a charge.

Mr. MARCH. Yes.

Mr. LEISELSON. On what principle do you charge the office fee?

Mr. MARCH. That is the law.

Mr. LEISELSON. That is what?

Mr. MARCH. That is the intelligence fee, and he knows.

Mr. LEISELSON. And he found the job himself, didn't he?

Mr. MARCH. He comes up to one of my representatives.

Mr. LEISELSON. He comes to one of your representatives who is there and needs men, and he asks him for a job and the man hires him?

Mr. MARCH. Yes.

Mr. LEISELSON. And he goes to work?

Mr. MARCH. Yes. If he goes to live in the cars and wants trust we charge him.

Mr. LEISELSON. Then you charge him the office fee just the same?

Mr. MARCH. One-half.

Mr. LEISELSON. The same as if you had found the man here and shipped him up there?

Mr. MARCH. Yes, sir; but those that live in town we don't.

Commissioner O'CONNELL. Supposing when the Erie Railroad Co. reduced the wage of the track men from \$1.60 to \$1.25 the track men went on strike—or is this a reduction?

Mr. MARCH. Yes, sir.

Commissioner O'CONNELL. Would you furnish men to take their places?

Mr. MARCH. Never did.

Commissioner O'CONNELL. Would you do it?

Mr. MARCH. No; I do not, because generally there would be a good deal of trouble. Nobody would go, and you would have to tell the men and nobody would go.

Mr. LEISELSON. As a matter of fact, the men do not strike, do they? You have not had any cases of strike?

Mr. MARCH. I have had very little trouble.

Mr. LEISELSON. When the company says the wages are coming down from \$1.50 to \$1.25 a large number left?

Mr. MARCH. Yes; they did.

Mr. LEISELSON. And you supplied others; there is no strike.

Mr. MARCH. If there is a strike I do not, because you have to tell the men what it is.

Mr. LEISELSON. But those men don't strike, they just quit?

Mr. MARCH. Yes.

Mr. LEISELSON. They get their pay and quit?

Mr. MARCH. Yes.

Commissioner O'CONNELL. Did you get any notice from the Erie Railroad Co. about the time or shortly before these wages were reduced to ascertain whether you could gather a number of trackmen?

Mr. MARCH. No, sir.

Commissioner O'CONNELL. Was there a generally larger application for men after the wages had been reduced?

Mr. MARCH. They do that every year, reduce the wages, but not as low. I never remember their reducing them to \$1.25 in about eight years.

Commissioner O'CONNELL. Don't they raise them occasionally, then?

Mr. MARCH. I have been arguing with the company to raise them now because it is hard to get men.

Commissioner O'CONNELL. Do you furnish employees for any other railroad?

Mr. MARCH. No.

Commissioner O'CONNELL. Only the Erie Railroad?

Mr. MARCH. Yes.

Commissioner O'CONNELL. You furnished 1,500, you say, last year?

Mr. MARCH. Maybe over.

Commissioner O'CONNELL. One thousand five hundred or 1,800 I think you said last year. You keep an office in New York with several employees?

Mr. MARCH. Yes. Of course I have other business of my own.

Commissioner O'CONNELL. Carried on in that office?

Mr. MARCH. Yes.

Commissioner O'CONNELL. Besides the employment business?

Mr. MARCH. Yes, sir.

Commissioner O'CONNELL. Do you keep your books separated?

Mr. MARCH. Yes, sir.

Commissioner O'CONNELL. What has been the gross income from your employment business for that year?

Mr. MARCH. Last year it was very little; I could not tell you off hand.

Commissioner O'CONNELL. You say that the cost of operation, however, was greater than the receipts?

Mr. MARCH. Yes, it was; because there wasn't so many men employed, and we have been to a lot of expense, and there is a lot of loss on the storekeepers.

Commissioner O'CONNELL. Do you furnish females at all?

Mr. MARCH. No, sir. And I have great trouble with the storekeepers, too.

Commissioner O'CONNELL. Did you hear the statement of the gentleman who preceded you regarding the conditions of camps in Jersey and the employment agencies?

Mr. MARCH. No, sir; I did not.

Commissioner O'CONNELL. You didn't hear him?

Mr. MARCH. I was outside.

Commissioner O'CONNELL. He made the statement that the conditions the commission investigating over there found was not moral, by any means, and very bad, indicating that some of these agencies were operating for immoral purposes.

Mr. MARCH. I guess there is nothing like that here.

Commissioner O'CONNELL. Have you any idea as to whether that would prevail in a free employment agency to any extent, if at all?

Mr. MARCH. I could not say. I know there is a lot of agencies. There is some agencies in Mulberry Street that tried to get me often in trouble. They bring a gang of men to the office and they take the money, cash, \$3 or \$4 from them—

Mr. LEISEN (interrupting). Who did?

Mr. MARCH. Some of these agents.

Mr. LEISEN. Private agents?

Mr. MARCH. And then they land them right in front of my office and then they run away, and then they come in and say, "We were brought here," and I said, "Who brought you," and I look at the paper and I know where they belong, and I made reports on them, and they went for them, the commissioner of licenses. May times they did that. There is a lot of them there that way that should not have any license, because in the first place they never in the world give you service. They get 10 or 15 men and haven't got any jobs for them.

Commissioner O'CONNELL. Do you keep your books so you can ascertain as to whether that portion of your business operation, the commissary department, is profitable or not?

Mr. MARCH. Yes, sir.

Commissioner O'CONNELL. Did you lose or make on your operations of that business last year?

Mr. MARCH. Well, we made a little, not very much last year, but this winter there has been a loss since December, because some of the camps charge—I

have a storekeeper in every camp, and sometimes only two or three men in it, they lay off so many men.

Commissioner O'CONNELL. In an ordinary year would your profits be greater from the commissary than from the employment business?

Mr. MARCH. The commissary?

Commissioner O'CONNELL. Would the profits from that operation be greater?

Mr. MARCH. No; because, as I said, we might ship 100 men to-night, and there was only 25 or 30 stayed. The book shows they went out, but they did not stay.

Mr. LEISERSON. But you got the \$2 from them?

Mr. MARCH. Oh, no; you never get that until they get work.

Mr. LEISERSON. Do you never "cop" your fee before you send the men out?

Mr. MARCH. Very seldom.

Mr. LEISERSON. What do you mean by "seldom"? In what proportion of the cases do you get the \$2 before the men are shipped out?

Mr. MARCH. There might be a few Italians, say, but none of the other class.

Mr. LEISERSON. Ordinarily you deduct it from their wages?

Mr. MARCH. As I told you, they haven't got even 5 cents to buy a loaf of bread before they go.

Commissioner O'CONNELL. Does the company collect your money, or do you collect it?

Mr. MARCH. The company makes deductions on the road.

Commissioner O'CONNELL. Holds it out of the wages?

Mr. MARCH. The commissary and everything else, or if they get cash from me or something like that. If a man wants \$1 or \$2 cash, I give it to him.

Mr. LEISERSON. How often are the men paid?

Mr. MARCH. Twice a month.

Mr. LEISERSON. If a man quits before the 15th day, say, or the 1st, if those were the two days, do they pay them off right away?

Mr. MARCH. Just as soon as they can pay him. But, you know, on lots of roads——

Mr. LEISERSON. Does he have to wait until pay day?

Mr. MARCH. Not if he gets his slip.

Mr. LEISERSON. I know; but ordinarily does he get paid?

Mr. MARCH. If he leaves the work himself and don't notify the foreman, he will have to wait, because he has to report to some office; but if he gets a slip he is paid the very next day.

Mr. LEISERSON. If he is fired and gets his time, he will be paid the next day?

Mr. MARCH. Yes.

Mr. LEISERSON. If he wants to quit, has has to wait until pay day?

Mr. MARCH. Oh, no.

Mr. LEISERSON. How long does he have to wait?

Mr. MARCH. As soon as he reports he has left the job.

Mr. LEISERSON. That he will report to whom—the foreman?

Mr. MARCH. No; he has to report to some office, and sometimes he comes to my office. He has to report to some office, and sometimes he comes to our office.

Mr. LEISERSON. He will have to come back to New York and report to your office?

Mr. MARCH. They jump on a freight and come in. You know, as I told you before, they drink, and they get on a train, and the foreman don't know they have gone at all.

Mr. LEISERSON. You run clear out how far on the Erie Railroad—to Ohio?

Mr. MARCH. I got one or two camps there, that is all.

Mr. LEISERSON. But you do have places there?

Mr. MARCH. Yes.

Mr. LEISERSON. If a man quits that place, he can not——

Mr. MARCH. If a man quits that place and goes to the superintendent, he can be paid right off.

Mr. LEISERSON. Where is the superintendent?

Mr. MARCH. Right there.

Mr. LEISERSON. You mean to say the foreman has money right there?

Mr. MARCH. Oh, my, no; not the foreman, but he gives him a slip and sends him to the superintendent to get a voucher.

Mr. LEISERSON. Where is the superintendent?

Mr. MARCH. All along the line.

Mr. LEISERSON. On each job?

Mr. MARCH. No; the place may be Salamanca.

Chairman GARRETSON. Superintendent of what?

Mr. MARCH. Of the division.

Mr. LEISERSON. He has to go to the division point where the superintendent's office is?

Mr. MARCH. If he wants to quit, he tells the foreman, and then this is sent in to the superintendent, and they send up a voucher and he is paid off.

Mr. LEISERSON. He has to wait until this comes back?

Mr. MARCH. It takes a day and a half.

Mr. LEISERSON. Is that the highest you have ever heard of it taking, the time—the necessary time that is ever taken, a day and a half?

Mr. MARCH. Sometimes they did not report for their time maybe for 10 days or a week.

Mr. LEISERSON. They did not report?

Mr. MARCH. I have men come in, return, that skipped or went to some other job; they just came in since last September.

Mr. LEISERSON. And he did not get any pay? He had not collected his pay?

Mr. MARCH. So I gave him a letter to the treasurer and he went and got his check.

Mr. LEISERSON. Ordinarily a man out on the road here, wouldn't he have to come into New York City to get his pay?

Mr. MARCH. No; if he had demanded his pay there, no, sir.

Mr. LEISERSON. He quits himself?

Mr. MARCH. Yes.

Mr. LEISERSON. Then the regular foreman would have to send in his time, and he would have to wait from one to three days until he gets it?

Mr. MARCH. Not two or three days; as soon as he gets the voucher.

Mr. LEISERSON. Then it would take—whatever it would take, during that time, he has to pay you for the board and for the commissary?

Mr. MARCH. Yes.

Mr. LEISERSON. Even though he is not working?

Mr. MARCH. Pay for the commissary?

Mr. LEISERSON. During that time?

Mr. MARCH. If he gets any stuff, but very seldom they get any.

Mr. LEISERSON. Isn't it necessary, or is it not necessary for the men to come to the city to get their pay?

Mr. MARCH. Not those that notify the foreman; no, sir.

Mr. LEISERSON. Are you sure about that?

Mr. MARCH. I am positive of it. If they notify, they can get paid right there.

Mr. LEISERSON. But the foreman hasn't the money.

Mr. MARCH. But he sends a slip to the superintendent for a voucher.

Mr. LEISERSON. Every man, according to that statement—you think we can verify this statement? That every man that quits his job of his own accord, if he will tell the foreman he can get his pay there by waiting until the check is sent in and his time is sent in and comes back, and that may take a day or two?

Mr. MARCH. Yes.

Mr. LEISERSON. And there isn't any exception?

Mr. MARCH. Unless they leave and do not notify the foreman, and come to my office or come to Jersey City, or things like that, and they send to the foreman and get the time, and make the voucher out.

Chairman GARRETSON. Isn't it a fact that every bunk charge on the railroad, on the Erie Railroad, is \$1.50 a month?

Mr. MARCH. What?

Mr. LEISERSON. Isn't every bunk charged on the Erie Railroad at \$1.50 a month?

Mr. MARCH. No, sir. Not for those that don't board, don't pay \$1.50. Those that don't buy any provisions, don't board.

Chairman GARRETSON. Isn't bedding sold over and over again?

Mr. MARCH. Not in my commissary; I guess not.

Mr. GARRETSON. It is sold in the other commissaries?

Mr. MARCH. That I don't know.

Chairman GARRETSON. What happens to the men who do not patronize the commissary?

Mr. MARCH. Nothing that I know of.

Chairman GARRETSON. Isn't his relation with the company severed pretty quickly?

Mr. MARCH. No. I tell you, that for the last three or four years there the commissaries, they don't pay very much on account of the storekeeper.

They steal more than this. I keep as little as possible, and give them all the privileges they want.

Chairman GARRETSON. The labor agency is run as a business proposition, and the commissary is a philanthropic proposition?

Mr. MARCH. I tell you there isn't much profit.

Chairman GARRETSON. Those men are not discharged for not patronizing the commissary?

Mr. MARCH. No, sir; not in my camps.

Chairman GARRETSON. Well, you dominate them very largely?

Mr. MARCH. I dominate it?

Chairman GARRETSON. I mean the employment there. Do you furnish most of it?

Mr. MARCH. No, sir; there are four others.

Chairman GARRETSON. Have you ever had any trouble with the board of health you have referred to a number of times?

Mr. MARCH. These houses they have notified me to build according to the law, I did.

Chairman GARRETSON. What happened before you built the houses?

Mr. MARCH. I never had no complaint.

Chairman GARRETSON. Never had any complaint?

Mr. MARCH. No, sir.

Chairman GARRETSON. There never had been any complaint against your camp conditions that brought about the building of the houses?

Mr. MARCH. No; but whenever I got a complaint I always complied with it, always attended to it right away.

Chairman GARRETSON. What constituted the ground of complaint?

Mr. MARCH. Oh, I never had any to amount to anything.

Chairman GARRETSON. They just sent them without any ground for complaint?

Mr. MARCH. I say, I never had many complaints.

Commissioner BALLARD. You said that they very often took freight cars and put bunks in freight cars?

Mr. MARCH. Yes.

Commissioner BALLARD. The bunks usually are two high, I suppose?

Mr. MARCH. What?

Commissioner BALLARD. Two high, one above the other, two tiers of bunks?

Mr. MARCH. Yes.

Commissioner BALLARD. And how many bunks do they put in an ordinary freight car?

Mr. MARCH. According to the length of a car; six or eight.

Commissioner BALLARD. Six or eight double bunks. They would hold 12 or 14 or 16?

Mr. MARCH. No; four on a side, eight altogether.

Commissioner BALLARD. Four on each side, four double bunks on each side?

Mr. MARCH. Yes; eight men; that is all you can put in.

Commissioner BALLARD. Eight men, or 16 men in 1 car?

Mr. MARCH. Eight; some cars you can't put in so many;—six. Some cars are shorter than others.

Commissioner BALLARD. Is that because the other end of the car is used for cooking purposes? Part of the car? Do they cook in them on the stove?

Mr. MARCH. The center of the car usually is used for that. Most of them cook on the outside in the summer time.

Commissioner BALLARD. You speak of the prices in the commissary. Does the railroad company, any railroad officer, have any right to interfere in the prices that the commissary shall charge?

Mr. MARCH. Have any right?

Commissioner BALLARD. Yes; do they say any price you shall charge for goods?

Mr. MARCH. I charge—not as I wish; no.

Commissioner BALLARD. What rate?

Mr. MARCH. I charge original prices. I will send the list down to-morrow.

Commissioner BALLARD. I mean by that, how are those prices arrived at? Do you charge 10 per cent or 40 per cent advance?

Mr. MARCH. I charge so much per pound for each article, whatever it may be.

Commissioner BALLARD. I mean a certain price?

Mr. MARCH. And the list is sent to the storekeeper and he has to comply with it.

Commissioner BALLARD. The railroad company does not have anything to do with it?

Mr. MARCH. No, sir.

Commissioner BALLARD. You speak of men being allowed to buy meat and other things outside the commissary?

Mr. MARCH. Yes, sir.

Commissioner BALLARD. Of course, they have to pay cash for that?

Mr. MARCH. Sometimes they do; sometimes they get credit.

Commissioner BALLARD. How can a man have any cash and take care of his cash?

Mr. MARCH. I said, after they get their first pay.

Commissioner BALLARD. After he gets the first pay, where could he keep his cash, sleeping in a bunk with a lot of other people?

Mr. MARCH. Well, they do; they keep it with them.

Mr. LEISENBERG. That is all, thank you. If you will supply us with your price list?

Mr. MARCH. Yes; I will.

TESTIMONY OF MR. JOSEPH MAYPER.

Mr. LEISENBERG. Will you state your full name and official position, Mr. Mayper?

Mr. MAYPER. Joseph Mayper. I am at present general secretary of the legislative committee of the North American Civic League for Immigrants.

Mr. LEISENBERG. How long have you been in that position?

Mr. MAYPER. Since January 1, this year.

Mr. LEISENBERG. Prior to that time you were what?

Mr. MAYPER. For the year before that I was acting chief investigator of the New York State Bureau of Industry and Immigration.

Mr. LEISENBERG. For a year?

Mr. MAYPER. For a year, 10 months, in full charge of this work, and for 2 years prior to that I was supervising investigator in that bureau. In fact, I was with the bureau since its creation.

Mr. LEISENBERG. For three years, then, you have been connected with the New York Bureau of Industries and Immigration?

Mr. MAYPER. Yes, sir.

Mr. LEISENBERG. And, then, since January of this year you have been with the North American Civic League for Immigrants?

Mr. MAYPER. Yes.

Mr. LEISENBERG. Will you tell us what the purpose of the bureau of industries and immigration was?

Mr. MAYPER. The New York State Bureau of Industries and Immigration was created October 1, 1910, after an exhaustive investigation by the New York State Immigration Commission for the purpose of providing for the welfare, distribution, education, and protection generally of the immigrants and the alien residents of the State.

Mr. LEISENBERG. Among your duties there was to inspect private employment agencies?

Mr. MAYPER. Not directly. We had a certain power which gave us a right of entry. Of course, the commissioner of licenses had direct jurisdiction.

Mr. LEISENBERG. And you had power also to inspect and investigate common-labor camps?

Mr. MAYPER. Yes; all labor camps in the State.

Mr. LEISENBERG. Now, with the present North American Civic League for Immigrants, what is the purpose of that organization?

Mr. MAYPER. Until January of this year this league was doing somewhat similar work to the bureau in New York and New Jersey, and was known as the New York and New Jersey Committee of the North American Civic League for Immigrants until last October, officially. Last October—at the beginning of this fiscal year—it was reorganized for the purpose of undertaking legislative work throughout the Nation for similar purposes—protection, distribution, education and the general welfare of the immigrants.

Mr. LEISENBERG. Now, then, your duties led you to inspect labor camps?

Mr. MAYPER. Yes, sir.

Mr. LEISENBERG. Did you make an investigation of the camps in the State of New York?

Mr. MAYPER. For three summers I supervised the work; I went out very frequently and saw a number of them.

Mr. LEISERSON. Did you have occasion to visit any of the camps of the Erie Railroad—

Mr. MAYPER. I did.

Mr. LEISERSON. Can you tell us anything about the conditions there that might add anything to what Mr. March has stated?

Mr. MAYPER. I was very glad to hear from Mr. March that the conditions of his camp had improved during the past three years. That is quite creditable to the bureau. When we first started on our work we divided our plan of inspection in accordance with the various seasonal industries carried on in labor camps—railroad works; public works, like barge canal and aqueduct camps, cannery camps, and some that were more permanent, like brick yards—well, they are temporary, in a way—and quarries, and possibly one or two other subdivisions of that nature. In connection with the railroad camps, we found what Mr. March has testified to: That during the summer months, largely, they were in full sway; and during the winter months, when the maintenance camps—as they are called—are in operation, unless there is some emergency which requires a large camp. The maintenance camps are generally more or less permanent, and have from 2 or 3 to 10 men in each. The construction gangs, which are larger camps, during the spring and summer and early fall usually have much larger gangs, possibly from 125 to 150 men or even more than that at times depending upon the amount of work to be done in that particular district. The scope of our investigation was not only to examine into the sanitary conditions—living conditions—of the employees, but also to find out the system of charges and deductions—the system of employment and what relationship the man, whom the police are pleased to call the padrone or the labor agent, as they desire to call themselves, had, first, with the employee; and, second, with the company for whom the employees were working. Perhaps, if I take up each division seriatim, you can see just what I mean. Taking the sanitary conditions, first:

The board of health did require the Erie Railroad Co. to pull down all the shacks at a place called Port Jervis along the Erie Railroad, after we had made several vigorous protests. We have some pictures of this camp in our office—at least, we did have in the bureau office, and I am sure they are still there—

Chairman GARRETSON. As it was?

Mr. MAYPER. As it was.

Chairman GARRETSON. That is a picture in the past tense. [Laughter.]

Mr. MAYPER. Yes, sir; and we found there were 25 or 30 hovels in this particular place. I use the word "hovels" advisedly. They were boards, and old pieces of tin and iron, put together by the men themselves almost invariably, in a large hollow. Port Jervis, by the way, is a coaling station for the Erie Railroad, and these men were working along the road and also in coal yards, and it is a fact that a number of them testified to us under oath that they put up these shacks themselves—without windows, bad air, and very foul smelling, and very poorly kept. Yet they were charged \$1 a month by the commissary. They had to pay rent for something they put up themselves. The tin and boards were picked up along the railroad, as they testified; and through their own manual labor they put this shack or hovel together. Usually they are so small that not more than two people could sleep in one of them.

In addition to the bunks there had to be a stove for when it grew a little colder. Port Jervis was more or less permanent, from the fact that it was a coaling station, and there was absolutely—as I recall it now it was three years ago when they made the inspection—and absolutely there were no sanitary provisions of any importance. That is, the actual housing quarters.

Mr. LEISERSON. How many men were there?

Mr. MAYPER. Sixty or seventy; somewhere there.

Mr. LEISERSON. No toilet facilities whatever?

Mr. MAYPER. There were a few toilets in a very filthy condition; and one of them, I remember particularly on account of the fact that it was filled with feces, and it was absolutely impossible to enter the place. The railroad people to whom we protested felt that it was not one of their duties; that the whole camp situation, commissary, employees, and sanitation had been turned over to the labor agent or padrone, and that he was responsible. We got into communication with the labor agent, and nothing was done, or very little was done.

Mr. LEISERSON. You had no power of compelling them?

Mr. MAYPER. No; we had no power. Our only power was to investigate and recommend necessary legislation. Prior to that time there was no State authority to make any investigation of any kind, and no one really knew what the conditions were.

Mr. LEISEN. Is there any authority now in the State that has power to look after—

Mr. MAYPER (interrupting). There is. Early last year, in the early part of Gov. Sulzer's administration, at any rate, a public-health council was appointed by the new governor. The public-health council entered into a very long investigation of the health conditions of the State. I appeared before them with relation to the labor-camp situation, and as the result of the agitation at the time, and their recommendations, the State department of health was reorganized so as to divide the State into 20 sanitary districts under the direction of 20 sanitary supervisors supposed to be doctors and physicians and sanitary experts of some kind. And these divisions were all over the State, and it was the duty of the public-health council, which was created at the same time, to indicate or devise rules or regulations which should enter into a sanitary code which gave the commission full power of law, and the sanitary supervisors, to enforce the sanitary code with regard to labor camps.

Mr. LEISEN. Has that been done?

Mr. MAYPER. I am advised in conferences with the public council that they are now working on it and have been, and that they feel that action will be taken very shortly. Some other action has, however, already gone through. That was the industrial board of the department of labor. They were given last year supervising authority over the living quarters in the camps connected with factories. Now, under that designation the cannery camps were directly under their supervision, and possibly the brickyards; but the cannery camps, at any rate. They required immediate attention, and last year members of the industrial board, representatives of the canners, and myself had several conferences; and early this year we finally agreed upon an industrial code, providing minimum sanitary requirements for all cannery labor camps in the State. This is now in print, I think, and will be published very shortly. It has been passed on definitely, I understand, by the public board of health, and it will be certain and definite, and provide for proper dealing with those camps; and, possibly, with the exception of California, this State is the first to do that thing.

Mr. LEISEN. In regard to those camps where they have double bunks—one up above and one below—did you find in your investigation that the lower bunks were often just the floor?

Mr. MAYPER. Not so much in the bunk cars. That is more or less true in the shacks and in the tarred-paper shacks that they put up for temporary construction work. In the bunk cars it is raised slightly.

Mr. LEISEN. A statement was made here by Mr. Carpenter, the ex-manager of the National Employment Exchange, that they never could get enough men—never, under ordinary circumstances—for construction work of this kind. Do you think that the conditions of employment, as you found them, had anything to do with the unwillingness of the men to go to that kind of work?

Mr. MAYPER. I don't think it was the most important, or the only cause; but it certainly was a contributing cause. I know from conference with the engineer of maintenance of way of the D. L. & W. Railway last year that they needed a number of men and could not get them during the summer months. That was largely true last summer on account of the considerable highway construction work being carried on in the State. And men were scarce for two months or so during the summer.

Mr. LEISEN. You heard Mr. March make a statement that the class of men going to these camps were ordinary drunkards and men who do not have any money left after they are out of work a few days. Do you think that the reason that they are in that condition is because they are drunkards, or do you think the conditions have anything to do with making the men drunkards?

Mr. MAYPER. I won't concede that they are drunkards, in the first place. Some of the American hobo type that come there may possibly be of the drunkard type; that is, those whom we may classify as drunkards, to some extent. But the labor camps are filled largely—and this is true of all labor camps—they are filled largely by foreign labor. In rather a rough sketch that I have made in the inspection of 180 camps last year, I think, in the proportion of about two-thirds, using a general average or proportion, about two-thirds of the employees—in round figures, about 100,000 employees—were foreign laborers in the labor camps of the State; and the foreign laborers are not drunkards. They are men, as you know, who come here to earn some money, and they save what they can.

Mr. LEISERSON. Did you make any investigations then intended to show that these foreign laborers were acquiring the habits of the ordinary American hobo after working in those camps a certain length of time?

Mr. MAYPER. No, sir; we did not make any such an investigation; I am afraid I could not qualify in that way.

Mr. LEISERSON. Are you prepared to make any statement to that effect?

Mr. MAYPER. I don't think I am. I did want to suggest about the system of charges that obtains in the labor camps generally.

Mr. LEISERSON. For commissary?

Mr. MAYPER. For commissary; yes, sir. The statement was made that transportation charges were not paid by the men. That is true if they work in the camp. This is generally the rule if they work in the camp for the whole season—if it is three months or four months—but if they leave their employment before the work at that particular place has been completed, the transportation charges which were advanced by the railroad company, by means of a check which the labor agent has gotten, the amount is deducted. That is generally practiced.

As to the commissary charges in the camps for supplies, I would think that is one of the matters that requires the strongest kind of supervision and action by anybody that may have the authority to take such action. The system, as I gathered it, from the inspection of several roads—I am talking of railroads just now; this is somewhat true in other camps as well—there is a storekeeper at a camp which is large enough to have a storekeeper. The storekeeper at the most gives each employee an ordinary little grocer's book as a pass book. When they purchase anything, when a purchase is made, the storekeeper notes the amount, without date, without description of the thing purchased, but just the amount under the number of that laborer, 10, 20, or 30; no name or address or anything else. Sometimes they have the name. If the purchases are made over a period of 10 days there is no way of distinguishing which purchases were made on any one day, 15, 20, 12, alongside of each other; there is no possibility of checking it up. The commissary at the same time makes an entry in the little book which is in the possession of the laborer, if he has such a book, and he returns the book to the laborer. The laborer is very frequently very illiterate, can not even read figures, and doesn't know what is marked down there, and must go to his friend if he wants to check it up—some one in the camp who may be able to read. At the end of the 15 days the storekeeper makes a charge account for each man; does not itemize it, excepting No. 10, \$2, No. 15, \$10, and sends this slip to the labor agency in New York, the labor agency O. K.'s it and sends it to the railroad company, and that amount is deducted from each particular check. That has proven the source of a considerable number of complaints filed with us, and in checking up we find it impossible to check up. The storekeeper may charge anything he pleases, and may deduct anything he pleases, and there is absolutely no recourse.

We have had offices do that. In fact, a certain minimum amount was deducted every week, anyway. In one instance, in my recollection—not on the Erie—it was required that at least \$3 be purchased every week from the commissary department. Even if that amount was not purchased it was deducted.

Mr. LEISERSON. Three dollars was deducted?

Mr. MAYPER. Three dollars was deducted for commissary supplies. On examination of the books at one time I found that the amount which they had, which two or three laborers had purchased one week, totaled \$2.20, or \$2.30, or \$2.70, and the balance was simply added on to make it up to \$3, or a little over—\$3. That is being done still in a number of camps.

Mr. LEISERSON. You also have had some experience in regard to employment offices? Are you in position to give us any criticism of this plan? Or would you prefer to give that to the commission in writing?

Mr. MAYPER. Perhaps I can make it clearer by not going into it in great detail at this time, if you will.

Mr. LEISERSON. Very well.

Mr. MAYPER. Our committee has had some legislation along the same lines, has proposed some legislation along the same general lines. Early in 1911 the league started to gather information, whatever information they could on this question of the distribution and aid of the immigrant, as it related to the immigrant, and as the result of their study for about two years, early in October of this year we had drafted three bills, a series of three bills, which were submitted to the Federal Department of Labor; secondly, regulating all em-

ployment agencies doing interstate business; and third, all steamship ticket agencies.

Mr. LEISERSON. We have had copies of that. I would like to know what is your criticism of this, so far as you have any?

Chairman GARRETSON. Can not you ask that that be submitted in writing?

Mr. LEISERSON. Suppose we have that in writing? We have got to get through with a certain number of witnesses.

Mr. MAYPER. There are several matters that I think I can possibly submit to you in that way.

Commissioner BALLARD. Did you get up that report on the camps? Did you have to make a formal report on camps of New York State?

Mr. MAYPER. That is found in the report of the New York State Bureau of Industries and Immigration.

Mr. LEISERSON. We have copies.

Commissioner BALLARD. Was the report on sanitation printed?

Mr. MAYPER. That is not printed. It has been drafted, and decided upon, but it is being printed.

Commissioner BALLARD. Let us have a copy of it, please.

Mr. LEISERSON. I will see that you get it.

Mr. MAYPER. There is one one thing I might add, if you are interested; that is, regulation of employment agencies doing interstate business. There are many complaints received along that line.

Mr. LEISERSON. We have developed that.

Mr. MAYPER. Yes.

Mr. LEISERSON. Any of those suggestions that you have we should be very much obliged to you if you would give them to us in writing.

Mr. MAYPER. Very well.

Chairman GARRETSON. That will be all.

The hour for conference is up, and the conference will reconvene in the morning, in the chamber of the board of estimates, upstairs, at 10 o'clock a. m.

Commissioner HARRIMAN. Perhaps you better announce the subject.

Chairman GARRETSON. On the subject of the American Federation of Labor, the Socialist Party, and the Industrial Workers of the World.

(At 4.30 o'clock p. m. an adjournment was taken until May 21, 1914, at 10 o'clock a. m.)

EXHIBITS.

BRESSLER EXHIBIT.

The intent of the proposed measure is primarily to increase the efficiency of labor agencies, and by a proper cooperation between them and central clearing houses, to connect the laborer with the job. There is no doubt that the bill presents many commendable features and that it will increase and improve the facilities for closer cooperation between employer and employee. It should increase the confidence of employers of labor in labor agencies, and by prohibiting a registration fee, it will on the other hand likewise increase the confidence of the workingmen in such agencies.

Among the purposes of the proposed bureau is the following: "To do everything that is possible to aid in securing the fullest application of the labor forces of this country." Such purpose invests the bureau with a broad scope and implies the recognition that the unemployment situation may be ameliorated. What, it may be asked, is the most important factor in maintaining what is known as the reserve army of the unemployed? The most generally recognized cause is seasonal variation of business activity. According to the census of 1900, among masons and plasterers, more than one-half were out of work a portion of the year. Of brick and tile makers, nearly one-half were at times unemployed; among paper hangers, the proportion was 44 per cent; among carpenters and painters, over 40 per cent. In the same period, more than one-fourth (27 per cent) of all tailors were out of work at some period. To discuss whether or not such seasonal variation may be overcome, is purely theoretical. However, there is a class of labor which is capable of shifting from one industry to another, and that is unskilled labor. Unfortunately the interchange of unskilled labor between various large industries throughout this country is restricted by the geographical location of these industries. In normal times it has been established that the large employers of unskilled labor can not supply their demand. For example, the investigators of the United States Immigration Commission were informed that as regards the Birmingham iron and steel industry in Alabama, the ordinary labor supply which may be relied upon continuously affords about 50 per cent of the total necessary to operate all plants and mines. According to an investigation made by the United States Bureau of Labor, the demand for laborers of all kinds in all lines of industry greatly exceeded the supply during the year 1906. One of the great lines of railroads reported an increase in its construction and track gangs of 41 per cent in 1906 over 1905, and the president of one of the largest railroads stated: "Our work was delayed in both years, 1905 and 1906, by the inability to get workingmen." No one will argue that the inability of these labor-employing companies to get adequate labor is altogether due to a shortage of supply, because it is well known that even in the best of times thousands of able-bodied common laborers are without employment. The main factor, as already indicated, is the inability of these unemployed common laborers to connect with the jobs, because, first, of their ignorance of the existing opportunities, and, second, even if informed, their inability to proceed to the point of employment.

As to the first, the measures proposed by the bill should provide such laborers with the necessary information through the bulletins which it is intended that the bureau issue in all the necessary languages. But the question is forced on us, What provision can be made for that large number of unskilled laborers in a destitute condition who would be precluded from acting on the bureau's information by lack of funds for transportation? I think it of high importance that this problem receive your very earnest consideration, for we have in our midst a preponderance of unskilled labor and our immigration is largely compounded of common laborers. If we consult the immigration figures for last year we will find that out of almost 1,200,000 arriving immigrants, only 160,108 were skilled, whereas of those termed "miscellaneous" (unskilled) there were 727,127; the remaining 297,188 had no occupation, but this number included women and children. Unquestionably the bureau can not differentiate in favor of one class of employees as against

another, but no class of workingmen is more in need of guidance and information than is the unskilled laborer. He is the only one who is usually exploited, because of his need to accept anything which offers itself in the way of employment.

Therefore, I venture to urge a consideration of the needs of the unskilled laborers who, although provided with favorable information as to employment, will be unable to pay the fare to the designated point. In this connection, I want to cite the experience of the Division of Information of the Department of Labor at Washington which is most illuminating. That division, since the year 1907 has concentrated its efforts to influence a distribution of our immigrants into industrial and agriculturally favorable sections of the country. In that period it has extended information to over 121,477 applicants of whom only 25,299 availed themselves of the advice and located in other sections of the country. It should be noted that in this same period 8,164,139 immigrants arrived. In explanation of this scant result, the division in its report for the year 1913 says, among other things: "Transportation is still the great stumbling block to distribution. I am of the opinion that mileage, issued by the Government and so arranged as to be honored by all railroads on presentation, would be of great economy and value to the Government and to traveling seekers of employment, if a plan can be perfected which will be acceptable to the transportation lines."

In this connection it is possibly in place to point out that yearly there is a considerable balance over and above the cost of running the Immigration Service for its various departments, such surplus being derived from the head tax paid by the immigrants themselves, and now representing the substantial total of almost \$8,000,000. Might not use be made of this money which belongs to one class of our labor, namely, the immigrants, in bringing them and the job together? If deemed desirable or advisable the Government might even arrange so as to merely advance the fare, to be refunded in installments by the employer, out of the wages of the employee.

Advisory council. Equal representation of employers and employees.

What employees?

Whenever representation of employees is spoken of we naturally have in mind those employees which are organized. These, unquestionably, should have representation. But what about the preponderating element of employees who are not organized and whose interests should be safeguarded in determining the policies of the bureau?

Section 7. Clearing house. This section as to the collating and distributing of information is somewhat vague.

1. Is it intended that every clearing house in receipt of information send the same to the central bureau at Washington before distributing it direct to the labor agencies in its district? Or is it empowered immediately to act on this information and to prepare it in suitable form for both employer and employee in its jurisdiction? If the former, will there not be entailed a loss of time which may defeat the necessary timeliness so important in information of this kind.

2. Has the commission considered the advisability of a clearing house in agricultural sections designed especially for that large number of peasant workers who are unable to procure the opportunity to work at their natural calling because of the peculiar economic conditions at the ports of entry which make it imperative that such laborers accept any form of employment for means of subsistence?

In this connection, I desire to call attention to the fact that in the year 1913 alone over 820,000 farm laborers arrived in this country, the greatest proportion of whom were compelled to seek employment in plants and factories for the reason above indicated. Especial effort should be made to place these workers on farms and specially in the southern sections of this country which have long clamored for agricultural laborers and whose regions are relevantly undeveloped because of their inability to procure such farm laborers.

The fate of the peasant immigrant in this country has long been the subject of comment. Time and again it has been demonstrated that as soon as these laborers accumulate a pittance many of them leave this country to return to their native shores there to buy a piece of land often valueless and at extortionate prices. It has been estimated by Lajos Steiner, possibly the best informed student of this question, that annually \$300,000,000 in immigrant savings is taken out of this country by the departing aliens who could not satisfy in this country their land hunger.

ATWOOD EXHIBIT.

NEW YORK, N. Y., *May 5, 1914.*

LADIES AND GENTLEMEN: I am deeply gratified to be asked to express an opinion before this body to-day, and for many reasons I believe that this meeting has been called to try to earnestly and honestly solve the problem of the great mass of unemployed, which at a certain season of the year comes before us so urgently, and again because having dealt with the workingman for over 20 years I am most deeply interested in his welfare and in seeing this problem solved as we should solve it, to be doing our duty to each of our fellow men, and I hope that my view of this matter maybe of a little assistance and have at least some weight in forming a plan of action to alleviate the present conditions.

My experience perhaps makes me realize more deeply than many of you present the necessity and demand for practical action.

For over 20 years I have, through employment agencies, handled laborers for building railroads, dams, aqueducts, canals, and farm work. I have had offices at Portland, Oreg.; Butte, Mont.; Ogden, Utah; Denver, Colo.; Omaha, Nebr.; Roanoke, Va.; Kansas City, Chicago, and Philadelphia, as well as in New York City, and besides these laborers have gathered laborers and distributed them to every city in the Union as well as to Canada and south into Mexico. For about five years I also boarded and run the commissary stores for all laborers employed by the Oregon Short Line Railroad. This boarding outfit usually carried from 1,500 to 2,500 men on its roll steadily, and many times was far in excess of that number; consequently I have come in direct contact with the various classes which you are here to-day to discuss.

When the investigator of labor relations of the United States Government called upon me he showed me a small chart, giving different plans which were to be discussed at this meeting, and asked which I favored. My instant reply (about which I have seen no cause to change my mind) was "none of them."

In the first place there are two causes for the condition which annually strikes all cities in the United States of unemployment: Those who wish to work, but find all farming and railroad labor closed for the winter and those who for many years have come to the great centers, profited by the bread line and the lodging houses and make their calculations of tiding over a cold winter without work in the open. There is but one practical solution of this problem, and that is work. Establishing official centers, putting out daily bulletins, either through postmasters in various parts of the country or through an agency for that purpose, can not work any great reform, as during the summer time it is not necessary, for it is almost impossible to find laborers to meet the demand either for farms or railroad work, and in the winter, when there are no demands for labor in one part of the country, there seldom is in another. Only three winters since I have been handling laborers have large works started and been kept up continuously through the winter and employed all the labor which we could obtain, and when these very active winters were demanding the labor in one part of the country I noted that the same activity was taking place in all parts of the United States, and that there was very little use in trying to induce men from any other part of the country to travel for miles to any particularly large contract—there was plenty of work for them nearer home. The keeping of these bulletins or statistics by the Government at Washington of the great army of unemployed would, it seems to me, only be creating labor for clerical help and would be a very fine source of appointments for some noted politician to hand out, but I can not understand where it would help the laborer who is waiting outside for a job. It reminds me most forcibly of a so-called charitable institution which, some two or three winters ago, during the idle season, placed an "ad." in the morning papers for all men needing employment to call at their office early the next morning. Men lined up for blocks, were kept in line by the police from 4 o'clock in the morning until nearly noon. They passed into the office in rotation to be handed blanks requesting their name, address, nationality, number of their family, and class of work which they could do. Toward noon the matter was investigated officially and inquiry made as to what it was done for and the answer was "to get statistics as to how many unemployed there was in the city." It occurred to me that it was a great deal like a scientist impaling an insect. It was very good for the scientist, but very hard on the insect. I can not under-

stand where these pretty theories and statistics are going to be of any possible aid in furnishing employment to the laborer.

Another thought of the Government is "back to the soil." This is a splendid idea, but I have noted that wherever I have shipped a laborer who in his heart was a farmer, who wished for that work, and who ever wanted a home, he always found his particular piece of ground to till, whether he was sent to the wilds of Idaho or the glades of Florida, for while he handled a pick and shovel his mind continually roamed to that home, which in imagination, he knew was waiting somewhere for him, and he has been ready to toil and save and find his place in the world.

The larger percentage of the foreign element who come into this country will not farm. It is impossible, during the farming season, to commence to fill our orders for farm hands at even the very best of wages and many of them are then incompetent and unwilling to learn. In this connection would say I held on my books for many months three distinct places where I could send families, fare advanced. The places were furnished with horses, a cow, pigs, seed, and the living for the first year until crops were harvested and every opportunity given to own their own home. Any nationality accepted if they were real farmers. The result was one German family sent in eight months. This family, by the way, have made exceedingly good money and done well. As a rule all foreigners wish day wages and regular pay day and no sense of responsibility. I see but one possible suggestion, and that is, making the employment, and not scattering the laborer to that which is already in progress.

If the State of New York would open at least two pieces of work (and we certainly have a demand for highway improvement) and be ready for this work to commence as the general work of the country begins to decline next fall, I think this problem would be solved in so short a time that we would be amazed at the results. I would suggest work which could be readily furnished by our State engineers, where there is rock to be handled. In many places in this State immense rock cuts have taken the entire winter, and the rock underlying this part of the country is handled even better in cold weather than in summer. If for this work, as an experiment, the State or city does not wish to incur the expense of a large plant, there are several large firms from whom rock crushers, steam shovels, and all implements could be rented at nominal figures. On one piece of this work I would use all unemployed men who were willing to work and can not obtain it, and this can be done at the ordinary wage schedule which prevails in this State to-day, of \$1.60 for eight hours. Good portable buildings at very cheap rates can be placed on this work, organizing a good, up-to-date camp, and doing this work at a lower price than any contractor in the State can possibly handle it for.

The second piece of work, which should be opened at the same time, should be as near as possible to the city. There are several places I have in mind where large crushers are needed, where the rock can be prepared (except for a few days) during any ordinary winter, and at any time can be distributed along the line where it is to be used.

For this second camp I would use the unemployable man who refuses work, frequents the lodging houses, and the bread line. I would have him arrested for vagrancy. Thirty days good work in the open air, with proper food and proper sleep would make a workingman out of a street "bum." Jailing a man for vagrancy does not do this. While this second camp would have to work under guard, these camps can be made sanitary, homelike, and cheerful. Not a place of punishment, but one which will send out better men physically and mentally when their time is up.

If there are married men at either of the above camps, then I would suggest that a certain percentage of their money be turned over weekly to their families. In this manner we are taking the burden of the families from the charitable organizations of this city; we are taking the man from the round of the charity organizations or being supported by the taxpayers in jail and making him a self-supporting unit as he should be. I do not believe that we should make a single human being a mendicant. He has the right to be a self-respecting, self-supporting man, and if the conditions have brought about the present state of affairs, then we should right about face, at once find the remedy, which is self-respecting work; and strong, healthy people who will not work willingly should be made to do it. Idleness is simply a habit.

I note that the Government investigators seem to think that the cities are only crowded in winter because men come here to look for work. This is not so.

Small towns and the country will not tolerate idle men who are discharged from the farms and work lying around all winter, and the men state frequently and frankly that nowhere can they live so easily and so well as in the large centers.

To show that the matter of road work is perfectly feasible and can be done in a satisfactory manner, and also with a saving of money to the State, I would like to quote a few figures. I find in the report of the State Highway Commission of New York for 1912 that the ordinary work through this State where there was only a little earth grading runs from \$12,130 up to \$52,078 per mile. I find again in the comparative figures on work done in 1909 in the United States, compiled by J. E. Pennybacker, jr., that the cost per mile of roads varied and was the least in Arkansas.

	Gravel.	Macadam.	Bituminous.
Arkansas.....	940	325
California.....	1,375	5,375	8,575
Pennsylvania.....	1,575	9,164	10,000
Virginia.....	2,260	4,920
New York.....	5,950	9,406

You will note in the foregoing table of prices that work in New York is much higher per mile than any other State for the same line of road. This, I am positive, is not necessary, as the material for good road making is very near at hand, and if a good, competent engineer were put in charge and work handled in a businesslike manner by checking all accounts through an auditing committee so that only actual expenses need be met and graft could not exist I think better roads for less money will be found to be an actual fact, and the taxpayer profit by it.

There has been within the past 60 days a little over 48 miles of new-road contracts let in this State at an average price of \$19,400 per mile, or, at least, this would be the price of the lowest bidder; and it is not possible that the city or State taking charge of one of these pieces of work could not handle it at the same figures or less and work out this great problem of employment which is calling the attention of the world.

Many States in the West are already building roads with prison workers and have found it not only feasible but that they saved the men, morally and physically, as well as saving money. I note in an article of the department of justice in the State of Iowa that they are working men at a wage schedule of from \$2 to \$2.50 per day; that the cost of the maintenance of their prisoners, which covers both guards and food, is \$1.01 per day; that the balance of the wages in cases of families is being turned over to them. Where there is no family it is all laid by for the man when his term ends, giving him a start of a few dollars instead of being a mediant.

In Colorado, where prisoners are used upon both farming and road work, I find by the report of the warden, Thomas J. Tynan, that he speaks in terms not at all uncertain of the good that has been accomplished. I would quote one paragraph from his report:

"By working convicts on public highways we have saved the State many thousands of dollars, and the taxpayers have received the benefit of this tremendous saving. To give an idea of the great saving to this State, I wish to quote a few figures based on actual facts: 'During the year 1909-10 we built 57 miles of finished roadway, saving the taxpayers of Colorado \$223,479.56 in actual cash. The above figures based on contractors' estimates. The cost to maintain these men was 32 cents per day per man, and not only are they building good, substantial roads under competent overseers but they are gaining a knowledge and physical condition that will enable them to earn honest livelihoods.'"

You understand, in Colorado these prisoners working on the road are nearly all State's prisoners under long sentences and are worked in honor camps without guards, and the watchword of the Colorado prison has been reform and not punishment, and they are realizing to-day and sending into the world a class of men with better habits, mentally, morally, and physically, than ever before.

I worked for many years with the Prisoners' Aid Association, and my experience has been that the man, whether a prisoner or free, who is obliged to do good, wholesome work and is made an economic factor, and the wage earner,

as well as consumer, is the man who counts not only in dollars and cents but in his own estimation and self-respect, and every man taken from the great army of the unemployed and made to work for 60 to 90 days systematically and regularly, well fed and housed, has acquired a habit that will raise him to higher citizenship and make him a man in every sense of the word.

I was in Colorado many years ago, when the Coxey Army made their headquarters there, arranging for their trip to Washington. Up to that date it had been very easy to fill orders for railroad work with the English-speaking class, a large percentage of these being, of course, Irish, Swedish, and German-Americans. This army formed at a time when a wave of unemployment swept the country. This class, without exception, drifted into the Coxey Army. They demanded something for nothing. Food and shelter without work, and became from workingmen, in every sense hoboos. Many of these men I had placed on work for years and I was interested enough to keep track of them afterwards, and when the army was disbanded I found about 5 per cent of these men ready for employment again. The balance were divided into two classes; one demanding positions and wages which they were not at all fitted to take and claiming that they were too good for common labor, the balance formed the army of tramps and hoboos that for many years infested the Western States and have not entirely disappeared. Those who before that time would have been ashamed to accept charity had acquired the habit of indolence and getting something for nothing.

Another point: I find that many of the immigrants come to this country fully understanding that there are all sorts of charitable institutions which will carry them on if they have simply enough to land here. For example, one Russian was only in this country some two weeks when his wife was in the confinement ward of an East Side free hospital, three children were in various charitable institutions, and he himself had received aid. On questioning him I found that friends in this country had urged him to come and save all expenses which it would cost him in the old country, and that all of the immigrants from his part of the country had been informed the same; that there was no expense in this country as we were very anxious to receive them. He fully believed that Roosevelt's policy was certainly a winner for the immigrant families.

In conclusion, I firmly believe that one year's trial of this plan would lessen the number of unemployed in this city to such an extent that you would feel the problem solved. I believe that if the United States Government would open one large piece of work on the Mississippi levee in the same manner they would find that nothing more was necessary, and I am sure you will all agree with me when I say that every dollar of money which both State and National Governments can spare should go to the making of employment and not to theories and statistics. No chain of agencies formed in the United States, whether private or Government, can give work when no work is to be had. Each State has been working out its own problem and can not take care of those within its borders, while each State would like to obtain labor from some outside source and can not find it. The table of prices of road work which I read to you some time ago shows that road work to-day in New York State has been let at higher prices and costs this State more than in almost any other State in the Union, while statistics show that New York has more unemployed than any other State. It seems to me that these two assertions should be taken to heart by thoughtful people and be made to solve our problem. Other States are finding that they can do their road work at less than it is costing New York by this same process, and if we were to make prisoners of those refusing legitimate employment and giving work at the ordinary price to those who are willing to accept it we would get the much needed work done at a lower price, make the existence of a municipal lodging house unnecessary, cut out the bread and pie lines from the East Side, take the burden of supporting the families of the unemployed men from the charity organizations, relieve the taxpayers from boarding and caring for vagrants in the jails, and compel every consumer to be a producer whether he wishes it or not. This should be done in all States, but I speak particularly of New York City, because it is the landing place and dumping ground of the immigration of the world and the first place where these immigrants land they are almost certain to return to; and hundreds of them, when sent to distant States for employment, will stay only a certain length of time when they must return to New York City, and if compelled to work when they came here to winter a great number would not return, and I fancy that other surrounding States will very soon have to

start work in the same manner to protect themselves from New York's overflow, which will stampede to other centers as soon as compulsory work is commenced here.

I can not see where there should be any aversion to prison labor. Because the man is arrested he is not out of existence. He is still a consumer—a unit to be figured upon, and he should not only be allowed, but compelled to be a producer.

I find in the yearly report of John A. Bensei, State engineer, that the State and county roads under improvements for one year shows:

	Miles.
State and county roads improved during the year-----	3, 578
State and county roads under contract for improvement-----	1, 627
Expedited roads (not contracted for, but which is contemplated)-----	298
Remaining State and county highways to be improved-----	6, 483
Total mileage of public roads in the State of New York, not including New York City-----	80, 000

Does it not seem that of all these miles of road for which big money is being paid to the contractors, who do all their work in midsummer, that at least 10 or 20 miles could be reserved by the State and done in midwinter and thus furnish the unemployed of this city with proper work and for ordinary prices, and thus solve the problem of building roads, clearing our prisons, lessening our charities, and stop making our brother a beggar.

MORTON EXHIBIT NO. 1.

NATIONAL METAL TRADES ASSOCIATION,
New York, May 23, 1914.

COMMISSION ON INDUSTRIAL RELATIONS,
Municipal Building, New York City.

GENTLEMEN: At the request of Mr. M. J. Dower we send you herewith copies of the forms used by us in the operation of the employment bureau of the National Metal Trades Association, under the supervision of the New York and New Jersey branch.

During my examination I stated to the examiner that the association did not maintain a branch office at Milwaukee. It does, however, maintain what is known as a "district," in which Milwaukee is the center, and this district is supervised by a district committee composed of manufacturers in and about Milwaukee who are members of the association.

The district committee does not maintain an employment bureau. Undoubtedly members of the Milwaukee district are identified with the Employers' Association of Milwaukee and use the bureau operated by that association.

This statement confirms the statement I made at my examination and explains the reference to Milwaukee appearing on this letter head.

Yours, very truly,

C. E. MORTON,
Manager Employment Bureau.

(The forms referred to were submitted and are on file with the committee.)

MARCH EXHIBIT.

NEW YORK, May 27, 1914.

To the CHAIRMAN CONGRESSIONAL COMMITTEE ON LABOR,
New York.

MY DEAR CHAIRMAN: Inclosed herewith please find price list as you asked me when before your committee at city hall.

Yours, truly,

JAMES E. MARCH.

List of selling prices of goods.

[Provisions are purchased from C. F. Matlage & Sons, 335-337 Greenwich Street, New York, and prices are subject to slight change according to market.]

Bacon, 22 and 24 cents a pound.	Paste (very best, \$1.76 a box, or 8 cents a pound.
Corned beef, 21 cents a can.	Coffee, 30 cents a pound.
Roast beef, 21 cents a can.	Tea, 35 cents a pound.
Lard, 15 and 16 cents a pound.	Tobacco, 5 cents a package.
Tomatoes, 10 and 11 cents a can.	Socks, 12 cents a pair.
Beans, 7 and 8 cents a pound.	Red all-wool underwear, A1 quality, \$1.50 a pair.
Peas, 7 and 8 cents a pound.	Red all-wool underdrawers, A1 quality, \$1.50 each.
Condensed milk, 12 and 13 cents a can.	Heavy flannel overshirts, 75 cents each.
Codfish (Italian), 12 cents a pound.	Light flannel overshirts, 65 cents each.
Pork and beans, 13 and 14 cents a can.	Pants, \$1.50 a pair.
Salmon, 14 and 15 cents a can.	Overalls with bibs (very best), 80 cents each.
Sugar, 6 cents a pound.	Overalls without bibs (very best), 75 cents each.
Shoulders, 17 cents a pound.	Jumpers (very best), 75 cents each.
Rice, 8 and 9 cents a pound.	Rubber boots, \$3.75 a pair.
Canned peas, 15 cents a can.	Double blankets, \$1.75 each.
Soap (large piece), 4 cents a piece.	Black shoes with nails, \$1.75 a pair.
Sardines in oil, 6 cents a can.	Black shoes without nails, \$2.25 a pair.
Smoked bloaters, 3 cents each.	Yellow shoes without nails, \$2.40 a pair.
Bologne, 24 and 25 cents a pound.	
Cheese (Italian imported), 37 and 39 cents a pound.	
Mustard sardines, 11 cents a can.	
Bread (2-pound loaf), 9 cents a loaf.	
Macaroni (very best), \$1.76 a box, or 8 cents a pound.	

HOMANS'S EXHIBIT.HYDE PARK, MASS., *October 19, 1914.*Mr. LEWIS K. BROWN, *Chicago, Ill.*

MY DEAR SIR: In my testimony given May 20, in New York, I offered to explain verbally a plan which I believed could be worked out for the benefit of the unemployed. I then stated doubts of being able to put it satisfactorily (to myself at least) on paper. However, at your request, I will do the best I can, but permit me to state that for the past 30 years—I have now retired—my time has been spent in conducting a successful employment office for high-grade help, bookkeepers, stenographers, salesmen, etc., and I have not devoted much time or thought to the broad question of mechanical, unskilled, or common labor. After all there is not much difference between an unemployed bookkeeper and a longshoreman, both desire work and the question is how to procure it.

During the past 30 years I have seen a great many unsuccessful attempts to solve this question. Each one conducted by a body of generous philanthropists and along, what to me seemed, impractical lines, nevertheless I believe there is a practical solution. There are but three questions to be considered: First, how to create labor; second, how to educate the unskilled to become skilled workmen; and third, how to reach these results at a minimum expense. One point is certain and beyond dispute: increasing employment offices, either private or public, does not reduce the number of unemployed except by the number employed in those offices. They simply aid in filling the vacant places which of a necessity would be filled—they do not create work.

Transporting Maine lumbermen to California to harvest wheat during the rush season is not practical. The cost would be much more than the value of the wheat they might gather. Furthermore, they must be returned or left in a country they are unused to and unfitted to serve in. At the present moment there are hundreds of barrels of ungathered apples here in Massachusetts, because of unavallable persons to gather them, yet there are hundreds of unemployed right here who could be utilized if properly directed. Doubtless this condition exists in the wheat States during the harvest time. If each State was properly organized to handle such conditions it could take care of the whole situation within its own borders. There is enough produce wasted in the United States that could be saved to pay a living wage to every unemployed person.

More men are kept idle because of unnecessary strikes than from any other one cause, and good men kept from filling their places because of the unions. This condition could and should be avoided to the benefit, not injury, of the unions. Unscrupulous union leaders, who are fast gaining the ascendancy, and stubborn, self-willed managers of corporations (handling other people's money) could and should be controlled. Enough money is lost by avoidable strikes to pay a minimum wage to all the unemployed in the country. While I know this could all be prevented, I will not now attempt any suggestion on that subject.

It is a fact that in all years during prosperous as well as hard times there are 10 applicants for every position. What will you do with this surplus? To create work is the only solution.

The resources in every State in the Union for supplying work are too great to itemize. Each State has its own peculiar needs. To illustrate by one out of many suggestions, there are hundred of acres of unimproved land in Massachusetts that are taxed from \$10 to \$25 per acre. If good roads were constructed, which are needed and wanted, these acres would become valuable for building and other purposes and the taxes raised sufficiently to reimburse the city, town, and State for the expense involved. Each State could absorb all its unemployed by opening up various lines of work and then offer employment to all at a minimum wage; if refused, they are not longer subjects for public consideration. My point is, when a community provides suitable work for its citizens, and the fact becomes known, then if there are any idlers it is their fault, and the public is relieved from all further responsibility. Each State industry as started could be made self-supporting if kept out of politics. One of the most perplexing questions is that of unskilled labor. There are several ways to overcome this difficulty, the simplest and cheapest being for every State, city, or town to control its own work instead of letting it out in its entirety to contractors. Thereby it could, to illustrate, put 10 skilled and 10 unskilled carpenters on a job, one at the regular and the other at half pay. The skilled man should, so far as reasonable, instruct the unskilled man in the work; in time this would reduce the number of unskilled workmen.

To carry out this plan of creating work, each State should establish a fund and the Government place to the credit of each State an equal amount to draw from if needed.

My thought would be to set these plans in motion and have them develop as the occasion requires.

The greatest evil in private employment offices is collecting advance fees. Abolish this system, and you drive the crooks out of business. An honest employment office is of great value to both employer and employee.

Sincerely, yours,

FRANK B. HOMANS.

JONES EXHIBIT.

BUREAU OF EMPLOYMENT AND DISCIPLINE,
Baltimore, Md., June 9, 1914.

MR. FRANK P. WALSH,

Chairman U. S. Commission on Industrial Relations,

Washington, D. C.

DEAR SIR: Pursuant to the request of the commission when the writer appeared before same at the hearing held at New York May 19, that I write the commission my views and suggestions covering the tentative proposals for operating a Federal bureau of labor exchanges, in connection with the Department of Labor, I respectfully submit the following:

The tentative proposition shows a comprehensive handling, the result of deep investigation and careful study, and covers the subject very thoroughly; but, being tentative, it will of course only prove its efficiency by actual trial.

The plan of establishing a bureau under Federal jurisdiction must appeal to all as a move toward overcoming to a great extent the difficulty of those seeking employment. Such a plan will enable—

(1) *Interstate control*.—Being interstate, it would control Federal, State, or municipal business between States, regulate operation and penalize abuses.

(2) *Child labor*.—The various State laws could be formulated into a Federal code, making a uniform basis for the handling of this very important matter.

(3) *Improved opportunities for dissemination of information*.—Such a bureau being general over such a great territory, each branch working in conjunction, must result in a vast improvement over the present condition, where each agency or territory works under different systems and according to different ideas.

Organization.—The name of the bureau should be very short and to the point, similar to "U. S. Mail." Such a short name in a short time would become a general slogan and would be easily interpreted by aliens as well as Americans.

Advisory council.—My idea is that this council should be strictly advisory and have no dictating power. It would appear that if the personnel of the active staff was efficient, and advisory council with authority to dictate policy or outline plans, and especially in selecting subordinates, would cause more or less friction and retard the proper administration to the bureau.

Civil-service appointment.—It is noted that civil-service appointments are to prevail, which, of course, is the best plan, with a few exceptions, a qualifying exception being made of the director, who, however, it is recommended should be selected on merit and not restricted to a competitive written examination. Would it not be better to apply this exception to all assistant directors and executive heads? I am of the opinion that a most competent executive would in some instances fall short in a competitive written examination.

Duties, power, and authority of the bureau.—Such a bureau should have a splendid opportunity to gather and distribute information now being handled by Division of Information, Bureau of Immigration, Department of Labor, such as land and crop conditions; improved and unimproved real estate; manufacturing interests, analysis of output, comparative rates of pay for various classes of labor, etc. This would allow investigation into working and living conditions at outlying camps, and such personal investigation permitting reports, first hand, would give opportunity to criticise unfit conditions and regulate them.

Clearing house.—Presume it is the idea to have proposed clearing houses to embrace zones. It would be impracticable to ship unskilled men hundreds of

miles, especially when necessary to incur transportation expenses; hence the employing zone covered by a particular clearing house would make it more practicable, due to reduced expenses in getting men to the job.

Contracts to be filled.—Employment agencies using printed contracts; the Federal bureau should stipulate the wording of such a contract and have it standardized and insist on its universal use, as provided in article 6, clause 3, of the pamphlet.

(4) *Proposed regulations for private employment office.*—While it is strictly against the desire to injure or handicap private agencies who comply with the law and do not permit abuses, still it would appear to be the proper thing to encourage the absorption of State or municipal agencies, and State legislation to that end should be encouraged.

General.—There is no doubt but that such a bureau would greatly enhance the employment of unskilled labor. It would relieve the charitable features; men would not have that feeling of dependence that is now complained of when they apply to philanthropic or free bureaus, and in many cases they can not apply to an agency demanding fees on account of lack of funds. I think, however, some difficulty will be experienced in placing the skilled mechanic, it being the writer's experience that it is very difficult to develop the ability of an applicant for a skilled job, the applicant very often having a talking knowledge of the job but can not perform the service, thus misleading the questioner. However, a Federal bureau would be in a better position to bring together the employee and the employer to the probable satisfaction of both.

Yours, very respectfully,

E. J. JONES, *Chief of Bureau.*

DESCRIPTION COVERING ESTABLISHMENT AND OPERATION EMPLOYMENT AND LABOR BUREAUS, BALTIMORE & OHIO SYSTEM.

[Baltimore, Md., May 16, 1914. E. J. Jones, Chief of Bureau.]

BUREAU OF EMPLOYMENT.

Establishment.—During the latter part of the year 1905 the relief department of the Baltimore & Ohio Railroad secured a full employment record covering each employee in the service at that time on the Staten Island lines, the Baltimore & Ohio Railroad, the Baltimore & Ohio Southwestern. (At that time the C., H. & D. was not a part of B. & O. system.) All available data was secured at divisional or department headquarters, but in very many cases the information was not complete, necessitating a personal interview with many employees to secure from them personal information covering the date of employment, changes in occupation, rates of pay, etc. After the information was gathered it was spread on forms hereinafter explained and sent to the central office at Baltimore, where each record was recorded on a card and this card placed in a permanent file alphabetically indexed to itself, and all subsequent changes reported from time to time were added to these cards. The cards are constantly in use in the department bureau. We have, at this time, 321,464 cards on file, and they are divided as follows:

	Cards.
Active (men in the service)	72, 404
Inactive (men out of service)	248, 087
Pensioners	883
Total	321, 374

On November 1, 1912, an employment bureau was established and the records, as above, together with forces that maintained same were transferred from the relief department to the employment bureau, after which date the employment bureau maintained the record in practically the same manner as did the relief department.

Previous to the establishment of the employment bureau, each division handled the applications in his own department, but upon establishment of the employment bureau all applications for skilled laborer (including brakemen and firemen) were referred by the division officials to the employment bureau for investigation and action resultant upon the investigation. The manner of handling applications and purpose of the employment bureau is explained in circular of November 1, 1912, issued upon establishment of the bureau, as shown on page 2 of this binder.

[The Baltimore & Ohio System: The Baltimore & Ohio Railroad Co., the Baltimore & Ohio Southwestern Railroad Co., the Cincinnati, Hamilton & Dayton Railway Co., the Staten Island Lines.]

ESTABLISHMENT OF EMPLOYMENT BUREAU—GENERAL INSTRUCTIONS.

OFFICE OF THIRD VICE PRESIDENT,
Baltimore, Md., November 1, 1912.

To all officers and heads of departments:

The following instructions, effective November 1, 1912, will be observed in connection with the employment, promotion, transfer, or termination of service of all employees in the operating department, except unskilled labor.

All persons, except unskilled laborers, entering the employ of the above companies will fill out form 726-Rev. When the applicant has been previously employed in railroad or other service, form 727-Rev. will be filled out, using a separate form for each former employer. When special qualifications are necessary, form 726-B will be used in connection with form 726-Rev.

Above forms are to be forwarded at once to the employment bureau by the employing officer.

Any officer receiving applicants for work for whom they have no place, should have blanks properly filled out and refer to the employment bureau, as such men may be needed elsewhere. In cases where application is made in person, the officer with whom it is filed will note on the application blank his opinion as to the qualification of the applicant for the character of work he seeks.

Employment will be conditional upon applicants passing satisfactory examinations and furnishing satisfactory references. Pending receipt of reports from the employment bureau, service shall be considered as only temporary. If application is rejected, the employment will be terminated as soon as possible after advice from the employment bureau and the termination reported to the bureau.

Minors will not be employed in train service or other hazardous work, and only for such other positions in accordance with whatever laws may be in effect, and if under 16 years of age written assent of parents or guardians must be secured.

Form 727-O Rev. will be used for reporting transfers between departments or divisions, changes in occupation, rates of pay, leaving the service, or deaths, reason being shown for leaving the service.

To avoid duplication of records the employment bureau will also maintain the service records now being kept in connection with the pension feature in the relief department. The service records of all employees, and reports heretofore forwarded on forms 727-N, 727-O, and 727-P, will hereafter be sent to the employment bureau direct.

Form 723-M will be used in reporting to the employment bureau results of examinations or reexaminations of employees who are subject to such examinations.

When employees, other than those in train service, in connection with which the information will be handled by the discipline bureau, are censured, information as to the circumstances in the case and the discipline administered must be forwarded to the bureau for record. This same action must be taken in connection with employees who are commended for meritorious service.

Certificates showing the character and length of service of former and present employees will be issued only by the employment bureau. Such information will only be furnished upon execution of form 726-C by the employee.

It is the policy of the company, so far as practicable, to fill vacancies by promotion of those in the service. It is expected that the employment bureau will assist in this direction.

A. W. THOMPSON,
Third Vice President.

During the year 1913 there were sent to the employment bureau 13,430 applications covering skilled laborers. Of this number there were:

	Per cent.
Approved	54
Rejected	8
Left pending investigation	20
Still pending investigation at end of year	18

1892 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Labor bureau.—In August, 1912, the maintenance of way department established a free labor bureau with the main office, located in the down-town district at Baltimore, where it was accessible to men seeking employment.

Very shortly after the establishment of the main office at Baltimore there were branch offices established at Philadelphia, Pittsburgh, and Cincinnati. Also, contracts were made with labor agencies at New York, Cleveland, and Chicago to furnish suitable men upon request of the head labor agent at Baltimore.

Shortly after the establishment of this labor bureau, which was to secure men for the maintenance of way department, the services of the labor bureau was extended to include laborers for other branches of the service, including the transportation and motive-power departments, and while a large percentage of the laborers employed were classed as unskilled, still the labor bureau employed quite a number of skilled mechanics.

In August, 1913, the labor bureau was removed from the jurisdiction of the maintenance of way department to that of the employment bureau, after which time the bureaus were worked jointly. As an exhibit of what this bureau has accomplished during the year 1913, we inclose herewith sheet No. 4, showing a total of 25,077 men employed at the various employment labor agencies and sent out along the line of road. A division official wishing men, that could not be secured on his own territory, will send his order to the nearest labor agent with a copy to the head labor agent at Baltimore. If the labor agent receiving this order is not able to fill same, he so advises the head labor agent, who makes an effort to furnish the requirements from other points where labor might be available.

ORGANIZATION.

Employment bureau.

Force consists of:	Men.
Chief of bureau.....	1
Maintaining employment record.....	8
Checking applications against records in office, investigating same.....	3
Total.....	12

Assistant.....	1
Chief clerk.....	1
Philadelphia agency, labor agent.....	1
Pittsburgh agency, labor agent.....	1
Cincinnati agency, labor agent.....	1
Total.....	6

Cleveland: Contract with outside labor agency.

Chicago: Contract with outside labor agency.

REQUIREMENTS OF EMPLOYEES ENTERING THE SERVICE.

At the time that the regular application is filed by an applicant and before he enters the service, he must pass a medical examination. This examination is made by the relief department, and embraces sick, accident, and death benefits. The examination is very complete, and if the applicant is to enter train service it includes examination on sight, hearing, and color senses. Form used for this examination is shown in Exhibit No. 12.

Applicants for train service must also pass a preliminary examination on train rules, and he must satisfy the employing official that he is proficient to carry out the duties of the position for which he was engaged.

After an applicant passes the examination satisfactorily, his application is sent to the employment bureau for investigation (his service being considered only temporary pending the approval of the application from the employment bureau).

As soon as the employee is able to take a thorough examination on train rules, he must pass either an oral or written examination, as he may elect, on regular prescribed form, sample of which is included in this pamphlet. (Exhibit No. 12.)

Promotions from firemen to engineman and from brakemen to conductors: These examinations are made by the superior in the department in which the man is employed, and after he has successfully passed this examination, in addition to the ones mentioned in the foregoing, he is given a certificate of promotion, a copy of which is sent to the employment bureau for record. (Copy of this certificate is shown in Exhibit No. 14.)

Where a minor is employed in a hazardous position, it is necessary for him to have a minor's release executed by his parents or guardian, which releases the employer from any liability to damage, etc. (Copy of this form is shown as Exhibit No. 15.)

EXHIBIT No. 1.—FORM 727N.

This form was used by the employing officials in preparing all past records up to and including the time it was taken, and includes all employees in the service at that time. It shows the date of entering the service and all subsequent changes either in rates of pay, transfers, leaving the service, reentering the service, etc.

After the information was tabulated on these forms they were sent to the central office at Baltimore, and this information was the foundation for establishing the permanent card record; it being transcribed to the permanent card index record described in Exhibit No. 2.

EXHIBITS Nos. 2A, 2B, AND 2C—FORM 727Q.

This is the permanent card-employment record. It is filed in alphabetical order and is an index to itself.

All advice received from the employing officials is transferred to this card, such as changes in occupations, rates of pay, promotions, demotions, leaving and reentering the service, etc. This information is furnished from time to time by the various departments or divisions.

These cards are divided into an active and an inactive file. The active file embraces men now in the service, while the inactive file represents those who have left the service and have not reentered.

When an employee for any reason leaves, the date of his termination and other information is noted on the card and the card is taken from the active and placed in the inactive file.

These cards are constantly referred to in order to secure the record of employees, the forms from which the information has been transcribed having been filed away.

EXHIBIT No. 5.—FORM 726—REV.

This is the standard form of application used for all classes of employees and shows previous railroad and other employment, with the dates employed by each employer. Note the back of this form calls for the names of living relatives who may share in liability covering claims made by the employee.

These applications are executed by the applicant, after which the department or division official forwards same, together with all supporting papers, to the employment bureau, where the application is investigated, and upon the investigation depends the rejection or approval.

As mentioned in another part of this pamphlet, an employee's service is considered temporary pending investigation and final action on the application.

EMPLOYMENT BUREAU—BALTIMORE DEPARTMENT OR DIVISION.

There are three ways to improve the character of the service:

- 1. Employ a better class of men.
- 2. Discharge the vicious and incompetent.
- 3. Educate those kept.

So far as possible men should be employed from those living along the line of the road. Their moral character, physical fitness, mental capacity, and past record should be rigidly examined.

Only the best should be employed.

APPLICATION FOR EMPLOYMENT.

BALTIMORE, May 15th, 1914.

To Mr. E. J. JONES,
Chief of Bureau, Baltimore, Md.

DEAR SIR: I hereby apply for a situation as brakeman or in such other service or employment as may be necessary or required from time to time by the company, or my superior officers, and, if accepted, agree to observe all the rules and regulations, to abstain from the use of intoxicating liquors, to conduct myself properly whether on or off duty, to perform my duties to the best of my ability. In the event of my leaving the service from any cause, I hereby authorize the company, and its officers, to answer any and all inquiries as to my conduct and qualifications while in such service and, so far as they may know, the cause of my leaving the same.

Name in full: John Doe. Date of birth: 3-17-83. Place of birth: Louisville, Ky. Married or single: Married. Name of wife: Mary. Present post-office address: Baltimore, Md.

See information to be furnished concerning relatives as shown on back hereof.

Mr. H. L. LAWRENCE,

No. 64 Superior Avenue, McKeesport, Pa.

DEAR SIR: Mr. John Doe has made application to this company for a position as brakeman and gives your name as reference to his character, ability, etc.

Will you kindly let me have the above information, using the inclosed stamped envelope for your reply, which will be treated confidentially?

Yours, very truly,

(Signed)

EL. J. JONES, Chief of Bureau.

EXHIBIT No. 9.—FORM 726E SPL.

After the investigation of the application has been completed this form is used for approving or rejecting the application in accordance with the investigation that has been prosecuted since receipt of the application.

This blank is executed only in the employment bureau and is sent to the employing official showing that the application has been accepted or rejected.

The employing official shows on the detachable slip at the bottom of this form the date the man was employed, and, if rejected, the date he was relieved, together with the rate of pay. The slip is detached at the perforation and is returned to the employment bureau.

After this slip is received it is attached to the employment file and the employment record of the man noted on the application is started; providing, of course, it is his first employment with this company. If he had previously been employed by this company, the record card (Form 727Q) is taken from the inactive file, his record revived, and the card placed in the active file. If the applicant is rejected, the card is closed out and is placed in the inactive file for future reference.

THE BALTIMORE & OHIO RAILROAD CO. RELIEF DEPARTMENT.

APPLICATION FOR FULL MEMBERSHIP IN THE RELIEF FEATURE.

To the SUPERINTENDENT OF THE RELIEF DEPARTMENT:

I,-----, of Baltimore, in the county of-----and State of Maryland, employed in the service of the Baltimore & Ohio Railroad Company, as -----, in the-----department, -----division, do hereby, as one of the conditions of such employment, apply for membership in the relief feature, and consent and agree to be bound by all the regulations of the relief department now in force, and by any other regulations of said department hereafter adopted applicable to the relief feature; for which regulations now in force reference is hereby had to any copy of the last edition of the book of regulations of said department, issued by the superintendent.

I also agree that the said company, by its proper agents and in the manner provided in said regulations, shall apply monthly, in advance, from the first wages earned by me under said employment, in each calendar month, sums at the rate of-----per month as a contribution to the relief feature of said department, for the purpose of securing the benefits provided by said regulations, for a member of class-----to myself, or in the event of my death to -----or to whomever I may hereafter from time to time designate in writing by way of substitution, with the written consent of the superintendent; or, if no such beneficiary be then living, to my next of kin (as determined by the laws of the State of Maryland), in accordance with regulation No. 18, subject to all the provisions and requirements of said regulations.

I expressly stipulate that my subsequent marriage shall ipso facto have the effect to substitute my wife in the place and stead of the beneficiary named above to receive said benefits in the event of my death, if she be then living.

I further agree that this application, when accepted by the superintendent, shall constitute a contract between myself and the said company, as a condition of my employment by the company, governed in its construction and effect by the laws of the State of Maryland, and as such be an irrevocable power and authority to said company to appropriate the above amounts from my wages and apply the same as aforesaid, and shall constitute an appropriation and assignment in advance to the said company, in trust for the purposes of the relief feature, of such portions of my wages, which assignment shall have precedence over any other assignment by me of my wages or of any claim upon them on account of liabilities incurred by me.

I further agree that in consideration of the contributions of said company to the relief department, and of the guarantee by it of the payments of the benefits aforesaid, the acceptance of benefits from the said relief department for injury or death shall operate as a release of all claims against said company or any company owning or operating its branches or divisions, or any company over whose railroad, right of way, or property the said The Baltimore & Ohio Railroad Co. shall have the right to run or operate its engines or cars or send its employees in the performance of their duty, for damages by reason of such injury or death, which could be made by or through me; and that the superintendent may require, as a condition precedent to the payment of such benefits, that all acts by him deemed appropriate or necessary to effect the full release and discharge of the said companies from all such claims, be done by those who might bring suit for damages by reason of such injury or death; and also, that the bringing of such a suit by me, my beneficiary or legal representative, or for the use of my beneficiary alone or with others, or the payment by any of the companies aforesaid of damages for such injury or death recovered in any suit or determined by compromise, or of any costs incurred therein, shall operate as a release in full to the relief department of all claims by reason of my membership therein.

I also agree, for myself and those claiming through me, to be specially bound by regulation No. 12e, providing for the final conclusive settlement of all disputes by reference to the superintendent of the relief department, and an appeal from his decision, either directly or through the advisory committee, to the operating committee in matters affecting the relief feature, or to the savings and pension committee in matters affecting the savings and pension feature.

I understand and agree that this application, when accepted by the superintendent, shall constitute a contract between me and the said company, by which my rights as a member of said relief feature and as an employee of said company shall be determined as to all matters within its scope; that each of the statements herein contained and each of my answers to the questions asked by the medical examiner, and hereto annexed, shall constitute a warranty by me, the truth whereof shall be a condition of payment of the benefits aforesaid.

I hereby certify that I am_____years of age; am correct and temperate in my habits, and have no injury or disease, constitutional or other, which will tend to shorten my life; and am now in good health and able to earn a livelihood.

In witness whereof, I have signed these presents at Baltimore, in the State of Maryland, this____day of_____, 191__.

Witness: _____ [SEAL.]

I certify that the foregoing form has been read to the person whose mark I herewith witness.

The foregoing application is accepted at the office of the superintendent of the relief department, Baltimore, Maryland, this____day of_____, 191__.

Superintendent of Relief Department.

NOTE FOR EXAMINERS.

The above form is to be filled up when application is made by a minor, and if the father is living is to be signed by him alone; if the father is dead, the mother must sign; and if she has married again, the stepfather, if living, must also sign. If both parents are dead, the signature of the guardian, if there be one, must be obtained. The signature must be witnessed in all cases; and the word father, mother, guardian, etc., as the case may be, must be added after the signature of the consenting party.

EXHIBIT No. 12A—MISCELLANEOUS CIRCULAR No. 1.

This is a circular issued by the third vice president dated January 1, 1914, and outlines rules and regulations for examining applicants and employees in vision, color sense, and hearing.

This circular outlines in full detail the requirements for examination specified above, and is self-explanatory.

EXHIBIT No. 12A.

[The Baltimore & Ohio System: The Baltimore & Ohio Railroad Co., the Baltimore & Ohio Southwestern Railroad Co., The Cincinnati, Hamilton & Dayton Railway Co., the Staten Island Lines.]

Operating department—Miscellaneous circular—Third vice president's No. 1—
Circular—Superintendent's No. ____—Miscellaneous.

RULES AND REGULATIONS FOR EXAMINATION OF APPLICANTS AND EMPLOYEES FOR
VISION, COLOR SENSE, AND HEARING.

[Office of Third Vice President, January 1, 1914.]

The following instructions have reference to the sight, hearing, and color sense of employees in train service and the method of conducting examinations in connection therewith.

Persons making application for positions hereinafter prescribed will be examined for sight, hearing, and color sense at the same time the regular physical examination is conducted.

Those affected by rules covering standards of vision must be examined as follows:

When entering the service, without use of glasses.

All classes must be reexamined every two years, unless otherwise prescribed by law, under conditions as shown by standards.

After any accident, in which they are concerned, which may have been caused by defective vision, color sense, or hearing.

After any serious accident or illness or severe inflammation of the eye or eyelids.

Applicants for prescribed positions failing to pass satisfactory examinations will not be employed and employees failing to maintain the required standard will be relieved from such positions; and if possible employment in other

capacities for which they possess the necessary qualifications will be arranged for.

Examinations will be in charge of the medical examiners of the Baltimore & Ohio Railroad and Baltimore & Ohio Southwestern Railroad, and the chief surgeons of the Cincinnati, Hamilton & Dayton Railway and the Staten Island Lines.

METHOD TO BE FOLLOWED IN ARRANGING FOR PROPER EXAMINATIONS.

The division superintendents will maintain a record for all employees required to take the examinations for sight, hearing, and color sense, notation to be made on the record of each employee.

Applicants for position requiring such examinations will be furnished with Form 726R, properly filled out, for presentation to the examiner so that the examination can be made when the regular physical examination is conducted, the result of such examination to be shown on the lower portion of such form and returned to the superintendent, details to be retained by the examiner and shown on Form 726L for future reference.

For periodical examinations of employees or where for some particular reason frequent examinations are necessary, the same method will be followed.

Should employees fail to present themselves for examination after the expiration of the time limit or when in the opinion of the proper officer it is considered advisable for him to do so and he has been furnished with Form 726R, he will be relieved from the service until the matter is attended to.

GENERAL RULES.

First. Each examiner will be provided with:

- (a) A set of standard test type for determining the acuteness of vision.
- (b) A standard reading card for testing the range of vision.
- (c) Two pairs of test spectacles—one with convex lenses of 2 diopters and the other with plain glass.
- (d) A set of Holmgren worsteds—125 colors, each with a numbered tag.
- (e) A pair of spectacles or shade for testing each eye separately.
- (f) Blank forms for certificates and examiners' records.

Second. Examinations should be conducted in a room or car in which a distance of twenty (20) feet can be measured from the test type to the candidate, and if lantern is used, the room or car should be darkened.

Third. In testing vision, color perception, and hearing, only the person to be examined and the examiner should be in the room or car at the time, except that if an employee so desires, he shall be permitted to call in another employee who has successfully passed to witness the examination.

Fourth. (a) The result of such examination must be shown on the prescribed form (726L) and forwarded to superintendent relief department B. & O. R. R. and B. & O. S. W. R. R., and to chief surgeons C. H. & D. R'y and Staten Island Lines for inspection, record, and file.

(b) Superintendent relief department B. & O. R. R., and B. & O. S. W. R. R. and chief surgeons C. H. & D. R'y and Staten Island Lines will keep proper check to insure reexaminations and will furnish division superintendents with a list of all employees due for reexamination each month.

(c) Examiners will issue to each person who passes a satisfactory examination, a certificate to that effect.

(d) An employee reported defective shall be again tested by the chief medical examiner, who will use the Williams or similar lantern, in addition to the apparatus specified in rule 1.

(e) The chief medical examiner will report result of his examination to the third vice president.

Fifth. Division superintendents will be notified on the prescribed form (726R) the date each employee presents himself for reexamination.

Sixth. All employees who are allowed the use of glasses, must wear them at all times when on duty and must carry a duplicate pair for emergency, and will be examined with each pair.

Seventh. Employees whose vision requires the use of glasses must be examined with the glasses worn; also with the duplicate pair of glasses, and the results recorded in Form 726L.

Eighth. All employees who are permitted to wear glasses for distant vision, when on duty must use the spectacle or automobile goggle form. There is no objection to the use of automobile goggles fitted with glass for protection of the eyes in engine or freight-train service. The use of amber glasses by firemen, as a guard against temporary fire blindness, is encouraged.

Ninth. Applicants having a squint or who are cross-eyed will not be accepted. Examiners who suspect a case of trouble should use some simple test to determine its presence.

Tenth. Employees applying for transfer from one kind of service to another must pass the entrance examination of the class they desire to enter, except that those who have been injured in the service may be transferred to positions as hostlers, switch tenders, and crossing watchmen upon passing the respective reexamination standards.

Eleventh. The test type should be in good light, the bottom of the card about on a level with the eyes. Place the candidate twenty feet from the card and ask him to read the type with both eyes open, then cover one of his eyes with a card or shade held firmly against the nose, taking care not to let it press the eye ball, and instruct him to read with the other eye such type as may be indicated. Each eye should be tested separately.

(a) Examiners are reminded that the normal eye should read the twenty-foot (or 6 meter) letters at twenty feet, in which case the visual power should be expressed by the fraction 20/20. Should a candidate be unable to read the twenty-foot letters at twenty feet, but be able to read the thirty-foot letters, result should be indicated by the fraction 20/30. If he can only read the forty-foot letters record should be 20/40, etc.

(b) Applicants for entrance into the service in classes A, B, or C, when tested for range of vision, must be able to read the standard card at a distance of 14 to 18 inches without glasses. Applicants for the service in all other classes, and employees upon reexamination, may use glasses for near vision.

(c) Car inspectors entering the service must have normal range of vision without the use of glasses. Car inspectors upon reexamination for range of vision who can not read standard card at a distance of 18 inches must wear glasses to make correction.

Twelfth. Applicants for entrance to the service in class A will undergo test to ascertain if farsighted to the extent of 2 diopters; plain and convex glasses will be used, varying the test so that the candidate's former experience or knowledge obtained from others will be valueless. If an applicant reads the twenty-foot letters at twenty feet through convex glasses of 2 diopters he will not be considered satisfactory.

Thirteenth. Examiners will adhere to instructions issued regarding the use of Holmgren color selection test. Further examination when necessary will be made with Williams lantern, as provided in rule 4.

Fourteenth. No applicant will be accepted for entrance to the service and no employee recommended for retention in any class specified in the following requirements who has defective color sense or whose sight or hearing falls below the established standards.

Fifteenth. No employee will be disqualified from the service by reason of defective sight, hearing, or color sense without an examination by the chief medical examiner B. & O. R. R. and B. & O. S. W. R. R., or chief surgeons of C. H. & D. R'y and Staten Island Lines.

Sixteenth. In examination of hearing (which will be with human voice) each ear will be tested separately, and the candidate should not see the movement of examiner's lips.

Seventeenth. Applicants must be able to hear ordinary conversation at a distance of twenty feet.

Eighteenth. Employees will not be retained in the service who can not hear ordinary conversation at ten feet.

Acuteness of vision standards.

Occupation.	To enter service.	To be promoted.	Reexamination.
Class A: Enginemen and firemen—road service.	20/20 in each eye, without glasses; must have normal refraction.	20/20 in one eye and not less than 20/30 in the other, without glasses.	Vision must be 20/20 in one eye and not less than 20/40 in the other, with or without glasses. Not less than 10/50 in each eye without glasses.
Class B: Enginemen and firemen—yard service, road foremen of engines, and assistants.do.....	Not less than 20/40 in one eye and 20/50 in the other, without glasses.
Class C: Conductors, brakemen, train baggagemasters, train flagmen, switch tenders.	20/20 in one eye and not less than 20/40 in the other, without glasses.	Not less than 20/30 in one eye and 20/40 in the other without glasses.	Not less than 20/40 in one eye and 20/50 in the other with or without glasses.
Class D: Car inspectors, engine inspectors, yard clerks.*	Not less than 20/30 in one eye and 20/40 in the other without glasses.	Not less than 20/40 in one eye and 20/50 in the other without glasses.
Class E: Yardmasters and assistants, division operators, telegraph operators, agent operators, section foremen, assistant section foremen, leading laborers, signal inspectors and foremen, lampmen,* levermen, hostlers, hostler helpers.	Not less than 20/30 in one eye and 20/40 in the other with or without glasses, provided vision in each eye must not be less than 20/50 without glasses.	Not less than 20/40 both eyes open and used together, with or without glasses.	Not less than 20/50 both eyes open and used together, with or without glasses.
Class F: division superintendents and assistants, train masters, assistant train masters, division engineers and assistants, roundhouse foremen, master mechanics, assistant master mechanics, general foremen, car foremen, master carpenters and assistants, supervisors and assistants, signal supervisors and assistants, bridge carpenters, building carpenters, foremen, tunnel inspectors and assistants, tunnel foremen, crossing watchmen.	Not less than 20/40 in one eye and 20/50 in the other, with or without glasses, provided vision in each eye must not be less than 20/50 without glasses.	Same as class E.....	Do.

*Color sense and hearing must be normal for all the occupations above mentioned, except engine inspectors, lampmen and yard clerks, who are to be tested for vision and hearing only.

EXHIBITS NOS. 13 AND 13A—FORM 1511D.

This form is the oral examination for all men in train service, and each employee in that service must successfully pass this examination in order to be retained in his position or considered for promotion.

Written examinations are identical with the oral examinations, the only difference being that the written examination contains more pages to take care of the written answers.

Circular issued by third vice-president dated March 20, 1913 (Exhibit No. 13) outlines the manner in which these examinations are to be made; also, note first page of Form 1511D gives in detail the manner in which examinations are to be made and the requirements of employees taking same.

Train rule examinations—General instructions—Third vice-president's No.----
Circular—Superintendent's No.-----—Train rule examinations.

OFFICE OF THE THIRD VICE-PRESIDENT,

Baltimore, Md., March 20, 1913.

There has been issued as of January 1, 1913, a revised book of operating rules, to become effective when all employees subject thereto are familiar with the same and have passed the necessary examination.

You will please arrange to appoint for conducting examinations a sufficient number of examining boards, so that all employees may be examined within a reasonable time.

At terminal points of more than one division there is no objection to joint examining boards with as many sessions each day as convenient, which should facilitate the work.

At terminal points where an examining board will not be located permanently, or at outlying stations, schedules should be arranged showing the days and at what hours examinations will be held, having in mind that they should be arranged for the reasonable convenience of employees, and at a time when the men at such points may take advantage of the opportunity, as it is not desired that any employee should have to lay off for this purpose.

A list of uniform questions, allowing sufficient space for answers to be given, will be furnished, and it should be optional with an employee whether his examination be written or oral; but examination of applicants for employment in train service must be written, and especial care be exercised by those making such examinations in order to determine definitely that those examined are sufficiently familiar with the rules before they are allowed to perform service.

If oral examination is had the answers must be filled in by a member of the examining board or a stenographer, and the answers repeated to the employee, that he may state at that time whether they are as he intended.

If the employee prefers a written examination necessary blanks should be handed him and the answers written out by him in the presence of the examining board.

A question improperly answered must be explained to the employee before he leaves the examining room and notation thereof must be placed on his card. In the event of an employee failing to pass the examination, being deficient in respect to certain rules, the examination blank should be withheld and the employee be given careful instructions, by the proper division official, who should outline his weak points and require that he spend the necessary time in becoming thoroughly familiar with the points in which he was lacking, and then be reexamined.

To the list of questions division officials will make such additions as the nature of the division and character of the work to be performed by the employee may, in their judgment, require. It is not necessary that all the questions of the list be asked each person examined. The idea is to determine, through the board, if employees sufficiently understand the rules to properly perform the required duties.

The examiners should select from the list the necessary questions, and when the examination is given indicate the questions to be answered with a check mark.

Reexaminations must be held at least once in every two years, or within such limit in accordance with the law in States that require lesser periods.

Examining boards will be provided with blanks containing the questions and so arranged that the name, occupation, division, date of examination, and answers of employee to be placed thereon, report of examining board and signature of person examined, may be shown. One copy of the record of each person examined must be sent to the employment bureau at Baltimore, and one filed at the division superintendent's headquarters.

All assistant train masters, assistant road foremen of engines, train dispatchers, conductors, enginemen, traveling firemen, brakemen, flagmen, switchmen, operators, signalmen, and others having directly to do with the operation of trains, will be required to take the examinations.

There will be furnished index cards so that complete card record will be kept of all books of rules, and employees leaving the service will be required to turn in to the proper officer of the division the books loaned them, and when again delivered to another employee the index card therefor must be promptly sent to the general inspector of transportation at Baltimore, and duplicate of the same be kept by the train master.

It will be necessary that each division report to the general superintendent, who will advise the general inspector of transportation promptly when the examinations for his district have been completed, as it is desired to put the new rules into effect simultaneously upon the whole system, but not until the examinations have been completed for all divisions and have been so reported.

A. W. THOMPSON,
Third Vice-President.

1414 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

EXHIBIT No. 13A.

[The Baltimore & Ohio System, including the Baltimore & Ohio Southwestern Railroad Co., the Cincinnati, Hamilton & Dayton Railway Co., and the Staten Island Line.]

EMPLOYEES' EXAMINATION ON BOOK OF RULES, EFFECTIVE JANUARY 1, 1913, AND EXAMINERS' REPORT THEREON.

Held at _____, _____ 191____. Person examined, _____, for service as _____, _____ division.

We certify that the above-named has been examined and correctly answered the questions upon the rules governing the service indicated.

Examiners.

ORAL EXAMINATION—INSTRUCTIONS TO EXAMINERS.

1. Examination of employees may be written or oral, as they may elect.
2. Examination of nonemployees for positions in train service must be written, and especial care exercised by the examiner to determine definitely a sufficient familiarity with the rules governing the service indicated by the one examined before the examiner certifies to the same.
3. When a person fails to pass the examination the fact must be cited by the examiner to the proper official, and the one examined not allowed to perform service until a satisfactory examination is had and certified to by an examiner.
4. When written examinations are held the examiner will furnish this list of questions and indicate by check mark thereon those which it is desired answered. The answers must be written on the form by the person examined in the presence of the examiner, and the form not taken elsewhere by the former.
5. In oral examinations when a question is incorrectly answered the examiner will repeat the answer to the person examined, and have the latter's assent to the correctness of the repetition before indicating the same as per paragraph 7.
6. When a question is asked and satisfactorily answered it will be indicated by making a cross mark in ink or indelible pencil over the number of the rule and question on the margin of the form.
7. Where it is incorrectly answered the examiner will make one diagonal line across the number of the rule and question on the margin, and hold the form, without certifying thereto, until, upon further examination, it is known that the person understands correctly, in which case a second line, intersecting the other and forming a cross mark, will be made upon the rule and question number on the margin.
8. In examining in classes it is desired, where practicable, that those performing similar duties, and, therefore, interested in the same rules, should be selected for a class. The examiner will have two copies of this form for each person examined, with the name of the person on each.
9. Additional questions should be added to those herewith as may be deemed advisable.
10. When satisfactory examination is passed and the questions asked and answered are indicated as per paragraph 6 the examiner will certify to the same, and the person examined will sign, in duplicate, the certificate on the last page of the form.
11. One copy of this examination must be sent to the employment bureau at Camden Station, Baltimore, Md., and duplicate kept on file at the division headquarters.

[Rule and question number.]

GENERAL NOTICE.

1. Q. Do you understand that entering or remaining in the service is an assurance of willingness to obey the rules?
2. Q. What is essential to the safety of passengers and employees and to the protection of property?
3. Q. What does the service demand of an employee?
4. Q. Upon what do you understand your further promotion depends?
5. Q. Do you understand in accepting employment you assume its risks?

GENERAL RULES.

6. Q. Have you a copy of the book of rules effective January 1, 1913, and the current time-table?

7. Q. What is the duty of employees with respect to the rules and special instructions?

8. Q. What is your duty, if in doubt, as to the meaning of any rule or special instructions?

9. Q. Are all persons employed in any service on trains, whether they are employees of the company or not, subject to the rules and special instructions?

10. Q. What is the duty of each employee with respect to the rules being carried out?

11. Q. What is required of employees when they notice any violation of the rules or special instructions?

12. Q. What is the rule in relation to the use of intoxicants?

13. Q. What is the rule in relation to the use of tobacco?

14. Q. What are the requirements as to wearing badges and uniforms?

15. Q. How are persons who are authorized to transact business at stations or on trains required to conduct themselves?

16. Q. In case of danger to company's property, what is required?

17. Q. Must accidents, detention of trains, failure in supply of water, or fuel, or defects in tracks or bridges be reported and how?

18. Q. What is of the first importance in the discharge of duty?

DEFINITIONS.

19. Q. What is an engine?

20. Q. What is a train?

21. Q. What is a regular train?

22. Q. What is a section of a train?

23. Q. What is an extra train and how designated?

24. Q. What is a superior train?

25. Q. What is a train of superior right?

26. Q. What is a train of superior class?

27. Q. What is a train of superior direction?

28. Q. Is superiority by direction limited to single track?

29. Q. What is a time-table?

30. Q. What is a schedule?

31. Q. What is a main track?

32. Q. What is a single track?

33. Q. Define double track?

34. Q. Define three (or more) tracks?

35. Q. What is meant by current of traffic?

36. Q. What is a station?

37. Q. What is a siding?

38. Q. What is a fixed signal?

39. Q. What is a yard?

40. Q. What is a yard engine?

41. Q. What is a pilot?

42. Q. To what extent, if any, do pilots relieve train and engine crews of responsibility?

43. Q. What is a division?

44. Q. What is a subdivision?

TRAIN RULES.

Standard time.

1-45. Q. What is the standard time used by this division?—A. (Note to examiner: Answer depends on the time-table instruction.)

1-46. Q. How often and when is standard time transmitted to all points?

2-47. Q. Who are required to use reliable watches?

2-48. Q. What are the requirements as to watches, comparison, inspection, etc.?

3-49. Q. What is required of conductors and engineers in regard to standard time before starting on each trip?

3-50. Q. What is a standard clock?

3-51. Q. What is the duty of conductors, engineers, and other designated employees when they do not have access to a standard clock?

TIME-TABLES.

- 4-52. Q. When does the new time-table supersede the old?
- 4-53. Q. How will a train of the preceding time-table proceed if it has a corresponding number, class, day of leaving, direction, and initial and terminal stations?
- 4-54. Q. If a train of the preceding time-table has not the same number, class, day of leaving, direction, and initial and terminal stations, how will it proceed?
- 4-55. Q. What fixes the date of a schedule on a division (or subdivision)?
- 4-56. Q. May more than one schedule of the same number and day be in effect on any division (or subdivision)?
- 4-57. Q. May a train which has become 12 hours late on the preceding time-table assume the new time-table schedule, if schedules correspond as required?
- 4-58. Q. If a schedule of the preceding and new time-table fails to correspond in one point only, may a train of the preceding time-table assume the new schedule?
- 4-59. Q. In case there are two or three sections of No. 1 of the preceding time-table, may all the sections proceed on the new schedule if schedules correspond as required?
- 5-60. Q. How many times are shown on the time-table for a train at any station?
- 5-61. Q. Where one is shown, what is it if not otherwise indicated?
- 5-62. Q. Where two are given what are they?
- 5-63. Q. Where does the time at a station apply?
- 5-64. Q. How are schedule meeting or passing stations indicated on the time-table?
- 5-65. Q. When both the arriving and leaving time of a train are in full-face type, what does it indicate?
- 5-66. Q. Under what conditions will the time at each end of a siding, extending between two adjoining stations, be shown in full-face type?
- 5-67. Q. How are the numbers of trains to be met or passed shown on the time-table?
- 6-68. Q. What do the letters "s" and "f" placed before the figures of the schedule indicate?
- 6-69. Q. What are the additional letters or symbols shown on the time-table and what does each signify?—A. (Note to examiner: Answer should be in accordance with the time-table rule or instructions.)

SIGNAL RULES.

- 7-70. Q. With what appliances must employees whose duty it is to give signals be provided, and when should they be ready for use?
- 8-71. Q. What signals are used by day and what by night?
- 9-72. Q. When are night signals to be displayed?
- 9-73. Q. When must night signals be used in addition to day signals?
- 10-74. Q. What are the color signals in use on this division, and what does each indicate?—A. (Note to examiner: As these differ on divisions the answer should be in accord with the division practice.)
- 11-75. Q. What colors do fusees burn on this division, and what does each color indicate?—A. (Note to examiner: As these differ on divisions the answer should be in accord with the division practice.)
- 11-76. Q. What must be done when a fusee is found on or near the track burning red?
- 11-77. Q. What restriction governs the throwing of lighted fusees?

HAND, FLAG, AND LAMP SIGNALS.

- 12-78. Q. What is the hand, flag, and lamp signal to indicate stop?
- 12-79. Q. To indicate proceed?
- 12-80. Q. To indicate back?
- 12-81. Q. To indicate train has parted?
- 12-82. Q. To apply air brakes when train is standing?
- 12-83. Q. To release air brakes when train is standing?
- 12-84. Q. To reduce speed? (Note: Examiner should require the party examined to give the hand, flag, and lamp signals in his presence.)
- 13-85. Q. When any object is waived violently by anyone on or near the track, how should it be considered?

ENGINE WHISTLE SIGNALS.

(Note to examiner: "o" represents short sounds and a dash "—" longer sounds.)

- 14-86. Q. What is the signal to apply brakes or stop?
 14-87. Q. What is the signal to release brakes?
 14-88. Q. What is the signal for the flagman to go back and protect rear of train?
 14-89. Q. What is the signal for the flagman to return from the west or south?
 14-90. Q. What is the signal for the flagman to return from the east or north?
 14-91. Q. What is the signal for the flagman to return from the west or south on branches?
 14-92. Q. What is the signal for the flagman to return from the east or north on branches?
 14-93. Q. What is the signal that train has parted? How often should the signal be repeated?
 14-94. Q. What is the answer to any signal not otherwise provided for?
 14-95. Q. What does three short (ooo) blasts of the engine whistle indicate?
 14-96. Q. What is the call for signals?
 14-97. Q. What does one long and two short (— oo) blasts of the engine whistle indicate?
 14-98. Q. What is the signal when approaching public crossings at grade?
 14-99. Q. What is the signal when approaching stations, junctions, and railroad crossings at grade?
 14-100. Q. What is the signal indicating that the train order signal has changed to proceed?
 14-101. Q. What is the signal for air brakes sticking?
 14-102. Q. For what purpose are two short and one long (oo —) blasts of the whistle sounded?
 14-103. Q. What does a succession of short sounds of the engine whistle indicate?
 15-104. Q. What does the explosion of one or two torpedoes indicate?
 15(A)-105. Q. What communicating signal must the conductor of passenger train give approaching all meeting points?
 15(A)-106. Q. How should this be answered by the engineer?
 15(A)-107. Q. What engine whistle signal must locomotive engineer of trains, other than passenger, give when approaching scheduled or train order meeting points, or points where ordered to report for orders?
 15(A)-108. Q. What is the duty of conductors and brakemen when the engineer fails to give this signal?
 15(A)-109. Q. If these signals are not given, are conductors or engineers relieved of responsibility?
 15(B)-110. Q. What is the proper train equipment for flagging purposes?
 15(B)-111. Q. What is the proper engine equipment for flagging purposes?
 15(B)-112. Q. How many torpedoes shall be attached to the flag stick and red lantern?

COMMUNICATING SIGNALS.

- 16-113. Q. What do two sounds indicate when train is standing?
 16-114. Q. What do two sounds indicate when train is running?
 16-115. Q. What do three sounds indicate when train is standing?
 16-116. Q. What do three sounds indicate when train is running?
 16-117. Q. What do four sounds indicate when train is standing?
 16-118. Q. What do four sounds indicate when train is running?
 16-119. Q. What do five sounds indicate when train is standing?
 16-120. Q. What do five sounds indicate when train is running?
 16-121. Q. What does one short and one long sound indicate when train is running?

TRAIN SIGNALS.

- 17-122. Q. Where and when will the headlight be displayed?
 17-123. Q. When must it be concealed?
 18-124. Q. What signals will yard engines display at night and where?
 18-125. Q. When not provided with a headlight at the rear what lights must be displayed?

- 19-126. Q. What are markers?
 19(A)-127. Q. What will a passenger train display as markers by day?
 19(A)-128. Q. When should these lights be kept burning by day?
 19-129. Q. What will all other trains display as markers by day?
 19-130. Q. What will all trains display by night as markers when on the main track?
 19-131. Q. What will train by night display as markers when clear of main track?
 19-132. Q. What will a train on double track by night display as markers when turned out against the current of traffic?
 19-133. Q. What change must be made before again fouling the main track?
 19-134. Q. If a train is on a siding and is met or passed by another train without markers, how must the train on the siding be governed?
 20-135. Q. When regular trains are run in sections, what signals must all sections except the last display on the front of the engine?
 21-136. Q. What do two white flags by day and, in addition, two white lights by night in the places provided on the front of the engine indicate?
 22-137. Q. When two or more engines are coupled and carrying signals, which engine should display the signals? What exception, if any?
 22-138. Q. When the helper engine is attached to the rear of a train, where should the markers be displayed?
 23-139. Q. When only one marker or classification signal is displayed where two are prescribed, what does it indicate?
 23 (A)-140. Q. Should classification signals be displayed on trains when running under signal indication?
 24-141. Q. When cars are pushed by an engine at night, what signal must be displayed and where?
 25-142. Q. Must each car in a passenger train be in communication with the engine?
 26-143. Q. What does a blue signal indicate when displayed at one or both ends of an engine, car, or train?
 26-144. Q. How must employees be governed if they find a blue signal displayed?
 26-145. Q. What are you required to do before placing cars which would obstruct the view of blue signals?
 26-146. Q. When a blue signal has been displayed who may remove it?

USE OF SIGNALS.

- 27-147. Q. How must an imperfectly displayed signal, or the absence of one where a signal is usually shown, be regarded, and what is required in connection therewith?
 28-148. Q. What signal must be used to stop a train at a point not a flag station?
 28-149. Q. For what is a combined green and white signal used?
 29-150. Q. How must a signal, other than a fixed signal, be acknowledged by an engineer?
 30-151. Q. When must the engine bell be rung?
 31-152. Q. What are the further requirements with regard to the use of engine bell and whistle?
 32-153. Q. What is the rule with regard to the unnecessary use of same?
 32-154. Q. Should the whistle be sounded when passing passenger trains?
 33-155. Q. What signal will watchman at a road crossing use when necessary to stop trains?
 34-156. Q. What whistle signal will locomotive engineer give to the signalman indicating desire to proceed, and when will the signalman restore the signal to the normal stop position?
 34 (A)-157. Q. Under what conditions may a train pass the signal at open telegraph stations? What exceptions, if any, are there to this rule?
 35-158. Q. When a signalman has orders for a train, can he give proceed to any other train? If so, how?
 36-159. Q. When a signalman has orders for a train, may he display a "Proceed" signal for any other train?
 37-160. Q. What does one long and two short (— oo) blasts of the engine whistle indicate?
 37-161. Q. Where and when must this signal be sounded?

37-162. Q. How answered?

37-163. Q. If not answered, what action must be taken?

38-164. Q. When two or more trains displaying classification signals meet, which train will give the engine whistle signal and answer?

39-165. Q. When a passing train fails to acknowledge classification whistle signals sounded by a standing train, what action should be taken by the engineer and conductor of the standing train?

40-166. Q. If conductors, locomotive engineers, or trainmen are in doubt as to signals displayed by other trains, what must they do before leaving the station or siding?

41-167. Q. How are communicating signals to start or stop passenger trains given, and from what part of the train?

SUPERIORITY OF TRAINS.

71-168. Q. How is one train superior to another?

71-169. Q. How is right conferred?

71-170. Q. How is class and direction conferred?

71-171. Q. Which is superior, right, class, or direction?

71-172. Q. Between what trains does superiority by direction apply?

72-173. Q. Define the superiority of the different classes?

72-174. Q. In which direction are trains superior to trains of the same class in the opposite direction?

72-175. Q. Is superiority by direction limited to single track?

73-176. Q. Are extra trains inferior to regular trains?

MOVEMENT OF TRAINS.

82-177. Q. How long are time-table schedules in effect unless fulfilled?

82-178. Q. When do regular trains lose right and schedule?

82-179. Q. After losing right and schedule how may they proceed?

83-180. Q. What must be ascertained before leaving an initial station on any division (or subdivision) or junction point, or passing from double track to single track?

83(A)-181. Q. What are the duties of conductors, and engineers of engines without conductors, with reference to train register books?

83(A)-182. Q. Where are register books located on this division?—A. (Note to examiner: Party examined should name locations as listed in the time-table.)

83(B)-183. Q. What are the duties of conductors and engineers with reference to bulletin boards and general orders?

83(C)-184. Q. Where will conductors report and what will they obtain before leaving their respective initial stations?

83(D)-185. Q. Can Form A be used to register at designated points?

83(D)-186. Q. Can Form C be used for registering at designated points?

84-187. Q. Is a train allowed to start without the proper signal being given?

85-188. Q. May a train proceed ahead of a train of another schedule of the same class in the same direction?

85-189. Q. May trains of one schedule pass trains of another schedule of the same class?

85-190. Q. May extras pass and run ahead of extras?

85-191. Q. May sections of a schedule pass other sections of the same schedule?

86-192. Q. How many minutes must an inferior train clear the time of a superior train in the same direction? What distinction is made with reference to a first-class train?

87-193. Q. What is the duty of an inferior train when it fails to clear the time of opposing superior trains as required by rule?

87-194. Q. How are extra trains to be governed in reference to clearing the time of other trains?

88-195. Q. When trains of the same class meet on single track, when must the inferior train clear the main track?

88-196. Q. At meeting points between extra trains, which train must take the siding?

88-197. Q. How must trains enter sidings?

89-198. Q. At meeting points between trains of different classes, how must the inferior clear the superior train?

- 89-199. Q. If necessary for the inferior train to back in, what protection must be given?
- 90-200. Q. Are trains of the same class required to stop at scheduled meeting stations?
- 90-201. Q. If the expected train of the same class is not found at the scheduled meeting point, how must the superior train be governed?
- 90-202. Q. At what point must the train which is to hold the main track stop?
- 90(A)-203. Q. How must trains be run on passing sidings?
- 91-204. Q. Unless some form of block signal is used, how many minutes must trains in the same direction keep apart?
- 92-205. Q. May a train arrive at a station in advance of its scheduled arriving time?
- 92-206. Q. May a train leave a station in advance of its scheduled leaving time?
- 93-207. Q. How will yard limits be indicated?
- 93-208. Q. How may yard engines occupy main tracks within the yard limits?
- 93-209. Q. How may trains other than first class move within yard limits?
- 94-210. Q. If a train overtakes another train disabled so that it can not proceed, how will it be governed?
- 94-211. Q. When a disabled train is passed by a following train to which it has given its schedule and train orders, on what authority will the disabled train move?
- 94-212. Q. On single track when a train is unable to proceed against the right or schedule of an opposing train and is overtaken between telegraph stations by an inferior train, or train of the same class having right or schedule which permits it to proceed, how may the delayed train proceed?
- 94-213. Q. When opposing trains are met under these circumstances what information must be given them?
- 95-214. Q. May two or more sections of a train be run on the same schedule?
- 95-215. Q. Has each section equal time-table authority?
- 95-216. Q. By whose authority will trains display signals for a following section?
- 96-217. Q. On single track when signals displayed for a section are taken down at any point before that section arrives, what must be done?
- 97-218. Q. By whose authority may extra trains be run?
- 98-219. Q. How must trains approach the end of double track, junctions, railroad crossings at grade and drawbridges?
- 99-220. Q. When a train stops or is delayed under circumstances in which it may be overtaken by another train, how must its rear be protected?
- 99-221. Q. What must he leave when recalled?
- 99-222. Q. When necessary who must protect the front of the train?
- 99-223. Q. When on other than single track trains are stopped unexpectedly, what protection must be immediately provided?
- 99(A)-224. Q. What must a flagman do who sees or hears an approaching train before he has reached the required distance to protect his train?
- 99(B)-225. Q. How is a flagman to be governed in locations, designated in the time-table as being automatically signaled?
- 99(C)-226. Q. Should the speed of a train be reduced and its rear thereby endangered, making it necessary to check a following train, what is the duty of the flagman?
- 99(D)-227. Q. How must instructions be given flagmen when work trains or other employees are performing work requiring flag protection? To whom must they be shown?
- 100-228. Q. When a flagman goes back to protect the rear of the train, who must take his place on the train?
- 100-229. Q. When a flagman is left, by whom must the train be protected?
- 100(A)-230. Q. May flagmen be sent out to flag only certain trains?
- 101-231. Q. If a train should part while in motion what action must be taken by trainmen and engineers?
- 101-232. Q. On double track, how should a train on the opposite track be warned?
- 101-233. Q. When the front portion goes back to recover the detached portion, how must it run and under what protection?
- 101-234. Q. Should the detached portion be moved or passed until the front portion comes back?
- 102-235. Q. When cars are pushed by an engine (except when shifting and making up trains in yards), where must a flagman be stationed?

103-236. Q. How must all messages or orders respecting the movement of trains or the conditions of track or bridges be given?

104-237. Q. How must switches be left after use?

104-238. Q. Who is responsible for leaving switches in proper position except where switch tenders are stationed?

104-239. Q. May switch be left open for a following train?

104-240. Q. Where must employees stand with reference to facing point switches?

104-241. Q. After a train enters a siding, or has crossed from one track to another to allow a train to pass, how must the pull-in switch and derail, or both switches of the crossover, be set?

105-242. Q. Who are equally responsible for the safety of a train and what is required of them?

106-243. Q. What course must be pursued in case of doubt or uncertainty? (Repeat rule 106.)

107-244. Q. When a train without markers passes a telegraph office, what must the operator do?

108-245. Q. Must a positive block be maintained behind all passenger trains? If not, state under what conditions following trains may proceed?

108-246. Q. What is the meaning of "under control"?

109-247. Q. At what rate of speed must a train proceed after receiving a caution signal (except automatic block caution signal governed by automatic block rule 501)?

109-248. Q. Are train crews relieved from protecting under rule 99?

110-249. Q. When a train in transit is laid up on a siding, what must be done?

111-250. Q. When, where, and how must air be tested?

111-251. Q. How and when will the running test on passenger trains be made?

112-252.—Q. When trains cross over on double track, how must both switches be handled?

113-253. Q. Under what conditions must trainmen ride out on the top of freight trains, and what signals will be exchanged at such times?

113-254. Q. Who will see that employees are properly placed?

114-255. Q. When should trains stop to collect mail pouches?

115-256. Q. When should engines be detached from freight trains to take water, or fuel?

116-257. Q. Where trains are run under signal indication, on single track, and instructions can not be obtained, how may trains proceed?

117-258. Q. What stops will a passenger train make when run to represent a regular passenger train?

D151-259. Q. On double track, do trains keep to the right or left?

D152-260. Q. How must a train be protected before crossing over to, or obstructing the other track?

D152-261. Q. Under what conditions may a train cross over when a superior train is due?

D152-262. Q. In permitting trains to pass after crossing over, what trains must be given preference?

D153-263. Q. How must trains run in passing a train which is receiving or discharging passengers at a station?

D154-264. Q. What is the duty of engineers with respect to trains following too closely on the opposite track?

SIGNAL INDICATION RULES.

D251-265. Q. Where will block signals supersede time-table superiority?

D252-266. Q. Who will issue instructions governing movement of trains under signal indication?

D253-267. Q. From whom must permission be obtained before entering a block when it is known that the train will be delayed by work or other causes within that block?

D253-268. Q. From whom must the signalmen obtain authority to give this permission?

D254-269. Q. Do block signal and train rules remain in force in territory operated under signal indication?

(Note to examiner: Rules D261 to D264, inclusive, are not now in use on any portion of the road, and no questions should be asked thereon.)

RULES FOR THREE AND FOUR TRACKS.

F271-270. Q. How are the tracks numbered?

F272-271. Q. How is their use as to class and current of traffic designated?

F274-272. Q. What marker lights shall a train running with the current of traffic on a high-speed track display?

F274-273. Q. What marker lights when running by night with the current of traffic on a slow-speed track, or any track against the current of traffic, will be displayed?

F274-274. Q. What marker lights will be displayed by night when on a siding?

F275-275. Q. What are the engine whistle signals to recall flagman on three or four tracks?—A. (Note to examiner: On divisions where three or four tracks are used, special whistle signals are provided therefor by general order or timetable, and examination should be made in accordance therewith and not in accordance with rule F275.)

F276-276. Q. Do block signal and train rules for double track remain in force?

RULES FOR MOVEMENT BY TRAIN ORDERS.

201-277. Q. For what movements are train orders issued?

201-278. Q. By whose authority and over whose signature are train orders issued?

201-279. Q. What must they not contain?

201-280. Q. Must they be brief and clear, and in the prescribed forms when applicable?

201-281. Q. May they contain erasures, alterations, or interlineations?

202-282. Q. Must train orders be given in the same words to all persons or trains addressed?

203-283. Q. How must train orders be numbered?

204-284. Q. To whom must train orders be addressed?

204-285. Q. To whom must train orders for a train be addressed?

204-286. Q. Who must be supplied with a copy by the operator?

204-287. Q. By whom must train orders addressed to operators restricting the movement of trains be respected?

205-288. Q. How must train orders be written at the office of the superintendent and records made?

206-289. Q. How must regular trains be designated in train orders?

206-290. Q. How must extra trains be designated in train orders?

206-291. Q. May other numbers and time be expressed in figures only?

207-292. Q. What signal does the dispatcher give to each office in transmitting train orders?

208-293. Q. How must a train order to be sent to two or more offices be transmitted?

209-294. Q. When must operators make the copy of an order on manifold blanks, and should he fail to make enough, how will he supply them?

209-295. Q. Are there any exceptions to this?

210-296. Q. How must the operators proceed with repetition of a "31" train order?

210-297. Q. What should each operator receiving the order observe?

210-298. Q. After the order has been repeated who must sign it?

210-299. Q. What is the operator's duty in regard to the order after it has been signed?

210-300. Q. Who must deliver the copy for each engineer?

211-301. Q. How must the operator proceed with the repetition of a "19" train order?

211-302. Q. After receiving "complete" what will the operator do?

211-303. Q. When delivery of a "19" train order to an engineer will take the operator from the immediate vicinity of his office, how must the engineer's copy be delivered?

211-304. Q. May "19" orders be used to restrict the superiority of trains? By what authority?

211(A)-305. Q. When a "19" train order is issued for a train at a point where its superiority is restricted by such an order, what is required?

211(A)-306. Q. When train orders are issued restricting the superiority of a train at a point where such superiority is restricted, what signals must be displayed?

211(B)-307. Q. To whom must the conductor show his orders?

211(B)-308. Q. To whom must the engineer show his orders?

211(B)-309. Q. What are the duties of fireman, flagman, and brakeman in reference to train orders received?

212-310. Q. When may the "X" response be used?

212-311. Q. How is the "X" response used?

213-312. Q. When may "complete" be given to a train order for delivery to an inferior train?

214-313. Q. When a train order has been repeated or "X" response sent, and before "complete" has been given, how must the order be treated?

214-314. Q. If the line fail before the order has been repeated, or "X" response sent, how must the order be treated?

215-315. Q. What copy of a train order must the operator preserve?

216-316. Q. What are the requirements for train orders delivered by the dispatcher?

217-317. Q. How should a train order be addressed to a train which can not be reached by wire?

217-318. Q. Whose signature must be taken before "complete" is given when Form "31" is used, and with what copies should the person delivering the order be supplied?

217-319. Q. What must the conductor do with the copy he retains and whose signature must appear thereon?

217-320. Q. May the train receiving this order act on it as if "complete" had been given in the usual manner?

217-321. Q. If an order so delivered restricts the superiority of a train, what is necessary before "complete" may be given to the order to an inferior train?

218-322. Q. When a train is named in a train order are all its sections included unless particular sections are specified, and should each section included have a copy of the order?

219-323. Q. May an operator repeat or give the "X" response to a train order for a train which has been cleared or the engine of which has passed his train order signal?

220-324. Q. How long are train orders in effect?

220-325. Q. May any part of an order be superseded or annulled?

220-326. Q. When do orders held by or issued for, or any part of an order relating to, a regular train, become void?

220(A)-327. Q. How long should a train order relating to reduction of speed on account of conditions which are liable to exist longer than 10 days, be allowed to continue in effect?

221-328. Q. What is the normal indication of a fixed signal at a train order office, and under what conditions may it be changed from this normal position? When may it be fastened at "proceed"?

221-329. Q. May a train pass the signal while "Stop" is indicated?

221-330. Q. May this signal be used to hold trains running in the same direction the required time apart?

221-331. Q. What appliances should operators keep on hand to use if fixed signals should fail to work properly?

221-332. Q. If a fixed signal is not displayed at a night office how must trains that have not been notified be governed?

221-333. Q. Where the semaphore is used, on which side of the signal mast, as seen from approaching train, is the governing arm displayed?

(Note to examiner: This question is introduced in connection with rule 221 to have the examiner develop that where the semaphore is used as a fixed signal in accordance with the rule, that the party examined should give his understanding of the indications when the position of the arm is horizontal, diagonal, or vertical.)

221(A)-334. Q. What must delivered train orders be accompanied by?

222-335. Q. What record of trains will be kept by operators and what report of trains will be made?

223-336. Q. What abbreviations and signs may be used?

FORMS OF TRAIN ORDERS.

(Note to examiner: In examinations on forms of train orders, the names of places on the division where those examined are employed should be substituted for the letters.)

Form A-337. Q. How will two opposing trains holding orders to meet at a certain station run with respect to each other?

Form A-338. Q. If the trains are of the same class, what rule is referred to?

Form A-339. Q. If the trains are of different classes, what rule is referred to?

Form A-340. Q. Should a meeting order be sent for delivery to a train at the meeting point?

Form A-341. Q. If an order is sent to the meeting point, what should be added to the order?

Form A-342. Q. If as conductor or engineer of No. 4, a superior train, you held an order reading: "No fifty five 55 Eng 873 meet No four 4 Eng 888 at B," and No. 55 arrived at B displaying signals, how would you be governed?

Form A-343. Q. If as conductor or engineer of No. 4, a superior train, you held an order to meet second No. 55 at B and second No. 55 arrived with signals, how would you be governed?

Form A-344. Q. If second No. 55 arrived without signals and with no markers, would you proceed?

Form A-345. Q. If as conductor or engineer of No. 4, a superior train, you held an order reading: "No four 4 Eng 888 meets first 1st No fifty five 55 Eng 873 at C and second 2d No fifty five 55 Eng 876 at E," and on arrival at E you received an order reading: "No four 4 Eng 888 meet second 2d No fifty five 55 Eng 876 at F," how would you be governed?

Form A-346. Q. If No. 4, a superior train, held order No. 1 reading: "No four 4 Eng 888 meet No fifty five 55 Eng 873 at B," and No. 55 arrived at B with signals and another order was given reading: "No four 4 Eng 888 meet 2d No fifty five 55 Eng 876 at C instead of B," and when No. 4 reached C it finds second No. 55 displaying signals, what must it do?

Form B-347. Q. If as conductor or engineer of No. 1 you held an order reading: "No one 1 Eng 1602 pass No three 3 Eng 1702 at K," how would you be governed?

Form B-348. Q. If an order is held by No. 6 and No. 4 reading: "No six 6 Eng 1810 pass No four 4 Eng 1826 when overtaken," how would the trains be governed?

Form B-349. Q. If as conductor or engineer of No. 6 you held an order reading: "Extra 594 East run ahead of No six 6 Eng 1828 M to B," how would you be governed?

Form B-350. Q. If an order is received reading "Extra 1450 West run ahead of No three 3 Eng 2410 B until overtaken," how would No. 3 be governed?

Form B-351. Q. When an inferior train receives an order to pass a superior train, is right conferred to run ahead of the train passed from the designated point?

Form B-352. Q. Do trains of any class require orders to pass trains of the same class in the same direction?

Form B-353. Q. Do extras require orders to pass extras?

Form C-354. Q. If as conductor or engineer of No. 2, a superior train, you held an order reading: "No one 1 Eng 2410 has right over No two 2 Eng 2428 G to X," would you pass X before the arrival of No. 1?

Form C-355. Q. If as conductor or engineer of No. 3 you held an order reading: "Extra 37 East has right over No three 3 Eng 2429 F to A," would you go beyond A before the arrival of the extra train and if not why?

Form C-356. Q. As conductor or engineer of Extra 37 East, how would you be governed?

Form C-357. Q. If your order to run extra extended beyond A and No. 3 had not reached there on your arrival, would you proceed against No. 3, and if so under what circumstances?

Form C-358. Q. If you were on No. 2, a superior train, and held an order reading: "No one 1 Eng 2410 has right over No two 2 Eng 2428 G to X," and should receive another order reading: "No two 2 Eng 2428 meet No one 1 Eng 2410 at J," would you pass X?

Form C-359. Q. If you were on No. 2 and held the same orders, except the meeting point was at G, would you take siding?

Form C-360. Q. When a right of track order is given to an inferior train against a superior train to a designated point, which train is required to take the siding?

Form C-361. Q. If a right of track order is given an extra train against a superior train to a designated point, can the superior train move beyond that point if the extra has not arrived?

Form C-362. Q. If an order was received reading: "Extra 37 East has right over No three 3 Eng 2429 F to A, but will wait at C until nine thirty 9 30 A M

for No three 3 Eng 2429," could No. 3 leave F before the arrival of the extra? If so how far could it go?

Form E-363. Q. If on No. 2, a superior train, you hold an order reading: "No two 2 Eng 2112 wait at H until ten 10 A M for No one 1 Eng 2115," how would you be governed?

Form E-364. Q. As conductor or engineer of No. 1 how would you be governed, both being first-class trains?

Form E-365. Q. How would an inferior train be governed if it received an order reading: "No one 1 Eng 2115 run twenty 20 mins late A to G?"

Form E-366. Q. If as conductor or engineer of an inferior opposing train you received an order reading: "No one 1 Eng 2115 run two 2 hours late A to B and one 1 hour late B to C," how much time could you use to make B?

Form E-367. Q. If as conductor or engineer of an inferior train you received an order reading: "Nos one 1 Eng 2115 and three 3 Eng 2116 wait at N until ten 10 A M—P until ten thirty 10 30 A M—R until ten fifty five 10 55 A M," how would you be governed?

Form F-368. Q. If engine 20 holds an order reading: "Eng 20 display signals and run as first 1st No one 1 A to Z," how would it be governed?

Form F-369. Q. If engine 25 holds an order reading: "Eng 25 run as second 2d No one 1 A to Z," how would it be governed?

Form F-370. Q. If engine 25 holds an order reading: "No one 1 Eng 20 display signals A to G for Eng 25" how would engine 25 be governed?

Form F-371. Q. If engines 20, 25 and 99 held an order reading: "Engs 20 25 and 99 run as first 1st second 2nd and third 3d No one 1 A to Z" how would they be governed?

Form F-372. Q. If engines 85 and following sections held an order reading: "Eng 85 display signals and run as second 2d No one 1 N to Z following sections change numbers accordingly" how would they be governed?

Form F-373. Q. If engine 85 and following sections held an order reading: "Eng 85 is withdrawn as second 2d No one 1 at H following sections change numbers accordingly" how would they be governed?

Form F-374. Q. If engine 18 holds the following order: "Eng 18 instead of Eng 85 display signals and run as second 2d No one 1 R to Z" how would they be governed?

Form F-375. Q. If second No. 1 and following sections held an order reading: "Second 2d No one 1 Eng 85 take down signals at R" how would they be governed?

Form F-376. Q. If engines 25 and 99 held an order reading: "Engs 25 and 99 reverse positions as second 2d and third 3d No one 1 H to Z" how would they be governed?

Form F-377. Q. Where an engine is substituted for another on a section, or where the positions of a section are reversed, what should be the duty of the dispatcher in reference to other trains affected? What should be the duty of the conductors and engineers of both sections in connection with train orders and the display of signals?—A. (Note to examiners: Where an engine is substituted for another on a section, or where the position of the sections are reversed, it should be the duty of the dispatcher to notify other trains affected thereby. Whenever conductors and engineers change off on the road they must transfer to each other all train orders and other instructions affecting their trains and each must know that the train orders and instructions transferred are understood by the others. Examiners will ask such questions as will develop an understanding in accordance herewith.)

Form F-378. Q. To annul a section for which signals have been displayed over a division or any part of a division when no train is to follow the signals what form of a train order must be used?

Form F-379. Q. Does an order reading: "Eng 20 display signals and run as first 1st No one 1 A to Z" give any authority for a second section to run if they receive a copy of the order?

Form F-380. Q. Under the conditions stated how should the order read to authorize a second section of No. 1?

Form G-381. Q. How would engine 99 proceed under the following order: "Eng 99 run Extra A to F?"

Form G-382. Q. Would you be required to protect against opposing extras upon this order?

Form G-383. Q. What right does this give you to main track at F?

Form G-384. Q. Are extra trains required to clear all regular trains; and if so, how much?

Form G-385. Q. If engine 99 held an order to run extra A to F and return to C, would it be necessary for Extra 99 to go to F before returning to C?

Form G-386. Q. If engine 77 held an order reading: "Eng 77 run Extra leaving A on Thursday Feb seventeenth 17th as follows with right over all trains:

Leave A eleven thirty 11 30 P M

Leave C twelve twenty five 12 25 A M

Leave E one forty seven 1 47 A M

Arrive F two twenty two 2 22 A M "

Would this extra lose right when it became twelve hours late?

Form G-387. Q. How many minutes must all trains clear the time of this extra?

Form G-388. Q. If engine 77 held an order No. 1 reading: "Eng 77 run extra A to D and meet No twenty-six 26 Eng 1432 at D" and upon arrival at D it should be given order No. 2 reading: "Eng 77 run extra D to E and meet No twenty six 26 Eng 1432 at E," would it be a proper order?

Form G-389. Q. If engine 77 arrived at D under order No. 1 and received order No. 3 to run extra to E instead of D, and also received order No. 4 to meet No. 26 at E, could it go to E for No. 26?

Form G-390. Q. What is the purpose of describing an extra train as a "passenger extra"?

Form G-391. Q. Has a passenger extra any superiority over other extra trains?

Form H-392. Q. If on engine 292 you received an order reading: "Eng 292 works seven 7 A M to six 6 P M between D and E," how would you be governed?

Form H-393. Q. If the order was modified by adding "Not protecting against eastward extras," how would you be governed?

Form H-394. Q. If the order was modified by adding "Not protecting against extras," how would the work extra be governed?

Form H-395. Q. If work extra 292 receives an order reading: "Work Extra 292 clears (or protects against) Extra 76 East between D and E after two ten 2 10 P M," how will Extra 292 be governed?

Form H-396. Q. How will extra 76 east be governed?

Form H-397. Q. If work extra 292 receives an order reading: "Work Extra 292 protects against No fifty five 55 Eng 1406 (or ——— class trains) between D and E," how will it be governed?

Form H-398. Q. How would No 55 be governed?

Form H-399. Q. If work extra 292 receives an order reading: "Work Extra 292 has right over all trains between D and E seven 7 P M to twelve 12 night," what right does this give the work extra?

Form H-400. Q. How will other trains be governed?

Form H-401. Q. Must other extra trains which are run over working limits have a copy of the order held by the work extra?

Form H-402. Q. Should the work order instruct a work extra not to protect against extra trains in one or both directions, how must extra trains be governed?

Form H-403. Q. If the order indicates the work extra is protecting itself against other trains, how will other trains be governed?

D. Form H-404. Q. (Note to examiner: For double track, examiners will question in accordance with examples and instructions shown in Book of Rules, D. Form H, Work Extra.)

Form J-405. Q. If an order is received reading: "Hold No two 2 Eng 2446" or "Hold all (———ward) trains," how would No. 2 or the trains named be governed?

Form J-406. Q. To whom will holding orders be addressed and delivered?

Form J-407. Q. When will Form J be used?

Form J-408. Q. Will any orders received by a train addressed to it only, release it from the holding order?

Form K-409. Q. How would an order reading "No one 1 Eng 2447 of Feb twenty ninth 29th is annulled A to Z" affect the rights of No. 1?

Form K-410. Q. When a train is annulled between given points are its rights affected between other points?

Form K-411. Q. When a train has been annulled may it be restored under its original number by train order?

Form K-412. Q. If you held an order to meet No. 1 at C and later got an order that No. 1 was annulled, how would you proceed?

Form K-413. Q. How would an order reading "Second 2d No five 5 Eng 2448 of Feb twenty ninth 29th is annulled E to G" affect second No. 5's rights?

Form K-414. Q. May an order annulling a schedule or section be combined with any other train order?

Form L-415. Q. How must an order annulling another order read, and must it be numbered, transmitted, and signed for as any other order?

Form L-416. Q. If an order to be annulled has not been delivered to a train, to whom must the annulling order be addressed, and what must the party to whom addressed do in connection therewith?

Form L-417. Q. May an order which has been annulled be reissued under its original number?

Form M-418. Q. May part of an order be annulled?

Form M-419. Q. Would the portions of the order not annulled remain effective?

Form P-420. Q. May an order superseding an order or part of an order be given? If so, what words should be added to the prescribed form?

Form P-421. Q. May an order which has been superseded be reissued under its original number?

Form P-422. Q. Under the following orders how will No. 1 be governed?

Order No. 1—No one 1 Eng 2448 meet No two 2 Eng 2447 at B.

Order No. 2—No one 1 Eng 2448 meet No two 2 Eng 2447 at C instead of B.

Order No. 3—Order No two 2 is annulled.

Form R-423. Q. When may a train be moved against the current of traffic?

Form R-424. Q. If as conductor or engineer of No. 1 you received an order reading "No one 1 Eng 2448 has right over opposing trains on No two 2 (or eastward) track C to F" how would you be governed?

Form R-425. Q. How must opposing trains be governed?

Form R-426. Q. Where trains are not governed by signal indication must the inferior train between the points named moving with the current of traffic in the same direction as the designated train receive a copy of the order? May it then proceed on its schedule or right?

Form R-427. Q. Where trains are operated under Rule D-251 would it be necessary to give other trains copy of this order?

Form R-428. Q. If you received an order reading "After No four 4 Eng 2449 arrives at C No one 1 Eng 2448 has right over opposing trains on No two 2 (or eastward) track C to F," when could No. 1 proceed?

Form S-429. Q. How must trains receiving an order reading "No one 1 (or westward) track will be used as single track between F and G from one 1 P M to three 3 P M" be governed?

Form S-430. Q. When must trains running against the current of traffic on the track named be clear of it?

Form S-431. Q. If an extra running under a time-table rule on double track without orders should find upon arrival at a station an order stating that a designated section of double track would be used as a single track between specified stations, would the extra require running orders over that section of track?

432. Q. Form A—outline its uses.

(Note to examiner: Explain to those interested the proper placing of an X across each unused lettered part of this form. The X should be made in such a manner that one portion of it should cross the letter contained in the parenthesis and with the exception of lettered part (A) the X should extend from one divisional line to the other. For lettered part (A) the X should be made with one of its lines intersecting that letter and the other crossing it within the open space between lines 1 and 2 thereof.)

DEFINITIONS.

433. Q. What is a block?

434. Q. What is a block station?

435. Q. What is a block signal?

436. Q. What is a home block signal?

437. Q. What is a distant block signal?

438. Q. What is an advance block signal?

439. Q. What is a block system?

440. Q. What is a manual block system?

441. Q. What is a controlled manual block system?

442. Q. What is an automatic block system?

MANUAL BLOCK SYSTEM RULES.

44. Q. Of what does a manual block system consist, and how operated?
444. Q. Where the semaphore is used, on which side of the signal mast, as seen from an approaching train, is the governing arm displayed?
- 301-445. Q. Describe the signal, occasion for use, indication and name in reference to display of home and advance block signals, according to rule 301.
- 301(A)-446. Q. At block signal stations where sidings are in advance of the block signal what must signalmen deliver?
- 301(A)-447. Q. How are intermediate closed block sidings, or nontelegraph sidings, considered?
- 302-448. Q. What do block signals control?
- 302-449. Q. Do they supersede the superiority of trains?
- 302-450. Q. Do they dispense with the use of or observance of other signals?
- 303-451. Q. When a block station is open at an irregular hour must trains be notified? If so, how?
- 303-452. Q. What is required when a train is approaching a block station opened at an irregular hour?
- 304-453. Q. When necessary to back out of a siding after the opposing train has departed, what rules must the signalman observe, and what must he issue in connection with this movement?
- 305-454. Q. After a train has backed out of a siding, how shall it be governed in its forward movement on the main track?
- 306-455. Q. When may a train on a siding be reported as having arrived?
- 307-456. Q. When a signalman has orders for a train, may the signal be changed for any other train?
- 307-457. Q. Do such instructions affect the block-signal rules?
- 308-458. Q. When a block station is made a meeting point for trains, to whom must a copy of the meeting order be sent?
- 308-459. Q. When a meeting point is at a nontelegraph station, to whom must a copy of the order be sent, and what must the signalman do in connection therewith?

SIGNALMEN.

- 311-460. Q. What is the normal indication of home and advance block signals?
- 311-461. Q. What is the normal indication of distant block signals?
- 312-462. Q. How must signals be operated?
- 312-463. Q. If a signal fails to work properly, what must be done?
- 313-464. Q. What must signalmen observe as to the correspondence of indications with lever positions?
- 314-465. Q. May signalmen permit unauthorized repairs, alterations, or additions to the apparatus?
- 315-466. Q. What record must be kept at each block station?
- 316-467. Q. What is used for communications between block offices, arranging for the movement of trains in the block?
- 316-468. Q. What is the definition of code signal 1?
- 316-469. Q. What is the definition of code signal 13?
- 316-470. Q. What is the definition of code signal 17?
- 316-471. Q. What is the definition of code signal 2?
- 316-472. Q. What is the definition of code signal 3?
- 316-473. Q. What is the definition of code signal 36?
- 316-474. Q. What is the definition of code signal 4?
- 316-475. Q. What is the definition of code signal 46?
- 316-476. Q. What is the definition of code signal 5?
- 316-477. Q. What is the definition of code signal 56?
- 316-478. Q. What is the definition of code signal 7?
- 316-479. Q. What is the definition of code signal 8?
- 316-480. Q. What is the definition of code signal 10?
- 316-481. Q. What is the definition of code signal S D?
- 316-482. Q. What is the definition of code signal O S?
- 316-483. Q. What is the definition of code signal G S?
- 316-484. Q. What is the definition of code signal N S?
- 316-485. Q. What is the definition of code signal W S?
- 317-486. Q. May a train be admitted to a block that is occupied by an opposing train or by a passenger train?
- 317-487. Q. May a train other than a passenger train be permitted to follow a train other than a passenger train into a block? If so, how?

317(B)-488. Q. For absolute block for opposing or following movements on the same track, what must the signalman do?

317(B)-489. Q. What will the signalman receiving this signal do?

317(B)-490. Q. What must the signalman at the entrance of the block then do?

317(B)-491. Q. For permissive block for following movements on the same track, what must the signalman do?

317(B)-492. Q. What must the signalman, receiving this signal, if there is no passenger train in the block, do?

317(B)-493. Q. What must the signalman at the entrance of the block then do?

318(B)-494. Q. For permissive block for following movements on double track, what must the signalman do?

318(B)-495. Q. What must the signalman receiving this signal, if the block is clear, do?

318(B)-496. Q. If the block is not clear, what must he do?

318(B)-497. Q. What must the signalman at the entrance of the block then display?

318(C)-498. Q. With what must the information given by the next block station in advance agree?

318(C)-499. Q. How must signalman receiving information of trains entering or clearing a block acknowledge receipt of same?

318(C)-500. Q. With this, what information must also be transmitted?

319-501. Q. When a train enters a block, what must the signalman give to the next block station in advance?

319-502. Q. When the train has passed the home block signal and the signalman has seen the markers, what signal must he display?

319-503. Q. When the rear of the train has passed 200 feet beyond the home signal, what must the signalman do?

320-504. Q. When may signalmen ask for the block?

321-505. Q. What must signalmen observe in reference to all passing trains?

322-506. Q. Should a train pass a block station showing conditions endangering the train, or a train on another track, what must the signalman do?

323-507. Q. Should a train without markers pass a block station, what must the signalman do?

324-508. Q. Should a train in two or more parts pass a block station, what must the signalman do?

324-509. Q. What must the signalman receiving this notice do?

324-510. Q. Must the stop signal be displayed to the engineer of the parted train if the train can be admitted to the block in advance under block-signal rules?

324-511. Q. Should a train in either direction be stopped from this cause, when may it be permitted to proceed?

325-512. Q. When a signalman is informed of any obstruction in a block, what must he immediately do?

325-513. Q. What must each signalman at the end of the block display?

325-514. Q. When may they permit any train to proceed?

326-515. Q. When a train takes a siding, what must the signalman know before giving "2," or displaying clear signal?

326-516. Q. What must he do before permitting a train on a siding to reenter the block?

326(A)-517. Q. When a train takes a siding, under what conditions may it again enter the block?

326(A)-518. Q. If the outlet switch is operated from an interlocking plant, may trains proceed under signal indication without Form A?

327-519. Q. To permit a train to cross over or return, unless otherwise provided, what must the signalman do?

327-520. Q. After a train has been given permission to cross over or return, how may other trains be admitted in the direction of the cross-over switches?

328-521. Q. When coupled trains have been separated, how must the signalman regard each portion?

329-522. Q. If necessary to stop a train for which a clear or caution home or advance block signal has been accepted, what must the signalman do?

330-523. Q. When a signalman has orders for a train, what must he display and how be governed?

331-524. Q. If from failure of apparatus block signals can not be changed from normal indication and information is had that the block in advance is clear, how may the signalman admit a train to that block?

331-525. Q. How may he admit a train other than a passenger train to a block that is occupied by a train other than an opposing or passenger train?

332-526. Q. If from any cause the signalman can not communicate with the next block station in advance, what must he do?

332-527. Q. Should no cause for detaining the train be known, may the train be permitted to proceed; and if so, how?

333-528. Q. What appliances for hand signaling must be ready for immediate use?

333-529. Q. When may signalmen use hand signals?

333-530. Q. When hand signals are necessary, how must they be given?

334-531. Q. Who is responsible for the care of the block-station apparatus and supplies?

335-532. Q. How must lights within block stations be placed?

336-533. Q. When must lights on all block signals be used?

337-534. Q. If a train overruns a stop signal, what must the signalman do?

337-535. Q. Before the train is allowed to proceed, what must the conductor receive from the signalman?

338-536. Q. If a stop signal is disregarded, to whom must it be reported?

339-537. Q. To open a block signal what is required of the signalman?

339-538. Q. When trains which were in the extended block when the block station was opened, and which had passed his block station before it was opened, clear the block in advance, what must the signalman do?

340-539. Q. On whose authority may a block station be closed?

341-540. Q. What is required before a block station may be closed?

341-541. Q. In closing a block station, what must the signalman give to and receive from the next block station in each direction, and what record must he make of their response?

341-542. Q. In what position must he secure the block signals?

341-543. Q. What must he do with the lights and the block wires?

342-544. Q. When a block station is open at an irregular hour, what signals must the signalman use in addition to the block signals, and what special precautions must he take?

343-545. Q. Are unauthorized persons permitted to enter a block station?

344-546. Q. At block stations where the signalman is also agent and required to attend trains making a regular stop, or when trains stop at stations for water, freight, or to take or leave cars, may the normal position of the signal be changed?

344-547. Q. On single track may trains be allowed to pass the stop signal at stations for water, freight, or to take or leave cars unless the signalman has obtained control of the block which they enter?

344-548. Q. Under such circumstances, what must the signalman have ready and deliver to the conductor and engineer?

345-549. Q. At starting and junction points, when may a clear signal be given to trains to enter upon the main track or to cross over?

345-550. Q. Where such movements occur in locations protected by block-signal stations, how will the signalman arrange for protection?

346-551. Q. What must the signalman frequently observe in reference to the block signals?

347-552. Q. What must signalmen observe in reference to classification signals carried by trains and how report the same?

348-553. Q. What is required when special rules for the spacing of trains is at variance with rule 317?

LOCOMOTIVE ENGINEERS AND TRAINMEN.

361-554. Q. To what trains do block signals for a track apply?

361(A)-555. Q. When trains are running against the current of traffic, what must they get at each block station authorizing them to proceed?

362-556. Q. When may a train pass a "stop" signal at a block station?

364-557. Q. When two or more trains have been coupled and so run past any block station, where only must they be uncoupled?

365-558. Q. When a train takes a siding, when may it reenter the block?

366-559. Q. When it is necessary for a train to cross over, and before crossing or returning, what must the conductor do?

367-560. Q. May locomotive engineers or trainmen proceed on hand signals as against block signals?

368-561. Q. What whistle signal must the engineer of a parted train sound when approaching a block station?

369-562. Q. What answer must a locomotive engineer give upon receiving a train-parted signal from a signalman?

370-563. Q. When a parted train has been recoupled, who must be notified?

371-564. Q. If there is an obstruction between block stations, to whom must notice be given?

372-565. Q. If a train is held by a block signal, who must ascertain the cause and when?

373-566. Q. Who must report any unusual detention at block stations, and to whom?

374-567. Q. When must a block station be considered closed?

375-568. Q. When a block station is open at an irregular hour, what indications will be given to trains in addition to the block signals?

376-569. Q. May a train which has overrun a stop signal be backed? What must the signalman and conductor do before the train proceeds?

377-570. Q. Where a signalman is absent from a block station, or incapacitated, how must trains be governed?

378-571. Q. Between sunset and sunrise, what are conductors and locomotive engineers to observe in reference to the absence of signal lights at block or train order telegraph stations?

379-572. Q. What time must yard engines clear the time of passenger trains?

379-573. Q. Whom must the conductor of the yard engine notify when it is clear of the main tracks?

379-574. Q. When may the main track again be occupied by the yard engine?

379-575. Q. When must a yard engine not enter a block?

CONTROLLED MANUAL BLOCK SYSTEM RULES.

576. Q. How are the rules governing the controlled manual block system made effective?

577. Q. What rules govern the use of controlled manual block?

578. Q. Where the semaphore is used, on which side of the signal mast, as seen from an approaching train, is the governing arm displayed?

417(B)-579. Q. Describe the method of providing for absolute block for opposing and permissive block for following movements on the same track under controlled manual block system?

418(B)-580. Q. Describe the method of providing for permissive block for following movements on double track, under controlled manual block system.

420-581. Q. When may a signalman ask for the block?

420-582. Q. When may a signalman unlock the next block station in the rear?

423-583. Q. Should a train without markers pass a block station, what are the signalman's duties in connection therewith?

AUTOMATIC BLOCK SYSTEM RULES.

584. Q. How are the rules governing automatic block system made effective?

501-585. Q. Where the semaphore is used, on which side of the mast, as seen from an approaching train, is the governing arm displayed?

501-586. Q. What position of the signal arm indicates stop?

501-587. Q. What position of the signal arm indicates caution?

501-588. Q. What position of the signal arm indicates proceed?

501-589. Q. How is stop indicated by night?

501-590. Q. How is caution indicated by night?

501-591. Q. How is proceed indicated by night?

501-592. Q. Explain the significance of disks of different colors when used in connection with automatic block system.

502-593. Q. Do automatic block signals supersede superiority of trains or dispense with the use or observance of other signals?

503-594. Q. Do automatic block signals apply to trains running against the current of traffic?

504-595. Q. When a train is stopped by an automatic block signal how may it proceed, if the signal is not immediately cleared?

504-596. Q. When a train is stopped by an automatic block signal at a single-track tunnel, how may it proceed?

505-597. Q. What is required when a block signal is out of service?

505-598. Q. How must trains finding an automatic block signal out of service be governed, unless otherwise directed?

506-599. Q. When a train is stopped by an automatic block signal which is evidently out of order and not so indicated, what must be done?

507-600. Q. When must lights on all block signals be used?

508-601. Q. What must be examined before using a switch in or leading to main track in automatic block territory?

508-602. Q. If an indicator displays "stop" in automatic block territory, how may the switch be used?

508-603. Q. How must trains entering a block from sidings or other main tracks between block signals, while the indicator displays stop, be governed?

509-604. Q. In automatic territory where sidings are equipped with derailing switches, where must cars be placed?

509-605. Q. Where derailing switches are not provided, where must the cars be placed?

510-606. Q. When may attempt be made to open electrically locked switches?

607. Q. In using a crossover equipped at both ends with indicators, by which indicator should those using the crossover be governed? What must the indication be?

INTERLOCKING RULES.

Definitions.

608. Q. What is interlocking?

609. Q. What is an interlocking plant?

610. Q. What is an interlocking station?

611. Q. What are interlocking signals?

612. Q. What is a home signal?

613. Q. What is a distant signal?

614. Q. What is an advance signal?

615. Q. What is a dwarf interlocking signal?

INTERLOCKING RULES.

601-616. Q. At an interlocking plant what is the character of signals used and what do the indications convey for both home and distant signals?

601-617. Q. Where the semaphore is used, on which side of the signal mast as seen from an approaching train is the governing arm displayed, and how are the indications given.

602-618. Q. Do interlocking signals supersede the superiority of trains and dispense with the observance of other signals as may be required?

SIGNALMEN.

611-619. Q. Give the normal indication of signals.

612-620. Q. By whom must the levers or other operating appliances be used?

613-621. Q. In what position must the signal levers be kept, except when signals are to be cleared for an immediate train or engine movement?

614-622. Q. If the route is clear, when must the signals be cleared?

615-623. Q. When should they be restored to display normal indication?

616-624. Q. If necessary to change any route for which signals have been cleared, how must the signalman be governed?

617-625. Q. May a switch or facing point lock be moved when any portion of a train or engine is standing on or closely approaching the switch or detector bar?

617-626. Q. May signals be taken away from a train at any time?

618-627. Q. How must levers be operated?

618-628. Q. If any irregularity indicating disarranged connections is detected, what must be done?

618-629. Q. Who are responsible for damage occasioned by rough handling?

618(A)-630. Q. Must signals be observed frequently during the night, and why?

619-631. Q. During cold weather how often must the levers be moved?

620-632. Q. If a signal fails to work properly, what must be done?

621-633. Q. What must signalmen observe in reference to indication of signals in relation to levers?

622-634. Q. May signalmen make or permit unauthorized repairs or alterations?

623-635. Q. What must the signals display if derailment, or a switch is run through, or damage occurs to the interlocking plant?

624-636. Q. What must be done if a switch is disconnected from the interlocking apparatus?

625-637. Q. What must be done in reference to special care during storms or while snow is drifting?

626-638. Q. May signals be displayed for any movement when switches affecting the movement are undergoing repairs?

627-639. Q. What must signalmen observe about all passing trains?

628-640. Q. If a signalman has information that an approaching train has parted, what must he, if possible, do?

629(A)-641. Q. What appliances ready for immediate use must the signalman have?

629(A)-642. Q. When may signalmen use hand signals?

629(A)-643. Q. When necessary to use hand signals, from what point and in what way must they be given?

629(B)-644. Q. If from failure of automatic block signal apparatus at an interlocking station where home and advance block signals are also used as automatic block signals, the signals can not be changed from the normal indication, how may the signalman admit a train to the block?

630-645. Q. Who must be notified if necessary to discontinue an interlocking signal and use hand signals instead?

631-646. Q. Who are responsible for the care of the interlocking station, lamps, supplies, and interlocking plant, unless otherwise provided for?

632-647. Q. How must lights be placed in interlocking stations?

633-648. Q. When must lights be used upon all interlocking signals?

634-649. Q. If a train or engine overruns a stop signal, what must be done by the signalman?

635-650. Q. May signalmen permit unauthorized persons to enter the interlocking station?

636-651. Q. What must the signalman do if defects are found in the interlocking machine?

637-652. Q. What must be done if during the day a signal arm breaks off?

638-653. Q. What must be done at night if colored glasses are broken?

638-654. Q. When glasses are broken, may signals be changed from the normal position until repairs have been made?

639-655. Q. Where interlocking rules permit hand signals to be used, what color flag or light should be used?

LOCOMOTIVE ENGINEERS AND TRAINMEN.

661-656. Q. When the signal at an interlocking plant indicates stop, to what point may trains or engines be run?

662-657. Q. If an interlocking clear or caution signal, after being accepted, is changed to a stop signal before it is reached, what must be done?

663-658. Q. May locomotive engineers and trainmen proceed on hand signals as against interlocking signals?

663-659. Q. May trainmen give proceed hand signals which conflict with interlocking signals?

664-660. Q. What whistle signal must a locomotive engineer of a parted train sound on approaching an interlocking plant?

665-661. Q. If a locomotive engineer receives a train-parted signal from a signalman, how must it be answered?

666-662. Q. Who must be notified when a parted train has been recoupled?

667-663. Q. May sand be used over movable parts of an interlocking plant?

668-664. Q. If unusually detained at an interlocking plant, what must conductors do?

669-665. Q. When trains or engines making a movement through an interlocking plant are stopped by a signalman, when may they again move?

REPAIR MEN.

681-666. Q. For what are repair men responsible at interlocking plants assigned to their care?

682-667. Q. When the condition of switches of track does not admit of the proper operation or maintenance of the interlocking plant, to whom must the fact be reported?

683-668. Q. When any part of an interlocking plant is to be repaired, what understanding must first be had with the signalman, and why?

684-669. Q. If necessary to disconnect any switch, what is required?

685-670. Q. What is necessary before alterations or additions to an interlocking plant may be made?

686-671. Q. Must repair men when on duty, or subject to call, respond promptly when called, and who must they keep advised as to their location?

MOVEMENT OF TRAINS BY TELEPHONE.

701-672. Q. What rules and regulations govern the movement of trains by telephone?

702-673. Q. Describe the method of procedure in transmitting or repeating a train order by telephone?

(Note to examiner: The party being examined should explain his understanding of rule 702.)

703-674. Q. Describe how a "31" train order is relayed by telephone?

703-675. Q. After the parties addressed at the point of destination have signed the order, what must be done?

704-676. Q. How must a "19" train order be relayed?

704-677. Q. When a train order is to be copied by one of a train crew, how must the train dispatcher be governed?

705-678. Q. What must be done with a copy of every completed, telephoned train order at the point received?

706-679. Q. May train-order blanks and Form A used at nontelegraph stations be printed upon paper with carbonized back?

707-680. Q. When a train enters a siding in a block, and is clear of the main track, how must it be reported to the signalman?

707-681. Q. What record must be made of this at the block station?

707-682. Q. When this report is received, how will the signalman be governed?

708-683. Q. How may a train proceed after reaching a block station and entering a siding?

708-684. Q. How may a signalman arrange for its further movement?

709-685. Q. When a train reaches a block station and enters a siding for the purpose of meeting an opposing train, or allowing a train to pass in the same direction, how shall the signalman be governed?

710-686. Q. What must the conductor do with his copy of each fulfilled train order received by telephone at a nontelegraph siding?

GENERAL REGULATIONS FOR EMPLOYEES.

Passenger conductors.

803-687. Q. To whom will the passenger conductor report?

803-688. Q. Whose orders must he obey, and to what instructions must he conform?

803-689. Q. When must he report for duty and what is required of him before his train starts?

803-690. Q. What is his duty relative to the movement, safety, and proper care of his train, and for the vigilance and conduct of the men employed thereon and in reporting any misconduct or neglect?

803-691. Q. What is his duty relative to transportation of passengers?

803-692. Q. What is his duty relative to the comfort and wants of passengers?

803-693. Q. What is his duty relative to passengers riding on platforms or in baggage, express, or mail cars, or violating, in any respect, the regulations provided for their safety?

803-694. Q. What is his duty relative to maintaining good order and to drunken and disorderly persons?

Passenger brakemen.

804-695. Q. To whom will the passenger brakeman report?

804-696. Q. Whose orders must he obey, and under whose direction is he while on duty?

804-697. Q. When must he report for duty, and what is required of him before his train starts?

804-698. Q. What is his duty relative to wants of passengers and when passing through sleeping cars?

804-699. Q. What is his duty relative to each station stop?

804-700. Q. What is his duty relative to the brakes, train signals, and lighting, heating, and ventilation of the cars?

804-701. Q. What is his duty relative to assisting the conductor in the proper disposition of passengers and in preserving order?

804-702. Q. What is his duty in the protection of the train?

804-703. Q. When more than one brakeman is used on a train, which brakeman must perform this duty?

804-704. Q. Is the front brakeman required in like manner to protect the front of the train when the fireman can not leave the engine?

804-705. Q. What position must the brakeman occupy on the train?

Baggagemen.

805-706. Q. To whom will the baggageman report?

805-707. Q. Whose orders must he obey and to what instructions must he conform?

805-708. Q. While on duty under whose direction is he?

805-709. Q. When must he report for duty, and what is required of him concerning passengers?

805-710. Q. Where shall he remain while on duty?

805-711. Q. What is his duty relative to baggage and U. S. mail?

805-712. Q. What is his duty relative to letters and packages forwarded on railroad business or addressed to officers or agents and to light and heat in baggage cars?

805-713. Q. What is his duty relative to loss, damage, or irregularity in handling baggage, U. S. mail, letters, and packages?

805-714. Q. Should he carry letters, packages, money, or other valuables not authorized by the regulations?

805-715. Q. What is his duty relative to permitting any one to ride in the baggage car?

Freight conductors.

807-716. Q. To whom will the freight conductor report?

807-717. Q. Whose orders must he obey?

807-718. Q. When must he report for duty, and what is required of him before his train starts, and upon the road?

807-719. Q. What is required before moving cars from stations?

807-720. Q. What is required before moving cars from stations?

807-721. Q. When necessary to move cars on station or loading tracks, or to place cars thereon, who must be notified?

807-722. Q. Do you understand that you are responsible to see that cars left on sidings must be placed inside the derail switches and properly secured by applying hand brakes?

Freight brakemen.

808-723. Q. To whom will the freight brakeman report?

808-724. Q. Whose orders must he obey, and under whose direction is he while on duty?

808-725. Q. When must he report for duty, and what is required of him in reference to making up his train?

808-726. Q. What is his duty relative to the brakes, train signals, assisting the conductor in loading or unloading freight, inspecting cars, and in all things requisite for the safe and prompt movement of the train?

808-727. Q. What position must he occupy on the train?

808-728. Q. Where is the post of the rear brakeman (or flagman)?

808-729. Q. What is his duty in the protection of the train?

808-730. Q. Is the front brakeman required in like manner to protect the front of the train when the firman can not leave the engine?

808-731. Q. Is an assisting engine on the rear of the train a part of the train, and must the flagman be governed accordingly?

Switch tenders.

809-732. Q. To whom will the switch tender report?

809-733. Q. Who will he report to and under whose direction is he, in yards?

809-734. Q. What is his duty relative to the switches under his charge?

809-735. Q. In what position must he keep the switches secured, and what is his duty relative to approaching trains?

809-736. Q. When day and night switch tenders are employed, what are their duties relative to not leaving their posts?

Levermen.

810-737. Q. To whom does the leverman report?

810-738. Q. Whose direction is he under, in yards?

810-739. Q. To whose instructions must he conform?

810-740. Q. What is the duty of the lever man?

810-741. Q. What are his duties in reference to the condition of switches?

810-742. Q. In what position must he keep the switches secured, and what is his duty relative to approaching trains?

810-743. Q. Where day and night lever men are employed, what are their duties relative to not leaving their post?

Telegraph operators.

815-744. Q. To whom does the telegraph operator report?

815-745. Q. Under whose direction is an operator at a station?

815-746. Q. When is the operator required to be on duty?

815-747. Q. Where day and night operators are employed, how must they be governed in reference to being relieved by each other.

815-748. Q. May he leave his office when a train is at his station?

815-749. Q. What record must each operator keep at his office?

815-750. Q. To what must he give particular attention?

815-751. Q. In transmitting, receiving, and delivering train orders, to what must he conform?

815-752. Q. What must he keep in good order and ready for immediate use?

815-753. Q. What must he observe in reference to the rear of trains?

815-754. Q. When orders are sent for delivery to trains at a meeting point, what must he do?

815-755. Q. What must he do in intercourse with persons transacting business with his office?

815-756. Q. May he leave his office in charge of another operator without permission or permit others to frequent his office?

815-757. Q. May he receive messages to be transmitted free? If so, how?

815-758. Q. What must he do in reference to messages sent, and delivery of those received?

815-759. Q. How are all messages to be considered?

815-760. Q. How must he transact commercial business of the telegraph company?

815-761. Q. Should the telegraph line fail for an unusual length of time, what are his duties in connection therewith?

815-762. Q. What circuit controlling signal will be used for general officers?

815-763. Q. What should he do with messages filed which may be sent by train mail without detriment to the company's interest?

Locomotive engineers.

818-764. Q. To whom will the locomotive engineer report?

818-765. Q. Whose orders must he obey?

818-766. Q. Whose direction is he under when at the engine house?

818-767. Q. When must he report for duty, and what is required of him before his train starts?

818-768. Q. What is his duty relative to keeping lookout on the track and in regard to signals?

818-769. Q. What is his duty relative to the protection of the front of the train?

818-770. Q. What is his duty relative to using precaution against fire and cleaning ash pan or front end?

818-771. Q. What is his duty relative to reporting the condition of the engine and making repairs?

818-772. Q. What is his duty relative to calling the indication of fixed signals to his fireman?

818-773. Q. Who shall be permitted to ride on the engine?

818-774. Q. What is his duty relative to not leaving the engine during a trip?

818-775. Q. When a train requires protection, what must the locomotive engineer do to so indicate?

818-776. Q. What are his duties in reference to economy in the use of fuel and supplies?

Firemen.

819-777. Q. To whom will the fireman report?

819-778. Q. Whose orders must he obey?

819-779. Q. When must he report for duty, and what is required of him before his train starts?

819-780. Q. What is his duty relative to keeping a lookout for signals and obstructions?

819-781. Q. What is his duty relative to taking charge of engine during the absence of the engineer and assisting in making repairs?

819-782. Q. What is his duty relative to running an engine in the absence of the engineer?

819-783. Q. What is his duty relative to the rules that apply to the protection of trains and the use of signals?

819-784. Q. What is his duty relative to protecting the front of the train?

819-785. Q. What is his duty relative to calling the indication of fixed signals to the engineer?

Track foremen.

827-786. Q. To whom will the track foreman report?

827-787. Q. What is his duty relative to the repairs on his section and for the safety of the track, bridges, and culverts thereon?

827-788. Q. What is required of the track foreman in regard to the condition of the track?

827-789. Q. Must he engage in work personally?

827-790. Q. What is required of the track foreman in regard to watchmen and other workmen under his charge?

827-791. Q. What is required in regard to a watch and comparing time?

827-792. Q. Must he have a copy of the time-table?

827-793. Q. What is required in regard to observing signals displayed by trains?

827-794. Q. What is required at points where obstructions are likely to occur; and where combustible material may be in the vicinity of the track, bridges, or buildings?

827-795. Q. What is required in regard to fires along the railroad; the telegraph, telephone and signal lines, poles and wires and water stations?

827-796. Q. What is required in regard to fences, encroachment on the right of way, rendering assistance in cases of accident or delay to trains, gathering up old material and keeping his section in good condition?

827-797. Q. What is required in regard to not placing anything where it will endanger trains or employees?

827-798. Q. What is required in regard to force sufficient to watch the railroad during heavy storms?

827-799. Q. From whom must permission be obtained before renewing rails, frogs, or switches in main track, except in emergency?

827-800. Q. What must work that interferes with the safe passage of trains at full speed be considered?

827-801. Q. What must be done before such work is attempted?

827-802. Q. In making repairs or otherwise obstructing the track, what protection must be given?

827-803. Q. How must track foreman be governed in using hand or push cars?

827-804. Q. To whom must he report all failures of locomotive engineers to properly acknowledge his signals?

827-805. Q. What is required when running his hand car?

827-806. Q. What is required when push cars are used?

827-807. Q. When hand or push cars are not in use, what precaution must be taken?

827-808. Q. How must hand or push cars be run, and under what conditions?

827-809. Q. What is required in regard to his switch key and the opening and closing of switches?

827-810. Q. What precautions must he take to avoid injury to his men and others?

Track and bridge watchmen.

828-811. Q. To whom will the track and bridge watchmen report, and from whom receive instructions?

828-812. Q. What are the duties of the track watchman?

828-813. Q. Should an obstruction to the track occur, what is required?

828-814. Q. What is required of the night watchman before going off duty?

828-815. Q. What are the duties of the bridge watchman?

828-816. Q. Must the watchman observe the speed of passing trains and report any violation of the rules?

828-817. Q. When his time is not wholly occupied with watching, to what other duties will he attend?

Crossing watchmen.

830-818. Q. To whom will the crossing watchman report, and from whom receive his instructions?

830-819. Q. What is required at the crossing when trains are approaching?

830-820. Q. What must be used at crossings to signal persons in vehicles and pedestrians?

830-821. Q. What kind of signals must he use on the crossing gates?

830-822. Q. What kind of signal must he use only to stop trains?

830-823. Q. Must he keep the watch house clean and not permit unauthorized persons in or about the premises?

830-824. Q. When two or more watchmen are employed during the day or night, what is required?

830-825. Q. When both day and night watchmen are employed, what is required?

ADDITIONAL SAFETY RULES.

900-826. Q. What does the company desire in the use of precaution to prevent injury to employees, and what does it prohibit?

901-827. Q. What warning and precaution must be used by train or yard crews handling engines or cars in yards?

902-828. Q. What precaution must be taken before going between or under engines or cars to make temporary repairs, adjustments, etc., when being coupled or moved?

903-829. Q. What is every employee required and warned to see for himself before using machinery and tools?

904-830. Q. Are employees prohibited from going between moving cars to couple or uncouple them?

904-831. Q. Are employees prohibited from running ahead of moving cars to open or close angle cock or for any other purpose?

904-832. Q. Are employees prohibited from kicking coupler with foot or adjusting with hand while cars are in motion or about to be coupled?

904-833. Q. Are employees prohibited from jumping on or off engine or cars moving at high speed?

904-834. Q. Are employees prohibited from riding on pilot of engine in forward motion?

904-835. Q. Are employees prohibited from making running switches with occupied caboose cars?

904-836. Q. Are employees prohibited from walking on track except in actual performance of duties making it necessary, and when necessary to use the right of way from one point to another, what path must be used when available?

905-837. Q. What precaution should employees take to prevent injury from approaching trains?

906-838. Q. In pushing cars ahead of an engine, or when trains have been cut for a road crossing, what precaution must be taken?

907-839. Q. If a second stop is necessary where water is taken, may the train be moved before the proper signal is given by the engine whistle?

907-840. Q. May a train be started while passengers are getting on or off?

908-841. Q. When should vestibule and trap doors be opened and closed?

908-842. Q. What precaution must be taken when discharging passengers from coaches not vestibuled?

ADDITIONAL QUESTIONS.

This will certify that I have on the date above mentioned been examined, understand clearly, and have answered the questions in accordance with the record herein shown.

EXHIBIT No. 14.—FORM 723M.

This is the certificate of promotions which is signed by the immediate superior and division superintendent.

A copy of this form is retained on the division, a copy furnished to the man promoted, and a copy is sent to the employment bureau for record.

EXHIBIT No. 14.

The Baltimore & Ohio Railroad Co.—----- division.

-----, 191---

To -----, *Superintendent*.

I have examined -----, who has been employed as ----- for ----- years, and find that his knowledge of—

The locomotive and experience in the management thereof.

The work in connection with the proper handling of a ----- train.

Track work and the proper conduct of a section or other M. W. gang.

Train work and the duties of a train dispatcher.

Train work, operation of signals, and the duties of an operator.

Tariffs, classification, routing instructions, accounts, loading instructions, and the duties of an agent.

With the general character and intelligence, qualify him for the position of—

Locomotive engineman.

----- conductor.

----- foreman.

Train dispatcher.

Operator.

Agent.

(Name and title of officer conducting examination.)

I have examined ----- and find his knowledge of general railroad work, book of rules, time-tables, etc., is sufficient to qualify him for the position of—

Locomotive engineman.

----- conductor.

----- foreman.

Train dispatcher.

Operator.

Agent.

-----, *Train master*.

Approved:

-----, *Superintendent*.

INSTRUCTIONS.—Erase all duties and titles except for position desired.

EXHIBIT No. 15.—FORM 964.

This form is known as a minor's release. It is executed by the applicant's parents or guardian when a minor is employed for what might be considered a hazardous position, and releases the employer from any liability for damage, etc.:

EXHIBIT No. 15.

Whereas the Baltimore and Ohio Railroad Company has agreed to take into its service _____, a minor, subject to discharge at the pleasure of the company, and has agreed with our consent, as shown by our execution of this agreement, to pay him the compensation to be earned for his service, and has been authorized to take from him such receipts and acquittances as the said company may require.

And whereas the said _____, by reason of such employment, will be subjected to great risk of personal injury from neglect of other employees, agents, and officers of the company, and from defects of machinery and other causes.

And whereas the undersigned have agreed that the said minor may be required by the company to engage in any work in any of the departments of the company to which he may be assigned, including work at all machines and on the trains and right of way of the company.

And whereas in the event of injuries to the said _____, whether resulting fatally or otherwise, the said _____, or members of his family, might make claim for damages against said company:

Now, in order to release the said company from all claim or liability for damages, for injuries of any and all kinds, from any cause whatsoever, _____, the father, and _____, the mother, in their several and individual capacities, and acting as guardians for the said _____, and the said _____ himself, in consideration of the employment by the said railroad company of the said _____, in the service of the said company, and in consideration of the sum of one dollar now in hand paid by the said company, do hereby release and forever discharge the Baltimore and Ohio Railroad Company from all claims for damages, and do also further agree to release company from all claim and liability for damages arising out of any injury or injuries to the said _____ resulting from the character of his employment, from the negligence of other employees, or agents or officers of the said company, from defects of machinery, or any other cause or causes whatsoever, whilst a minor and whilst in the service of the said company in any capacity whatsoever.

Witness our hands and seals this ____ day of _____, 191__.

SEARS EXHIBIT.

Superintendent Walter L. Sears, of the State free employment office at Boston, states that "it may be interesting to educators and parents, especially at this time of year, to learn that of the 408 boys under 21 years of age who applied for work at our office on Monday (June 22) that 28 expressed a desire to learn a trade, 34 wanted factory work, 117 preferred office work, 153 wanted to run errands, 51 wanted general work of any kind, 12 had no preference, and only 13 wished to become electricians. This would seem to bear out the statement so often made that very few boys have a definite object in mind or have given a thought as to the future. It may be that they have not been properly advised by those responsible for their rearing as to what their future should be in the commercial, industrial, professional, or social world. It is a well-known fact that the commercial field is overcrowded and that competent, reliable, temperate help with a technical training are exceedingly scarce at any price."

**THE AMERICAN FEDERATION OF LABOR
THE SOCIALIST PARTY,
AND
THE INDUSTRIAL WORKERS OF THE WORLD**

COMMISSION ON INDUSTRIAL RELATIONS.

NEW YORK CITY, *Thursday, May 21, 1914—10 a. m.*

Present: Chairman Walsh, Commissioners Lennon, Harriman, Garretson, O'Connell, Ballard, and Delano.

Chairman WALSH. The commission will please come to order. Mr. Thompson.

Mr. THOMPSON. Mr. Chairman and members of the commission, in the act creating this commission you are directed by Congress, among other things, to inquire into the existing organizations of labor, and also into their effect on the industrial situation. In obedience to that direction, we have for our public hearings, in the next two days, the subject of the American Federation of Labor, the Socialist Party, and the Industrial Workers of the World. These have been selected as being three representative organizations of labor in this country, and we have thought it was wise to hear them together.

In the hearing of this subject it has been thought best to put on the principal representatives of the representative parties who may state, as we might say, their platform; and as these organizations may cover—and do cover, as we know—a good deal of the same field, to recall these representatives and give them an opportunity to come upon the reasons for their existence which may call for some comments on the part of the other parties. It is the desire, as I understand, of this commission to permit these witnesses this opportunity. For that reason, Mr. Chairman, I would like to call Mr. Gompers for a statement of the principles and purpose of the American Federation of Labor.

STATEMENT OF MR. SAMUEL GOMPERS.

Mr. GOMPERS. Mr. Chairman and gentlemen of the commission, I do not know—I have not heard the entire statement from Mr. Thompson as to the procedure contemplated in the special investigation that is about to be undertaken. I have seen statements published in the paper, in the public press, as to the nature of the investigation about to be undertaken; and if there be any proper inferences to be drawn from those statements, it seems to be that it is to be made the subject for analysis and for dissection. So far as I am concerned, as the president of the American Federation of Labor, I have no hesitancy in saying that we welcome—I welcome any attack or criticism or abuse, just as anyone may care to launch it, against the American Federation of Labor; and I shall endeavor then to answer it. I am free to say this, now, that I come in answer to the subpoena of this commission with the intention of playing the game open and fair, and with the cards up upon the table, for anyone to know, but I do not want to have it appear upon the record that I have introduced matters which may seem to be extraneous to the investigation. And yet these same themes are the subject of general discussion among the opponents of the American Federation of Labor, those who do not understand, and those who may understand it and have some peculiar kink in their reasoning powers, and consequently are scarcely responsible for their utterances regarding the American Federation of Labor.

But be they as they may, I think that the existing organizations of the American working people to-day are entitled to know what we are officially called upon to meet; and I think that I should prefer—not only prefer, but I think I have the right to insist—I do not care about appearing contumacious. It is not my desire to be, but rather to be yielding whenever I can. But I feel that it is a matter of right which I owe to the American Federation of Labor, an organization which has been in existence for more than 33 years, to know what the organization has to meet from the criticism or the antagonism of its opponents. As I say, I may not have the right to bring in here matters which, unless they are on the record, would be regarded as extraneous and having been on my part simply thrust in. And I have no hesitancy in believing that the

opponents of the American Federation of Labor will only welcome the opportunity of launching all their attacks and criticisms against us.

Chairman WALSH. I will try to reply to your suggestions, Mr. Gompers. I will state, as Judge Thompson started out to say and stated properly, the program for to-day, morning session, is: Samuel Gompers, statement of purposes and methods of the American Federation of Labor, 40 minutes.

Morris Hillquit, statement of purposes and methods of Socialist Party, 40 minutes.

Vincent St. John, statement of purposes and methods of Industrial Workers of the World, 40 minutes.

Afternoon session: Vincent St. John (recalled), criticism of the other organizations.

Joseph Ettor, extension of Mr. St. John's criticisms on the basis of practical experience.

F. R. C. Gordon, statement on behalf of the American Federation of Labor.

Friday (morning session), Max S. Hayes, statement from the point of view of a prominent member of the Socialist Party, who is also active in the support of the American Federation of Labor.

Joseph W. Sullivan, statement on behalf of the American Federation of Labor.

Afternoon session: Morris Hillquit, Vincent St. John, and Samuel Gompers recalled in rebuttal.

The proposition is this, Mr. Gompers, that—if you haven't already been informed—that there is, of course, a difference of opinion not only among the various organizations that are mentioned here, that are called here, but there is a lack of information on the part of the public as to the aims and purposes of all of these organizations. Now, the commission has attempted to put this in as concise and good a form as they possibly can to develop, in the time they have at their command, a statement as to the aims and purposes of each. You are called on first, as I understand the committee on these public hearings, because you represent this old organization—what might be called the standard organization of labor in this country; and inasmuch as this is the definite organization, the committee thought well to let you make your statement of the aims and purposes, together with these gentlemen, Mr. Sullivan and Mr. Gordon, and to let those who might have criticisms come in between, and then giving you an opportunity of rebuttal. Now, whether that has been wisely or properly laid out, that plan nevertheless is the plan.

Mr. GOMPERS. Mr. Chairman, pardon me, if I may be permitted—you say 40 minutes in the presentation of that for which the American Federation of Labor stands. I have not had any previous notice that I should be required to do that, and it is not an easy matter for a man to attempt offhand to state before an official body the aims and purposes of the American Federation of Labor.

Chairman WALSH. Well, if there is any reason sufficient to you, on account of which you do not desire to be heard, or if the rules laid down by the commission are such as that you do not want to be heard under them, of course we will excuse you, though we do not like to do it, but this is the way we have laid down our plans.

Mr. GOMPERS. That is intended for a curt request for me to retire—

Chairman WALSH. Certainly not.

Mr. GOMPERS (continuing). For my retirement. I will retire.

Chairman WALSH. Why certainly not. If that sounded curt I am very sorry, as it was not so intended. I did not mean to be curt, and I tried to state my proposition in a business-like and concise way, and we would be delighted to have your views.

Mr. GOMPERS. I will submit to the commission's order, whatever it is.

Chairman WALSH. Take the chair, then.

Mr. THOMPSON. I would say, Mr. Chairman, that if it is agreeable to Mr. Gompers, and Mr. St. John and Mr. Morris Hillquit are here, we may hear from them first and give Mr. Gompers the opportunity of collecting his data on that subject.

Chairman WALSH. How is that?

Mr. THOMPSON. Is Mr. Morris Hillquit here, or Vincent St. John here?

Mr. ST. JOHN. Here.

Mr. THOMPSON. I think, Mr. Chairman, under the suggestion of Mr. Gompers, I think it is the wise thing to put Mr. St. John on the stand. I thought Mr. Gompers had a fairly definite idea as to what you were to hear here to-day, and I know from communication with Mr. St. John that he has had, and I know from conference with Mr. Morris Hillquit that he has, a very definite idea.

Chairman WALSH. Now, one moment. Do I gather from what you have said that you would prefer to appear on the stand later, Mr. Gompers, at this hearing? This a matter of first intention. I am not intending to be curt with you, or counsel, or anyone else.

Mr. THOMPSON. I think under Mr. Gompers's statement it might be advisable to have Mr. St. John take the stand at the present time.

Chairman WALSH. Well, is that satisfactory?

Mr. GOMPERS. Yes.

Chairman WALSH. Very good.

TESTIMONY OF MR. VINCENT ST. JOHN.

Mr. THOMPSON. For the purpose of the record, will you kindly give us your name and address?

Mr. ST. JOHN. Vincent St. John, Chicago, Ill.

Mr. THOMPSON. What is your official position?

Mr. ST. JOHN. General secretary and treasurer of the Industrial Workers of the World.

Mr. THOMPSON. How long have you occupied that position?

Mr. ST. JOHN. Since January, 1909.

Mr. THOMPSON. How long have the Industrial Workers of the World been in existence as a definite organization, if you know?

Mr. ST. JOHN. Since July 27, 1905.

Mr. THOMPSON. Previous to your occupation of the position of general secretary and treasurer of the organization, who occupied that position?

Mr. ST. JOHN. William E. Troutman.

Mr. THOMPSON. How long did he occupy that position?

Mr. ST. JOHN. From 1905 to December, 1908.

Mr. THOMPSON. Then he was practically occupying that official position from the beginning of the organization?

Mr. ST. JOHN. Yes.

Mr. THOMPSON. Is that the chief executive and official position of the organization?

Mr. ST. JOHN. Well, that is hard to say. I suppose it is looked on as that and the general organizers.

Mr. THOMPSON. What other office or officers do they have?

Mr. ST. JOHN. General organizers and a general executive board advising them.

Mr. THOMPSON. Who is the general organizer at the present time, do you know?

Mr. ST. JOHN. William D. Haywood.

Mr. THOMPSON. And who are the members of the executive board?

Mr. ST. JOHN. C. H. Edwards, of Louisiana, Alexander, La.; John M. Frost, Seattle, Wash.; J. W. Kelly, St. Louis, Mo.; Ewald Koettgen, Paterson, N. J.; and Frank Little, of Fresno, Cal.

Mr. THOMPSON. What are the powers of the executive board of the organization?

Mr. ST. JOHN. They oversee the affairs of the organization in general and keep track on the secretary and organizers.

Mr. THOMPSON. Do they have any authority to direct the policies, and do they direct the policies of the organization?

Mr. ST. JOHN. They only carry out the policy of the organization as determined at the convention.

Mr. THOMPSON. Then, the creating power or the creating body that gives direction is the convention of the organization?

Mr. ST. JOHN. Yes.

Mr. THOMPSON. How often does the organization hold a convention?

Mr. ST. JOHN. Annually.

Mr. THOMPSON. How are the delegates, if there are such, of course, appointed?

Mr. ST. JOHN. They are elected by local unions and other component bodies of the organization.

Mr. THOMPSON. Delegates is a proper name, is that, for them?

Mr. ST. JOHN. Yes.

Mr. THOMPSON. What method has the organization of deciding upon the credential of the delegate?

Mr. ST. JOHN. The standing of the local union as determined by the books in the general office, and the general office forward official credentials in duplicate

to each local union. They are supposed to be delivered to the delegate elected to be the agent of the local union, with the seal of the local on, certifying to their regular election.

Mr. THOMPSON. You mentioned, Mr. St. John, that there were other bodies appointed delegates to your convention. What other bodies are they?

Mr. ST. JOHN. The National Industrial Unions are not represented by delegates from the local unions. The National Industrial Unions are groups of local unions in the same industry that are combined for administrative purposes into a national organization of that industry, and they are represented in that manner in the general convention as the National Industrial Union.

Mr. THOMPSON. How many have you of National Industrial Unions which are associated and affiliated with the Industrial Workers of the World?

Mr. ST. JOHN. Two—Marine Transport and Textile.

Mr. THOMPSON. Where are the headquarters of those bodies, and who represents them, if you know?

Mr. ST. JOHN. Well, the Marine Transport Workers' organization is located in New York City; secretary and treasurer is C. L. Coleno.

Mr. THOMPSON. Do they deal with the salt-water transportation?

Mr. ST. JOHN. Salt-water and all marine transportation.

Mr. THOMPSON. I mean have they any organization; do they deal with traffic on the Great Lakes and rivers?

Mr. ST. JOHN. They would if they had any organization on the Lakes.

Mr. THOMPSON. Their charter or their power or jurisdiction extends to that?

Mr. ST. JOHN. The jurisdiction covers all water transportation.

Mr. THOMPSON. What is the other?

Mr. ST. JOHN. The other is National Union of Textile Workers.

Mr. THOMPSON. National Union of Textile Workers?

Mr. ST. JOHN. Headquarters in Boston, Mass.

Mr. THOMPSON. What field does that cover?

Mr. ST. JOHN. The textile industry.

Mr. THOMPSON. Does that organization extend all over the country?

Mr. ST. JOHN. They have an organization in South Carolina, and the New England district, and the Paterson districts.

Mr. THOMPSON. Is that limited to any particular class of fabrics, or does it include all cloths?

Mr. ST. JOHN. Includes the textile—includes all operations of the textile industry.

Mr. THOMPSON. How and in what manner is their relation to the parent body determined?

Mr. ST. JOHN. Well, they are affiliated as an integral subdivision of the organization, with jurisdiction over the textile industry.

Mr. THOMPSON. What power has the convention?

Mr. ST. JOHN. They have a charter, and they are chartered under the constitution, with jurisdiction specified.

Mr. THOMPSON. What power has the convention over these two affiliated organizations?

Mr. ST. JOHN. The same power it has over any other constituent part of the organization.

Mr. THOMPSON. What are the purposes, general scope, and plan of the Industrial Workers of the World? Take your time and make your statement in regard to that.

Mr. ST. JOHN. The primary purpose is the organization—to organize the working class on a class basis. That is, to organize and educate the workers with the understanding that the workers of this and every other country constitute a distinct and separate economic class in society, with interests that are distinct and separate from the employing class, as such, in society. That is, the organization divides society to-day into two broad classifications—the employing class on the one hand and the wageworking class on the other. The purpose of the organization is to organize and educate the wageworking class into a knowledge of economic position for the purpose of gaining requisite power in order to advance their interests, defend their interests, and advance them wherever possible, with the ultimate object of placing the control and operation of industries in which workers work into the hands and under the jurisdiction of the organized wageworkers of the country, so that the result of their efforts, the wealth produced by them and by their collective efforts, will accrue to those who are responsible for its creation without having to pay tribute to any employing class over any other parasitical class whatever. It

is proposed to accomplish that by organizing the workers in such a manner that it will be possible for them, through their organization, to control their labor power, their brain and muscular energy that is used from day to day and year to year in the operation of industries, which to-day is a commodity sold on the labor market under the same rules, governed by the same conditions, that any other commodity is sold; and the Industrial Workers of the World propose that the wageworkers organize in such a manner that they will control a sufficient amount of this commodity required to operate the industries so that they will be able to dictate the terms upon which it is used.

I think, for a general statement, that covers the matter, so far as I can go.

Mr. THOMPSON. Is there anything in respect to the plan of your organization, its form, that you have not stated in your answer to the previous question?

Mr. ST. JOHN. Nothing that I can recollect. It is simply a general statement. It might not be clear to the commission or to yourself, but the only way I see to make it clearer is simply by a line of questions.

Mr. THOMPSON. What is the present membership of the Industrial Workers of the World?

Chairman WALSH. Might I interpolate a question there to see if I can not open it up?

How would you apply what you have said in your general statement, if you had the power to do so at once, to the transportation industry; that is, the general transportation industry of the country?

Mr. ST. JOHN. How would we apply it?

Chairman WALSH. Yes, sir.

Mr. ST. JOHN. Well, the transportation industry is subdivided into four component parts, under the scheme of organization, our plan of organization. Marine, steam railroads—

Chairman WALSH. Well, just take steam railroad.

Mr. ST. JOHN. Well, the steam railroad?

Chairman WALSH. Yes.

Mr. ST. JOHN. They would be organized at different points into local unions; that is, division points of the railroad, local unions, or industrial unions of railway employees would be instituted or organized. These local unions would embrace all employees of the railroads entering that particular point in that local union. It would not make any difference what their occupation happened to be, from the section man to the engineer, and men and women engaged as clerks in the office, telegraphers, station agents; it would include every wageworker on the systems of the railroads working out of that point. They would be members of that particular industrial organization; and they would be branched inside of that local industrial union as their experience and their particular requirements of the industry might dictate.

Chairman WALSH. Who would determine that?

Mr. ST. JOHN. They would determine that themselves, the membership.

Chairman WALSH. Individually?

Mr. ST. JOHN. What?

Chairman WALSH. Individually?

Mr. ST. JOHN. No, sir; the local union.

Chairman WALSH. The local union would determine which were the best fitted?

Mr. ST. JOHN. They would determine the branch formation of the local union. They would determine whether it was necessary to have a branch consisting of engineers and firemen or whether one branch would be sufficient to get the required administrative functions by taking in the entire train crew in a branch. That would be determined by the experience of the members of the branch who were actually employed in the industry.

Chairman WALSH. What else have you to say in this game of transportation industry?

Mr. ST. JOHN. The different industrial unions would be brought together, forming a national industrial union of the transportation industry. That would comprise all of the employees of all of the railroad systems in the United States in the National Industrial Union.

Chairman WALSH. Would it include the president?

Mr. ST. JOHN. How?

Chairman WALSH. Would it include the president, superintendents, etc.?

Mr. ST. JOHN. It would include only what is recognized as the wage-working element of the railroad.

Chairman WALSH. It would not include the administrative part?

Mr. ST. JOHN. It would not include those that were looked upon as the officials of the system at all.

Chairman WALSH. Now, after that union was formed the local unions were formed, and you had this national union, what means would you propose to see that those men get the profit of their own labor? What means would you adopt to see that these men so formed into a union would receive what I believe you said was the product of their toil and not divide it with anyone else?

Mr. ST. JOHN. That would be impossible, so far as the railroad workers themselves were concerned. They could not accomplish that individually; that is, it would be impossible for the employees of the different railroad systems to arrange matters to that extent simply as the employees of the railway system, of the railway industry. The ultimate object of the organization would have to stand until such time as the organization in all of the industries reached the point that gave them the required power to attain that object.

Chairman WALSH. Will you please pick out some industry, for instance, now? We are going to try to put this into operation. Will you pick out some industry that you might indicate to the commission that would be the first one that you would start on, considering the fact that you have made a study of the subject?

Mr. ST. JOHN. I am trying to state that, as far as the organization is concerned, we would not try to put any such plan into operation for a particular industry. The achievement of that ultimate object of the organization will depend upon the existence of an organization in all industries and about the same power.

Chairman WALSH. That would not fit them unless there was an entirely changed industrial system?

Mr. ST. JOHN. Well, that is the purpose of the organization. It is to change the industrial system.

Chairman WALSH. Are you attempting to organize in specific industries? You are, aren't you?

Mr. ST. JOHN. Yes, sir.

Chairman WALSH. Organize the workers?

Mr. ST. JOHN. Yes, sir.

Chairman WALSH. Assume that you completed a perfect organization in the meat-provision industry, which employs, as I understand, a large number of what might be common or unskilled laborers.

Mr. ST. JOHN. Yes, sir.

Chairman WALSH. Suppose, now, you effect a complete organization in the packing industry. What means would you take, if you can give it briefly and generally, the means you would adopt to put into form the general objects of your organization as you have stated them in the record here?

Mr. ST. JOHN. All that we could hope to accomplish with an organization of that kind, if it was confined to one industry alone, would simply be to extend the control of the workers as so organized, so that they would be able to dictate better conditions for themselves, better returns for their labor; and the revenues of an organization so formed would be used in extending the organization to other industries to bring them up to the same standard. So there would be a requisite amount of control exercised not only in one industry alone but in all the industries sufficient to be able to dictate the terms under which those industries would operate; that is, we would have, through the organization, control of a sufficient amount of labor power to prevent the operation of the industries by withdrawing it or to allow it to operate on terms satisfactory to the membership of the organization.

Chairman WALSH. Assuming, Mr. St. John, that you succeed in perfecting such an organization in the leading industries of the Nation, the large employers of labor, what steps would you then take to bring about the conditions that you mentioned in the statement of your general object, to wit, that the workers should have the product of their own labor and not give any proportion or divide it with the parasitical class or with the class of nonworkers?

Mr. ST. JOHN. Well, when that stage arrives the organization will have gradually increased its control over the industries.

Chairman WALSH. How is that?

Mr. ST. JOHN. I say when that stage arrives the organization will have gradually increased its control and domination over industry to such an extent that they will be able to operate the industry and exchange the products through the medium of our own organization.

Chairman WALSH. At what point would you take in what you call the officials or the administratives?

Mr. ST. JOHN. Whenever we were strong enough to dominate them and know that they would work for our interest.

Chairman WALSH. Would your plan require a political action?

Mr. ST. JOHN. I don't know what you mean by political action.

Chairman WALSH. That is, would it require control of the legislative body of the Nation?

Mr. ST. JOHN. No, sir.

Chairman WALSH. Or of the various States, or a change in the organic law of the Nation, or constitutions of the various States?

Mr. ST. JOHN. None, whatever.

Chairman WALSH. That is all.

Mr. THOMPSON. I understand, Mr. St. John, from your answers to the chairman's questions, that what you have stated in reference to the program of your organization in regard to the production and distribution of wealth is a future program. That at present you are concerned with the organization of the workers to better their hours and their working condition and to increase their wages.

Mr. ST. JOHN. The organization, in order to represent the interests of the working class, must necessarily have a twofold function. It has to be able to handle the everyday problem of the workers, which is one of shorter hours, better wages, and improved shop conditions, and ultimately the education of the workers, so that they can assume control of industry. The fundamental purpose of the organization is to drill, have the workers drilled, and to educate themselves so that they can control industry; and as a training school or preparation for that task, the everyday struggle of the workers is the first struggle in front of the organization.

Mr. THOMPSON. Mr. St. John, what is the method of organization you pursue in any given industry, if you have such?

Mr. ST. JOHN. The method of organization?

Mr. THOMPSON. Yes, sir.

Mr. ST. JOHN. You mean by that how we build up an organization—start it?

Mr. THOMPSON. Yes. Do you have any organized? Do you have any distinct plans, different from those of other labor organizations that are commonly understood and known?

Mr. ST. JOHN. Well, I think that is the general proposition. All organization work is pretty much the same. The plan the I. W. W. follows is by organizers. For a local union in a given locality it carries on the organization work, through its members, through its membership, educational work, the distribution of leaflets, circulation of the papers of the organization, holding of public meetings in halls and on the streets, in front of factory gates, in fact any method by which the attention of the workers employed can be attracted; either carrying on agitation inside or outside of the factories.

Mr. THOMPSON. When as a result of such methods as you may use for basing an organization in a given city or factory, how do you present or make your demands to such factory, in reference to any subject which you take up? Do you have a shop organization?

Mr. ST. JOHN. We have a shop organization. If the local, if the industry in question has several different establishments in the same locality, the workers in the shops have meetings of their own wherein they take up the questions that they are interested in, with a view to the particular shop that they are working, and their demands or ideas are formulated into demands, and these different shops, branches, elect delegates who receive the report from the meetings of the shop branches; that is, the demands formulated for the different shops, and harmonize the whole. That is, they compile from the different demands a general set of demands, embracing whatever particular demands may apply to each shop or each establishment, either combined into a set of demands covering the entire district or the jurisdiction of that industry, or that industrial charter, or whatever it may be; and they are presented to whoever has the authority to receive them on the part of the employers.

Mr. THOMPSON. Who in the cases you have mentioned would present such demand on your organization?

Mr. ST. JOHN. The committee elected by the different branches of the workers involved.

Mr. THOMPSON. What, if any, arrangement does your organization countenance with the different factories that you may have an organization in?

Mr. ST. JOHN. What arrangement do we countenance?

Mr. THOMPSON. Yes. Do you carry out systems of collective bargaining?

Mr. ST. JOHN. We do not make any agreements for any stated length of time; but, as an example, if there was a—if the effort to gain better conditions resulted in a strike and this strike resulted in a victory for the workers involved, work would be resumed simply upon the representatives of the employer, the qualified representatives of the employer, saying that they agreed to the terms for which the workers were fighting, and a notice posted in the mill to that effect. That is the extent of the effect of any agreement we enter into.

Mr. THOMPSON. Take a case, for instance, where there has been no strike, where your representatives meet with the firm, and an agreement is reached in reference to the several matters in dispute, have your representatives power to agree to any conditions, or hours, or wages for any given length of time, or are they to last for the day only?

Mr. ST. JOHN. They do not agree upon a length of time. They do not have any power to agree to anything of the kind. All they have power to do is to report back to a meeting of the workers involved wherever they report and whatever their report is, and their report is either accepted or rejected. If it is rejected then the practice is simply to require that a notice be posted in the establishment stating that these conditions will govern.

Mr. THOMPSON. Assuming that, as a result of the conference of the representatives of your organization, the firm should agree to the demands of the men, but should attach to that agreement the conditions that such demands should be in existence and be the law between the two for the time of a year, is it the purpose of your organization to countenance or encourage the making of such agreements?

Mr. ST. JOHN. No; on the contrary the organization is emphatically opposed to the entering into of any agreement for any stated length of time.

Mr. THOMPSON. Would the representatives of the workers under your plan of organization have the right to submit such a question to the mass meeting of the workers?

Mr. ST. JOHN. They would not have the right, but if the question was put up to them they would be supposed to do so. They are not judges of what comes before the membership on matters of that kind.

Mr. THOMPSON. Then, suppose they submitted such a plan to the membership at a mass meeting and the membership unanimously voted for it, and such an agreement or arrangement was made on such a vote of the mass meeting, would your international organization or your general organization stand back of such an agreement?

Mr. ST. JOHN. The possibilities are that the acceptance of any such agreement, any time agreement, on the part of any local connected with the I. W. W. would sever their connection. That has been the practice in the past.

Mr. THOMPSON. That is to say that the fundamental policy of your organization is this: That they do not countenance any time agreements, and that the making of time agreement automatically severs the organization making it from your parent body?

Mr. ST. JOHN. That has been the policy in the past; yes, sir.

Mr. THOMPSON. And consequently and naturally you would not encourage the carrying out of such an agreement? That goes without saying.

Mr. ST. JOHN. Certainly not.

Chairman WALSH. Mr. Thompson, inasmuch as the time is drawing to a close, could we shorten it by having him explain the difference in the operations of his organization and that of the American Federation of Labor, for instance?

Mr. THOMPSON. We can take it up that way, Mr. Chairman, but that was not the plan that I had outlined.

Chairman WALSH. I will not call your attention, then, when the 40 minutes are up.

Mr. THOMPSON. When demands are made by your organization on the factory or firm, and they are not acceded to, what are the general plans of your organization for enforcing such plans, if you have any?

Mr. ST. JOHN. Well, we have no general plan, because the circumstances surrounding each particular case is what determines the plan of operation. The general plan might be stated as the withdrawing of the labor power from the establishment in question, or from the industry in question, in that locality, and if necessary from the industry in question throughout the country, in an effort to stop production in that manner. That is generally known as a strike. If circumstances were such as to prevent, such as to indicate that a strike would probably not give the results, would be inopportune, the conditions in the

industry were not favorable, why, different methods would be resorted to; we would try to slow up the production in the factory; turn out poor work; in fact, interfere with the process of production so as to destroy the possible chance for revenue or profit accruing to the owners from that particular industry or mill.

Mr. THOMPSON. Is that what you call sabotage?

Mr. ST. JOHN. That is what it is generally known as; yes, sir.

Mr. THOMPSON. How else do you carry that principle out? Say, when you are out on a strike and not in the mill, how would you carry that same principle out?

Mr. ST. JOHN. If we were out on strike?

Mr. THOMPSON. Yes.

Mr. ST. JOHN. We couldn't very well carry that principle out if we were out on a strike, excepting it would be to interfere with the products turned out in that particular mill, in transportation, or interfere with the raw material going into the mill. We would make an effort, if the organization was in shape, to control an influence sufficient with the isolated plant in question, so that no raw material or anything they use in the manufacture got very far.

Mr. THOMPSON. If, in carrying it out, it is necessary to destroy property, would your organization countenance that?

Mr. ST. JOHN. If the destruction of property would gain the point for the workers involved, that is the only consideration we would give to it. The fact that property was destroyed would not have anything to do with determining whether we adopted the plan or not.

Mr. THOMPSON. Then, the criterion of your action on a strike is whether or not the proposed action will gain the point of the strike?

Mr. ST. JOHN. That is the only one.

Mr. THOMPSON. Would that same reasoning apply to questions of violence against persons?

Mr. ST. JOHN. Certainly.

Chairman WALSH. Please turn this way, Mr. St. John, and speak a little louder; this is a difficult place to hear.

Mr. THOMPSON. I understood he said yes.

Mr. ST. JOHN. I said certainly.

Mr. THOMPSON. I wish you would explain the reasons why your organization would not make a time agreement, and why you countenance the destruction of property or the injury of persons in order to carry out any desired point as workmen?

Mr. ST. JOHN. Well, in the matter of the time agreements, the entering into time agreements is of no value to the working class. It is of no value to that particular part of the working class who are directly involved in the agreement. It is, as a rule, a distinct—it places them at a disadvantage for the future period. In the first place, it is simply saying to the employer that on a certain date, after the lapse of a certain number of months, we are going to make a demand on you for increased wages or change in the working conditions. That is what it means to them. The consequence is that if he has any semblance of intelligence at all he prepares for it, and he has got a year's time to get ready for it. He makes up his stock ahead—his warehouse is piled with stock where he is dealing in goods that he can handle that way; and when the time comes and you make your demands, he has made arrangements so that he is able to get along without you. He places you at a disadvantage.

Another thing, it prevents the workers from taking advantage of any favorable opportunity that might arise during the term of this agreement, by which they could get better conditions. For instance, the market or demand for the commodities that were being produced might become lively, and the plant become rushed with orders, why, from that circumstance the workers has an advantage in making terms and demands. There is an added demand for the commodity they are selling—their labor power; and there is that added demand there, and they are in a more favorable position to force recognition for their claims and gain what they are after.

In addition to that, it destroys the active spirit in an organization to work under a contract period. The membership, as a rule, working under a time contract, as soon as the contract is signed and they are back to work, they lose everything except a mere passing interest in their organization; and they think things are settled for the time being, and they do not need to bother under their contract is about to expire. Those are a few of the reasons; and as far as the destruction of property is concerned, the property is not ours. We haven't any interest at all in it; it is used simply—it is used

to make the lot of the workers, as a class, harder; and the only property that we have, experience in the past has shown that the employers, as a class, are not at all particular whether they injure our property or not. They take us into the mills before we are able—before we have even the semblance of an education, and they grind up our vitality, brain and muscular energy into profits, and whenever we can not keep pace with the machine speeded to its highest notch, they turn us out onto the road to eke out an existence as best we can, or wind up on the poor farm or in the potter's field. And we think what is good for the working class—rather, what is good for the employing class is certainly good for us. And he has not shown any respect at all for our property, that it is not incumbent upon us to show any respect for his property; and we do not propose to do it; and we do not propose to make any bones about having that attitude clearly understood; that we are getting somewhat intelligent, and at least beginning to notice things. And the same holds true with regard to life and violence. Not that the Industrial Workers of the World are advocating the destruction of life to gain any particular point or the use of violence; because the destruction of life is not going to gain any point, and if life happens to be lost in strikes that we are implicated in, the blame generally, and has been up to date, on the other side. But we are not going to tell our membership to allow themselves to be shot down and beat up like cattle. Regardless of the fact that they are members of the working class, they still have a duty that they owe to themselves and their class of defending themselves whenever they are attacked and their life is threatened. Violence is not always the choosing of the working class; as a general rule, it is forced on them as a simple act of self-defense. They have to strike back when they are struck at, and that is the spirit and that is the idea the organization is trying to educate the workers into.

We do not—we do not want to be understood as saying that we expect to achieve our aims through violence and through the destruction of human life, because, in my judgment, that is impossible. The achievement of success—the success of this organization—the realization of what it is striving for—depends on one thing only, and that is gaining the control of a sufficient amount of the labor power that is necessary in the operation of industry. Now, when we have that control, then through organization the necessity for violence will be reduced; in fact, it will almost disappear. It will disappear. The necessity for using any tactics that will lead to violence will disappear, and the protection and the safeguarding of human life will increase just in proportion as we have that control. And we will not only be able to take care of ourselves, and therefore it will become unnecessary for us to injure anybody else so far as life is concerned.

Mr. THOMPSON. In getting your control of an industry, Mr. St. John, do you—and in your advocacy of the method of gaining that control, do you tell your membership only to use force in case it is necessary for self-defense?

Mr. ST. JOHN. We don't tell them anything of the kind. They are supposed to have sense enough to know that. If they did not have sense enough to know when to take care of themselves, no amount of telling on our part would do them any good.

Mr. THOMPSON. In other words, your general policy is that whatever violence is necessary to carry the point, and if violence will carry the point, they must use it to gain the point?

Mr. ST. JOHN. Most assuredly; yes.

Mr. THOMPSON. Yes.

Chairman WALSH. What is the answer?

Mr. ST. JOHN. Most assuredly; yes.

Mr. THOMPSON. That is to say, if violence will bring the point that the workers want, then it is countenanced?

Mr. ST. JOHN. Well, violence is not going to bring the point that the workers want except in rare instances.

Mr. THOMPSON. Take the case of workers filling the place of strikers, for instance. If your people believe that by committing acts of violence against the people who take the places, they would cause a determination of the struggle in favor of the strikers, then you would countenance such violence?

Mr. ST. JOHN. Certainly.

Commissioner HARRIMAN. I would like to ask you, Mr. St. John, what was the underlying cause for the creation of your organization?

Mr. ST. JOHN. Well, the organization came into existence mainly because of the lack of unity on the part of labor as it was and is organized to-day.

Commissioner LENNON. I wish the witness would face that way [indicating audience], and we could hear just as well.

Mr. ST. JOHN. Strikes in different sections of the country were fought out and lost by the workers, not because they did not put up a good fight themselves, those that were directly involved—not because of the fact that the employers were in an advantageous position, but simply because that, in addition to fighting the employers who were solid as a unit on the proposition, they also had to contend against the assistance rendered to the employers by workers in the same industry or in other industries. The only show for the winning of a strike is stopping the production of the commodity that is being manufactured by the workers that are on strike, curtailing the profits of the corporation or the individual who has title to that establishment; and as long as he can transfer his work to other workers or operate his factories with scab labor and the product turned out by scab labor are distributed around the country by union men with union cards in their pockets, and the raw materials are furnished to the scab labor in this particular factory and pass through the hands of men with union cards in their pockets, the chance of any body of workers winning a strike in any important industry are reduced to a minimum, to say the least. And it was to overcome that state of affairs that the union has come into existence.

Commissioner HARRIMAN. Do you think that cooperation between employers and the wage-earning class is possible or impossible—peaceful cooperation?

Mr. ST. JOHN. It is not possible except by a loss to the wage earners. It might be brought about, but the only ones that would gain by it would be the employers. The wage earners would be the ones to suffer.

Commissioner HARRIMAN. I would like to ask you what is the attitude of your organization toward the Government?

Mr. ST. JOHN. Toward the Government?

Commissioner HARRIMAN. Yes.

Mr. ST. JOHN. Well, they simply look on the Government as a committee employed to look after the interests of the employers. That is all the Government means to it. It is simply a committee employed to police the interests of the employing class.

Commissioner LENNON. Mr. St. John, I understood you to answer Mrs. Harriman that the reasons for starting the I. W. W. were, your view as to the inefficiency—because of your ideas of lack of cooperation in the existing organizations. Is that true?

Mr. ST. JOHN. Yes.

Commissioner LENNON. Where have you found in your observations that the unions that you are criticizing have been less successful than the I. W. W. in strikes and lockouts and contests of that character?

Mr. ST. JOHN. What do you want, definite examples?

Commissioner LENNON. Yes.

Mr. ST. JOHN. Well, the industrial history of the country is full of them for the last 15 years.

Commissioner LENNON. Well, I know something of that history myself.

Mr. ST. JOHN. The strike of the subway and elevated railroad men in the city of New York in 1905 is one instance.

Commissioner LENNON. Yes.

Mr. ST. JOHN. The strike of the miners in Leadville, Colo., in 1896 is another instance. The loss of the A. I. U. strike in 1894 is another instance, and the garment workers' strike in Chicago in 1908, I think that was another instance. The loss of the—

Commissioner LENNON. While those strikes were, in the main, lost, but not entirely—that is another phase of the matter. Are you not aware of the fact that hundreds and even thousands of strikes were gained in the meantime?

Mr. ST. JOHN. Well, that might hold true, but the strikes that were gained were possibly of less economic importance or involved fewer people than those that were lost. As a matter of fact, in the past 15 or 20 years in this country organizational workers have practically been wiped out in every basic industry—been wiped out after struggles, after fights, after strikes, and they have been wiped out, and there is no gainsaying the fact that to-day, in basic industries in this country, they have no efficient organization.

Commissioner LENNON. Have the Industrial Workers an efficient organization in those industries?

Mr. ST. JOHN. No, sir; we haven't, and more is the pity.

Commissioner LENNON (inaudible). Are you in the same position now in regard to strikes as the old organization has long been?

Mr. ST. JOHN. Yes; some of them.

Commissioner LENNON. In other words, you are in the same position as the other unions, although not quite so successful?

Mr. ST. JOHN. We are in the same condition of the other unions for this simple reason: We not only have to fight the employers, but have to fight all other unions besides. For some reason or other, all unions think it is a badge or honor to scab on the I. W. W. They are encouraged in that viewpoint by all parties and by every agency of the country, and that is an added handicap, but it is no criterion—it is no criterion of whether the methods of the I. W. W. are correct or not.

Commissioner LENNON. Have there been any attacks of the I. W. W. on other unions—attempts to destroy their efficiency, or wipe their organizations out, or take their places?

Mr. ST. JOHN. No; none whatever; that is, not if I understand your question correctly. The very fact, of course, that we are in the field, might be so construed on the general proposition, but if by your question you mean that the I. W. W. interferes in the strikes of any other organization, or allows its membership to act in manner detrimental to the strikers interested, I could say emphatically no, and that wherever any such instances as that have occurred, those responsible for it have been expelled from the organization.

Commissioner LENNON. You spoke something of the inconsistency of union men. Do you find that members of the I. W. W. are entirely consistent as to the patronage of union products, and all that kind of thing, which you mentioned a while ago?

Mr. ST. JOHN. I did not say anything about patronizing union products.

Commissioner LENNON. I understood you to speak of the inconsistency of unions not supporting each other, and individual members not supporting the unions.

Mr. ST. JOHN. That is all right, I did not mean by their patronage at all. That is not any support. That is only simply building up a commercial proposition, and making a market for labeled goods, that is all, and never won a strike yet, and never will. That only simply creates a kind of a little monopoly for the manufacturer of goods that have got a particular tag on it, or something, and the manufacturers, as a general rule, take advantage of that and put up an inferior grade of goods, and trade on a union man's principles to sell them to him. The circulation of the demand for a union label is not going to settle any question for the working class. The relation that I spoke of is in their handling of the products of wageworkers, one from the other, in getting them to the market. That is why I spoke—that is what I means by the lack of cooperation. For instance, a factory is manned with scab labor, the raw material is brought to that factory, in many instances, by teamsters who belong to local unions. They are tied up with a contract and can not do anything else, no matter how they feel about it. The goods are manufactured in the shop. Sometimes part of the shop is union, sometimes part of it is nonunion, and sometimes part of it is run by strikebreakers taking the place of men actually on strike, and the product passes from one department to another, and goes through the hands of those different union men and nonunion men to completion, and then put on a car and transported to market by the union train crew. That is what I mean.

Commissioner LENNON. Do you maintain that the idea of collective bargaining or agreements should not be recognized? You said that in industry you don't believe in collective agreements.

Mr. ST. JOHN. I don't believe in collective agreements, so far as the wage-workers are concerned; no.

Commissioner LENNON. Well, then, as between men. Do you believe that men ought to agree with each other?

Mr. ST. JOHN. I am not interested in that. That is not a part of the labor question.

Commissioner LENNON. It is not a part of the labor question?

Mr. ST. JOHN. No.

Commissioner LENNON. The labor question covers all questions.

Mr. ST. JOHN. What is that?

Commissioner LENNON. I have no right to argue with you; I don't want to argue with you. That is all right. What are you striving for? What is the ideal that you are working for?

Mr. ST. JOHN. Working class control of industry.

Commissioner LENNON. Is that collective ownership?

Mr. ST. JOHN. We don't care anything about ownership; all we want is control of it.

Commissioner LENNON. What are you going to do with it? What will you do with it?

Mr. ST. JOHN. When we control it, we will control the products produced by it, and we will distribute them to those whose efforts are responsible for producing them.

Commissioner LENNON. For the benefit of those that are organized, or for the benefit of all?

Mr. ST. JOHN. For the benefit of those actively contributing in the effort necessary to produce. Whenever the working class have control of industry, they will all be organized. There will be no question about organized and non-organized at that time.

Commissioner LENNON. All right.

Commissioner BALLARD. You spoke a minute ago of expelling from your organization. What would constitute such offense as to merit the expulsion from the I. W. W.?

Mr. ST. JOHN. Violation of the principle of the organization—that is, the fundamental principle of the organization. The signing of a contract with employers by local unions, the repudiation of the principle of the organization with regard to the employing class, and the wage-working class having no interests in common. That is, for instance, if any local of the organization were to take the stand that the employers and workers had a mutual interest and that they should meet and try to arrive at some mutually satisfactory understanding, why, that would automatically expel them from the organization.

Commissioner BALLARD. Have any of your men been expelled for any of those causes?

Mr. ST. JOHN. One local union was expelled for entering into an agreement with the employers in Great Falls, Mont.

Commissioner BALLARD. You spoke of not believing in organized government. If, for instance, the I. W. W. could eventually control the working class, would there any longer be any need for a Government as we have it now?

Mr. ST. JOHN. I did not say anything about not believing in organized government. Somebody asked me what we thought of the political government of to-day, and I said that we recognized it as a committee of the employing class. So far as organized government is concerned, whenever the workers are organized in the industry, whenever they have a sufficient organization in the industry, they will have all the government they need right there.

Commissioner BALLARD. What would become of our present United States Government?

Mr. ST. JOHN. It would die of dry-rot.

Commissioner BALLARD. There would be no longer any need for that Government?

Mr. ST. JOHN. None that I could see.

Commissioner BALLARD (inaudible). Supposing you had a certain factory organized under the I. W. W., the men were organized workers, and suppose it happened that there was competition from some other factories making the same goods, so that your people could only find work half the time, would it be right and proper for you to send a man with a torch to the other factory and burn it down so your people could work all the time?

Mr. ST. JOHN. We would not care about that. We would leave that to the other fellows. They would attend to that themselves. We would not have to worry about that. That is the way they root up competition themselves.

Commissioner BALLARD. Well, there is a good deal of competition left, I find.

Mr. ST. JOHN. I know that, simply because the factories left ain't hardly worth paying somebody to go around with a torch. All you have to do is read the criminal records of arson and incendiary and the Standard Oil history, how they got control of the oil industry. You don't have to worry about that.

Commissioner BALLARD. The men in the office who have charge of the buying and selling and the superintendent who has charge of the manufacturing, they are not eligible to become members of your order, as I understand it?

Mr. ST. JOHN. Men in the office, certainly, providing that they are not in a position of firing and employing. If they are clerks in the office, whether they are buyers, or no matter what they are, if they are clerks and they are not in a position of authority over other employees, they are eligible to membership.

Commissioner BALLARD. Well, those who are the superintendents and others are not eligible?

Mr. ST. JOHN. No.

Commissioner BALLARD. They are not necessary to the industrial scheme of work?

Mr. ST. JOHN. They are not necessary to our organization. They are necessary for the employer, but we don't care anything about that.

Commissioner O'CONNELL. Mr. St. John, are there two distinct organizations of the I. W. W.?

Mr. ST. JOHN. Well, there is an organization calling itself the I. W. W., with a separate headquarters; yes, sir.

Commissioner O'CONNELL. Where are they located?

Mr. ST. JOHN. They have got a post-office box in Detroit, Mich.

Commissioner O'CONNELL. Who are the supposed officers of that organization, do you know?

Mr. ST. JOHN. The secretary is named Herman Richter, and the executive board's names I could not recall.

Commissioner O'CONNELL. Have you any idea as to their membership?

Mr. ST. JOHN. No; I have not.

Commissioner O'CONNELL. What is the approximate membership of the I. W. W. as you represent it?

Mr. ST. JOHN. About 14,310.

Commissioner O'CONNELL. Fourteen thousand three hundred and ten?

Mr. ST. JOHN. The average for the last six months of our membership was 14,310.

Commissioner O'CONNELL. How many local unions have you scattered throughout the country?

Mr. ST. JOHN. Two hundred and thirty-six.

Commissioner O'CONNELL. One hundred and thirty-six?

Mr. ST. JOHN. Two hundred and thirty-six.

Commissioner O'CONNELL. How many of those local unions were represented at your convention last September?

Mr. ST. JOHN. I could not say offhand.

Commissioner O'CONNELL. How many delegates were at that convention?

Mr. ST. JOHN. Forty-five.

Commissioner O'CONNELL. Forty-five?

Mr. ST. JOHN. Forty-five.

Commissioner O'CONNELL. Do the delegates carry proxies from other unions that are not represented directly?

Mr. ST. JOHN. Not unless the other unions are in the same locality from where the delegate comes.

Commissioner O'CONNELL. Are there any limits to the number of proxies one delegate can carry?

Mr. ST. JOHN. One delegate from one union can only cast 10 votes. That is representing—

Commissioner O'CONNELL. How many delegates did it take to have the majority vote in your convention for last year?

Mr. ST. JOHN. Well, I could not tell you that offhand. I have the convention report here, but I have not it with me.

Commissioner O'CONNELL. Is it possible that seven delegates could control the convention, have a majority vote?

Mr. ST. JOHN. No.

Commissioner O'CONNELL. Eight delegates, or ten?

Mr. ST. JOHN. Well, at the last convention, possibly the control of the convention was in the hands of 10 delegates at the last convention; that is, the 10 delegates with the largest number of votes.

Commissioner O'CONNELL. Is the membership in the I. W. W. largely of a foreign-speaking tongue?

Mr. ST. JOHN. No; not any more than usual.

Commissioner O'CONNELL. What are the predominating nationalities of the members?

Mr. ST. JOHN. Well, there isn't—I wouldn't say that any nationality predominates in the organization.

Commissioner O'CONNELL. Have you a universal initiation fee throughout the organization?

Mr. ST. JOHN. We have a maximum limit.

Commissioner O'CONNELL. What are they?

Mr. ST. JOHN. Five dollars.

Commissioner O'CONNELL. Is that the maximum or minimum?

Mr. ST. JOHN. That is the maximum.

Commissioner O'CONNELL. What is the minimum?

Mr. ST. JOHN. Anything they want, anything up to \$5. The local union determines that themselves.

Commissioner O'CONNELL. What are the monthly dues?

Mr. ST. JOHN. From 50 cents to \$1.

Commissioner O'CONNELL. That is the minimum and maximum, too, is it?

Mr. ST. JOHN. Yes.

Commissioner O'CONNELL. Do you pay strike benefits to your members on strikes?

Mr. ST. JOHN. No, sir.

Commissioner O'CONNELL. Out-of-work benefits?

Mr. ST. JOHN. No, sir.

Commissioner O'CONNELL. Death benefits?

Mr. ST. JOHN. No, sir.

Commissioner O'CONNELL. Sick benefits?

Mr. ST. JOHN. No, sir.

Commissioner O'CONNELL. Benefits of any kind?

Mr. ST. JOHN. None whatever; no, sir. That is, only incidental, particular cases, that might be. It is not—there is no benefits of any kind that are provided for in the constitution.

Commissioner O'CONNELL. Do you publish monthly, quarterly, semiannually, or annually a statement of your receipts and expenses?

Mr. ST. JOHN. Every month; yes, sir.

Commissioner O'CONNELL. Every month?

Mr. ST. JOHN. Yes, sir.

Commissioner O'CONNELL. Does that show general and voluntary contributions raised or collected by your local union involved in trouble, for instance, where there may be a strike?

Mr. ST. JOHN. The only statement we publish is the transactions between the local unions and the general office.

Commissioner O'CONNELL. And that indicates just the receipts to your general office and the expense of your general office?

Mr. ST. JOHN. Yes, sir.

Commissioner O'CONNELL. Is it itemized, the purposes for which the expenses are paid?

Mr. ST. JOHN. Yes, sir; it is an itemized statement.

Commissioner O'CONNELL. Will you furnish the commission with a copy of your last 12 months' reports when you return to your office?

Mr. ST. JOHN. Yes; I will be glad to, but I have not got it with me.

Commissioner O'CONNELL. But send them to us?

Mr. ST. JOHN. Yes.

Commissioner O'CONNELL. But have you a copy of the constitution with you?

Mr. ST. JOHN. No; I have not.

Commissioner O'CONNELL. You could not, of course, give us verbatim; but as near as you can, will you give us the aims and principles of the constitution as it describes them?

Mr. ST. JOHN. I will bring to the commission a copy of the constitution this afternoon, possibly.

Commissioner O'CONNELL. You spoke of having a number of the strikes in which you were involved, which were successfully settled, and others were not. Can you give us, for the benefit of the record, what the result was of the pressed steel car strike at Canton, Ohio?

Mr. ST. JOHN. Canton, Ohio?

Commissioner O'CONNELL. Canton, Ohio.

Mr. ST. JOHN. I have no recollection of handling any strike at Canton, Ohio.

Commissioner O'CONNELL. The American Car Co., Rankin?

Mr. ST. JOHN. Where?

Commissioner O'CONNELL. Rankin.

Mr. ST. JOHN. Rankin, Pa.?

Commissioner O'CONNELL. Yes.

Mr. ST. JOHN. Last year?

Commissioner O'CONNELL. Yes.

Mr. ST. JOHN. We were not—we were not involved in that strike at all that I know of.

Commissioner O'CONNELL. Were you involved in the Philadelphia sugar workers' strike?

Mr. ST. JOHN. Yes.

Commissioner O'CONNELL. What was the result of that?

Mr. ST. JOHN. That strike was lost, so far as I know.

Commissioner O'CONNELL. And then the New York barbers' strike?

Mr. ST. JOHN. The New York barbers' strike?

Commissioner O'CONNELL. Yes; what was the result of that?

Mr. ST. JOHN. Well, the strike was, the conditions, that they went out on strike for were gained, according to my understanding. The strike was a win from the point of the barbers involved. So far as the organization was concerned, the organization did not get anything out of it. It had no organization when it went into it. Simply the strikers appealed to the organization to help them out, and they furnished them with organizers, and after the strike was over, that was all there was to it.

Commissioner O'CONNELL. Are they still members of the organization?

Mr. ST. JOHN. No.

Commissioner O'CONNELL. What was the result of the strike at Paterson?

Mr. ST. JOHN. At Paterson?

Commissioner O'CONNELL. Yes.

Mr. ST. JOHN. Well, the strike at Paterson was not a complete victory by any means; but it gained some of the points for which they fought—some in all the mills and a good many in others.

Commissioner O'CONNELL. Were these people members of your organization before they went on the strike?

Mr. ST. JOHN. Something like twelve or fifteen hundred out of the entire number.

Commissioner O'CONNELL. What was the largest number that you had during the strike?

Mr. ST. JOHN. During the strike?

Commissioner O'CONNELL. Yes, sir.

Mr. ST. JOHN. I couldn't say as to that, because they don't pay any dues during the strike to the general office, and so I have no way of finding that out.

Commissioner O'CONNELL. Have you any membership there now?

Mr. ST. JOHN. Yes, sir.

Commissioner O'CONNELL. To what extent have you a membership there?

Mr. ST. JOHN. Must be 2,500.

Commissioner O'CONNELL. What was the result of the strike at Little Falls, N. Y.?

Mr. ST. JOHN. All the demands were gained.

Commissioner O'CONNELL. Did you retain your membership there?

Mr. ST. JOHN. Well, I could not say, because they are part of the Textile Workers, and as a local union they do not make any reports or pay anything into the general office. I believe, however, that they have a small—a local union—a small local—one branch known as the Sylvania membership—Sylvania Workers.

Commissioner O'CONNELL. What is the difference between Centralists and Decentralists, as recognized?

Mr. ST. JOHN. Well, I don't know myself.

Commissioner O'CONNELL. There is a recognized difference between you and the so-called Detroit organization—a sharp distinction, is there not?

Mr. ST. JOHN. The difference between the Detroit organization and the I. W. W. is—the Detroit organization, as far as I can find out, is simply a duplication of an alleged political party known as the S. L. P. They have no information; do not give out any information; have no organization except on paper; and are committed to the program of capturing plates at the political-pie counter for their membership whenever possible, and trading also at the —they trade on the name of the I. W. W. That is the way they keep alive.

Commissioner O'CONNELL. That is all; thank you.

Chairman WALSH. Mr. Garretson.

Commissioner GARRETSON. Mr. St. John, does or does not the plan of the I. W. W. contemplate the ownership—

Mr. ST. JOHN (interrupting). How is that?

Commissioner GARRETSON. Does the general plan of the I. W. W. contemplate the ownership of all the means of production by the men employed in that pursuit?

Mr. ST. JOHN. It contemplates control. We are not worried about the matter of ownership at all. Of course, ultimately, control means ownership.

Commissioner GARRETSON. The difference between control and ownership, as you have explained it, is virtually a play on words?

Mr. ST. JOHN. No; not necessarily.

Commissioner GARRETSON. If you control it, does it have any value to somebody else?

Mr. ST. JOHN. You might control it and somebody else might own it; but it wouldn't be very much good, though.

Commissioner GARRETSON. In the market they could not transfer title for a very great sum?

Mr. ST. JOHN. No; they would not be able to sell out for very much.

Commissioner GARRETSON. Can your methods come to ultimate success until the present system—until our forms of government have been changed so as to permit the carrying of them out uninterrupted—by the present laws governing property, for instance?

Mr. ST. JOHN. As far as the Government—the present Government—is concerned?

Commissioner GARRETSON. The present laws.

Mr. ST. JOHN. All the present laws are concerned—they are operative only by reason of the fact that the element in society in whose interest these laws are drafted are at present, and have been, in the control of the industries.

Commissioner GARRETSON. And able to enforce the law?

Mr. ST. JOHN. They have the resources behind them to their control of industry, to finance, or keep a machine in the field that will enforce their will; yes, sir.

Commissioner GARRETSON. Then your ultimate plan would result in one of two things—either the falling into disuse of the present code of laws, or their repeal; and you consider repeal unnecessary, I assume?

Mr. ST. JOHN. Well, I don't think we would bother much about whether you repealed them or not; but if we had an organization and had sufficient control of industry to be able to dictate our terms, why, we would not care much about what they done—

Commissioner GARRETSON (interrupting). In fact, it is a fact that the control of industry would mean the control of everything else?

Mr. ST. JOHN. Yes, sir.

Commissioner GARRETSON. Other things are merely incident thereto? Ultimately your plans would abolish—well, the word that was just used might describe is best—any central form of government.

Mr. ST. JOHN. Not necessarily.

Commissioner GARRETSON. Your system would carry itself along without governmental interference or necessity?

Mr. ST. JOHN. As far as the I. W. W. is concerned, we are only interested in the bread and butter proposition of the wage-earner class, and getting them in control of the industries. And the organization, when it was perfected, would be an organization through and by which the workers administered industry. It would not have any governmental functions, as they are known to-day. But whether there would be anything necessary in addition to that is something we are not—I am not, anyway, prepared to say; don't care anything about it.

Commissioner GARRETSON. Has any other idea ever dominated any class which desired to control a country but the bread and butter question in one or the other of its ramifications?

Mr. ST. JOHN. Well, that is what the I. W. W. holds—that it is not sustained that way, but, as a general rule, they are working for some other purpose ostensibly.

Commissioner GARRETSON. Hasn't the bread and butter idea and the pleasure counter idea dominated the employing class absolutely as it now dominates you?

Mr. ST. JOHN. Certainly.

Commissioner GARRETSON. All the difference is that two sets of men have it now.

Mr. ST. JOHN. The only difference is that they have the control of the organization and want to keep it.

Commissioner GARRETSON. Want to keep it?

Mr. ST. JOHN. Yes, sir; and the men are keeping control of industry for the benefit relatively of a small number of individuals.

Commissioner GARRETSON. Yes. You simply desire a wider distribution?

Mr. ST. JOHN. Who at the present stage of advancement of industry contribute practically nothing to its operation or the production of any wealth whatever.

Commissioner GARRETSON. On the practical side, Mr. St. John, one statement you made in regard to contracts struck me as rather peculiar, that the enter-

ing into a time contract itself took the life out of the men subject thereto—the interest. I assume from the position you hold you were probably a working man at some stage, actually?

Mr. ST. JOHN. Yes, sir.

Commissioner GARRETSON. Did you ever work under a time contract?

Mr. ST. JOHN. Never did; no.

Commissioner GARRETSON. Then you are not speaking from experience, but from hearsay?

Mr. ST. JOHN. No; I am speaking from hearsay.

Commissioner GARRETSON. Do you know what the average men under a time contract pay—assuming, now, that it runs a year? Do you know anything of the comparative amount of money spent by the men subject to that contract, first, in the making of it; and, secondly, in the period of the year in working under it?

Mr. ST. JOHN. Certainly. I have a general idea.

Commissioner GARRETSON. Now, what would those proportions indicate, in regard to the interest being continued or dying out?

Mr. ST. JOHN. Don't necessarily indicate anything as to interest at all. For instance, to give you an example, there is a local union of building laborers in the city of Chicago. It has a membership of about 14,000, working under a contract from time to time. Now, the average attendance at a meeting, of the membership of that union is about 35, and at special meetings, at which officers are elected, the maximum attendance is about 700. Now, the interest in our organizations, so far as I am concerned, is not expressed in the amount of fees they pay, or the amount of finances the organization has to control and disburse; that does not indicate anything, so far as the interest of the membership is concerned. It is no indication of it whatever.

Commissioner GARRETSON. You mean that is your opinion?

Mr. ST. JOHN. Certainly. I say that is from my standpoint.

Commissioner GARRETSON. The opinion of another man, who has had an equal number of years of experience, that the putting up of the coin is the real test of interest, a voluntary separation from his money—would it have any effect in the final determination of that question?

Mr. ST. JOHN. Well, how are you going to determine whether or not it is voluntary?

Commissioner GARRETSON. He voluntarily—he don't have to spend it.

Mr. ST. JOHN. It is not voluntary at all when the boss has got a contract with an organization. They use the boss to maintain their own organization, and the man can not work unless he has got a card in that organization, and they have got an agreement that he pays—

Commissioner GARRETSON (interrupting). Where none of those conditions exist?

Mr. ST. JOHN. Where none of those conditions exist, why—

Commissioner GARRETSON (interrupting). And in some large section of the country, those conditions do not exist.

Mr. ST. JOHN. Why, maybe—

Commissioner GARRETSON (interrupting). Then isn't it voluntary?

Mr. ST. JOHN. I don't know. I would have to have a particular case.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. I have just a question or two. Does your organization in any way manage or finance public demonstrations—that is, to call attention to conditions?

Mr. ST. JOHN. You mean the general organization?

Chairman WALSH. Yes.

Mr. ST. JOHN. No; it does not.

Chairman WALSH. Does your local organization?

Mr. ST. JOHN. The local organizations do, and whenever they are in need of assistance they call on the general organization and they assist them to that extent—to the extent they are able.

Chairman WALSH. Did your organization, to your knowledge, have anything to do with the demonstration that took place in New York City outside of the movement proper such as called for aid on the churches, and so forth?

Mr. ST. JOHN. I don't think the organization—I don't know anything about that. I know that the general organization was not consulted in the proposition, and was not concerned in it one way or the other; I don't think the local organizations here were officially connected with it. I don't know.

Chairman WALSH. Is there any organization within your body that is furnishing men to go to a city where the right of free speech is said to be an issue?

Mr. ST. JOHN. There is not any organization outside of the general organization.

Chairman WALSH. Is there an organized effort to send men from one place to another? You know what I mean. The papers publish from time to time, for instance, they have ordered men off the streets; that they have arrested men, and that others are coming from certain places. Is that organized inside of your organization?

Mr. ST. JOHN. Whenever there is a free-speech fight. Whenever any local union becomes involved in a free-speech fight they notify the general office and that information is sent to all the local unions, then to the general organization with the request that if they have any members that are foot loose to send them along.

Chairman WALSH. Is there any attempt to finance them by the general organization?

Mr. ST. JOHN. They finance themselves.

Chairman WALSH. How do they get from place to place? Just use their own exertions?

Mr. ST. JOHN. They get from place to place by making themselves at home on a freight train or on a passenger train—any way they can get there.

Chairman WALSH. Paying their way if they see fit?

Mr. ST. JOHN. Yes, sir.

Chairman WALSH. Is it an individual effort after they have been notified?

Mr. ST. JOHN. Yes; it is up to them.

Chairman WALSH. When those men are sentenced by the court, is there any record kept in the organization as to those that are convicted? Where they are, and where they are confined?

Mr. ST. JOHN. They make an effort to compile those statistics; but that all depends upon the local union.

Chairman WALSH. Does the national union have any record showing their activities in that direction?

Mr. ST. JOHN. Nothing is very complete. They have some data on the proposition.

Chairman WALSH. What is the state of the attitude of the I. W. W. toward the Government generally? Does it include the courts or not?

Mr. ST. JOHN. We recognize the courts as a branch of the Government. There is not any difference.

Chairman WALSH. But what you say about the Government generally you say of the courts?

Mr. ST. JOHN. Certainly.

Commissioner O'CONNELL. I have here, Mr. St. John, a book issued by you, "The I. W. W., by Vincent St. John, third edition, July 1, 1913." You recognize that, do you?

Mr. ST. JOHN. Yes, sir.

(The book entitled "The I. W. W.," by Vincent St. John, publisher, I. W. W. Publishing Bureau, was submitted in printed form.)

Commissioner O'CONNELL. I note here you say: "The membership to-day consists almost wholly of unskilled workers. The bulk of the present membership is in the following industries: Textile, steel, lumber, mining, farming, and railroad construction. The majority of the workers in those industries, except the textile, flow from place to place, following the different seasons of work. They are, therefore, out of touch with the organization for months at a period."

"The paid-up membership of the organization at this time is 30,147. Due to causes referred to above, this is all of the membership that keeps paid up on the books at all times. The general office, however, has issued over 120,000 cards, which is about the number of workers that are in the organization in good and bad standing."

I note that 30,147 is the membership last July. To-day you say the membership is about fourteen thousand and something?

Mr. ST. JOHN. Yes, sir.

Commissioner O'CONNELL. What is the cause of that falling off of membership?

Mr. ST. JOHN. Those figures do not refer to July. That issue of the book is printed in July, but the figures were taken in 1913.

Commissioner O'CONNELL. But it shows a very large falling off in your good-standing membership from that period to the present?

Mr. ST. JOHN. Certainly.

Chairman WALSH. Do you wish to attribute the cause?

Commissioner O'CONNELL. Do you assign any reason for that?

Mr. ST. JOHN. The principal cause is the industrial depression. The membership on the Pacific coast, from one end of it to the other, 75 per cent of them, have been out of work in the last year and have not paid any dues. For membership out of work for any specified length of time we furnish out-of-work stamps, but they are not computed in the paid-up membership of the organization.

Commissioner O'CONNELL. They would be computed in the good-standing membership?

Mr. ST. JOHN. No, sir; not in the good-standing or paid-up membership.

Commissioner O'CONNELL. That is all I have to ask.

Chairman WALSH. That is all. Call your next. Will you kindly remain in attendance, Mr. St. John?

Mr. ST. JOHN. Yes.

TESTIMONY OF MR. MORRIS HILLQUIT.

Mr. THOMPSON. For the purpose of the record, will you kindly give us your name and address?

Mr. HILLQUIT. Morris Hillquit, 246 West One hundred and thirty-ninth Street, New York City.

Mr. THOMPSON. And your occupation?

Mr. HILLQUIT. Lawyer.

Mr. THOMPSON. Are you a member of what I will call the Socialist Party?

Mr. HILLQUIT. I am.

Mr. THOMPSON. What is the name of the party?

Mr. HILLQUIT. Socialist Party of the United States.

Mr. THOMPSON. If you know, how long has that party been in existence as a party?

Mr. HILLQUIT. In its present form and under its present name since 1900.

Mr. THOMPSON. Were there any prior organizations which were merged into that party?

Mr. HILLQUIT. Yes, sir; there were several of them. There was the Socialist-Labor Party, organized in 1878; there was the Social-Democratic Party, organized in 1897; and several local organizations, the greater part of the Socialist-Labor Party; all of the Social-Democratic Party; and some independent organizations were merged in the present Socialist Party?

Mr. THOMPSON. That is the present form, Mr. Hillquit, of that organization?

Mr. HILLQUIT. The Socialist Party is a political organization, consisting of all State organizations within each State of the Union, State organizations in turn being comprised of local organizations, county, city, or town. The Socialist Party has an enrolled dues-paying membership, as distinguished from other political parties. The dues-paying membership of the party at the present time comprises about 115,000 men and women, and the number of local organizations of the party is about 6,000 or 7,000.

Mr. THOMPSON. What form of control for government has the party, its officers and committees, etc.?

Mr. HILLQUIT. It has a national committee composed of representatives from each State organization, representation being based on dues-paying membership. That is one representative from every State organization, and one additional representative for every 3,000 dues-paying members above the first 3,000.

The national committee meets in session once a year, and elects a national executive committee composed of five members.

There is a national secretary who conducts the practical business of the party throughout the year, at Chicago, Ill., with a staff of assistants.

Mr. THOMPSON. This executive committee of five members that you mentioned, Mr. Hillquit, is the committee that designated you as the representative official of the party here?

Mr. HILLQUIT. It is.

Mr. THOMPSON. What, first, are the powers of the larger committee, and next, the powers of those smaller committees, or committee of the officers?

Mr. HILLQUIT. The national committee practically acts as a convention of the party between regular nominating conventions. It convenes once a year, gets records of offices, lays out plans of work for the coming year, elects the

executive officers, and considers and often recommends amendments to the constitution and by-laws of the party.

The national executive committee is practically vested with the powers of the national committee between sessions. The national executive committee meets at frequent intervals, about once in every two or three months, and between meetings transacts business by correspondence.

The national committee, as well as the national executive committee, and the national secretary are subject to directions of the membership given by referendum from time to time.

Mr. THOMPSON. Has the Socialist Party a constitution, if I may say?

Mr. HILLQUIT. It has.

Mr. THOMPSON. A regular organization?

Mr. HILLQUIT. Yes, sir.

Mr. THOMPSON. Have you got a copy of them?

Mr. HILLQUIT. I think I have.

Mr. THOMPSON. Would you mind filing those with the commission?

Mr. HILLQUIT. Not at all.

(The constitution and by-laws were marked, "Hillquit, Exhibit 1." Hillquit Exhibit 1 was submitted in printed form.)

Mr. THOMPSON. Mr. Hillquit, I would like you to state in your own way, the reason, as you see it, for the existence of the Socialist Party and its purposes and plans.

Mr. HILLQUIT. I will start out with the purposes and plans first, and follow up with the reasons for its existence as I see it.

The object of the Socialist Party or of the socialist movement, may be summarized in a few words. The nationalization of the industries. The Socialist Party believes that the principal and most important industries of the country, such upon which the life and welfare of the community depends, should not be owned, managed, and controlled by individuals, or private corporations, for the personal benefit and profit and without regard to the public welfare, but should be conducted as a social function, primarily for the benefit of the community, by responsible agencies of the people organized for that purpose. Concretely stated, socialism demands the collective ownership of the principal tools, courses, and resources of wealth production. When I say collective ownership, I do not mean by that national ownership of all industries in the country.

The Socialists would abolish private, irresponsible ownership and would substitute social ownership in such form as is, in each case, best adapted to a given industry. For instance, we advocate national ownership of, say, interstate railroads, telephones, telegraphs, and other means of interstate communication and transportation. You might well conceive of proper national ownership and management of mines, for instance, or of such industries as are generally organized on a natural scale, such, for instance, as the great classified industries of the country. We would probably conceive of certain other industries wholly located within one State and best managed by the State government.

Then, there is the large area of municipal industries, such, for instance, as street cars, water works, gas works, which should be operated and could be operated most economically and to the best advantage by the city.

We may also conceive of certain other industries so unorganized, and perhaps unorganizable in their nature as to be even incapable of municipal operation. Such industries, small industries, might be conceivably conducted by cooperative groups, under certain Government supervision and control, for the production people and consumers alike.

The system of socialism, as we understand it, does not necessarily exclude from the ownership private management of purely individual industries, such, for instance, as the various arts, crafts, and other industries not based upon the exploitation of labor, but based upon purely personal efforts.

Now, this Socialist program is by no manner of means a device, an arbitrary or ingenious device of a new social scheme. It is nothing but an attempt at the solution of certain social problems which have arisen but recently, and to which the Socialists believe the Socialist program is the only answer.

I suppose the commission here, in going over its very live and very interesting task, has come across a number of social problems or social evils, and one of its tasks is to find suitable remedies for it.

That is precisely what the Socialists have been doing for the last half a century, and very few persons realize that the social problems we are encounter-

ing are new; that they have arisen within the last century. And that they require a special solution such as would grow out from their very nature.

The Socialists find that all, or most of the industrial, economic, and largely also social problems of the day are due to the private ownership of the tools and other instruments of wealth production, and that such problems have arisen with this system of private ownership of the social tool. There, again, the general conception that this is a condition that has confronted mankind practically always is entirely erroneous.

The point which I wish to make, and which is important for a comprehension of the Socialist tactics generally is this: The condition of a century ago or more does not exist to-day. The most acute social problems of the day are industrial problems. Wealth is produced differently. In those times wealth was produced on an individual basis purely. That is, they were produced by means of simple, inexpensive, individual tools. The workers or wealth producers are mostly independent mechanics who do not require large capital, or large machinery, or large factories for their work. They required their individual skill; they required a small tool that they possessed. They worked in a small workshop or in their homes. They produced the entire commodity from beginning to the end; they worked for a certain given specific consumer; they suited his tastes. The commodity when produced was their own. It is in every sense of the term legally, as well as morally and equitably, and the question of the division of product can not possibly arise under such circumstances. There is no division of the product. The product rightfully, logically, belongs to the producer. Then, within the last century, imperceptibly and unnoticeably a tremendous change, amounting to a veritable revolution has occurred in our methods of producing wealth. We are all familiar with it. When we take the trouble to think about it, that is primarily the individual tool has undergone a gradual but rapid evolution. It has developed into the more involved, complete tool, more perfect machine, until by slow stages it has reached the condition of the modern huge machine propelled by steam or electricity, and doing the work of thousands of hands occasionally.

Now, this change involved and necessarily entailed a number of corresponding changes. In the first place, a machine requires a factory for its housing, it requires it on account of its great bulk; and it requires it also on account of the fact that a machine in its essence, produces a particle of the work, a particle of the product, instead of the entire product. So that, in order to have the whole product, a set of machines is always required. A set of machines, on the other hand, can only be economically maintained if operated by a large number of employees, and if producing very large quantities of products. So that the factory begins to congregate individual workers under its roof. Gradually the independent mechanic or artisan of old times lost his independence. Gradually he drifted into the factory. Gradually he became a cog in the wheel instead of being the entire machine. In the first place, it was no more a question of individual skill or knowledge or ability on his part. In order to produce, in order to work, he must have modern instruments of production. That is, if you take a worker of to-day and say to him, "Why don't you discard the machine? Why don't you go back to the ancient tool and operate with it?" It is of course something impossible for him. He can not work unless he uses modern machinery, and he can not own modern machinery. He can not own it, first, because it represents a very large outlay of capital. It presupposes not only the purchase of the machine but of other machines, and it presupposes a factory and raw material, and so on. If he could own the machine, that would not help him. Suppose you take an individual worker to-day who got one of them, one great modern machine, he would still be in a social fraction. All he could do would be to produce one particle of some commodity, meaningless in itself, but you can not get a shoemaker to-day to get, you can not give a shoemaker all the machines required for the production of the entire shoe by machine process. The transformation merely meant that we went from individualism in production toward socialization of production. In other words, the worker has become a social servant to-day, and the machine as a social machine is not an individual machine, and the workshop is an individual workshop.

Corresponding with this change, a logical change, and a just and equitable change would have been to transform the ownership of the machine to a social ownership along with the other transformations of industrial elements from individual into social. In other words, if society by this process has

deprived 1,000 individual workmen of 1,000 individual tools by which they have been in the habit of making a living for themselves, and have substituted for those 1,000 individual tools, say, 10 great machines to be operated by the same 1,000 men, the proper and equitable transformation would have been to have placed these 1,000 men properly organized in possession of this complexity of new machines taking the place of the former tools and allowing them to continue operating collectively, but for their own uses and purposes.

The evolution, as a matter of fact, took a different direction. While the matter of production became social, and the workers became a social servant, the ownership of the machine remained individual. It drifted into the hands of, say, a lucky mechanic who, for some reason or other, could make the first start, or perhaps the person who never had anything in common with the industrial process at all, but merely had the capital to furnish for the new machine or factory to work in.

So that this operation of function and ownership has resulted in the creation of social and economic classes, and there is something which I believe every social investigator and every social worker should bear in mind first of all, the existence and the comparatively recent origin of social and economic classes in the United States.

Or, say, if you go back to the period before the production of modern machinery, there practically were no economic classes. There were those that were better off than the others, but fixed, established, economic classes did not exist.

The helper or apprentice of a century ago always considered his dependent position transitory, and he had a good right to, for after his apprenticeship was over he could set up for himself, and when land was abandoned and free practically he could well go out and take up farming. Now, however, with the introduction of machinery, the laborer to-day, with very rare exceptions, is a laborer forever, and he breeds and produces a generation of laborers. There may be exceptions in several thousands. A working man may succeed perhaps in breaking into the ranks of wealth, but that is always an exception.

The vast majority of workers receive just enough to sustain their lives, perhaps a little less occasionally; and they can never expect to save up sufficient capital in order to undertake independent work with modern methods and in a modern system. And, furthermore, physically, of course, it would be quite impossible for every worker to be a factory owner, for there must be somebody in the factory also to operate the machine who does not own then. Consequently, when the condition is such that for a majority of the workers his condition has become permanent and hereditary, we have for the first time in our history a hereditary perpetual working class. And by the same token and in the same way we have permanently with us a capital class.

When I speak of a capitalist class I mean the class of men or women who own the tools of production which the workers need for their work, and they are capitalists only to the extent to which they own such tools of production. Their ownership may be direct or indirect, may be by means of stocks or bonds or otherwise, but it is still ownership. A capitalist may even be a hard worker, but that does not change the situation. If a capitalist is a hard worker, he earns actually as much as his work is worth. But inasmuch as he derives also a workless income, income from the ownership of the machinery of production, whether it be a railroad or a mine or anything else, to that extent he is a capitalist, and to that extent the capitalist is a permanent hereditary class. Herein there are exceptions. There are the capitalists, the capitalists' sons, who dissipate their fortunes and perhaps sink to the level of the laborer, but those are likewise the exceptions; and as the fortunes grow larger the relapses become rarer and rarer. The capitalist class tends to become permanent and hereditary just as much as the labor class.

We claim that the origin and development of those two classes are unfortunate, and that is one of the evils for which we seek a remedy. And that for the following reasons: The economic interest of the two classes are opposed to each other; they are antagonistic. By that I do not mean personal hostility between the worker and the employer. Their relations may be very friendly, very cordial, but their interests are of necessity opposed to each other. The capitalist deriving this income from profits—that is, from the opportunity of the product which goes to him by virtue of his ownership of the means of production—and the worker receiving wages, which means that part of the product which the capitalist leaves to him after deducting his own share, it is natural that the capitalist will always endeavor to make his share of the product as large as

possible, and the worker likewise, and that, again, regardless of personal information.

The capitalist is in business for profit. The worker is in business for wages. Each depends upon the share of productive process, and the smaller the wages under other circumstances the larger the profits, and the smaller the profits the larger the wages.

So we have this economic conflict which expresses itself in a variety of ways. It works under the surface; it is not even consciously perceived by the workers, perhaps, or the capitalists. If you tell a number of workers to-day that their interests are opposed to those of the employer, they say, "No, they are not; they are perfectly harmonious." At the same time, during his work, he will instinctively keep in the opposite direction. He will instinctively try to conserve his labor power, the sole source of his wealth. He will instinctively strive to secure a raise of a dollar or two, or as much as he can. He will bicker and bicker with his employer at all times, and his employer with him. It may all be done in a very good-natured way, but there is an unconscious manifestation of the class trouble. Sometimes it will flare up; there will be a strike or there will be a lockout, and sometimes it will assume a very violent force. Such, for instance, as the present pending labor struggles in Colorado, but all those are simply different forms and different degrees. It is the struggle for economic advantages between the employer and the employee, whose interests and whose shares in the production product are opposed to each other.

We claim, first of all, that this class trouble is at the bottom of the greatest number of our present industrial problems, and we claim, second, that this problem can not be abolished unless we abolish the very system which has created it. In other words we may preach harmony between employers and employees, or we may have our organizations especially organized for the promotion of such harmony, such, for instance, as the National Civic Federation and other similar organizations; but, as a matter of fact, so long as the economic interests of the two classes remain conflicting so long will no exact harmony exist.

The Socialists claim that by abolishing the system of private ownership in the instruments and tools of production, and by substituting for it a system of general collective or national ownership, the classes and class distinctions and class antagonisms will cease, and otherwise they can not. Then, if you take all other problems which are known prominently as industrial problems—say, the problem of child labor, the problem of woman labor, and so on—then you find an application of the same theory. So long as the modern machinery makes the labor profitable, and so long as it is in the interest of the employer, regardless of his personal qualifications, to get his labor as cheap as possible, and so long as the workers themselves are not paid sufficient to maintain their whole family in decent comfort, so long will child labor prevail. There, again, some restrictions are possible, some mitigation of the evil is possible, but the root of it is in the private ownership of the machine in the capitalist, and that will remain so long as the system prevails.

I could go over the list of a number of other social problems. I could take up, even to a very large extent, the question of the unemployed—the tramp, for instance—and bring that back to the capitalistic system, for it is a system which works without general national plan, which works for individual profit and regardless entirely of social welfare, which is based upon the exploitation of labor and intense work; it is this system which creates the problem of unemployment. Ordinarily, under normal conditions, there should be no unemployment in the United States. For what does unemployment mean? It is not that we stand in need or that we have a superfluity of commodities, too much food, or too much clothing, or too much furniture, and so on, and for this reason we can not allow our entire working population to continue working. We still need all that work and production. There are millions of citizens who stand in need of food, clothing, shelter, furniture, books, and so on, but we do not produce them, although we have the facilities for it. We have the natural resources for it, we have the skill for it, and we have millions of workers ready, and even eager, to do the work for themselves, but, you see, the present system of production is not based upon social needs. It is not a social function. It is simply a case of where a number of individuals happen to manufacture for profit. They produce a certain quantity; they employ a certain number of men; they employ them for as many hours a day as they can exact from them; and they are guided by the market which is made by the ability of men to pay for what they need, not by what they need. Conse-

quently under a capitalist system there always remains this certain army of unemployed. Some of them are unemployed temporarily, others become permanently unemployed, others lose the capacity for work by long idleness, others become old and disabled, and so we get the hobo and tramp and the unemployable. There is another problem. It relates back to the present or so-called capitalization system.

You could even take the problem of crime and vice and find that a good deal of it, by no means all, but a very considerable part of it, can be brought back directly to the present economic system.

The Socialists say the only way to cure all those evils and maladjustment is by placing the ownership of the means of production in accord with its manner of operation. In other words, making it social instead of individual; making it serve the people instead of serving the capitalists; producing for use instead of producing for profit.

Socialism by no manner of means contemplates a complete change of the system in one day. We fully realize that social revolution is gradual; that social institutions are methods of historical growth and development; that no system of society can be changed in a day just because a certain number of individuals think it ought to be changed; and for that reason socialism works toward the gradual introduction of the socialist system and also with a view of steady, gradual improvement of present social conditions, particularly the condition of the workers.

By this we mean a dual system. We mean, first, a gradual socialization of the ownership of industries. We advocate national and municipal ownership of certain industries to-day for the entire socialistic program, and we also advocate every measure calculated to improve the condition of the workers—such, for instance, as better wages, shorter hours, abolition of child labor, State insurance, national insurance, the workers against old age, sickness, disability, and so on.

And in doing that we have a dual consideration. In the first place, the immediate benefits of the working class, as such, are not to be entirely neglected; they must be recognized. But it would be a very poor proposition to say to the ten or twelve million of industrial workers, "Why, if you men and women will continue suffering and continue working for starvation wages, perhaps, and continue crippling your children in the factories, morally and physically, if you will be patient enough for another generation or so, an entirely new and better and another system will be developed, but you must wait for it." The workers of to-day are entitled to relief to-day, and as much of it as they possibly can secure, and of betterment.

On the other hand, we also know that in order to bring about the ultimate and radical change which the Socialist proposes it will require a better class of workers, a class of workers physically better, better fit mentally and better trained, and politically and economically better organized. In other words, we assume that socialism, as any other proposed change, political, social, or economic, can only be brought about, first, when conditions are ripe for it, and, secondly, when the men are ripe for it; and, third, when the machinery for the accomplishment of the transformation is organized and ready. We do not expect the capitalists of to-day to rise one nice morning and say: "After all, we have considered it and have come to the conclusion that we have been unjust or iniquitous in using our control for our own purposes, and we will abdicate our economic power and we will turn over our industries to the collectivity of the Nation."

We expect that socialism will be only introduced by a majority, or well-nigh a majority, of the population when it is ready to do so and when it has power enough—political power enough—to force that change, just as every other social reform is introduced. So that the practical program of socialism, or the practical problem before Socialists, is to increase their numbers sufficiently to secure that power. They expect to increase their numbers principally from accretions from such part of the population as are interested in their proposed change and as would be economically benefited, or, in other words, by accretions from the working class. And for this reason also it has a direct motive in elevating the physical and mental conditions of the workers. That is, we have found that if you take a worker who is badly underpaid, underfed, illy housed, you can not expect him to develop a social idealism. You can not expect him to grasp a principle of social philosophy. You can not expect him to develop the mental independence and physical and moral courage to battle for a cause and a principle more or less idealistic.

The worker, on the other hand, who may be interested in such a movement of essential idealism, is the one who has some leisure. He has some time to read, to study, to think; who may cultivate the fine and better sides of life. Now, we find in the Socialist movement here, as well as everywhere else, that the main support of the movement comes from the better situated and more intelligent part of the workers. We do not mean to say by that that we encourage a class distinction of workers, but there is a certain stratum of the working class which has been exploited to an extent that it has fallen below the level of even average culture or intellect. And that class, slum, or proletariat, so called, is very rarely accessible to the teachings of socialism or of any other similar movement.

Whereas, on the other hand, the better situated and more intelligent workers constitute the bulk of the Socialist Party membership—The Socialist Party voters here and abroad. And it is for this reason also that it is in direct interest of the Socialist Party to support all movements on the part of the workers tending to improve their condition. The Socialist Party, for this reason, encourages and supports economic organizations and the struggles of the labor movement, of the trade-union movement, in all its forms. It does so in this country; it does so in every other country. It does so for the reason that it realizes the economic organization of labor is practically the main proposition under the present existing conditions; that it serves very largely to raise the standards of life in every direction and to make it better and stronger and healthier and happier, and for this reason it wants to make more intellectual men and women out of them. It supports, for similar reasons, the cooperative movement of the working class and its supports for similar reasons also every other radical reform movement based upon actual economic need and aiming at actual economic improvement.

Now, the Socialist platform, which sets forth the aim ultimate and immediate of the Socialist Party, contains a large number of what we call immediate demands. That is, practical political measures, practical propositions for immediate reform. It is addressed to the national and State legislatures and will show the general direction and mental bent of the Socialist.

If you will permit me to mention a few, I will refer to the platform adopted by the Socialist Party in 1908.

Mr. THOMPSON. I would like to ask you, Mr. Hillquit, a question or two right there.

Mr. HILLQUIT. Yes; go ahead.

Mr. THOMPSON. In reference to the present method, or present industrial situation of the workers, is the program of the Socialist Party limited to such pronouncements as you have there and are about to tell us of, as, say, a program of legislation for the national and State legislators? Has it, in addition to that, any other concrete machinery or organizations for the carrying out of immediate redress in industrial matters?

Mr. HILLQUIT. Yes; we have the pronounced views of the party on these various problems that are contained not only in the platform but in a number of other resolutions and similar instruments. The practical instruments for the carrying out of our program are as follows: In the first place, we have in the national office of the party an information department consisting of the statistical department, and certain statisticians whose duty it is to assist all elected members of our party in various city councils, State assemblies, and so on, on practical matters. For instance, a new councilman who will be elected in some town for the first time, a Socialist, some measures will come up before the city council, and he will write to the information department and inquire: "Now, what do you think of this measure, or what proper stand do you think I should take, and what should I propose on this or that question in conformity with the Socialist program." And he will receive suggestions and information and perhaps model bills to be introduced, or model ordinances. Then, in addition to that—

Mr. THOMPSON. Are the suggestions that may be given to him obligatory upon him by the party platform?

Mr. HILLQUIT. No; they are purely voluntary, just in the nature of suggestions and advice, nothing more.

Mr. THOMPSON. Relating particularly now to the industrial organization of the workers?

Mr. HILLQUIT. Yes.

Mr. THOMPSON. Has the Socialist Party a program or organization for dealing with them as actually engaged in industry, for instance, in the shops and factories?

Mr. HILLQUIT. No; we don't engage in the economic struggles of the workers, except where such struggles assume a political and general aspect. We do not consider it part of our mission, function, or power to interfere with any detail of economic or organized labor in the shop or in the unions. We would consider that meddling. If this relation of the Socialist Party to the economic labor organizations is of interest to you, I have here a brief resolution adopted by the last convention of the National Socialist Party in 1912, and if you wish me to I will read it to you.

Mr. THOMPSON. Will you read it?

Mr. HILLQUIT. It is very short.

Mr. THOMPSON. I think we might hear it, then.

Mr. HILLQUIT. It is not a page. [Reading:] "Political organizations and economic organizations are alike necessary in the struggle for working-class emancipation. The most harmonious relations should exist between the two great forces of the working-class movement—the Socialist Party and the labor unions. The labor movement of the United States has of recent years made marvelous progress in all directions. It is steadily increasing in numbers and has reached trades and industries which were before unorganized. It has in many instances concentrated its power and increased in efficiency by the amalgamation of related trades into federations and industrial unions. Many unions have opened their meetings before adjournment to the discussion of vital social and political problems of the working class and have repudiated the demoralizing politics represented by the National Civic Federation.

"The organized workers are rapidly developing an enlightened militant class consciousness. The reality of this progress is attested by the increasing virulence with which the organized capitalists waged their war against the unions. This improved economic organization is not a matter of abstract theory, but grows out of the experience of the wageworkers in the daily class struggle. Only those actually engaged in the struggle in the various trades and industries can solve the problems of forms of organizations. The Socialist Party, therefore, reaffirms the position it has always taken with regard to the movement of organized labor: First. That the party has neither the right nor the desire to interfere in any controversies which may exist within the labor-union movement over class or form of organization or technical methods or action in the industrial struggle, but trusts to the labor organizations themselves to solve those questions.

"Second. That the Socialists call the attention of their members in the labor unions to the vital importance of the task of organizing the unorganized, especially the immigrant and the unskilled laborers, who stand in greatest need of organized protection and who constitute a great menace to the progress and welfare of organized labor if they remain neglected. The Socialist Party will ever be ready to cooperate with the labor unions in the task of organizing the unorganized workers, and urges the labor organizations which have not already done so to throw their doors wide open to the workers in the respective trades and industries, abolishing all onerous conditions of membership and artificial restriction. In the face of the tremendous powers of the American capitalists and the close industrial and political unions, the workers of the country can win their battles only by strong class consciousness and closely united organizations on the economic field, and a powerful and militant party on the political field, and by joint attack of both on the common enemy.

"Third. That it is the duty of the party to give moral and material support to the labor organizations in all the defensive or aggressive struggles against capitalists' oppression and exploitation for the protection and extension of the rights of the wageworkers and the betterment of their material and social conditions.

"Fourth. That it is the duty of the members of the Socialist Party who are eligible to membership in the unions to join and be active in the respective labor organizations."

Mr. THOMPSON. Going back to the original question again, while it is the attitude of the Socialist Party, or, rather, they appreciate that the underfed and underpaid and overworked people are not apt to develop that intelligence that is necessary to understand a rather elaborate social philosophy or program such as the Socialist Party has, yet when it comes to dealing with the subject of greatly shortening the hours, increasing the pay, bettering the working conditions, they have no definite organization of their own, and do not go directly and specifically into industry, but leave that to the trade unions whose general purposes they, as a party, indorse?

Mr. HILLQUIT. Yes, sir.

Mr. THOMPSON. And rather keep to the field of political action as it may present itself for the carrying out of the general program, such as the municipalization of a gas plant or street railroad, or so on; or generally——

Mr. HILLQUIT. Principally, but not exclusively; that is, the Socialist Party is a political party, primarily, but it is not a political party in the sense in which the old parties are, but is exclusively political.

The Socialist Party is also an educational institution or organization. And, in addition to that, it does take an active part in the economical struggles where they assume a general character, for instance, in cases of a large and extensive strike, the Socialist Party does actually support. It supports them by means of money contributions, supports them by means of speakers, sending them into the fields, and supports them also by its press. Now, there is a point which is perhaps not generally appreciated: The Socialist Party has better facilities, probably, for reaching the non-English speaking population of the country than any other social organization. We have papers printed in most every language spoken in the United States, over 30 languages in this way, and we have speakers in all of those languages. Now, in a strike of miners, where perhaps there is a dozen different nationalities involved, one of the great problems is how to help them. Of course, we don't manage the strike. We are not in for that. But we will very cheerfully send speakers in all those languages to the strike region, if requested, or consented, to by the organization having charge of the strike. We will send our literature there, and, of course, we will take a position in support of the strike in all our publications. In other words, we do render active financial, moral, and other support in case of labor struggles, as, say, take, for instance, a case like the Moyer-Haywood trial, or similar legal transactions against labor leaders by reasons of the connections with labor troubles, say, where the fight is drawn pretty generally, the Socialist Party will join in such a movement in defense of the class. It has done so time and time again.

Commissioner GARRETSON. Is it not true that the declared position of the Socialist Party to-day—is it not true that the attitude you have described is the only one which you could consistently take, because active effort by committees or otherwise to perform functions would be by you regarded as only a temporary makeshift until a reversal of the system had been effected?

Mr. HILLQUIT. I must confess I don't quite understand the question.

Commissioner GARRETSON. In other words, that the declaration that was laid down as the basic one of the Socialist Party, you could not consistently from the standpoint of the party, deal under the present methods on any other than a makeshift basis, you would only regard it as patchwork and not as real betterment?

Mr. HILLQUIT. I would not say that; I would say that I consider every real betterment, as a real betterment, and as, perhaps, leading to the final solution and to the radical cure, but I do not consider it as a complete cure. In other words——

Commissioner GARRETSON (interrupting). It would only be grafted upon the present system?

Mr. HILLQUIT. I don't say that at all. It might change the present system gradually into a new and better system; it is not grafting upon it. In other words, our attitude toward real and lasting reform, such as the proper factory legislation, proper protection of working men by social insurance, and similar measures, is not a makeshift for us or in our eyes. We consider it as very valuable, very substantial.

Commissioner GARRETSON. You very evidently misunderstood the scope of my question. Applied only to wage and working conditions is what I intended to apply it to. In other words, you work for the abolition of the wage system?

Mr. HILLQUIT. Well, we work to-day for the improvement of labor conditions, and we work ultimately for the abolition of the wage system.

Commissioner GARRETSON. And therefore you would regard betterment in those things just as of a temporary character until you attained the whole object?

Mr. HILLQUIT. Oh, no; one of the means. We would consider it as one step in the direction of our aim.

Commissioner GARRETSON. Helping it along?

Mr. HILLQUIT. We would consider it in this way, Mr. Garretson: If I have set out to earn \$100, and if I had done part of my work and earned \$10, I

would not consider that as a makeshift or patchwork, but would consider it as a part realization of my ultimate object.

Commissioner GARRETSON. Part of the \$100?

Mr. HILLQUIT. Yes.

Chairman WALSH. At this point the commission will adjourn until 2 o'clock. Return here at 2 o'clock sharp, without further notice.

AFTERNOON SESSION.

Chairman WALSH. The commission will please come to order.

TESTIMONY OF MR. MORRIS HILLQUIT—Continued.

Mr. WALSH. Mr. Thompson, it is the conclusion of the commission that in this one particular case they would waive the ordinary rule and let Mr. Gompers examine Mr. Hillquit and Mr. Hillquit examine Mr. Gompers.

Mr. THOMPSON. I assume now that I am substantially through with the questions I have to ask Mr. Hillquit in regard to the application of socialism to the present-day industrial propositions. In other words, I am through with the direct examination.

Chairman WALSH. If it is convenient, then, Mr. Gompers, you may proceed.

Mr. GOMPERS. Mr. Hillquit, in your statement this morning you said that the purpose of the Socialist Party—to help the trade-union movement in the achievement of its purposes; that is, for the material improvement of the condition of the working people.

Mr. HILLQUIT. I did.

Mr. GOMPERS. Has that been the policy of the Socialist Party and with its immediate predecessor, the Socialist Labor Party, of which you are a member?

Mr. HILLQUIT. It has been the uniform policy of the Socialist Party. It has been, I understand, the policy in principle, of the Socialist-Labor Party, although I am inclined to think that the principle was not properly applied by the Socialist-Labor Party for a time.

Mr. GOMPERS. May I be seated to examine, Mr. Chairman?

Chairman WALSH. Oh, certainly, Mr. Gompers.

Mr. GOMPERS. You said, Mr. Hillquit, it has been the policy of the Socialist Party, and substantially its purpose, to work for factory legislation, and legislation of that character. Will you tell the commission in which instances to secure such legislation your party has been active?

Mr. HILLQUIT. The party has been active wherever it has had an opportunity to be active, and more specifically in the following way: Where the party has no representation in the State legislatures, the activity of the party was necessarily limited to the advocacy of such measures, through party organs, papers, the adoption of proper resolutions, and the support of such measures in other ways.

Where the party has representatives in the legislatures of the various States, such attempts have been made by introducing bills for the purpose of efficient-labor legislation and social legislation. In the State of New York we have had one important movement for a measure of labor legislation—one overshadowing, in my mind, all others. That was the movement for the adoption of a proper compensation act. As soon as the agitation sprang up, the Socialist Party initiated a joint conference with the labor organizations and trades unions of this city, including the Central Federated Labor Union of New York, the Central Labor Union of Brooklyn, and several local trades councils, and the Socialist Party. It was this joint conference which was, I believe, instrumental, at least, as much as any other factor, in making the movement for a workmen's compensation act effective; and it was the Socialist Party representatives in that conference who led in the drafting of the proposed compensation act. We had for one term only, a member in the State legislature, and that member, coming from the county of Schenectady, submitted a bill to the legislature along all important lines of factory and social reform. There were measures for State insurance against sickness, industrial accidents, and old-age pensions. There was a measure for limitation of child labor, and there was a measure against the employment of private detective agencies in labor disputes, and many more measures along the program recognized and advocated by the Socialist Party, and also some minor extensions

of the American Federation of Labor. In Wisconsin we have had representation in the legislature for a number of years, and I am free to state that there is not a general measure advocated by the organized-labor movement here, including the American Federation of Labor, which has not found a concrete expression in a proposed measure submitted by the Socialist representatives in that assembly. The same holds true of every other State in which we had representation. For instance, even the State of Washington, I noticed recently a statement of all the measures proposed, supported and worked for by the Socialist representatives, and they cover the whole range of Socialist and labor legislation. The same holds true, of course, in a large measure—in a larger measure—in all countries upon the European continent where socialism is a political factor and a strong political factor.

Mr. GOMPERS. Are you through?

Mr. HILLQUIT. I am through.

Mr. GOMPERS. The workmen's compensation bill, now a law of the State of New York—did the Socialist Party have a hand in the framing of that bill?

Mr. HILLQUIT. The Socialist Party had at that time no representation in the legislature.

Mr. GOMPERS. I am asking you whether you took any part, whether the Socialist Party took any part—whether the Socialist Party took any part in the framing of that bill.

Mr. HILLQUIT. It did not and could not, and if it could have done so, the bill would have been very much better and more efficient than is is. [Laughter.]

Mr. GOMPERS. Do you know that the workmen's compensation law of the State of New York is the most comprehensive and generous of any law on the statute books of this or of any other State or of any country on the face of the globe?

Mr. HILLQUIT. No; not of any other country, Mr. Gompers. It is, I believe, one of the very best in this country. It is far from doing social justice to the workers, in my opinion.

Mr. GOMPERS. It has not established the cooperative common wealth.

Mr. HILLQUIT. Nor has it established a proper compensation act.

Mr. GOMPERS. Now, then, do you note that the workmen's compensation act was drafted by authority and direction of the New York State Federation of Labor?

Mr. HILLQUIT. Yes; after the New York State Federation of Labor had received a good deal of valuable instruction on the subject from the Socialists. I know something about it, Mr. Gompers. [Laughter in the audience.]

Chairman WALSH. We must keep order, ladies and gentlemen, and it will not be proper to make any demonstration at any time.

Mr. GOMPERS. Who gave that instruction? What did that instruction consist of?

Mr. HILLQUIT. Why, when we first met the representative of the State federation of labor, Mr. Gompers, we found that the majority of the members did not even know what workmen's compensation stood for or meant, and we have had a sort of class there, and I remember it very well, and when finally it downed upon them and they had their first draft prepared, which was so woefully inadequate that we urged strongly Mr. McDonald, who then supported the American Federation of Labor, to withdraw it and redraft and remodel his bills. It was not done at that session of the legislature, and nothing passed. Then the other bill passed, which was declared unconstitutional by the court of appeals, and when finally the present bill was prepared it came very much closer to our original drafts and specifications.

Mr. GOMPERS. Do you know that there was a meeting in the assembly hall of the New York Legislature where the joint committees of the legislature had hearings and demonstrations in regard to the workmen's compensation bill now a law?

Mr. HILLQUIT. I appeared before one of those hearings on workmen's compensation.

Mr. GOMPERS. I refer to the hearing by the joint committee of both houses of the legislature.

Mr. HILLQUIT. Appointed by Gov. Hughes. It was the first and only. The Wainwright Commission—is that it?

Mr. GOMPERS. No, sir; you are quite in error, Mr. Hillquit. That is—pardon me; I have no right to say that. But I refer to the workmen's compensation bill when Mr. Sulzer was governor.

Mr. HILLQUIT. Yes. I know nothing about this particular commission, for I was not in the country at that time. I know of the original subject that was brought up by the Wainwright Commission, and that at that commission the Socialist Party was officially represented by your humble servant and one or two more, and that we urged our views on the commission, which were in favor of an effective and broad compensation act, and which, I believe, received some consideration.

Mr. GOMPERS. Was the Wainwright Commission created by an act of the Legislature of the State of New York?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. Was that urged by a socialist party?

Mr. HILLQUIT. Was that urged by the Socialist Party?

Mr. GOMPERS. The creation of this commission?

Mr. HILLQUIT. The Socialist Party was very much in favor of the creation of such commission. It did not happen to be in power, and could not appoint a committee.

Mr. GOMPERS. Do you know that the American Federation of Labor has gone on record for more than 10 years in favor of a workmen's compensation law for the States and for the Federal Government?

Mr. HILLQUIT. I have no fault to find with the American Federation of Labor in its attitude on workmen's compensation. I think that is one of the things that the American Federation of Labor did properly.

Mr. GOMPERS. Do you know what the Socialist Party contributed toward that end?

Mr. HILLQUIT. I know it contributed a good deal in the lines in which it could contribute. I know that the Socialist Party had expressed itself in favor of workmen's compensation or State insurance of workers in case of accidents much longer than 10 years, and even before the American Federation of Labor took it up, and I should not be surprised if the American Federation of Labor was somewhat directly influenced by that socialist propaganda in taking it up.

Mr. GOMPERS. Do you know of the efforts of the Socialist Party in the United States in securing workmen's compensation for the Government employees of the United States?

Mr. HILLQUIT. I would not specify Government employees. The Socialist Party of the United States pronounced itself in favor of workmen's compensation generally, drafted a model workmen's compensation act, sent it to all State secretaries of the organization and all locals, with the recommendation to make a special propaganda of it, and in 1910, I believe, passed a resolution urging the various local organizations of the Socialist Party to concentrate their efforts upon workmen's compensation.

Mr. GOMPERS. Mr. Hillquit, I have no desire to curb you in any way, but where you can answer yes or no, that does no violence to your position, it would be proper, and if exemplification or amplification is necessary, why, it would be better to do it then.

Chairman WALSH. Wherever an answer yes or no can be given, give it first, Mr. Hillquit, and then take all the time you need to explain your answer.

Mr. HILLQUIT. Perfectly well satisfied. I did not know my friend Gompers was so legally technical.

Mr. GOMPERS. I would like to have some definite answer to a definite question.

Mr. HILLQUIT. Very well, Mr. Gompers.

Mr. GOMPERS. What assistance, if any, was given by the Socialist Party to the creation of a Bureau of Mines for the protection of the lives and health and conditions of the miners?

Mr. HILLQUIT. The same assistance as the assistance given in other similar measures, that of propaganda for it.

Mr. GOMPERS. Did the Socialist Party aid in securing the enactment of a law for uniform couplers on cars on railroads?

Mr. HILLQUIT. I do not think that question specifically ever came up before the Socialist Party.

Mr. GOMPERS. Did the Socialist Party ever take any part in securing vestibules for the street railway men?

Mr. HILLQUIT. The Socialist Party never took part in special propaganda or special legislation affecting certain special trades, considering that to be fully within the province of the organized workers within that particular trade or industry.

Mr. GOMPERS. Did I understand you correctly to say this morning that the Socialist Party always was and is now in favor of the trade-union movement, the labor-union movement?

Mr. HILLQUIT. You understood me correctly.

Mr. GOMPERS. Do you recall or do you know that at the convention of the American Federation of Labor in Detroit the Socialist Party insisted upon representation in that convention as a political party?

Mr. HILLQUIT. That was when, Mr. Gompers, 1896, was it?

Mr. GOMPERS. About that time.

Mr. HILLQUIT. About that time?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. I know that the Socialist Party that then existed claimed representation in the convention of the American Federation of Labor through membership in the Central Federated Union in New York, and such representation was not granted to them. The Socialist Party never claimed such representation.

Mr. GOMPERS. They felt outraged at such an exclusion?

Mr. HILLQUIT. The Socialist Party did not feel outraged at such an exclusion because the Socialist Party never sought representation.

Mr. GOMPERS. Did the Socialist Party ever inaugurate a movement to supplant and be in rivalry with the American Federation of Labor?

Mr. HILLQUIT. The Socialist Party very emphatically did not. The Socialist-Labor Party at one time conceived the notion of forming an organization of trades unions in opposition to the American Federation of Labor, and constituting a distinct Socialist economic organization, and this act on the part of the Socialist-Labor Party brought about a split within the party, and the Socialist Party of to-day was organized largely on that issue and because it did not agree with that policy.

Mr. GOMPERS. The Socialist Party which you now represent before the commission is the successor of the Socialist-Labor Party as it existed?

Mr. HILLQUIT. It is the successor of that part of the Socialist-Labor Party which rebelled against the labor policy just mentioned by you. And those who were opposed to the policy seceded and formed the new Socialist Party.

Mr. GOMPERS. The Socialist-Labor Party is still in existence?

Mr. HILLQUIT. The Socialist-Labor Party is still in existence.

Mr. GOMPERS. Do you think the members of the Socialist-Labor Party would agree with you in saying it is still nominally in existence?

Mr. HILLQUIT. I don't know. They represent the same proportion as the I. W. W. represent to the American Federation of Labor.

Chairman WALSH. In round number, how many members are there in the United States of the Socialist Party?

Mr. HILLQUIT. One hundred and fifteen thousand dues-paying members.

Chairman WALSH. And how many of the Socialist-Labor Party, do you know?

Mr. HILLQUIT. I estimate about 1,500.

Chairman WALSH. Where do you get that estimate?

Mr. HILLQUIT. Pretty much from the Socialist-Labor Party. The last time they published or gave out a statement of the membership it was between two and three thousand, and they have fallen off, as noticed by the referenda and other indications.

Mr. GOMPERS. Who was the candidate of the Socialist Party for President of the United States in 1912?

Mr. HILLQUIT. Mr. Eugene V. Debs.

Mr. GOMPERS. Who was in 1908?

Mr. HILLQUIT. Likewise.

Mr. GOMPERS. And in 1902?

Mr. HILLQUIT. 1902, likewise. That is, there was no presidential candidate when you think of it in 1902.

Mr. GOMPERS. 1904?

Mr. HILLQUIT. In 1904 it was Debs.

Mr. GOMPERS. Is it unfair to assume that the candidate of your party for the Presidency of the United States expresses the views of the party? Is he the party spokesman, the standard bearer?

Mr. HILLQUIT. It is entirely unfair to assume, in view of the expressed position of the party itself on the subject. In other words, Mr. Gompers, when the Socialist Party, in convention assembled, officially takes a stand on its relation to organized labor, no individual member of the party, no matter what his position, can nullify or modify that stand.

Mr. GOMPERS. Do you know that Mr. Eugene V. Debs was present at the first annual convention of the organization which formed the so-called Industrial Workers of the World?

Mr. HILLQUIT. I do.

Mr. GOMPERS. Have you read any of his speeches during that convention?

Mr. HILLQUIT. I have read some.

Mr. GOMPERS. Do you regard his expressions as being friendly or in favor of the trades-union move, the American Federation of Labor?

Mr. HILLQUIT. As I understand his position, his attitude is not friendly toward the leaders of the American Federation of Labor. His attitude is more friendly toward the members of the American Federation of Labor. At the same time one and the other are his personal views to which he is entitled.

Mr. GOMPERS. When Mr. Debs says: "The American Federation of Labor has numbers, but the capitalist class do not fear the American Federation of Labor. Quite the contrary." Do you regard that utterance as a friendly expression for the American Federation of Labor?

Mr. HILLQUIT. I do not, nor do I regard it as an authorized utterance of the Socialist Party.

Mr. GOMPERS. Speaking of the American Federation of Labor, and some Socialist, he says: "There are those who believe that this form of unionism can be changed from within. They are very greatly mistaken." Do you agree with Mr. Debs on that utterance?

Mr. HILLQUIT. Do I agree? I do not agree. I think, on the contrary, the American Federation of Labor is being forced, and will be forced more and more, to gradually change its form of organization, to adjust itself to more modern industrial conditions.

Mr. GOMPERS. I read this as an obscure expression of opinion. Mr. Debs says in that speech: "There is but one way to effect this change, and that is for the working man to sever his relation with the American Federation."

Mr. HILLQUIT. Yes. I do not agree with that, nor does the Socialist Party agree with that. And, to make our position clear once for all, Mr. Gompers, I will say it will be quite useless to quote Mr. Debs in his attitude to the American Federation of Labor. Mr. Debs took part in the organization of the Industrial Workers of the World. I think he has now lived to regret it, but whether he does or not the fact of the matter is he acted entirely on his own accord and on his own responsibility; that the Socialist Party at no time approved, directly or indirectly, of that stand; and at no time have they indorsed the Industrial Workers of the World as against the American Federation of Labor. And I will say further that the Socialist Party at no time had any substantial criticism of the American Federation of Labor, although I am just as frank to add that the Socialist Party, at least in the majority of its members do believe that the present leadership of the American Federation of Labor is somewhat archaic, somewhat antiquated, too conservative, and not efficient enough for the object and purposes of the American Federation of Labor. That is the position.

Mr. GOMPERS. Of course as to the leadership, that must be determined; the leadership of the American Federation of Labor, I assume, must be determined by the membership and the organization as it can best give expression to its preference.

Mr. HILLQUIT. Entirely so.

Mr. GOMPERS. Are you aware that the leadership to which you refer has been elected and reelected by practically unanimous vote for several years past?

Mr. HILLQUIT. We do not contest the election nor the legitimacy of holding office. We only wish they were a little more abreast of the time, and would keep pace with industrial conditions.

Mr. GOMPERS. As opposed to Mr. Debs, you would not oppose the leadership—

Mr. HILLQUIT. If you will read all, read it all, you will find that his position is largely, if not exclusively, on account of the loose leadership as he sees it. And I reiterate once more that it is his individual stand.

Mr. GOMPERS. You have said that it is his individual stand, yet the speech in which I refer and in which he asks and urges the workmen to leave the American Federation of Labor was made some time in June or July, 1908, and Mr. Debs was twice made the standard bearer of the Socialist Party as candidate for President of the United States since that time.

Mr. HILLQUIT. Yes, sir. He was. There was absolutely no reason why he should not be, in view of the fact that the party itself had at some time in

1904 very explicitly declared its stand on organized labor, and it did not have to apprehend that any of its representatives may misrepresent its attitude.

Mr. GOMPERS. Do you know that Mr. Debs has, within these past weeks, issued a document in which he urges the secession of two of the largest organizations from the American Federation of Labor, for the purpose of destroying the American Federation of Labor?

Mr. HILLQUIT. I do. May I add, Mr. Gompers, that this likewise was wholly and fully his own initiative and on his own responsibility, and in no way approved of or condoned by the Socialist Party. We tolerate liberty of expression and speech and opinion within the Socialist Party, you know.

Mr. GOMPERS. Do you regard that as the individual expression of opinion, when a man thrice the candidate of a political party urges that a movement be inaugurated to dissolve the only general federation of organized workmen that ever existed for a period of time, such as the American Federation of Labor?

Mr. HILLQUIT. I regard it purely as the literal expression of a man of the Socialist Party who never places its program, its views, into the hands of any individual candidate. It speaks for itself in convention.

Mr. GOMPERS. And the candidate for the Presidency of your party does not express, then, the sentiments and the views of the party itself; is that the inference to be drawn from your answer?

Mr. HILLQUIT. You may draw this inference, that inasmuch as the candidate of the Socialist Party for the Presidency, or otherwise, deviates from the principles of the Socialist Party, he does not speak for the party, but speaks entirely on his own responsibility.

Are you still quoting Mr. Debs?

Mr. GOMPERS. Perhaps. Would you hold the same line of conduct to apply to, say, Mr. Taft, who was the candidate for President of the United States, nominated by the Republican Party?

Mr. HILLQUIT. No, sir; because the Republican Party has no declaration of general principles, attitude to labor unions, and no general social philosophy, and no general social use of any kind, and its candidate for President necessarily expresses the views of the party. The Socialist Party is entirely different in this respect.

Mr. GOMPERS. Would you say the candidate of the Prohibitionist, the President, the candidate for President, if he were to make a declaration that was inconsistent with what the party would hold, would you regard that as simply his individual expression of opinion?

Mr. HILLQUIT. The candidate for President of the Prohibition Party, if he were to take a drink, I would not say that the Prohibition Party was committed to the drink evil.

Mr. GOMPERS. I prefer not to bring in the personal habits of any man. I don't know that that is illuminating or contributory to the discussion.

Mr. HILLQUIT. I did not mean to be personal, Mr. Gompers.

Mr. GOMPERS. The question as to the candidate for President of the Prohibition Party is nothing to me. I was speaking of personal declarations. Supposing I, as president of the American Federation of Labor, were to go upon the platform and give expression in a speech, or if I had written an editorial in the American Federationist, urging the dissolution of the American Federation of Labor—

Mr. HILLQUIT. Of the Socialist Party, you mean? To apply your analogy.

Mr. GOMPERS. Evidently you want to bandy words with me rather than to answer the question.

Mr. HILLQUIT. Go ahead.

Chairman WALSH. Wait until the question is finished and then answer, if you can.

Mr. GOMPERS. Supposing Mr. Gompers, president of the American Federation of Labor, were upon a public platform or in articles contributed to the labor press, would advocate the dissolution of the American Federation of Labor, would you regard that as a personal expression of my own?

Mr. HILLQUIT. I would, decidedly, and with all due respect to you, Mr. Gompers, your analogy does not apply. If you were the president of the American Federation of Labor—if you as president were to advocate a dissolution of the American Federation of Labor, without such resolution having been passed by the federation, I certainly should not say that you voiced the sentiments of the American Federation of Labor.

Furthermore, if you were to do that, you would speak strictly on a subject within your own jurisdiction. If you take your analogy with Mr. Debs, as the leading member of the Socialist Party, advocate certain changes in the American Federation of Labor; if you as the President of the American Federation of Labor, were to advocate a change or dissolution in or of the Socialist Party, you would be in an analogous position, and I certainly would not regard that as an official expression of the American Federation of Labor. Furthermore, you, Mr. Gompers, for instance, have taken a stand very often hostile to the Socialist Party. I do not regard that as the official expression of the American Federation of Labor, for I know that the membership, or a very large portion of it, holds different views. That does not come within your domain as president of the American Federation of Labor, although you, as an individual, are perfectly at liberty to hold such opinions, and the Federation, as such, does not in any way discipline you for holding such an opinion. There is your analogy.

Mr. GOMPERS. Mr. Hillquit, these speeches which you have made a thousand and one times——

Chairman WALSH. I would not get into any arguments, Mr. Gompers, with the witness, but just question him. When you go on the witness stand, he is going to ask you questions, and I suppose you can make some when you come to go on there.

Mr. GOMPERS. All right, Mr. Chairman. Now, of course, Mr. Hillquit, you understand that in each of the articles or editorials which I have written and published in the American Federationist, all of them have been caused by the defensive attitude which the American Federation has been forced to take against the aggressiveness and hostility of the Socialist and Socialist-Labor Party and Socialist Party?

Mr. HILLQUIT. I don't think so at all, Mr. Gompers. If you ask me my understanding of it, my understanding of it is that those articles have been caused by your fear of the increasing growth of socialism in the ranks of the Federation. That is my understanding of it.

Mr. GOMPERS. Well, of course, you would not attribute to me very great fear of anything, would you?

Mr. HILLQUIT. Of anything?

Mr. GOMPERS. Of anything.

Mr. HILLQUIT. If you want my opinion, Mr. Gompers, I should say you are a very brave man, but you do hate to see the American Federation of Labor turning socialistic.

Mr. GOMPERS. The reason I do so is the result of conviction——

Chairman WALSH. Mr. Gompers, please do not get into an argument with the witness now. You can go on the witness stand, and he will examine you, and you will have the same latitude of stating your views. But just ask him questions, please.

Mr. GOMPERS. Mr. Debs, in his speech to which I have referred before, said: "I appeal to you to ally yourselves with the economic organization which embraces your entire class." He referred to the Industrial Workers of the World, organized in 1905. Will you give me your judgment as to the extent to which that organization embraces the entire working class?

Mr. HILLQUIT. Of the world? Not very much, Mr. Gompers. It was the fond hope of the organizers, which I never shared, that it would; but it did not.

Mr. GOMPERS. He says further: "I would appeal to you to declare yourselves here and now to be for once and forever true enough to yourselves to join the only industrial union that is absolutely true to you—the I. W. W." And the stenographer put "Loud applause." Will you give your opinion of that statement?

Mr. HILLQUIT. My opinion is the same that I have given you before. I think Mr. Debs was carried away by his enthusiasm when he thought he could create an artificial organization to embrace all the workers joined in one great industrial union. I think his views of trade unionism are not sound. At any rate they are not those of the Socialist Party, and they are not mine, and you might find just as well 200 quotations from his speeches as 5 on that subject.

Mr. GOMPERS. Mr. Debs said: "Now, we, the Socialists, who have organized the Industrial Workers, have had enough of this kind of experience. We have quit the old unions."

Mr. HILLQUIT. I presume he has had enough, Mr. Gompers; I don't speak for others.

Mr. GOMPERS. Isn't it true that at the last convention of the Socialist Party, held at Indianapolis, Mr. Karl Legien, of Germany, was urged to be in attendance in order that he might help present the introduction and passage of a resolution hostile to the trade-union movement?

Mr. HILLQUIT. It is not. Mr. Legien was asked to be present as a prominent Socialist and as the international trades-union secretary, in order to deliver an address to the workers on the experiences of the Socialists of Germany and the workers in their mutual cooperation, which he did, and did very well.

Mr. GOMPERS. Do you know at the time when the Socialist Party convention was about to be held Mr. Legien was lecturing under the auspices of the American Federation of Labor?

Mr. HILLQUIT. Yes; that was about the most progressive thing that the American Federation of Labor ever did.

Mr. GOMPERS. And do you know that he asked permission from the American Federation of Labor that he might cancel a few engagements already made, so that he could go to attend the Socialist Party convention for the purpose I indicated by my first question?

Mr. HILLQUIT. I don't know the specific engagements. I know that Mr. Legien came here primarily on the invitation of the American Federation of Labor, in which the Socialist Party joined, and the understanding was that he was first to lecture for the American Federation of Labor, and then for the Socialist Party.

Mr. GOMPERS. The New York Call is one of the official journals of the Socialist Party, is it not?

Mr. HILLQUIT. Not official, but a Socialist paper.

Mr. GOMPERS. Recognized socialistic paper?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. Speaking with some degree of authority?

Mr. HILLQUIT. Editorially, mostly speaking with some degree of authority.

Mr. GOMPERS. This appeared in it, in the issue of December 16, 1909: "Don't like the I. W. W.? Well, don't kill the kid. He will grow, and we shall need him in our business by and by, and possibly sooner than many of us believe."

Mr. HILLQUIT. Yes; now, Mr. Gompers, did that appear as an editorial or as a contributed letter by some reader?

Mr. GOMPERS. I can't say, sir.

Mr. HILLQUIT. I can help you out, Mr. Gompers. It was never part of an editorial. That was one of the many letters sent to the Call from all sorts of writers, which the Call publishes in full, just as the Evening Globe does, without taking any responsibility for it.

Mr. GOMPERS. In a work entitled "Industrial Union Movement"—the preface of it is written by C. H. Kerr, a prominent American Socialist, a member of the party and a large publisher of socialist literature—in which he says: "As Marxian students of evolution, we (Socialists) recognize that economical concentration has made trade-unions obsolete, and that the principle of industrial unionism socialism must be adopted in the near future."

Mr. HILLQUIT. What do you want to know with reference to that, Mr. Gompers?

Mr. GOMPERS. Is that a Socialist expression in favor of the American labor movement, the American labor union movement?

Mr. HILLQUIT. Why, it might be. The expression comes from Mr. Kerr as a preface to industrial unionism. Industrial unionism was a pamphlet, I think, published by Mr. Haywood and Moyer, and indirectly led to Mr. Haywood's recall from the national executive committee of the Socialist Party. It never represented the accepted views of the Socialist Party. It seems to me that the passage that you read may be crude, but it contains, to my mind, a good deal of sound truth. In other words, what it means is that the industrial evolution in this country has been such as to bring the industrial—larger—generally all-embracing organization of production to the front, and under such circumstances the trade unions evidently will have to adjust themselves and become organized on an industrial basis, and where the American Federation of Labor might not say it in so many words I think it has felt it, and I think it is undergoing a process of change in its organization now in just that very direction.

Mr. GOMPERS. Have you read—you read the proceedings of the American Federation of Labor fairly carefully, don't you, Mr. Hillquit?

Mr. HILLQUIT. Yes; quite well.

Mr. GOMPERS. Did you read the proceedings of the Rochester convention of the American Federation of Labor held in that city in 1912?

Mr. HILLQUIT. Yes; I did, Mr. Gompers.

Mr. GOMPERS. Did you read the declaration of the executive council of the American Federation of Labor on the subject of "Industrial unionism"?

Mr. HILLQUIT. I presume so; but I don't recall it.

Mr. GOMPERS. It didn't make any sufficient impression upon your mind that you can now recall it?

Mr. HILLQUIT. No; but if you will be kind enough to just bring my attention to the point you have in mind, I suppose I shall remember it.

Mr. GOMPERS. I hand you a copy of that report.

Mr. HILLQUIT. Thank you.

Mr. GOMPERS. And which, Mr. Chairman, I hope, may be marked as an exhibit now, or that when I am a witness before the commission I shall have the opportunity of presenting it in my own evidence.

Chairman WALSH. What is it?

Mr. GOMPERS. A report made by the executive council of the American Federation of Labor to the Rochester convention of that federation November, 1912. I ask Mr. Hillquit whether he had kept informed upon the work of the American Federation of Labor and he said that he did.

Chairman WALSH. And do you recognize that as being the paper described?

Mr. HILLQUIT. Yes; and I—

Chairman WALSH. And you can testify that it is authentic and that is what it is?

Mr. HILLQUIT. Oh, yes; it is that.

Chairman WALSH. Very good; let it go in evidence at this time.

(Received and marked "Hillquit's Exhibit A.")

Hillquit Exhibit A, a pamphlet entitled "Industrial Unionism in Its Relation to Trades Unionism," a report of the executive council of the American Federation of Labor to the Rochester convention, 1912, was submitted in printed form.

Mr. HILLQUIT. And I think I remember the contents pretty well, now, Mr. Gompers, after looking it over.

Mr. GOMPERS. Mr. Hillquit, you have seen that pamphlet which I handed you and which is a reprint of the report of the executive council to the Rochester American Federation of Labor convention. You will find also a reprint in that same pamphlet of the report of the committee to which this declaration was referred and the action of the convention thereon.

Mr. HILLQUIT. Yes.

Mr. GOMPERS. Now, as an advocate of industrial unionism, will you point out to the commission that from which you dissent?

Mr. HILLQUIT. Why, but Mr. Gompers, I don't dissent. I stated, on the contrary, that the American Federation of Labor is rapidly and irresistibly drafting an industrial organization, and I am very glad of the process.

Mr. GOMPERS. Of course, we are all, when there is anything good done, no matter how or by whom or under what circumstances, it affords us all satisfaction, but that is not the question.

Chairman WALSH. What was the question, whether or not he dissented from anything said in there?

Mr. HILLQUIT. In what view I dissented.

Chairman WALSH. Do you dissent?

Mr. HILLQUIT. I do not dissent.

Chairman WALSH. That answers it.

Mr. GOMPERS. Then, sir, if you don't dissent from the declaration of the American Federation of Labor upon the subject of industrial unionism, will you please tell the commission how it comes that Mr. Debs and other Socialists, whose names, many of whom I can mention at this time, advocate the dissolution of the American Federation of Labor on the question of industrial unionism?

Mr. HILLQUIT. I can not answer for the operation of the mind of Mr. Debs or anybody else, but I may point out the following: First, that the first declaration on industrial unionism adopted by Mr. Debs and his colleagues when organizing the I. W. W. was adopted in 1905, and the declaration of the Federation of Labor was adopted in 1912, seven years later. That is, the American Federation of Labor once more followed in the wake of the Socialist agitation. The next point, Mr. Gompers, is that I understand the difference between the industrialism advocated by you and the industrialism advocated by the I. W. W., or particularly by Mr. Debs, is this, that the industrial form of organization which you advocate consists of a federation of similar crafts or trades

within one industry not organically united to cooperate with each other in matters of common interest, and that the industrial form of organization advocated by Mr. Debs is an organic union of all crafts employed and embodied within one industry.

Mr. GOMPERS. You know, I had already questioned you upon the declarations made by Mr. Debs in 1905?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. And my last question has reference to the article written by Mr. Debs appealing to the unions within these past two weeks to secede and supplant the American Federation.

Mr. HILLQUIT. You have asked me that before, Mr. Gompers, and I have answered before that the Socialist Party is not sponsor for those plans, and that the Socialist Party is as directly responsible for it as the American Federation of Labor would be for an expression of an executive member of its board on religion.

Mr. GOMPERS. In that article addressed to the United Mine Workers of America and to the Western Federation of Miners, it says the American Federation of Labor as an aggregation of craft unions has outlived its usefulness.

Mr. HILLQUIT. I don't agree with this opinion.

Mr. GOMPERS. I want to call your attention to the fact that the same article is published in the United Mine Workers' Journal in the Western Federation of Miners' official magazine, the Miners' Magazine. In the latter it is published without comment. In the United Mine Workers' Journal it is published with an introduction of an editorial note strongly dissenting from that view, and that editorial, on page 4 of the United Mine Workers' Journal of Thursday, May 14, 1914, which has the heading of which I shall read is, "Secession not the way to unity." Do you agree with the view expressed by the editor of the United Mine Workers' Magazine in that heading?

Mr. HILLQUIT. Yes. The United Mine Workers' Journal, of course, which prints a comment and the magazine of the Western Federation of Miners, are your organs; that is, they both belong to the American Federation of Labor.

Mr. GOMPERS. Yes, and Debs advocated the secession of both those organizations from the American Federation of Labor, they to form the bodies to call a convention of all organizations and form what he calls an industrial union—one big union to take the place of the American Federation of Labor.

Mr. HILLQUIT. I am inclined to agree, Mr. Gompers, with the editorial you mention. I don't believe secession from the federation is the way to reform. I think the A. F. of L. is fully capable of progress in the (logicals), and I believe it is one of the functions of the Socialist Party to carry on such education and enlightenment as possible within the ranks of the A. F. of L., and I have no doubt at all that ultimately the members of the A. F. of L. will be just as enlightened and progressive as members of any other organization, no doubt.

Mr. GOMPERS. Of course those who are so thoroughly educated that they can learn nothing, know it all, and we are not of that character.

Mr. HILLQUIT. The leaders of the A. F. of L. are not of that character.

Chairman WALSH. That is not a question and really has no place in the record.

Mr. GOMPERS. Mr. Chairman, nor was that an answer, nor was the statement made by Mr. Hillquit a pertinent answer to my question.

Chairman WALSH. I don't think so either.

Mr. HILLQUIT. Pardon me one moment, the chairman of the commission having agreed with the questioner, I must take exception to it. The question was, if you will recall, do you agree with this editorial or the thought expressed in it. That certainly called for an answer as to whether or not I agreed with those views, and upon what ground, and I do not see why my answer was not perfectly responsive. It would be if tested by the strictest rules of evidence, and I think it should be in this commission.

Chairman WALSH. I may be wrong. I made an offhand decision to get through with it. It is generally leading to an argument of a rather extraneous nature.

Mr. HILLQUIT. Yes; but an opinion called for must be expressed.

Mr. GOMPERS. I say just this, that this may appear as rather long drawn out, but I think that if the commission, since it has entered into this domain, it will obtain more fundamental information upon the constructive work of the American Federation of Labor movement and the destructive tactics employed by other elements than can be obtained in any other way. If you did not care to have this discussion opened at all, opened up wide, it might have

been better than that it had not been opened up at all. I am perfectly willing to submit myself to the examination of Mr. Hillquit. He is a lawyer; I am not. I have no parchment nor diploma of which I can boast. Simply the plain ordinary experience of a working man who has tried to learn something, and I have, as I said this morning, when it comes to me being on the stand, I play this game with my cards down and face up, nothing to hide, nothing to equivocate, nothing to evade, and everything that this commission will want to know in connection with the American Federation of Labor will be spread before you.

Chairman WALSH. You may proceed.

Mr. GOMPERS. Conceding the fact that the American Federation of Labor and its rank and file and its officers are learning a bit, now, in view of the declaration on industrial unionism adopted by the convention of the American Federation of Labor in 1912, I ask you what dissent you have to make, as a Socialist believing in industrial unionism, what dissent you have to make against this declaration.

Chairman WALSH. Without in any way undertaking to limit this examination, or to shorten its scope in any way, I am going to rule that the question has been fully answered by the witness, that he dissents in no way whatever, and he gave an explanation, if I am correct.

Mr. HILLQUIT. May I reply to that, Mr. Chairman? May I just add this?

Chairman WALSH. Unless there is some dissent from the commission, I will rule that that question has been asked and answered. You may proceed now to another question.

Mr. GOMPERS. Mr. Chairman, I must yield, of course, even if I desire not to.

Chairman WALSH. Certainly.

Mr. GOMPERS. And I yield, and I hope I may do so gracefully, and I do. May I suggest this to your honors, that after the witness has said that he has no dissent to express from the declaration, he then said further that upon this very subject we need education from he and his associates.

Mr. HILLQUIT. No; I have not.

Chairman WALSH. I have passed upon that.

Mr. GOMPERS. Do you know Mr. William English Walling?

Mr. HILLQUIT. Slightly.

Mr. GOMPERS. How slightly.

Mr. HILLQUIT. I have spoken to him a number of times, seen him a few times; I am not intimately acquainted with him.

Mr. GOMPERS. But you know of him?

Mr. HILLQUIT. Oh, yes.

Mr. GOMPERS. And you have read some of his writings, have you not?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. He is a member of the Socialist Party?

Mr. HILLQUIT. I believe he is; I am not sure. He surely was. Whether he is now I don't know.

Mr. GOMPERS. You don't know now?

Mr. HILLQUIT. No; he is not in the city of New York.

Mr. GOMPERS. Do you know that in the New York Call on December 11, 1909, he said: "The Socialist Party has become a hissing and a byword with the actual wage earners of America. It is becoming the party of two extremes: On the one side are a bunch of intellectuals like myself and Spargo and Hunter and Hillquit; on the other is a bunch of never works, demagogues, and would-be intellectuals, and veritable lumpen proletariats. The average wage earners, the men who are really doing the class struggle, are outside. Above all else we must have the union man. No one has denounced the efforts of the American Federation of Labor more than I, but I am forced to recognize that it comes much nearer to representing the working class than the Socialist Party, and unless we are able to shape our policy and our organization as to meet the demands and incarnate the position of the workers we will have failed of our mission." Do you assent or dissent from the expression of Mr. Walling on that subject?

Mr. HILLQUIT. With a few qualifications I assent. With one correction, Mr. Gompers. You got mixed up in your text somewhat. That is not an expression by Walling. That is an expression by A. M. Simons, writing a private letter to Walling, which Walling then published, although he had no business to publish it. It is a heart to heart talk, such as, perhaps, you might have with another intimate member on the A. F. of L. board. I believe it contains exaggerations. I believe the reference to the lumpen proletariat is grossly exaggerated. I think the reference to the intellectuals is somewhat unjust. I

think, however, the sentiment—that is, the statement that the Socialist Party must seek to obtain the support of the working class of this country is absolutely correct, absolutely true. The Socialist Party has been working along those lines for a number of years and has so far fairly well succeeded, and, I suppose, will succeed more.

Mr. GOMPERS. Do you recall a statement appearing in the New York Call of November 28, 1909, made by Mr. John Spargo, in which he said: "In furtherance of the ambitions of a few men of small minds, and even smaller hearts, the whole movement is being dragged into the mire, and the heart of every sincere Socialist sickens with shame at the spectacle. No depth of degradation and dishonor has been reached by any capitalist party in its sordid strivings, which has not also been attained by American Socialists."

Mr. HILLQUIT. I recall that passage. I think it is a bit rhetorical; but we always do resort to self-criticism, which results in a process of purification and improvement.

Mr. GOMPERS. What was the attitude of the Socialist Party, then in existence, toward the American Labor Union formed by Mr. Debs?

Mr. HILLQUIT. The American Labor Union, if you will permit me to correct you, was not formed by Mr. Debs. The Socialist Party's attitude toward the American Labor Union was no different than its attitude toward the I. W. W. The Socialist Party, as such, did not take any sides in the quarrel between the American Labor Union and the A. F. of L.

Mr. GOMPERS. Did not Mr. Debs and his associates of the American Railway Union form the American Labor Union?

Mr. HILLQUIT. They did not.

Mr. GOMPERS. Are you quite sure of that?

Mr. HILLQUIT. I am pretty sure, and I am surprised that you are not. The American Labor Union was formed by the western hotel and restaurant employees by the Western Federation of Miners and, I think, by the western metal workers, or something like that, at a convention of those organizations. The American Railway Union developed into the brotherhood of something or other which published a paper of its own, and then developed into the Socialist Democracy of America.

Mr. GOMPERS. This morning you expressed views which seemed to indicate that you believed in the constant, gradual improvement, material improvement—of the conditions of the working people, and also of the things which should be encouraged for the attainment of the ultimate ends of your party or your philosophy?

Mr. HILLQUIT. Yes, sir.

Mr. GOMPERS. Then, is it your opinion that the declaration is true, that the present social system is inevitably converting the workers into a propertyless proletariat, possessing nothing but their labor powers, is productive of an increase of misery, oppression, enslavement, debasement, and exploitation.

Mr. HILLQUIT. Why, I think the passage in the main is correct. It was written about 50 years ago by Mr. Marx. It has been the subject of a great many controversies just as to what he meant by "misery, degradation," and so on; but it is the general consensus of Socialists' opinion that the process of the making of a propertyless class of workers is on the increase; that the working class, on the whole, gets proportionately a lesser share of the general national wealth from year to year; but that absolutely there is a noticeable improvement in the conditions of at least a large section of the working class.

Mr. GOMPERS. In your explanation as to the condition of the social system—the conditions of society under socialism, you spoke of the industries which have practically become socialized and been taken over in their operation and control, and that smaller industries, with smaller tools and owned by the individual, would not come under that control, ownership, or management, but that they would be left to the individual—did you not?

Mr. HILLQUIT. I said, there is nothing in the Socialist problem requiring collective ownership of purely individual industries not based upon hiring or exploitation of labor.

Mr. GOMPERS. That declaration—how long since has that distinction been made as between all the means of production and distribution and the definition which you now give?

Mr. HILLQUIT. A very long time ago, Mr. Gompers.

Mr. GOMPERS. I mean, authoritatively?

Mr. HILLQUIT. Authoritatively? I think authoritatively there never has been any different conception; it was first clearly expressed, as far as I can think of it, by Karl Kaulsky about a dozen years ago or so.

Mr. GOMPERS. How long has it been since that declaration has been made by the American Socialist Party?

Mr. HILLQUIT. There has not, at any time, to my knowledge, been a specific or formal declaration made; but my understanding is that it has always been the theoretical conception of the American Socialist Party.

Mr. GOMPERS. The American Socialist Party has always declared until quite recently for the nationalization of all of the means of production and distribution, has it not?

Mr. HILLQUIT. I don't think the word "all" occurs in any exposition of the principles of the party.

Mr. GOMPERS. But by the omission of the word "all," and without any qualification in there, nevertheless no other inference could be drawn from that declaration, could it?

Mr. HILLQUIT. Not in my view, I would not say that was true.

Mr. GOMPERS. Suppose I should say that this court room belonged to the State of New York or the city of New York; it would not be necessary for me to say that all the entire court room belonged—

Mr. HILLQUIT. No; not in that connection, but I should think that it would be a somewhat unfortunate phrase if I should say that Mr. Gompers could be heard by the people in the audience. It would not necessarily imply that he could be heard by all.

Mr. GOMPERS. For instance, if you put it this way: The Socialist Party demands the nationalization of the means of production and distribution. The absence of the word "all" there would not at all minimize the extent, would it?

Mr. HILLQUIT. By my conception of it, Mr. Gompers, and I can only report that—I can give you only my understanding of it. I should say that the Socialist Party has always stood for the collective ownership of social tools of production and distribution.

Mr. GOMPERS. As a matter of fact, isn't it so? We need not quibble—

Mr. HILLQUIT (interrupting). I am not quibbling.

Mr. GOMPERS. Isn't it so that it has been only within the past two or three years that the Socialist Party has made that distinction—"socialized industry"?

Mr. HILLQUIT. No, Mr. Gompers; you may have noticed it within the past two or three years, but the entire Socialist philosophy is based upon the conception that the tools of the work have become social in character and consequently its philosophy is based upon this social character of the tools, and never the individual.

Mr. GOMPERS. I refer to the declaration excluding any private property—

Mr. HILLQUIT (interrupting). There was no such exclusion at any time. Private property in actual process of consumption has always been recognized and sanctioned by the Socialists at all times; and as to the means of production, it is not my understanding, and I think I am more or less conversant with the literature on the subject, that it ever was intended to embrace in that the individual tool or the individual industry.

Mr. GOMPERS. Take, for instance, the boot and shoe industry; you used to find and still find that there are shoemakers and bootmakers who work on artistic work—artistic shoemaking and making the whole shoe—in which there are but few tools. If the boot and shoe industry became socialized and owned and controlled, would there be a separate arrangement for the artistic boot and shoe maker?

Mr. HILLQUIT. Now, Mr. Gompers, I don't see any reason in the world why the artistic boot and shoe maker should not continue to be the artistic boot and shoe maker, individually, under socialism. I don't take it there would be any socialization of the individual shoe; at least, I should not wear it, if it did, if I knew it at that time.

Mr. GOMPERS. The answer, of course, is quite germane.

Mr. HILLQUIT. To the question.

Mr. GOMPERS. Do you regard it as a fact that in the United States "the bourgeoisie has converted the position of the lawyer, the priest, the poet, the man of science into its paid wage laborers"?

Mr. HILLQUIT. Why, it is somewhat exaggerated, but substantially true. I could speak about the lawyers. [Laughter.]

Mr. GOMPERS. Do you believe that the statement, quoting again from Socialist authority:

"Chattel slavery is dead; a greater slavery has grown up in its place; wage slavery is so much greater than slavery as the white people in this country are more numerous than the black people"?

Mr. HILLQUIT. I think that is substantially correct.

Mr. GOMPERS. Do you agree with the estimate that in the United States the number of men out of work are more than 5,000,000?

Mr. HILLQUIT. At some time or another, I believe the census of 1900 gives the number of partially employed during the year at 6,000. Correct? Six million, I believe.

Mr. GOMPERS. Which authority?

Mr. HILLQUIT. The 1900 census; number of men unemployed during all or part of the year; at some time unemployed. Is that correct?

Mr. GOMPERS. Do you regard the communists' manifesto of Marx and Engels as on the whole correct; as correct to-day as ever?

Mr. HILLQUIT. That was published in 1847. Written in 1847 and published in 1848.

Mr. GOMPERS. Do you regard the general principles laid down in that manifesto as on the whole as correct to-day as ever?

Mr. HILLQUIT. The general principles, on the whole, yes. The details, perhaps not.

Mr. GOMPERS. Do you accept or repudiate the term, or the idea, of communism?

Mr. HILLQUIT. The name of communism as applied in the communist manifesto signified something entirely different from what it signifies now, and has been so stated by the author of the communist manifesto. What the author of the communist manifesto meant by the term "communist" is what we mean to-day by the term "Socialist."

Mr. GOMPERS. I should judge from the testimony you gave this morning that you do not accept the theory of cataclysm coming as a means to bring about cooperative commonwealth?

Mr. HILLQUIT. I do not believe in the cataclysm theory; no, sir.

Mr. GOMPERS. Your answers would indicate that the Socialists' predictions of several years ago have scarcely been verified, including the inability of any government either to destroy or regulate the corporate existence of capital, such as trusts.

Mr. HILLQUIT. The question is, whether I admit that this prediction was wrong.

Mr. GOMPERS. I simply want, if I can, to have you verify, or rather restate, by yes or no, or in such a way as you may care, as to whether this is to be in our society a revolutionary, continuous improvement in the condition of the workers to whatever may be a goal or a constant improvement?

Mr. HILLQUIT. You asked two questions there, Mr. Gompers. As to the ability of the Government to regulate or destroy business corporations or trusts, I still believe that the Government is quite incapable of doing so. As to the process of gradual improvement, I believe in it. But whether such process of gradual improvement will lead up eventually to socialism without any social or political disturbance or civil war or otherwise, I don't know.

Mr. GOMPERS. Do you not see a departure from Marx's conception in the development of the joint-stock company?

Mr. HILLQUIT. Decidedly not. On the contrary, an affirmation of his theory of the concentration of capital.

Mr. GOMPERS. Then, you think that the growth and ownership of the joint-stock company is a refutation of the theory of the development of the capitalist classes, or Marx's theory of the capitalist class?

Mr. HILLQUIT. I don't think so. On the contrary I think, as I said, it is an affirmation of it—the proof of it.

Mr. GOMPERS. Do you regard the population of the United States as divided into a small master class and a vast servant class?

Mr. HILLQUIT. No such conception was ever expressed by any authoritative offer. What you read from the communist manifesto says that the population tends to develop into such two classes. It has been by far not reached; it has not reached that point in the United States.

Mr. GOMPERS. Do you believe that the children of the working class are doomed to ignorance, drudgery, toil, and darkened lives in the United States?

Mr. HILLQUIT. Very largely, Mr. Gompers.

Mr. GOMPERS. As a matter of fact when you say that we have grown, or are growing into a material improvement in the general condition of the

working people, and the people generally, it does not conform to your latest answer. What is true, your latest answer or your answer this morning?

Mr. HILLQUIT. Both are absolutely true. We have improved somewhat, but our improvement is nothing as compared with what will come. I presume, as president of the American Federation of Labor, you know that we still have the evil of child labor with us, and in an abominable large extent.

Mr. GOMPERS. I have been admonished that I must not argue with you, and I have no desire to do so; but I want to call your attention to the fact that you said just now that you agreed largely with this statement:

"The children of the working class are doomed to ignorance, drudgery, toil, and darkened lives."

If you say that this is a fact, how does it conform with your statement this morning of the general gradual improvement of the working class, and that means, of course, that it includes the children?

Mr. HILLQUIT. If you will read the document further, you will get your answer. The children of the working class are doomed to the lives described unless something very radically is done to relieve them from it.

Mr. GOMPERS. Do you believe, Mr. Hillquit, in collective bargaining between workmen and their employers?

Mr. HILLQUIT. I do.

Mr. GOMPERS. During the pendency of an agreement, it may prevent workmen from honorably asking for an increase in wages in the event of industrial conditions improving. It also has the tendency, does it not, to prevent reductions in wages being made in the event of a falling off in the trade?

Mr. HILLQUIT. I think it has both, and the principal consideration, in my mind, is that the practice of collective bargaining tends to cause the workers to unite and to act collectively, and the employers likewise, and the struggle between them, or negotiations between them will better organize. And it also tends to strengthen the solidarity of the workers.

Mr. GOMPERS. Do you know that several sections of the Socialist Party and labor papers—their official papers—encouraged, aided an organization known—a small organization known as the United Boot and Shoe Makers, in opposition to the Boot and Shoe Workers' International Union?

Mr. HILLQUIT. I think you are going back again to the old days of the S. L. P. That is when the struggle occurred.

Mr. GOMPERS. I asked you whether you had noticed as having occurred within these past three months?

Mr. HILLQUIT. No, sir.

Mr. GOMPERS. It could have occurred without your knowing it?

Mr. HILLQUIT. Oh, yes; I can not control the 300 socialist papers we have in this country.

Mr. GOMPERS. I understood that you have no control?

Mr. HILLQUIT. I say I can not control, so your understanding is right.

Mr. GOMPERS. I say, I understood you had no control at all.

Mr. HILLQUIT. No.

Mr. GOMPERS. Is it not true, Mr. Hillquit, that the radical movement in Europe has been greatly changed in the past 20 years?

Mr. HILLQUIT. You mean the Socialist movement?

Mr. GOMPERS. Let me put the question in this form: Is it or is it not a fact that the radical movement in Europe has been greatly changed in the past 20 years, mainly in this respect—I want to read them, and then if you should desire that I read them separately, I shall be very glad to do so.

Mr. HILLQUIT. Yes, sir.

Mr. GOMPERS. One. In general recognition of working for democratic rule, as the first necessary step for the masses.

Two—would you prefer to answer now?

Mr. HILLQUIT. I would rather hear them all.

Mr. GOMPERS. Two. Consequently, in concentrating political effort, or obtaining a uniform suffrage for male citizens, with just representation in legislative bodies and an influence in administration proportionate to the powers of the people in general.

3. In conducting the struggle of the masses in European countries to obtain rights long exercised by the citizens of the United States.

I think you will find it necessary to answer, unless you agree to them all. However, I shall proceed.

In abandoning the theory of the inevitable social cataclysm predicted by Marx and falling into line with the labor movement of Great Britain and the

United States, the first step being toward trade-union organization, which, in Germany, has come to dominate all great branches of the social movement of the masses in the adoption and energetic promotion of the plan of voluntary cooperation, the necessary function of which is independence of the State.

If you prefer, I shall halt here.

Mr. HILLQUIT. You may as well.

The socialistic movement abroad has not materially changed or modified its methods within the last 20 years. It has changed its practical methods somewhat. It always does. It learns from experience. It is not any more conservative to-day than it was 20 years ago. It has struggled for political rights and suffrage always, since the existence of an organized Socialist movement in Europe. Some of its demands are for rights which we in the United States already possess—political rights. Others are for demands which we do not possess, as, for instance, proportional representation.

On the economic field, the Socialist parties in Europe are, as a rule, considerable in advance of the labor movement here in their demands, for the simple reason that they have accomplished more than we have accomplished here. The cooperation of the Socialist parties with the trade unions is by no manner of means a novel feature. It always has existed and, in continental Europe, most of the trade unions were directly created, organized, and called into life by the Socialist parties. The German trade-union movement does not play a dominant part in the labor movement of Germany. It is coordinated with the Socialist movement, except that they organized social democracy. It is somewhat more authoritative in their joint counsels.

What else have you there, Mr. Gompers? Have you any other questions that I have not answered?

Mr. GOMPERS. I want to ask you—you say that the demands of the organized workers of Germany are far in advance of these of the United States. Are the material conditions of the working people of Germany higher and better than they are in the United States?

Mr. HILLQUIT. I think they are decidedly better, in that they are more secure. I think the worst feature of labor conditions in America is the insecurity of existence—the question of stability—and I think that has been largely obviated in Germany through a comprehensive system of social insurance, which takes care of the workers in case of sickness, in case of permanent disability, in case of accident, and in case of old age.

I also think the problem of unemployment is not as acute among German workmen as it is among American workmen. And, taking it all in all, I think that the German workman is considerably better off than the American workman.

Mr. GOMPERS. Supposing the representatives of the German workmen disagree with that view, would you think you would have cause to revise your judgment?

Mr. HILLQUIT. No, sir; that alone would not cause me to revise my judgment, because it would imply that those American or German labor leaders had a better knowledge of the conditions of workers, both in Germany and the United States, and until I could verify that I would not revise my judgment.

Mr. GOMPERS. Have you read Mr. Legien's book, which he has recently published?

Mr. HILLQUIT. Formerly minister to the United States?

Mr. GOMPERS. As to the rights of German workers, do you know that meetings that are now being held, when held in Germany, they must be under police authority?

Mr. HILLQUIT. Yes, sir; all political meetings of any kind, and it is very objectionable, but it is not half as bad—

Mr. GOMPERS. Now, you are arguing with me.

Mr. HILLQUIT. No, sir; I am answering.

Mr. GOMPERS. I am asking you as to the conditions in Germany.

Mr. HILLQUIT. It is a broad question, Mr. Gompers, I can not always answer just so as to please you.

Mr. GOMPERS. If you do not answer at all—

Mr. HILLQUIT. Your question was about the conditions of the German workmen with reference to the right of suffrage and free speech, was it not?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. My answer to that is, that in Germany the workers, not as workers, but as citizens, are subject to certain police supervision in all of their political meetings. And I say, with all that, they exercise on the whole

greater freedom of speech and greater guaranty of security, for Germany has never had a case like Colorado or West Virginia or similar cases.

Mr. GOMPERS. Do you know that in Germany any meetings held that they permit no language to be spoken at any meeting other than the German language?

Mr. HILLQUIT. I don't think they know any other language but German. But, really, Mr. Gompers—

Mr. GOMPERS. I suppose that we, all of us, can be facetious if we want to.

Mr. HILLQUIT. Occasionally.

Mr. GOMPERS. But I asked you this question: Whether it is a fact.

Mr. HILLQUIT. I understand that the police authorities, present at every political meeting in Germany, have the right to close the meeting in case of certain, say, seditious utterances, and that for that purpose they must be familiar with the language the speaker uses, and the police have the right to prohibit the use of a certain language.

Mr. GOMPERS. I agree with you in your remarks as to Colorado, but I do not as to the German proposition. Do you know that the German trade-unions are forbidden by law to deal with any political question?

Mr. HILLQUIT. Not any political question, as far as my knowledge of it goes, which, I must confess, is limited. I know that the trade-unions deal with political questions in Germany; that they support the Socialist Party of Germany officially.

Mr. GOMPERS. I will ask you again, sir—

Mr. HILLQUIT. My answer is, I don't know.

Mr. GOMPERS. If, for instance, I say to you, sir, that quite recently the American Federation of Labor asked a representative of the German trade movement to transmit a communication for international peace to other countries and the officer of that organization could not comply with that request without violating the law and threatening the existence of the organization, do you regard that as liberties having been larger attained in Germany than in the United States?

Mr. HILLQUIT. I would not regard those instances as one of the particular liberties to the citizens of Germany by any manner or means.

Mr. GOMPERS. It would not be an infringement upon the liberty of the German workmen, the German citizen?

Mr. HILLQUIT. It would be.

Mr. GOMPERS. Supposing I tell you that actually occurred?

Mr. HILLQUIT. I should be very much interested.

Mr. GOMPERS. I will tell you that it did.

Mr. HILLQUIT. I thank you.

Mr. GOMPERS. In Germany there is considerable immigration from adjoining countries, particularly from Italy, surrounding countries, and, well, I think, coming from the Balkans, this last year or so. The police have nurtured and encouraged the strike breakers' employers imported into Germany, and by reason of the fact that the police have given them card permits, which are required to be renewed periodically, and when any one of those men becomes converted to the cause of the workmen in contention their cards, permits, are revoked and they are deported to their country. Do you see the influence that would have upon the condition of the class struggle among the workmen in Germany?

Mr. HILLQUIT. Yes, sir; decidedly.

Mr. GOMPERS. Inasmuch as the speaking of a foreign language at any public meeting is forbidden, do you see the effect and influence it will have upon poor workmen who have been brought from one place to another and into Germany and held in that benighted position?

Mr. HILLQUIT. I see that, Mr. Gompers.

Mr. GOMPERS. You would not regard that as a very great liberty?

Mr. HILLQUIT. I would infer from that that they still have capitalists in Germany also.

Mr. GOMPERS. Of course, that is contributory to the statement; but I suppose we have not forgotten that fact—I don't suppose we can be permitted to forget that, but if you will permit us to forget that fact; I do not want you, Mr. Hillquit, to imagine that by my questions I am making comparisons that are individuous to any other country, or that I am purblind or do not understand the wrongs or the outrages committed here, but I would ask you, as the representative, the authorized representative, of the Socialist Party, to bear in mind that when you speak of greater liberty and better conditions of the German

workman as the result of the movement of Germany's workmen that you ought to have these facts in mind, and I ask you whether you have?

Mr. HILLQUIT. I have this in mind, that when I spoke of better conditions it was the question of material conditions. That was what you asked. When you go into the point of political institutions and political liberty you deal with Prussia, which is a kingdom, and Germany, which is an empire, and the United States, which is a republic. But I do wish to reiterate that statement, that with the Socialists' representatives in the Reichstag, 111 of them, and the Socialist trade-unions in Germany, during such particular outrages as we had here—and I do not have to mention them again—could not have occurred in Germany. That is all.

Mr. GOMPERS. Haven't they occurred in Germany?

Mr. HILLQUIT. They have not.

Mr. GOMPERS. The right of meeting is forbidden, and the workmen yield; when they do that there is no conflict?

Mr. HILLQUIT. They have not killed women and children in Germany, and the Government of Germany has not tolerated it; but when there is a rude attempt on the part on some soldiers upon one crippled burgoman, the entire nation stood against them, and the Socialist faction in the Reichstag brought about almost the solution of that subject.

Mr. GOMPERS. The incident to which you refer has an entirely different application, and was a public official and not a workman.

Mr. HILLQUIT. A shoemaker.

Mr. GOMPERS. Isn't this the fact, that in the United States, the workman having become impregnated with the fundamental principles of liberty, propose to exert those rights and, as compared to the willingness of workmen of other countries, to yield rather than to assert—

Mr. HILLQUIT. It is not a fact, because the workmen you refer to, the workmen we have in mind, have not had time to become impregnated with any so-called habitual American spirit. They were Bohemians, Hungarians, Italians, and Austrians of all kinds, a very short time in the country. The attitude of the militia they began resenting when they began being burned alive and clubbed to death.

Mr. GOMPERS. There is nothing in resenting a wrong and an outrage.

Apart from the establishment of the cooperative commonwealth wherein does the purposes of your movement differ practically from the social reform movement which is carrying out corrections and improvements on the present social system, with the aim of complete social justice, and a maximum of possible liberty and happiness for mankind, such as the American labor movement? The American trade union movement, the American Federation of Labor?

Mr. HILLQUIT. Mr. Gompers, I have not been trying to establish any differences between the Socialist movement and the labor movement. On the contrary, it seems to me, you have been trying to establish them and vainly. The Socialists see a difference in degree only, but they see absolutely no antagonism between the activities of the Socialist movement and the labor movement, or economic movement. On the contrary, I want you to understand they claim that they go very well hand in hand; that each of them can exist and thrive with the support of the other, and we are perfectly willing to lend our part of the support, Mr. Gompers. Whatever little criticism we have of leaders or methods are purely in the nature of friendly criticism, and we are not here, or anywhere else, to criticize the organized labor movement of this country, particularly as against the public at large. We consider them as part of the labor movement, and consider ourselves as a part of the labor movement.

Now, Mr. Gompers, permit me to say this—may I, Mr. Chairman?

Chairman WALSH. If it is any statement other than a question, I wish you would defer it until such time as you take the witness stand, Mr. Gompers.

Mr. GOMPERS. What is your opinion, Mr. Hillquit, upon the general strike for the subversion of the present system?

Mr. HILLQUIT. I think it is Utopian. I don't think it is a feasible or realizable proposition at all. I think that whenever the workers of this country are ready to go into a general strike in order to change the general system, they will be intelligent enough and sufficiently organized to change the system directly by legislative methods.

Mr. GOMPERS. Legislative methods?

Mr. HILLQUIT. If they are strong enough to win out by a general strike, they will be strong enough to take hold of the machinery of Government and produce that change of system without any general strike.

Mr. GOMPERS. What do you mean by legislation—the enactment of law?

Mr. HILLQUIT. The enactment of a law, a decree, an ordinance, or any other mandate which can be executed.

Mr. GOMPERS. Expropriating property of all who may hold it to the Government or the cooperative commonwealth.

Mr. HILLQUIT. I have not said, "Expropriate." It may be a question of purchase.

Mr. GOMPERS. Well, say—take hold——

Mr. HILLQUIT (interrupting). Take hold—take control and possession of.

Mr. GOMPERS. Well, by revolution?

Mr. HILLQUIT. Oh, I suppose it would probably be called a revolution anyhow, but it may be a very peaceful one, I don't know.

Mr. GOMPERS. By confiscation?

Mr. HILLQUIT. Not as we are inclined at present. At present we are in the market for buying out the capitalists.

Mr. GOMPERS. By compensation?

Mr. HILLQUIT. By compensation. However, again, Mr. Gompers, I do not guarantee the acts of the next generation. The capitalists may become very naughty and the people may become very displeased with them, and may take things, just as we took the negro slaves from the owners.

Mr. GOMPERS. You have an idea that the taking might be for compensation?

Mr. HILLQUIT. Might be; yes.

Mr. GOMPERS. Have you an idea how such a proposition could be financed?

Mr. HILLQUIT. How it could be financed? We haven't reached that point yet, Mr. Gompers——

Mr. GOMPERS (interrupting). No.

Mr. HILLQUIT (continuing). I suppose that if paid, it will be paid by some Government securities.

Mr. GOMPERS. I think—I take it that you are not in favor of what is generally known by the capitalists as State socialism—State socialism?

Mr. HILLQUIT. Yes; I am not.

Mr. GOMPERS. Not even as a step toward a democratic socialism?

Mr. HILLQUIT. Why, if it were State socialism, it would not be a step toward democratic socialism?

Mr. GOMPERS. Under socialism, are not the present differences within the socialist parties in the United States significant of fatal differences in the management of a revolutionized society?

Mr. HILLQUIT. No; not fatal differences, Mr. Gompers. We have some differences of opinion within the Socialist Party, sometimes lively ones. I hope you have them in the American Federation of Labor. But we, nevertheless, manage to keep our organization to work for a common purpose. I presume there will be strong differences of opinion, and some fights, even under socialism. There have been in the American Federation of Labor. I should not want it to be otherwise.

Mr. GOMPERS. I mean as to liberty. Under socialism will there be liberty of individual action, and liberty of choice of occupation and liberty of refusal to work?

Mr. HILLQUIT. Plenty of it, Mr. Gompers.

Mr. GOMPERS. I take it that you have no apprehension that under the democratic management of socialism, the administrators could or would attempt to exploit the workers under them, and one set of laborers would exploit another set; the lazy office holders, the industrious artisans; the strong and bolder, the weaker and more modest ones; and the failures, the economically successful.

Mr. HILLQUIT. Why, I think there will be some abuses of some kind appear. Even under socialism men will still remain human, no doubt. But I think, Mr. Gompers, we have every reason to believe that they will be very small and slight, as compared to present abuses, for the system is based on a greater democracy and self-government, and provides for means of remedy; and furthermore, there is no great incentive to corruption such as we have under capitalism and private gain.

Mr. GOMPERS. In the event that the cooperative commonwealth should be established, taking it for granted for the sake of the question, that it is possible, it would mean or have for its present purpose, the highest material and social and moral improvement of the condition of the workers attainable at that time, would it not?

Mr. HILLQUIT. I think so.

Mr. GOMPERS. And would there be any higher aim after that is established?

Mr. HILLQUIT. Oh, there would be plenty more. There will be new aims coming every day.

Mr. GOMPERS. Still more?

Mr. HILLQUIT. Still further.

Mr. GOMPERS. Still higher?

Mr. HILLQUIT. Still higher.

Mr. GOMPERS. Now, if that is so, isn't it a fact that it is not at all a goal but simply a transitory ideal?

Mr. HILLQUIT. Sure; it is our present goal, and it is transitory. There will be a forward movement to-morrow.

Mr. GOMPERS. In other words, you think even if that condition of affairs should be possible, it, like the conditions of to-day, is transitory and continually tending toward improvement?

Mr. HILLQUIT. Sure enough.

Mr. GOMPERS. And not a goal?

Mr. HILLQUIT. Not an ultimate goal. There is no such thing as an ultimate social goal.

Mr. GOMPERS. In the socialist state, would you have each worker rewarded by the full product of his labor, or by an apportionment of the product according to his demands? In other words, would the rule be, to each according to his deeds, or to each according to his needs?

Mr. HILLQUIT. I think neither, strictly speaking. I don't suppose his socialist régime would at once and very radically change established conditions. I think it would have to grow up and be built up on the existing basis. And I think it would largely be a question of salaries and wages, as nearly as possible, in proportion to the usefulness of the workers—all of them greater than to-day, because it would include the profits to the workers.

Mr. GOMPERS. So, as a matter of fact, then, if the cooperative commonwealth is not a goal, is not an end, then why term it socialism, and why not term it the ordinary, natural development of the human race to a higher and better state of society?

Mr. HILLQUIT. We do term it the ordinary and natural development of the human race to the point of socialism. In other words, Mr. Gompers, you divide the history of mankind pretty arbitrarily into certain periods. You say the period of slavery, the period of feudalism, the period of capitalism. Now we foresee the next step in development, called the period of socialism. You can not draw a line of demarkation where it starts out or where it vanishes. It is certainly not permanent. There will be something superior to that some time. In the meantime every stage of development is superior to the preceding stage; and by the same token capitalism is superior to feudalism. Socialism is superior to capitalism. That is all.

Mr. GOMPERS. You simply apply it as a term.

Mr. HILLQUIT. Sure—a term denoting——

Mr. GOMPERS (interrupting). And not an end.

Mr. HILLQUIT. Not an ultimate end in social development; no.

Chairman WALSH. Any members of the commission desire to ask Mr. Hillquit any questions?

Commissioner BALLARD. I should like to ask him a question or two.

Chairman WALSH. Mr. Ballard, Mr. Hillquit, would like to ask you some questions.

Commissioner BALLARD. You were speaking of the conditions of socialism and of the workers under it being different from the present. If we had an ideal condition of socialism, would not there be some of the people who would be workers, some of the people who would still be managers, under any condition of socialism?

Mr. HILLQUIT. They would all be workers and some would be engaged in the management and supervision and some in the manual work and some in the mental work. No doubt there would be a division of functions.

Commissioner BALLARD. But you would not allow any, no matter what their division was, to acquire or have any larger division of the advantages than the lowest worker?

Mr. HILLQUIT. Well, I would not put it that way. We would not permit anybody to enjoy a workless income by virtue of his private ownership of the tool which society needs for its wealth production, for it is certainly recognized that our human nature is diversified and that we have different aptitudes and

different abilities, and the work would certainly be organized and functions divided.

Commissioner BALLARD. And different rewards?

Mr. HILLQUIT. And different rewards, no doubt, for some time.

Commissioner BALLARD. You spoke this morning of the American Federation of Labor and of its being somewhat antiquated in its methods. Could you, in a short time, tell us what changes you would suggest that should come over the American Federation of Labor in order to make it more suitable to the needs of the present time?

Mr. HILLQUIT. I think those changes are coming anyhow. The changes, to my mind, are these: The tendencies, which were shown very distinctly and also recognized by the American Federation of Labor, toward closer alliance and amalgamation of kindred trades and crafts in one. I think the political attitude of the American Federation of Labor is another. I think the American Federation of Labor does not take advantage of the great inherent political powers resting within that organization; and I think by throwing it after one chimera or another and by following the policy, whatever it is, of punishing friends and rewarding enemies, dissipates a good deal of the very great power which organized workers of all countries can have; and I think the direction of further progress in the American Federation of Labor lies just in this greater solidarity in their organization, greater and close affiliation of allied bodies, and political independents.

Commissioner HARRIMAN. I want to ask a question or two there, Mr. Hillquit. It has been partially asked by Mr. Ballard, but I did not quite get the answer. Isn't it inevitable that some men, who have superior mentality and driving force, will always go ahead of other men? And if that is so, how are you going to prevent the capitalist class forging to the front and getting into power?

Mr. HILLQUIT. Mrs. Harriman, there is no objection to a person of superior quality or merit getting ahead of the man of inferior quality or merit, or getting, say, a larger reward or compensation. The Socialists' objection is to the men of inferior quality or intellect or of no intellect getting ahead of the brainy man by reason of his ownership of the tools, by reason of capital. You take to-day, any kind of a person who happens to be lucky enough to be born to wealth and who inherits a good deal of stocks and bonds; he may be devoid of any brains, of any intellect, but will get a princely income nevertheless, whereas perhaps a foreman or caretaker or some employee may be a very much wiser man and yet get a mere pittance. That is the Socialists' objection.

Commissioner HARRIMAN. Then you do not object to the whole capitalist class—only to individuals of the class who are wealthy?

Mr. HILLQUIT. No; we object to the capitalist class, for that class derives its income without work from the ownership of capital. If any member of the capitalist class can render useful services to society he is entitled to compensation for such services; but we object to any compensation being given to him for his good fortune of being born to wealth and getting dividends, whether he is good or bad, capable or incapable, productive or otherwise.

Commissioner LENNON. Mr. Hillquit, I want you to answer a question a little more elaborately than you have, or than I have understood you. I understood you to say that the coming of Socialism must be through growth, through evolution, through the development of the human race to higher and better conditions, and that they must attain better conditions, so far as their industrial life is concerned, and social life, and their mental activity.

Mr. HILLQUIT. Yes.

Commissioner LENNON. Then you do not believe in the theory that you must grind a man's nose to the extreme before he will rebel and help to bring about better conditions?

Mr. HILLQUIT. By no manner of means; just the contrary.

Commissioner LENNON. Has that not been the theory expressed by a very large number of socialists up to recent times?

Mr. HILLQUIT. It is not. The distinguishing feature between the Socialists, or as we term it more accurately, the Social Democrats, and the Anarchists is that the Anarchists adopt as their motto, "The worse the better." Whereas the Socialists' motto is, "The better the better."

Commissioner BALLARD. I would like to ask you, if you please, one other question. As I gather, you want the tools to be owned by the commonwealth. Would you allow any man by his own efforts to acquire property and allow him to enjoy the use of that himself?

Mr. HILLQUIT. Yes.

Commissioner BALLARD. Would you require that his children should start out the same as any other person's children or would you allow him to pass on his dollars and cents that he had acquired.

Mr. HILLQUIT. In other words, would we allow inheritance under Socialism? Personally I think we probably would. Understand I have no warrant to speak for the future, but under Socialism there would be no private ownership of productive processes, industries, machinery, or any means of exploiting a fellow man. There would be private ownership only in the means of consumption and enjoyment. And society at large is not very much concerned whether you consume your consumable commodities in a year or preserve them for 10 years later or pass them down to your children so long as there is no possibility for the exploitation of your fellow men by the ownership of the social tool—of the instrument of labor—so long, I do not see anything in the Socialist program that would prohibit the use and enjoyment of simple articles and the transmission of them to posterity.

Commissioner GARRETSON. Mr. Hillquit, your theory is, then—I want to get myself straightened—

Mr. HILLQUIT. Get it.

Commissioner GARRETSON. In regard to this question started by Mrs. Harriman, your theory is that it would be impossible under the system to misuse the ability to accumulate. Is that it?

Mr. HILLQUIT. Yes, sir; that is to—

Mr. GOMPERS (interrupting). In other words, the incentive would be gone for dishonest exploitation?

Mr. HILLQUIT. Exactly; dishonest exploitation or exploitation of any kind. It might be accumulation in consumable articles.

Commissioner GARRETSON. I was simply accenting exploitations with the other adjective.

Chairman WALSH. The commission will now stand adjourned until tomorrow morning at 10 o'clock and will meet in the aldermanic chamber, the room immediately east of this.

(Thereupon, at 4.25 p. m. of Thursday, May 21, the proceedings were adjourned until Friday, May 22, 1914, at 10 o'clock a. m.)

NEW YORK CITY, May 22, 1914—10 a. m.

Present: Chairman Walsh, Commissioners Lennon, Garretson, O'Connell, Ballard, Delano, and Harriman.

Chairman WALSH. The commission will please come to order. All right, Mr. Counsel, we are ready to proceed.

Mr. THOMPSON. I believe the witness, Mr. Hillquit is not here.

Chairman WALSH. We can not wait for him. Just have Mr. Gompers take a seat and examine him.

Mr. THOMPSON. Is Mr. Gompers here?

Mr. GOMPERS. Yes.

TESTIMONY OF MR. SAMUEL GOMPERS.

Mr. THOMPSON. For the purposes of the record, give us your name, address, and occupation.

Mr. GOMPERS. Samuel Gompers, president of the American Federation of Labor, residing in the city of New York; headquarters of the American Federation of Labor are at Washington, D. C.

Mr. THOMPSON. How long, Mr. Gompers, have you been president of the American Federation of Labor?

Mr. GOMPERS. The American Federation of Labor was formed in 1881 in Pittsburgh, when I was elected its first vice president, and, with the exception of two terms, I have been president of the American Federation of Labor from that time.

Mr. THOMPSON. Mr. Gompers, what trades, generally speaking, does the American Federation of Labor include?

Mr. GOMPERS. It covers practically the field of industry throughout the country.

Mr. THOMPSON. And there are no limitations as to membership in it on the part of any body of workers?

Mr. GOMPERS. There is none. The only requirement, in so far as the American Federation of Labor is concerned, is that it shall be composed of wage earners.

Mr. THOMPSON. If you can, Mr. Gompers, I would like you to state the trades which are, as a matter of fact, affiliated, and if you can not, I would like to have you submit at some time that to the commission in written form.

Mr. GOMPERS. I have it in print, sir. The American Federation of Labor print a directory of all the organizations affiliated to it and a list of the organizations which are not affiliated but which are regarded by the American Federation of Labor as having common policies and common polity, even though unaffiliated. I shall in a moment or two submit to you a copy of that directory for such purposes as you may desire.

Mr. THOMPSON. Mr. Gompers, what is the form of the organization of the American Federation of Labor?

Mr. GOMPERS. The American Federation of Labor, as its name implies, is a federation. It is not, as it is often mistakenly called, an organization, but a federation. It is a federation of organizations, each of which has its own government, determined by its own needs and requirements, the result of the experience of the members of the organization; and this right, as in the beginning, has been proclaimed and has been adhered to as consistently as possible in the history of the American Federation of Labor. The federation has no part except that which is yielded and conceded by the organizations which make up the federation.

Mr. THOMPSON. Has the Federation of Labor got a constitution, so called, or any articles or organization?

Mr. GOMPERS. It has.

Mr. THOMPSON. Have you those present, Mr. Gompers?

Mr. GOMPERS. I have, sir.

Mr. THOMPSON. Would you mind giving a copy to the commission?

Mr. GOMPERS. Very glad to hand you one, now, sir. It is the constitution as amended and adopted at the last convention of the American Federation of Labor at Seattle, November, 1913.

Mr. THOMPSON. I will ask the stenographer to mark this "Gompers Exhibit No. 2," as Exhibit No. 1 will be a list of the affiliated bodies.

(Gompers Exhibit No. 2, booklet entitled "Constitution of the American Federation of Labor" as adopted at the thirty-third annual convention held at Seattle, Wash., November 10-22, 1913, was submitted in printed form.)

Mr. GOMPERS. I can now, sir, give you a list of the affiliated organizations. There are 110 national and international unions. There are, industrially, five departments. There are 42 State federations of labor. There are 623 city central bodies or local city federations of the local trades-unions in the city or town, and there are 642 local trade and federated unions, directly attached to the American Federation of Labor as local unions, and whose chartered existence to the American Federation of Labor will continue so long—until the time that there has been a sufficient number of each particular calling or trade, so that a national union may be formed from these locals and set up in business as a sovereign entity in the trade or the calling or the industry covered by these local unions. I hand you here, sir, a copy of this directory, issued on January 12, 1914, containing the names and addresses of the executive officers of either the national trade-union, the department, the State federation, the central body, or the local and federal labor unions.

Mr. THOMPSON. I give this to the stenographer and ask to have it marked "Gompers Exhibit No. 1."

(Gompers Exhibit No. 1, booklet entitled "List of Organizations Affiliated with the American Federation of Labor," dated January 12, 1914, was submitted in printed form.)

Mr. THOMPSON. Mr. Gompers, how does the organization of the American Federation of Labor express itself? Does it have a convention, or has it got officers?

Mr. GOMPERS. It has.

Mr. THOMPSON. What convention does it hold and what officers has it?

Mr. GOMPERS. The conventions are held annually, and have for many years been held in the month of November of each year. The officers consist of a president, eight vice presidents, a secretary, and a treasurer, the 11 officers constituting the executive council.

Mr. THOMPSON. What jurisdiction and authority does the convention have? Is it the supreme lawmaking body of the federation?

Mr. GOMPERS. It is, to the fullest limit; and yet within the limitations of the authority and power conceded to the federation by the constituent or federated sovereign organizations. If I may be permitted to use the simile that we have formed our American Federation of Labor practically after the make-up of the Government of the United States, both in its Federal jurisdiction and within the Federal limitations the State sovereignty and prerogative and right and the Federal Government, exercising only such powers as are conceded to the United States by the States.

Mr. THOMPSON. The right of secession, Mr. Gompers, however, remains with the local union, does it not?

Mr. GOMPERS. With the affiliated unions.

Mr. THOMPSON. With the affiliated—

Mr. GOMPERS (interrupting). With the affiliated unions. No one can question the local right within the federation of an organization to secede or withdraw. There is a moral obligation, a spirit of camaraderie, a spirit of patriotism, a spirit of endeavoring to be of mutual assistance.

Mr. THOMPSON. In case, Mr. Gompers, of the secession of an international union which has been affiliated with the American Federation of Labor, are any coercive measures adopted by the American Federation of Labor to keep it within the federation or to make it recall the secession?

Mr. GOMPERS. I did not catch the question.

Mr. THOMPSON. In case of the withdrawal or secession of an international union which has been affiliated with the American Federation of Labor, are any coercive methods used by the American Federation—

Mr. GOMPERS (interrupting). None, sir.

Mr. THOMPSON (continuing). To cause the international union to withdraw its secession?

Mr. GOMPERS. None, sir. As a matter of fact, the Western Federation of Miners, for instance, withdrew from the American Federation of Labor about 1896. There were many efforts, many suggestion made to have local unions belonging to the Western Federation of Miners to become part of the American Federation of Labor as local unions. Not only was that discouraged, but the proposal was repudiated. And that is equally true with national organizations which are not affiliated to the American Federation of Labor. The obligation that we feel is that it ought to be the duty of every wageworker to belong to the union of his trade or his calling, and that it is the duty of a local union or a trade or calling to belong to the national or international union of that trade and calling, and that it is equally the moral duty of every organized body—bona fide organized body—of workmen to belong to the American Federation of Labor; but as to coercive methods, they are not employed.

Mr. THOMPSON. Where an international union, Mr. Gompers, has joined the American Federation of Labor and at the convention resolutions are passed relating to the trade of that international union, and the international union refuses to carry out the order of the convention, what is done then? What power has the American Federation of Labor?

Mr. GOMPERS. It has no powers to enforce its judgment. There is but one instance that I recall in which an organization, having agreed in advance to abide by the decision of the executive council sitting as a board of arbitration—that is, to abide by the decision rendered by the council in a dispute between them and two other organizations, and then when the decision was rendered against it it refused to abide. It was then decided that the organization's charter or its chartered relations with the American Federation of Labor would cease, and it did upon a certain date, and it did so cease; but the organization in a year after reaffiliated upon a declaration by the convention to that effect.

Mr. THOMPSON. And the only actual power outside of moral power that the A. F. of L. has is the power of expulsion from membership; is that right?

Mr. GOMPERS. From membership in the American Federation of Labor.

Mr. THOMPSON. In the American Federation of Labor?

Mr. GOMPERS. Yes, sir. And I ought to say, sir, that that can only be accomplished when upon roll call at the convention of the American Federation of Labor two-thirds of the vote are cast for such revocation of charter or disassociation of that organization from the federation.

Mr. THOMPSON. Mr. Gompers, you have spoken about the moral force of the American Federation of Labor and the allied organizations. Have you found that to be effective in the dealings of the international union, one with another?

Mr. GOMPERS. The most effective of any influence and power. As a matter of fact, the experience of the men in our movement has shown one fact stand-

ing out in bold relief, that every movement of workmen which has been made and having a system of government by which power, force, compulsion are attempted to be practiced it has aroused the resentment and repudiation and dissolution, which the effort to exist as a moral force upon the doings of men and of women has exercised a magnificent influence. In other words, they are just human beings. And when men are told that they must do something at the peril of their organized existence, or they must do something at the peril of their personal existence, there is a spirit aroused in men to say, "I shall try to do the very contrary to that you command me to do." If men are appealed to, their better judgment, their better feeling, to righteous course and conduct, they are more ready to yield and do the best that they can.

Mr. THOMPSON. Mr. Gompers, it is true that, under the law of the land no man, a member of no organization, has a right to force another to take a certain action, in a certain action. Isn't that true? I say that no trade-union has a legal right to force a member to go on a strike, for instance?

Mr. GOMPERS. It has not.

Mr. THOMPSON. The sole force, then, that any organization in this country has—yours, as well as others—is the moral force upon its members to take concerted action; isn't that true?

Mr. GOMPERS. Yes, sir; it is.

Mr. THOMPSON. And that that rule applies in every phase of labor organization, and particularly in your organization?

Mr. GOMPERS. Particularly, in the Federation.

Mr. THOMPSON. You have spoken, Mr. Gompers, of the officers and executive council, I believe, of the American Federation of Labor. You have told of its membership. What are its powers?

Mr. GOMPERS. They are an executive committee, an administrative committee, if you please, for the purpose of carrying into effect the conclusions reached at the conventions, and to take such initiative in regard to any matter, particularly legislation upon which the convention had not an opportunity to express itself; to be helpful in any and in every way to any sphere of human activity contributing to the protection, the benefit, the welfare of the people, and particularly of wage earners.

Mr. THOMPSON. Are the powers of this council set forth?

Mr. GOMPERS. Yes, sir; in the constitution, a copy of which I handed you, sir.

Mr. THOMPSON. Now, Mr. Gompers, in a general way, if you know, what is the total membership of the unions affiliated or federated with the American Federation of Labor?

Mr. GOMPERS. In the report which the executive council of the American Federation of Labor submitted to the Seattle convention last November was incorporated the report of the secretary of the federation, Mr. Frank Morrison, and his report is based upon the reports made to his office by the affiliated organizations, and upon which these organizations pay the per capita tax for their respective memberships.

The average membership for the year 1913, Mr. Morrison reported and accounted for as having, upon whom the per capita tax and for whom the per capita tax, was 1,996,004 members. I ought to explain that, because we aimed to avoid any padding of membership by any organization in the last month just preceding the conventions and thereby increasing the voting power of the delegates of any organization.

In 1895 the convention made the change that the representation and voting power in the convention should not be based, as theretofore, upon the last month's payment, but upon the average payment of the organization during the year. If I may be permitted to call your attention at this time to a chart which was prepared for the last convention; this chart, you will observe, contains the membership of the affiliated organizations of the American Federation of Labor, from the date of the formation of the federation in 1881, up to and including 1913.

Mr. THOMPSON. Just a moment. Will you give us a copy of that, Mr. Gompers?

Mr. GOMPERS. I did that with special design, to bring it with me for that purpose.

Mr. THOMPSON. The chart mentioned is offered as Gompers Exhibit No. 3.

(The chart was marked "Gompers Exhibit No. 3," of May 22, 1914.

The chart mentioned by Mr. Gompers is page 42 of the Report of Proceedings of the Thirty-third Annual Convention of the American Federation of Labor,

held at Seattle, Wash., November 10-22, 1913, published by the Law Reporter Printing Co., Washington, D. C., and was submitted in printed form.)

Mr. GOMPERS. You will observe in that chart the small membership in 1881, and its very slow growth up to 1892; and then that the membership was practically stationary up to 1898, and then in 1899 there was a slight growth. Then in 1900 a still greater growth, and then so on and so on growing until in 1904 there was a recession; that is, the report of 1904 is based upon the year 1903 and 1904, and was the result of the industrial stagnation which existed at that time. But you will observe also that there has been a recession here and there of the membership of affiliated organizations. There was a rise again very shortly after and never—never receding back to the former total of membership. There was a constant, continual growth, until in September last; that is, September 30, 1913, at which time the membership on which the per capita tax was paid to the American Federation of Labor was \$2,054,526. There is an increased membership since then. And you may be interested in the observation of another chart submitted in the same report, which shows the relationship of the various affiliated organizations to the American Federation of Labor, which is rather an interesting chart.

Mr. THOMPSON. Is that in that book, Mr. Gompers?

Mr. GOMPERS. It is, sir.

Mr. THOMPSON. May we have a copy of that book to file?

Mr. GOMPERS. I should be very glad to submit it just as it is.

Mr. THOMPSON. Would you mind giving us the whole book?

Mr. GOMPERS. I will give you the proceedings—well, I don't care. You may have the whole book.

Mr. THOMPSON. Well, at least that to which you are referring. What page is this?

Mr. GOMPERS. That is page 43.

Mr. THOMPSON. That is page 43 of Gompers Exhibit No. 4.

(Gompers Exhibit No. 4, Report of the Proceedings of the Thirty-third Annual Convention of the American Federation of Labor, held at Seattle, Wash., November 10-22, 1913, published by the Law Reporter Printing Co., Washington, D. C., was submitted in printed form.)

Mr. GOMPERS. Before I hand you this, Mr. Thompson, may I explain this chart? You will observe in the chart, in the center of it, the essence, the key, the heart to the federation, the national and international unions. It is they which are the primary factors, the sovereign national and international unions; and there to the left, the five departments created to do the best that each department can for each individual trade or calling, or for the industry interested in the departments. Then there are the 42 State federations of labor to the right; then the 659 local trade and federal labor unions; then the 621 city central bodies; then the 317 local councils—that is, of the trades primarily represented in these departments; and then again, right at the bottom, as the foundation of it all, the 2,046 local trades-unions. The chart is made up as containing the ligaments, the heart strings, you may say, of the make-up of the federation.

Mr. THOMPSON. Have you made any comparison, Mr. Gompers, between the growth of the membership of the Federation of Labor and the growth of the population of the United States?

Mr. GOMPERS. I have made no accurate comparison. The question, of course, needs—an answer to the question, rather needs elucidation. The membership of the organizations affiliated to the American Federation of Labor are composed of adults, and they are principally men, but there are some women. Therefore, a comparison as to the membership, say, for convenience the membership in the American Federation of Labor—and the population of the United States is hardly a fair comparison. If you count five to a family, it is only fair to assume that in the American Federation we have about 11,000,000; and upon that, as I say, paid up in their per capita tax.

Mr. THOMPSON. My question was not directed to that which you state, but was directed to the proportion of the increase—whether the percentage of increase had gone on with the increase in population. Now, if you don't know, that is all right. We can figure that out.

Mr. GOMPERS. I think the increase of the American Federation of Labor—the percentage—has been greater than that of the population of the United States.

Mr. THOMPSON. Mr. Gompers, now, will you please tell us in your own language the objects and purposes of the American Federation of Labor?

Mr. GOMPERS. Recognizing the fact that associated effort is of greater influence and power in securing any given object over that of individual effort, the first purpose for which the American Federation of Labor directed its efforts, is for the encouragement or formation of trade and labor unions, and the closer federation of such unions—that is, so far as local, State, national, and international—the establishment of departments, central bodies—for these organizations to aid and assist each other to the fullest in any of the struggles in which they may be engaged; for the protection of the rights and the interests of the membership and of the working people; to promote and advance their interests and rights economically and politically, legislatively and socially; to make life the better for living in our day, and so that the workers may be in a better position to meet any problems with which the future generations may be confronted. In a word, to let no effort go untried by which the working people, as the masses of the people, may find betterment upon every field of human activity. There is no limit to any course which may be pursued by our American Federation of Labor if it is calculated to be of advantage to the people of our country and primarily of advantage to the working people. Of course, I could enter into details; but the omission of any one factor would then be—or could be inferentially stated—that the federation's activity was so far limited. I take in the sum total of human activity, regardless upon what field that may be, which can aid, which can promote, and which can advance and protect the rights and the interests of the working people to establish better conditions and also to work for the greatest sum total of human happiness. At no part of their scheme or in the rules or in the order of evolution, is there a limit placed upon the work and the activities of the American Federation of Labor.

Chairman WALSH. Now, Mr. Hillquit, you may cross-examine Mr. Gompers.

Mr. HILLQUIT. Mr. Gompers, you say the principal aim of the American Federation of Labor—

Chairman WALSH (interrupting). Let me make a suggestion, in view of the difficulty yesterday afternoon, when Mr. Gompers had a little trouble in getting yes and no answers from you. We recognize anything that is in the field of controversy—some arguments must be interspersed, we don't want to shut you out—but I wish you would, as near as possible, dress it in the form of interrogations, and that Mr. Gompers would, as near as possible, answer them directly, yes or no, and, of course, making any explanations that to your mind seems proper.

Mr. HILLQUIT. I shall cheerfully submit, Mr. Chairman, but I suppose the commission realizes that this is a somewhat difficult situation.

Chairman WALSH. Yes; we realize that. I guess you noticed that we realized it yesterday.

Mr. HILLQUIT. Certainly.

Chairman WALSH. Mr. Garretson suggests a thing very wisely: That if possible you should take a sort of central position so that these gentlemen of the press, who are having some difficulty, may have more convenience.

Mr. HILLQUIT. That is here [indicating]?

Chairman WALSH. Yes.

Mr. HILLQUIT. Now, Mr. Gompers, you have stated that the general objects of the federation are to better the conditions of the workers in all fields of human activity. By that you mean, I presume, economic betterment in all directions first, don't you?

Mr. GOMPERS. First. Yes, and in every other.

Mr. HILLQUIT. That is, including political and social?

Mr. GOMPERS. In every particular.

Mr. HILLQUIT. That would include, would it not, Mr. Gompers, improvement in political life and in social standing, as well as in economic conditions?

Mr. GOMPERS. Beyond question.

Mr. HILLQUIT. Did your federation formulate definite programs of such improvements from time to time?

Mr. GOMPERS. Yes; the American Federation of Labor has concerned itself with first questions first.

Mr. HILLQUIT. And it has passed various resolutions on such subjects, recommending concrete ameliorative measures, has it not?

Mr. GOMPERS. It has.

Mr. HILLQUIT. Has the American Federation of Labor expressed itself in favor of the shortening of the workday in keeping with the increased productivity of machinery?

Mr. GOMPERS. It has—

Mr. HILLQUIT (interrupting): Your answer is, it has?

Mr. GOMPERS. It has, and I should say that that demand for a shorter work-day, and the movement for a shorter workday has been going on for nearly 50 years. Twenty years prior to the organization of the American Federation of Labor. It had more concrete form and expression since the American Federation of Labor was formed. For instance, in 1884, the American Federation of Labor declared that a concerted effort should be made by the working people of the United States to secure the eight-hour working day on May 1, 1886. And the Federation offered its services to be helpful to the organizations in the establishment of the eight-hour workday by conferences between workmen and employers, by conferences by correspondence, by publication, by agitation and education and, if it is responsive to the question, I may be permitted to say right here that upon the recommendation of the American Federation of Labor, two trades, piecework trades, enforced the eight-hour workday on May 1, 1886, and they have maintained the eight-hour workday in the industry from that day until this; and that, as a result of that declaration of the American Federation of Labor, the movement took impetus so as to reduce the hours of labor in many trades and calling from the 18-hour day, the 16-hour day, not to the 8-hour day, but to the 10 and to the 9. Now, of course, I may, I suppose at some other stage of the proceedings, I may refer to the hours of labor now generally prevailing in industry.

Mr. HILLQUIT. You may. At any rate, Mr. Gompers, the American Federation of Labor is unequivocally in favor of a shorter workday, and a progressive decrease of working hours in keeping with the development of machinery and other productive forces, is it not?

Mr. GOMPERS. And, in addition——

Mr. HILLQUIT (interrupting). It is?

Mr. GOMPERS. Yes; and in addition, the need, the recognized need in our day for greater rest opportunities and time for rest and leisure and cultivation.

Mr. HILLQUIT. Quite so. Then, the American Federation of Labor is also in favor of a rest of not less than a day and a half in each week?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. It is?

Mr. GOMPERS. Yes. I would say that we insist upon the one rest day, entire day in each week. I may say that it was my great pleasure to have been the president of the New York State Federation of Labor when the legislature of the State of New York, the first one in America to make Saturday afternoon a legal holiday.

Mr. HILLQUIT. You are, then, Mr. Gompers, in favor of the rest period of a day and a half, at least, in each week?

Mr. GOMPERS. I am, sir.

Mr. HILLQUIT. And are you also in favor of securing a more effective inspection of workshops, factories, and mines?

Mr. GOMPERS. Mr. Hillquit, if I may, I should prefer that you would address me, not as to my personal wishes and preferences. I am here as president of the American Federation of Labor, and I should, if you can, like to have you address your questions as to what the attitude of the American Federation of Labor is, rather than my own.

Mr. HILLQUIT. Mr. Gompers, it will be understood that whenever I refer to you, I refer to you as the head and representative of the American Federation of Labor, and in such capacity I now repeat that question: Are you, or is the American Federation of Labor, in favor of more efficient inspection of workshops, factories, and mines?

Mr. GOMPERS. It is, it has always been, and has worked to the accomplishment of the purposes which you have just now read as being declared.

Mr. HILLQUIT. And does the federation also favor forbidding the employment of children under 16 years of age?

Mr. GOMPERS. It has, is, and has worked toward the accomplishment of that purpose.

Mr. HILLQUIT. Does the federation favor forbidding the interstate transportation of the products of convict labor and the product of all uninspected factories and mines?

Mr. GOMPERS. Yes, sir; that is merely an instrumentality. One of the instrumentalities for the accomplishment of the question you asked me just now. It is not in itself the thing; it is in itself an instrumentality to accomplish the thing.

Mr. HILLQUIT. But as such instrumentality, the federation favors the measure, does it not?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And do you also favor direct employment of workers by the United States Government, or State governments, or municipal governments, without the intervention of contractors?

Mr. GOMPERS. Yes, sir; and to a large degree have accomplished that.

Mr. HILLQUIT. Very well, sir. And does the federation also favor a minimum wage scale?

Mr. GOMPERS. That question is general, and does not admit of an intelligent answer.

Mr. HILLQUIT. Well, does the federation favor the fixing by legal enactment of certain minimum wages below which the employer should not be permitted to pay?

Mr. GOMPERS. The American Federation of Labor is not in favor of such a proposition; but on the contrary is very much opposed to it, and it is necessary to say—

Mr. HILLQUIT (interrupting). Can you state your reasons why, Mr. Gompers?

Mr. GOMPERS. The attempts of Government to establish wages at which workmen may work is the experience of history to be the beginning of an era, and a long era, of industrial slavery. There was a time in history where governments and courts, at court sessions, established wages, and during periods where there was a dearth of workmen to perform the work required, and employers offered higher wages, the workmen and employers were brought into court and both punished, punished by imprisonment and physically mutilation, because the one asked, received, or demanded and the other was willing to offer, or did pay higher wages.

Mr. HILLQUIT. May I interrupt you, Mr. Gompers, because I think you misunderstood me.

Mr. GOMPERS. I think I will anticipate what you want with the next five or six words. The proposition upon which I am questioned is as to minimum wages.

Mr. HILLQUIT. Correct.

Mr. GOMPERS. I thought I anticipated you. I think I know the operations of men's minds a bit, particularly in the differences which you and I have both the honor to represent.

This is a proposition, presumably, to determine a minimum wage. It is a maxim law, although I am not a lawyer, perhaps know all too little about law—that once a court has jurisdiction over an individual, it has the power to exercise, the field and authority of that jurisdiction. I fear invite the Greeks when they bore gifts and attempted to entrap the American workmen into a species of slavery under the guise of an offer of this character is resented by the American, the men and women of labor in the American Federation of Labor.

Mr. HILLQUIT. In other words, Mr. Gompers, assume a law being passed in the State of New York to the effect that no women be employed in factory industries at a wage less than, say, \$9 or \$10 a week, you would not object to such a measure on the ground that it might tend to enslave the women workers of the State of New York? Is that your proposition?

Mr. GOMPERS. Let me say this, that can not be answered in a categorical answer yes or no.

Mr. HILLQUIT. Answer it in your own way.

Mr. GOMPERS. When that question was up for investigation and discussion by the executive council, and subsequently by the American Federation of Labor, there was quite a diversion of views. I am betraying no confidence when I say that. The convention decided that the subject was worthy of further study and consideration, and that is the official action of the convention of the American Federation of Labor.

If you desire to have my personal views upon that I shall be perfectly willing to express them.

Mr. HILLQUIT. You may voice your own views or the views of the federation, as you please. All I want is a clear answer. My last question was: Assuming that a law was proposed in this State, fixing a minimum wage rate for women employed in factories at, say, \$9 or \$10 a week, would you individually or as representative of the American Federation of Labor, oppose such a law?

Mr. GOMPERS. I would not be authorized nor warranted in opposing, from the attitude as expressed by the American Federation, as a subject worthy

of further study and investigation. Personally, of course, I would prefer in general, not to do that, but in this I shall be very glad to volunteer my opinion.

Mr. HILLQUIT. Go ahead, Mr. Gompers.

Mr. GOMPERS. To say that, in my judgment, the proposal, the well-meaning, is a curb upon the natural right and development, the opportunity for development of the women of our country and of industry.

Mr. HILLQUIT. Then your idea is, Mr. Gompers, if the legislature once fixed a minimum wage, that then the machinery of the State would be set in motion to enforce work at that rate, whether the worker desires to render such service or not?

Mr. GOMPERS. I am very suspicious of the activities of governmental agencies.

Mr. HILLQUIT. And your apprehensions are, then, in that direction, that once the State is allowed to fix a minimum rate the State would also take the right to compel women or men to work at that rate. Is that it?

Mr. GOMPERS. That is my apprehension.

Mr. HILLQUIT. That is your apprehension?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Mr. Gompers, you were in favor of a maximum workday established by law, are you not?

Mr. GOMPERS. I am.

Mr. HILLQUIT. Wouldn't you, by analogy, say that there should be an apprehension that if the legislature once is allowed to establish a maximum workday that it might, by putting its machinery in motion, compel workmen to work up to the maximum allowed?

Mr. GOMPERS. I think that my answer has not been sufficiently intelligent or comprehensive when I answer by the two monosyllables, "I am." I ought to say I am in favor of the legal enactment for the maximum hours of labor for all workmen in direct Government employment, and for those who do work that the Government has substituted for Governmental authority. I am in favor of the—and the federation is in favor of the—speaking for the federation—is in favor of the maximum number of hours for children, for minors, and for women.

Mr. HILLQUIT. Then do I understand you to say, Mr. Gompers, that the federation does not favor a legal limitation of the workday for adult men workers?

Mr. GOMPERS. Not by law of the State. As a matter of fact, the unions have established very largely the shorter workday by their own initiative and power and influence; they have done it for themselves.

Mr. HILLQUIT. I know that, Mr. Gompers, but is the federation opposed to similar legal enactment?

Mr. GOMPERS. For adult workmen?

Mr. HILLQUIT. Exactly; limiting their hours of work?

Mr. GOMPERS. By legal statutory authority?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. It is.

Mr. HILLQUIT. It is opposed?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Has it, in any of its conventions, or otherwise officially, declared itself as opposed to such legal enactment?

Mr. GOMPERS. Such propositions have been up at such times, and they have been negatived.

Mr. HILLQUIT. From all of that you infer that the federation is opposed to such legal enactments?

Mr. GOMPERS. I do not think it is a question of inference. It is a question of fact that when a proposition is made, and it is defeated, that it is opposed to it. It may be that it was set aside without desiring to commit itself, but the grounds upon which such rejection has occurred was as I have stated.

Mr. HILLQUIT. Then, Mr. Gompers, will you tell me what line you draw between child labor, woman labor, and labor in some specified industries, and other labor—men's labor in other industries?

Mr. GOMPERS. For instance—I rather—well, I am absolutely in favor of the method by which the United Mine Workers of America established the eight-hour day in the bituminous coal field by their own action than I would be for the enactment of a law.

Mr. HILLQUIT. One does not exclude the other, does it, Mr. Gompers?

Mr. GOMPERS. Except as I have stated, that the American Federation of Labor has some apprehensions as to the placing of additional powers in the hands of Government which may work to the detriment of working people, and particularly when the things can be done by the workmen themselves.

Mr. HILLQUIT. Then, Mr. Gompers, as I understand you, the American Federation of Labor is in favor of a uniform shorter workday and would enforce it by means, say, of collective bargaining, or other methods employed by labor unions?

Mr. GOMPERS. I may say, Mr. Hillquit, that you have evidently a misapprehension of the functions of the American Federation of Labor. As a matter of fact, the unions themselves undertake the work of accomplishing the shorter workday. Say, for instance, that the International Typographical Union undertook a movement, giving employers more than a year's notice in advance, that on a certain day they would no longer work more than eight hours in each day. Almost immediately a large number of employers acceded to the request. Others refused. The men struck. Covering a period of more than a year, employers in numbers and individual firms came to an agreement acceding to the eight-hour day, and enforcing it, and finally the eight-hour day has been accomplished, not only by the printers, the International Typographical Union, but the eight-hour day prevails now generally in the printing trades; and that is true in many others, in the building trades. It did not require any law for the printers; it did not require any law for the granite cutters; it did not require any law for the Cigar Makers' International Union, of which I have the honor to be a member. There was not any requirement in the law in the building trades, and many others, to introduce the eight-hour workday.

Mr. HILLQUIT. I fully understand that, but you have stated before that the American Federation of Labor, as such, at its annual conventions, adopted a resolution as early as 1884 approving of the movement for an eight-hour day, encouraging it, and that it has since cooperated with the various affiliated organizations for the attainment of the eight-hour day.

Mr. GOMPERS. Yes; but it was necessary for the organizations themselves to take the initiative.

Mr. HILLQUIT. Granted.

Mr. GOMPERS. For instance, I think it was in 1890, or in 1889, when the American Federation of Labor again took up the movement to encourage the inauguration of a shorter workday—the eight-hour workday; and the executive council was given authority by the convention to concentrate every energy it could to be helpful to any organization making application to be selected to make the movement; and the carpenters were one among the organizations then making application, and it was selected by the executive council to make the fight.

Mr. HILLQUIT. Now, Mr. Gompers, to save further misunderstanding and explanation, I will say to you that whenever I mention the American Federation of Labor, I mean not only the executive council, but mean also the unions affiliated with and constituting that body. Now, Mr. Gompers—

Mr. GOMPERS (interrupting). Mr. Hillquit—pardon me again. In any question and answer appearing without that distinction being made, the student of history now and hereafter is not likely to go back to your qualification and find the interpretation of the question upon that basis; and for that reason I must insist that each time you refer to the specific thing, rather than to the general.

Mr. HILLQUIT. Very well, Mr. Gompers. As far as you know, Mr. Gompers, the United Mine Workers, and the Western Federation of Miners, both affiliated with the American Federation of Labor, have been very active in establishing in the several States of their operation, a minimum workday of eight hours. Is that a fact?

Mr. GOMPERS. In the Western States, for workmen who are employed beneath the surface of the earth.

Mr. HILLQUIT. Now, is the federation as a whole now in favor of such legislation as the Western Miners have obtained, say, in Colorado?

Mr. GOMPERS. The organized-labor movement of Colorado and Utah have accomplished that, sir; but the American Federation of Labor, as such, has not taken any action upon that subject.

Mr. HILLQUIT. From your knowledge of the sentiment and position of the American Federation, as such, would you say that the federation approves or disapproves of such activity of its affiliated unions of obtaining a maximum legally established workday?

Mr. GOMPERS. I think that the federation, if called upon to approve the course, would say that the organization acted within its rights, and if it deemed that the best we would not oppose it but, rather, approve it.

Mr. HILLQUIT. Notwithstanding the apprehensions you express.

Mr. GOMPERS. The fact of the matter is that some men unconsciously and with the best of intentions get to rivet chains on their wrists.

Mr. HILLQUIT. Now, Mr. Gompers, the federation would encourage the practice of its various affiliated organizations in endeavoring to secure a shorter workday, by means of a collective agreement, of certain groups of employers in a certain industry, would it not?

Mr. GOMPERS. It would.

Mr. HILLQUIT. And the ideal state would be then to have each of your affiliated organizations secure such shorter workday by such means, would it not?

Mr. GOMPERS. No, sir. I have a very different conception from what you have, as is quite evident, as to ideals. It is desirable but it is not ideal.

Mr. HILLQUIT. Yes; but it would be desirable?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Now, if the same proposition should come by means of a law bringing upon all employers in a given State, or, for that matter, throughout the Union, then the federation, as I understand, would not approve it?

Mr. GOMPERS. It would oppose it.

Mr. HILLQUIT. It would oppose it?

Mr. GOMPERS. If I understand the views and interpret the views of the American Federation of Labor, men and all alike, it would oppose it?

Mr. HILLQUIT. Well, now, let's understand that well, Mr. Gompers, for the record. Your opinion is that if there were a movement and a possibility of establishing a shorter workday, say, an eight-hour workday, by legal enactment throughout the land, and a minimum wage in the same way, the federation would be opposed to such measures?

Mr. GOMPERS. It would; because it has in a large measure accomplished it and will accomplish it by the initiative of the association, the organization, and the grit and courage of the manhood and womanhood of the men and women in the American Federation of Labor.

Mr. HILLQUIT. And if that grit and courage should express itself by forcing the legislatures of the various States to enact such a law and if the execution and performance of the law were backed by a strong labor organization in each State, with the same grit and courage, you would not object to it?

Mr. GOMPERS. Well, your hypothesis is entirely groundless.

Mr. HILLQUIT. Why, Mr. Gompers?

Mr. GOMPERS. When the organizations of labor, as I have already said, have accomplished that to a large extent, and propose to accomplish it again, further, on their own initiative and by their own voluntary association, it precludes the question of having a legal enactment for that purpose.

Mr. HILLQUIT. I just wanted to know why it precludes it. You say that the unions affiliated with you propose to enforce such rules; that means they have not done so yet.

Mr. GOMPERS. Unfortunately, that is so.

Mr. HILLQUIT. Unfortunately, that is so. Now, Mr. Gompers, my question is this: In proposing to do so, assume that it had a chance to accomplish, then, by the methods of legal enactment through their influence and in such shape and surrounded by the precautions satisfactory to labor organizations, then I want you to say whether or not the American Federation of Labor would be opposed to such measures.

Mr. GOMPERS. It would, for the reason I have already stated, and for the additional reason that the giving of the jurisdiction to government and to governmental agencies is always dangerous, when it comes to the government of working people.

Mr. HILLQUIT. Yes; I understand you rightly. Now, Mr. Gompers, does the American Federation of Labor favor a system of noncontributing old-age pensions for workers—

Mr. GOMPERS (interrupting). Yes, sir.

Mr. HILLQUIT (continuing). Reaching a certain age?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. It does?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And that, of course, by legal enactment and governmental machinery?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. And does the federation likewise favor a general system of State insurance against unemployment, sickness, disability, accident?

Mr. GOMPERS. There is some doubt as to some of the propositions.

Mr. HILLQUIT. Which ones?

Mr. GOMPERS. Particularly State insurance of nonemployment.

Mr. HILLQUIT. Is there any doubt about State insurance against sickness or accidents?

Mr. GOMPERS. I think not.

Mr. HILLQUIT. There is not?

Mr. GOMPERS. I am sure not.

Mr. HILLQUIT. In other words, the federation supports such measures?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. As measures of legal enactment?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. What does the federation propose to do with the problem of unemployment?

Mr. GOMPERS. To shorten the workday of the employed; to share with the unemployed workmen the work that is to be performed; to constantly tend toward the elimination of unemployment and the refusal of the American workman to regard unemployment as a permanent status in the industrial and economic forces of our country.

Mr. HILLQUIT. Just what do you mean, Mr. Gompers, by refusal of the workman to regard it as an institution in our industrial system?

Mr. GOMPERS. To constantly make for a reduction in the hours of labor—for the sharing of the work with those who are unemployed, and thereby find work—help to find work for the unemployed.

Mr. HILLQUIT. If you—

Mr. GOMPERS (interrupting). One moment. And to encourage and stimulate the workmen in their effort for a constantly increasing share in the production of wealth—the consumption and use of things produced—and thereby giving employment to unemployed, which can find its encouraging and application by no other known means.

Mr. HILLQUIT. Then, Mr. Gompers, your only remedy is practically the shortening of the workday, the increased power of consumption on the part of the workers that would follow as a consequence, would it not?

Mr. GOMPERS. You are employing the word “only,” which is scarcely a proper characterization of my answer.

Mr. HILLQUIT. Then what else?

Mr. GOMPERS. I have already enumerated.

Mr. HILLQUIT. Well, whatever you have enumerated constitutes the entire program of the American Federation of Labor with reference to the unemployed. What else did you wish to add?

Mr. GOMPERS. Just as I mentioned a short while ago, when one begins to particularize, anything unmentioned, it is limited to anything unmentioned, but the sum total of the activities of the organized workers to meet the problem of unemployment is not encompassed in what I have already said. It is in every possible way which human activity can be applied. The undertaking of great public works. Again, I am particularizing, which is also limited. If you should ask me whether I would favor this or that or the other proposition to meet and solve the problem of the unemployed, it would place them upon you to question me on my answer, limiting or extending, just as the case may be. But I don't believe that I should be placed in the position of having my entire curriculum on the subject limited and shortened by a statement made upon the spur of the moment.

Mr. HILLQUIT. Now, Mr. Gompers, the methods you mentioned would naturally involve a rather slow process, wouldn't they, a question of several years, anyhow?

Mr. GOMPERS. As a matter of fact, the existence of the organized-labor movement in 1907, as well as the existence of the organized-labor movement to-day, has been and is the most potent force in our country to prevent a bringing about of conditions that would act to the great detriment of the working people of our country. In 1907, when the financial panic came upon the working people, the attitude of the American labor movement to prevent, to resist at all hazards any attempt to reduce wages, was a clarion call to the workers, and a warning to the employers that they must not apply in our times the old method of meeting the defects or the faults of their own planning or mis-planning.

Mr. HILLQUIT. I fully appreciate it, Mr. Gompers, and fully accept it. But does your federation have any program in face of the present momentary condition of unemployment—any program of immediate, even though partial, alleviation of that condition?

Mr. GOMPERS. The American Federation of Labor and the bona fide organized labor movement, have less to do with setting forth programs than it has to be engaged in the actual work. It is the easiest thing in the world for people to promulgate programs which mean simple, idle, elusive words, and mean nothing substantial to the working people.

Mr. HILLQUIT. Does not the plan of action, Mr. Gompers, a plan of systematic, thought-out action, constitute a program?

Mr. GOMPERS. If, Mr. Hillquit, you want me to say that the American Federation of Labor is not a perfect federation, or that our organizations are not perfect—if you want me to say that these organizations, and our federation has not promulgated a theory or a program for the elimination of every human ill, I will admit it.

Mr. HILLQUIT. Now, Mr. Gompers, that was very far from my thoughts. I wanted to get at facts. I wanted to know how the federation stands in the face of this acute problem in the labor conditions. Does the federation favor Government relief of unemployed by extension of useful public works?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. It does?

Mr. GOMPERS. It does.

Mr. HILLQUIT. And does it also favor a provision that the persons employed on such work—

Mr. GOMPERS (interrupting). What?

Mr. HILLQUIT. Does it favor a provision to the effect that all persons employed on such work shall be engaged directly by the Government and work not more than eight hours, and at not less than the prevailing union wages?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. The federation favors that?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. Does the Federation favor a plan by which the Government should established employment bureaus and loan money to States and municipalities without interest for the purpose of carrying on useful public works?

Mr. GOMPERS. Will you please read the question?

(The question was read by the stenographer.)

Mr. GOMPERS. It has not declared itself upon that subject, except as I have already stated in the blanket answer; that is, it favors any tangible, rational proposition that would help to meet and solve the question of unemployment.

Mr. HILLQUIT. Then you individually, Mr. Gompers, would not object to such a plan?

Mr. GOMPERS. Oh, no; I think not.

Mr. HILLQUIT. Now, Mr. Gompers, you also mentioned that the American Federation of Labor tried to improve the political status of the workers; that is correct, is it not, among other things?

Mr. GOMPERS. I should like to be quoted accurately. To improve the condition of the working people in every human field of activity; to protect and promote and advance their rights and interests.

Mr. HILLQUIT. Exactly. Now, every field of human activity includes the political field?

Mr. GOMPERS. It does.

Mr. HILLQUIT. And every right of the worker includes his political rights?

Mr. GOMPERS. It does.

Mr. HILLQUIT. Now, then, Mr. Gompers, is your federation in favor of the absolute freedom of press, speech, and assemblage?

Mr. GOMPERS. It is. May I amplify that answer?

Mr. HILLQUIT. You may.

Mr. GOMPERS. By saying that the American Federation of Labor has, in the effort to stand for the freedom of speech, freedom of the press, and freedom of assemblage, undertaken great risks, and has asserted it and maintained it. In addition to this, the American Federation of Labor looks askance upon any effort to curb the inherent, as well as the constitutional rights of free press and free speech and free assemblage, and holds that, though these rights may be perverted, may be improperly exercised, exercised for an unlawful purpose, say, and yet these rights must not, in advance, be interfered with. The right

of assemblage, the right of expression through speech or press, must be untrammelled if we are going to have a republican form of government with freedom. If anybody utters that which is libellous or seditious or treasonable, they must be made and may be made to answer for those transgressions, but the right to expression must be unimpaired, and the American Federation of Labor has and will stand unalterably and unequivocally in favor of free assemblage, free speech, and free press.

Mr. HILLQUIT. So with the Socialist Party. We are there at one.

Mr. GOMPERS. I did not know that the Socialist Party was to be injected into this.

Mr. HILLQUIT. Why, we have had the two injected all along.

Chairman WALSH. If you will leave out the comment or the assertion——

Mr. HILLQUIT. Very well. Mr. Gompers, is your federation of unrestricted and equal suffrage for men and women?

Mr. GOMPERS. It is, it has been, and has done much to advance that cause.

Mr. HILLQUIT. Does your federation favor the initiative, referendum, and recall?

Mr. GOMPERS. It not only advocates it, has advocated it, but one of the members of an affiliated organization is a member who was the author of the first book upon direct legislation, initiative, and referendum in the United States—Mr. James W. Sullivan.

Mr. HILLQUIT. Mr. Gompers, does your federation also favor the system of proportional representation?

Mr. GOMPERS. It has not, as an organization, taken affirmative action on that subject.

Mr. HILLQUIT. But it practices it in its own conventions, practically? Your vote is by membership?

Mr. GOMPERS. The proportionate representation, as that term is usually expressed, is not the proportional representation to which you refer in the voting in the conventions of the American Federation of Labor. The proportional representation—that is, I want to know whether I am right?

Mr. HILLQUIT. I will define it, Mr. Gompers.

Mr. GOMPERS. Yes.

Mr. HILLQUIT. I use proportional representation as denoting a system by which votes are cast and rights are exercised by representatives in proportion to the numerical strength of the constituents?

Mr. GOMPERS. Yes; I favor that.

Mr. HILLQUIT. You do?

Mr. GOMPERS. Yes, sir. The American Federation of Labor does.

Mr. HILLQUIT. Yes. Then, does the federation favor the election of the President and Vice President of the United States by direct vote of the people without intervention of the electoral college?

Mr. GOMPERS. It does, and so declared.

Mr. HILLQUIT. Does your federation favor a restriction upon the powers of judges to nullify laws or set them aside as unconstitutional?

Mr. GOMPERS. It does, and it has.

Mr. HILLQUIT. Does your federation favor a measure to make the Constitution of the United States amendable by a majority vote of the people?

Mr. GOMPERS. Amendable by an easier method than at present prevails. As to the specific proposition that you have just asked, I am not so sure. I don't know. No expression has been given before.

Mr. HILLQUIT. Personally, Mr. Gompers, you would think a simpler method of amending the Constitution would be a step in advance?

Mr. GOMPERS. The method now is very cumbersome and slow, and, being a written Constitution to be a chart, while it ought not to be subject to changes at every ebb and flow of the tide, it ought to be much easier than it is now.

Mr. HILLQUIT. Now, Mr. Gompers, are you in favor of curbing the powers of the court to punish for contempt in labor disputes, or to regulate that power?

Mr. GOMPERS. If I may adopt the tactics of the Yankee, I might say, "Do you doubt it?" Yes, sir.

Mr. HILLQUIT. Are you in favor of an enactment of further measures for general education, and particularly for vocational education in useful pursuits?

Mr. GOMPERS. Read the question.

(The question was read.)

Mr. GOMPERS. Yes. Here is a fact not generally known, that the organized-labor movement of Massachusetts—the credit of having established the public schools of Massachusetts with the public schools as they have extended since

then—prior to that time there were schools at which the children of the indigent parents could attend, but each child which did attend carried with it the stigma of the poverty of its parents, and it was a stigma then. The labor movement of Massachusetts secured the enactment of a law removing the requirement for attendance at these schools that the children and parents must avow and declare that they were indigent, and they could not afford to pay for the tuition of their children. Thus came into vogue the first public school in the world.

Mr. HILLQUIT. So that the federation is committed to and in favor of an extension of the educational system and the vocational training?

Mr. GOMPERS. In all, in its highest and best phases. And I say that the American Federation of Labor has had a committee for the past 10 years, a committee composed of many of its own representative men and women, a number of public educators, men and women, acting for the American Federation of Labor, yet independent of it, that has worked out the system of vocational training in industrial and agricultural vocational training, household economy, and civic duty, so much so that that report was made a public document by the Senate of the United States.

Mr. HILLQUIT. Is your federation in favor of the free administration of justice?

Mr. GOMPERS. It is.

Mr. HILLQUIT. I have enumerated to you all political and industrial demands in the platform of the Socialist Party, and you find that your federation adopts them, with the exception of two points on the question of a maximum work-day and the minimum wage. You would accomplish that by pure economic action, and the Socialist Party advocated legal enactments; is that correct?

Mr. GOMPERS. It is not correct.

Mr. HILLQUIT. Why?

Mr. GOMPERS. As a matter of fact, the Socialist Party has purloined the demands and the vocabulary of the American labor movement, and has adopted it as its own, and now you ask the American Federation of Labor whether they favor it.

Mr. HILLQUIT. Then, Mr. Gompers, whether we have purloined, or no matter in what way we arrived at it, the demands and the program that I questioned you upon, the American Federation of Labor, either as the original inventor or otherwise, fully approves of it, with the exception of the small difference I mentioned; is that correct?

Mr. GOMPERS. I would like to hear the question.

(The question was read by the stenographer.)

Mr. HILLQUIT. Suppose we waive that answer?

Mr. GOMPERS. No; don't waive the answer. Just amend your question so that it is comprehensive, so that it is comprehensible.

Mr. HILLQUIT. It is merely in the nature of a summary, Mr. Gompers. I have read to you point by point the working program of the Socialist Party with reference to economic and political measures, and I have asked you on each point whether your federation approves of such measures. Your answer has been in the affirmative, uniformly, with the exception as to the question of a minimum wage and the maximum workday, where we agreed on the principle, but you would secure it by purely economic action and the Socialist Party by legal enactment. It is in the nature of a summary. I want it on the record. You may answer or not, as you please.

Mr. GOMPERS. What did you want me to answer?

Mr. HILLQUIT. Is it so or is it not?

Mr. GOMPERS. That which I have already answered?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. I say that these demands which you have enumerated have been promulgated, declared for, and fought for, and in many instances accomplished by the American Federation of Labor and the organized-labor movement of the country, and your question would indicate that you would want the adhesion of the American labor movement to your original propositions when, as a matter of fact, they have been put into your platform simply as vote catchers.

Mr. HILLQUIT. Exactly. Then, you admit the identity, but you deny priority on our part?

Mr. GOMPERS. And purpose.

Mr. HILLQUIT. Then, Mr. Gompers, let me ask you, has the Republican Party or the Democratic Party purloined from you the same demands?

Mr. GOMPERS. Not all of them, but many of them.

Mr. HILLQUIT. Any of them?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. How many? And which?

Mr. GOMPERS. Will you give me a few minutes' time, Mr. Chairman?

Chairman WALSH. Do you wish to be excused?

Mr. GOMPERS. No, sir; only a few minutes' time that I may answer.

Mr. HILLQUIT. Do you want to consult with me?

Mr. GOMPERS. No; I don't need advice from you, Brother Hillquit.

I may say, Mr. Chairman, that because my friend, Mr. Gordon, did me the kindness of looking it up and handing it to me, a copy of the American Federationist, it is erroneous to place the construction upon that that he has prepared in my questions, or has prepared in my answers, or in any way helped me other than what I have already stated; that is, the significance of that remark may be outside of the record rather than in.

Chairman WALSH. It is really lost upon me.

Mr. GOMPERS. I am sure it is not lost upon my cross-examiner. Is it?

Mr. HILLQUIT. Nothing is lost on me, Mr. Gompers, that comes from you.

Mr. GOMPERS. I have here, in answer to the question propounded by Mr. Hillquit, a report which I had the honor to submit to the international secretariat; that is, the American Federation of Labor is in alliance with the organized labor movement of the civilized world, and one of the duties is that the chief executive officer of each country must report for the labor movement of his country as to economic and political or legislative gains. I have this report in my hand. Before stating, I think I ought to say that two of the demands which the labor movement of America makes is a limitation of the powers of the President of the United States in his frequent exercise of the veto upon the legislation of the representatives of the people.

Mr. HILLQUIT. That is contained in our platform likewise, Mr. Gompers.

Mr. GOMPERS. The only Member of Congress which the Socialist Party ever had sustained two vetoes of the President of the United States.

We also have secured, which is not incorporated in the question proposed by Mr. Hillquit, the election of United States Senators by a direct vote of the people.

I have here, as I said, Mr. Chairman, the report which I made to the secretariat. It is under this general caption: "President Gompers' report to the international secretariat," and under the subcaption of (1) "National legislative gains for 1912"; (2) "State legislative gains for 1912"; (3) "National economic gains for 1912." It would take me about half an hour to read them, but I submit that I have no desire to bore the commission or to take up unnecessary time of the commission and counsel, and if it can be incorporated here as my answer to the question of the gentleman you will find it comprehensive.

Chairman WALSH. Do I understand the question that Mr. Hillquit asked you to call attention to the place in the platform of the Democratic or Republican Parties where demand was made for this same social action he read to you this morning; is that correct?

Mr. HILLQUIT. That is correct.

Chairman WALSH. Can you do that by referring to your notes, just read into the record, when and where the demand was made by either one of the parties?

Mr. GOMPERS. I can not do that just now from memory. I have not the platform declarations of the several State committees.

Chairman WALSH. Then, it is impossible to do it on account of the comprehensive nature of the question at this time?

Mr. GOMPERS. I supplement this answer by saying that I here submit to the commission a report of the legislative gains secured at the hands of Congress and the several legislatures composed of Republicans and Democrats and Prohibitionists and Progressives.

Chairman WALSH. Very well. That may be made a part of the record, then, and not read in extenso.

PRESIDENT GOMPERS'S REPORT TO THE INTERNATIONAL SECRETARIAT.

I. National legislative gains for 1912.

This portion of my report should be read in conjunction with my report of last year (for 1911) so that a clearer understanding may be had of the legislative periods governing the United States Congress. It will be noted

I then said on page 198 of the ninth report that "the first regular business session of the Sixty-second Congress commenced in December, 1911, and lasted until August 26, 1912." I must now complete that account by adding that the last regular business session of the Sixty-second Congress commenced in December, 1912, and continued until March 4, 1913, when the legislative period for which that Congress was elected expired by constitutional and statutory enactment.

I reported progress for 1911 on 16 specific matters of interest to labor upon which favorable action had been taken either in the House of Representatives or the Senate, or upon which final action had been taken in both bodies.

It will be seen that in this report (for 1912) some of these subjects have again been enumerated. This is unavoidable because in several of these matters it was necessary to wait until final action was taken by both Houses and approval given by the President to the measures enacted by the Congress.

It is very gratifying, indeed, to be able to report for historical record the following 19 important measures of interest to the working people of the United States upon which the Sixty-second Congress took complete and final action. It is additionally satisfying to say that this record is the best any Congress ever made in behalf of demands made upon it by the organized labor forces of the country.

This national report must not be accepted as the sum total of remedial legislation for humanity secured in the United States, but must only be read as a part of that which follows under the caption "State legislative gains."

(1) A national Department of Labor was created, the Secretary of same to be a member of the President's Cabinet. The first secretary to occupy this honorable and responsible position was formerly the national secretary of the United Mine Workers of America, and for six years a Member of the House of Representatives; during the last term of two years he was chairman of the House of Representatives Committee on Labor.

(2) All contractors and subcontractors doing work for the National Government, as well as on naval contracts and fortification contracts, must hereafter observe the eight-hour day.

(3) Eight hours per day will be the maximum hereafter for all post-office clerks, letter carriers, and employees in the railway post offices.

(4) Workmen employed on levees and water fronts, and dredge operators have had the eight-hour law extended to such employments.

(5) The Bureau of Mines act was amended and strengthened, thereby tending to conserve the health and safety of coal and metalliferous mine workers.

(6) The national law granting compensation for injuries to Government employees was extended to employees in the Bureau of Mines and lighthouse employees.

(7) The manufacture of white phosphorus matches has been prohibited.

(8) A physical-valuation law for steam railroads and express companies was passed.

(9) A parcel-post law was passed.

(10) Increased appropriations were obtained to develop rescue work in the Bureau of Mines.

(11) The three-watch or eight-hour system in the merchant marine applicable to masters, mates, and pilots was established.

(12) Wages were increased for all employees in the naval-gun factory and for the pressmen in the Government Printing Office.

(13) Public construction in Government navy yards of naval vessels, transports, and colliers have been extended in opposition to such construction in private shipyards.

(14) A law was enacted by which a Children's Bureau was established, which will be effective in conserving the best interests of the children by practicable and scientific methods.

(15) Former Presidents Roosevelt and Taft were directly rebuked by Congress because of their arbitrary executive order depriving Government employees of the right of petition, the right of organization, and the right of hearing in the case of a discharged employee of the Government. The full rights of citizenship has been restored thereby to all employees of the National Government.

(16) The working conditions of employees in the iron and steel industry were rigidly investigated and a most comprehensive, helpful report made by the Federal Bureau of Labor Statistics.

(17) After a rigid investigation by Congress of the high-speed, "stop-watch" working systems in Government establishments orders have been issued by the War Department and the Navy Department to discontinue such speeding-up systems in Government establishments.

(18) The amendment to the National Constitution providing for an income tax has been ratified by three-fourths of the States and is now effective.

(19) The amendment to the National Constitution providing for the popular election of United States Senators has also been ratified by three-fourths of the States and is now in active operation. This amendment gives to citizens of a State the right to cast a direct vote for the election of the Members of the United States Senate from their State instead of as before, delegating this power to the State legislatures.

II. State legislative gains for 1912.

The progressive record by the Congress enumerated in the preceding part of this report under "National legislative gains" was substantially maintained by the several State legislative bodies that met in 1912.

The legislation which most vitally affects the life and interests of the workers in the United States is the legislation which is enacted by the State legislatures. While it is important that comprehensive, effective, and fundamental measures should be passed by Congress as a matter of example of precedence, it by no means stands as the goal or the complete success toward which the aspirations of the organized workers are directed.

It is imperative that each of the 48 States, all of which have local autonomy, keep step with the progress of the Nation or vie with each other for preeminence in the forward, upward work of civilization.

I furnish herewith a brief summary of helpful, practical legislation in the workers' interests enacted by 17 State legislative bodies during 1912, which, as of course must be understood by students of this report, is only supplementary to previous legislation already on the statute books of the several States reported. It must also be understood that all the State legislatures do not meet each and every year. The following excellent record for 17 States whose legislatures met in 1912 is the result of the militant, loyal, intelligent effort made by the men and women in the organized American labor movement in behalf of those who toil.

Arizona.—The new State of Arizona (until recently a Territory) adopted the following fundamental provisions in behalf of labor, in its constitution during 1912: (1) No limitation upon damages for death or injuries to an employee; (2) a corporation commission authorized to make and enforce necessary rules for convenience, comfort, safety, and preservation of health of employees and patrons of all public-service corporations; (3) eight hours to constitute a legal day's work in all employment by or on behalf of the State, or any of its political subdivisions; (4) age limit for employment of children, 14 years above ground, 16 years underground, eight hours to be the maximum workday for such children in all employments; (5) making it illegal for any employer to require employees to waive any rights in order to secure or obtain employment; (6) the old common law of "fellow servant" doctrine forever abrogated; (7) the defenses of "contributory negligence" or of "assumed risk" in all cases to be a question of fact and must be left to the jury without interference by the judge; (8) employees' right of action to recover damages for injuries shall never be abrogated (amount to be recovered shall not be subject to any statutory limitation); (9) an employers' liability law and compulsory compensation for injuries law shall be enacted by the legislature; (10) blacklisting of employees to be penalized; (11) aliens prohibited from employment on public work; (12) safety mining laws and mining inspectors ordered.

The first legislature of Arizona enacted laws governing the following subjects during the session of 1912, in harmony with the foregoing clauses of the constitution:

(1) Eighteen years minimum age for telegraph operators; (2) waiving of employee's legal rights by corporations prohibited; (3) full-crew law for railroad trains enacted; (4) illegal for foremen to accept fees for employment; (5) an eight-hour day established in all coal and metalliferous mines; (6) standard headlights to be installed on all locomotives; (7) 14 years set as the limit for employment of children (in dangerous occupations 16 years the limit); (8) eight hours as a maximum workday for children; (9) comprehensive safety

laws for mines enacted; (10) employers' liability and workmen's compensation for injury laws enacted; (11) aliens prohibited from employment on public works.

California.—Constitution amended, authorizing the legislature to enact laws granting compulsory compensation to injured workmen. The legislature enacted the following laws in the interest of workmen: (1) All accidents on railroads to be reported to the railroad commission; (2) all employees (male and female) allowed two hours in which to vote on election day without deduction of pay; (3) industrial accident board established to which employers in all industries must report all accidents to employees.

Kentucky.—(1) Employment of females limited to 10 hours a day, 60 hours a week (seats must also be furnished, wash rooms, etc.); (2) factory-inspection law enacted and inspectors provided; (3) assignments of wages of employees prohibited.

Louisiana.—(1) Seats to be provided for employees on street cars; (2) employment of children prohibited in pool and billiard rooms; (3) semimonthly pay day established; (4) factory inspection ordered for city of New Orleans; (5) employers' liability commission created; (6) railroad crossings to be properly guarded; (7) employment of children prohibited in dangerous occupations or questionable entertainments; (8) the old common-law defenses of "assumption of risk" and "fellow servant" doctrine, applicable to public service corporations, abrogated; (9) modern systems of ventilation and sanitation to be installed in all printing offices; (10) an eight-hour day established for certain stationary engineers and firemen (some employments excepted).

Maryland.—(1) Ten hours a maximum day's work for working women, eight hours to be a maximum night's work, three inspectors appointed to enforce the law; (2) all occupational diseases to be reported by physicians to State board of health; (3) age limit for working children set at 14 years; (4) hospital for miners established by the State; (5) cooperative insurance fund for miners established by the State; (6) compensation for injury law to all industrial workers enacted.

Massachusetts.—(1) Employers ordered to furnish seats for all female employees; (2) employment of illiterate children under 18 years prohibited; (3) employers' liability law amended; (4) factory-inspection law amended; (5) railroad-liability law amended; (6) old-age pension law for employees of the State enacted; (7) accident-report law applicable to all employers enacted; (8) a maximum 10-hour day and 54-hour week law, applicable to women and children, enacted; (9) steam-boiler inspection law amended; (10) a nine-hour day for employees on street railways enacted; (11) during times of strike, employers must state particulars when advertising for laborers; (12) bureau of labor statistics extended and strengthened; (13) compensation for injuries law amended and strengthened; (14) employment of women in core rooms, foundries, and law made more stringent; (15) a minimum wage commission, to deal with wages of women and children, established; (16) a State board of labor and industries established; (17) State printing law enacted.

Michigan.—Workmen's compensation for injuries act passed, including an industrial accident board, a State accident fund, and the optional privilege of employers organizing "mutual insurance companies."

Minnesota.—(1) Employers prohibited from threatening employees or improperly influencing the political opinions or actions of employees; (2) child-labor law amended and strengthened so that children under 16 shall not be permitted to work more than eight hours a day, 48 hours a week, and no night work; dangerous and questionable employments for children prohibited.

Mississippi.—(1) Employment and emigration agents prohibited under heavy penalties from operating without a State license; (2) monthly pay days made mandatory by employers; (3) equipment of street cars with vestibules for motormen, made mandatory; (4) sanitary-buildings act for car repair employees passed; (5) locomotives to be equipped with standard headlights; (6) employers prohibited from working employees over 10 hours per day; (7) child-labor laws amended and strengthened, 14 years the age limit for employment of girls, 12 years for boys; boys under 16 and girls under 18 not permitted to work more than eight hours per day, nor more than 48 hours in any one week. Suitable enforcement of this law included; (8) the "contributory negligence" clause of the railroad companies liability act, made broader in the interest of employees and passengers.

New Jersey.—(1) Factory-inspection act amended, requiring standard "blowers" in grinding and polishing rooms; effective guards to be installed on all

dangerous machinery; additional factory inspectors ordered, must be men with practical shop experience; (2) State department of labor act amended and strengthened; employees of same required to pass civil-service test; power for enforcing factory-inspection laws increased; (3) bakery-inspection law enacted, with suitable provisions for enforcement; (4) all industrial accidents must hereafter be reported by employers to commissioner of labor; (5) a 10-hour day, or 60-hour week law for working women enacted; (6) workmen's compensation for injuries, law amended and strengthened; (7) all industrial and occupational diseases hereafter must be reported by physicians to the State board of health.

New Mexico.—The new State of New Mexico, until recently a Territory, adopted the following fundamental provisions in behalf of labor in its constitution during 1912: (1) Railroad commission charged with the duty to enforce standard safety appliances on all railroad equipment; (2) office of mine inspector created; (3) safety mining laws ordered; (4) no children under 14 to be employed in mines; (5) the old common law of "fellow servant" abrogated and the defense of "contributory negligence" defined; (6) a law was enacted making it illegal for employers to require employees to waive any legal rights in order to secure or retain employment; (7) the effective national employers' liability law was the model for this State law; (8) establishment of an eight-hour day for all employees of the State, county, or municipality.

The first Legislature of New Mexico enacted laws governing the following subjects during the session of 1912: (1) Safety mine-regulation law enacted, with inspectors to enforce same; (2) protection for employees to vote, with sufficient time allowed for same by employers; (3) blacklisting of employees by employers penalized; (4) maximum workday of 16 hours for railroad employees was enacted.

New York.—(1) Additional powers granted factory investigating commission; (2) number of factory inspectors increased from 85 to 125 and their power to enforce factory laws strengthened; (3) workers in caissons under compressed air protected; (4) private employment-office law made more stringent; (5) women and children prohibited from attending in barrooms; (6) factory-inspection law strengthened by many amendments for the purpose of affording greater safety, health, and comfort to factory employees; (7) employers forbidden to employ women within four weeks after childbirth; (8) child-labor law amended by requiring physical examinations; (9) a nine-hour day and a 50-hour week enacted for women; (10) the bureau of industries and immigration laws amended and strengthened in many particulars, thereby affording greater protection to working people; (11) recommendation by the legislature to amend the State constitution so as to enable the legislature to enact a compulsory workmen's-compensation-for-injuries law; this amendment to the New York State constitution will be voted upon by the people of the entire State November 4, 1913; a majority vote will adopt it as part of the constitution.

Ohio.—The constitution of Ohio was amended in 1912 by referendum vote of the people of the State, authorizing the legislature to pass certain specified labor laws as follows: (1) To regulate the hours of labor; (2) to establish a minimum wage; (3) to provide for the comfort, health, safety, and the general welfare of all employees; (4) to enact a workmen's compensation-for-injuries law, including a compulsory-insurance system and leaving intact right of action in the courts for employees; (5) to enact an eight-hour day for all employees of the State or any political subdivision, and for employees of contractors for the State.

Philippine Islands.—(1) By a contract of employment law, employers will be penalized if laborers are defrauded by employers, contractors, or subcontractors; (2) workmen's compensation-for-injuries law enacted, covering employees of the insular government and the provincial government of the Philippine Islands; (3) free public-employment agencies opened under the supervision of municipal officers.

Porto Rico.—Bureau of labor established, the commissioner of which is charged with the duty of investigating sanitary conditions of factories and workshops.

Rhode Island.—(1) Accident law enacted; all public-utility employers must hereafter report all accidents to employees and other persons to the commissioner of labor; (2) child-labor law amended and strengthened; (3) workmen's compensation-for-injuries law enacted, by which the old common-law defenses

of "contributory negligence," "fellow-servant" doctrine, "assumption of risk," and "waiving of rights" are abrogated; (4) mutual insurance agreements and agencies may be established by employers or by employer and employees.

South Carolina.—(1) Voluntary relief schemes established by employers for payment of sick and death benefits, to be hereafter approved and licensed by the State department of insurance; (2) act passed establishing a State department of agriculture, commerce, industries, and immigration; (3) child-labor law enacted by which children under 14 are prohibited from being employed as messengers for telegraph and telephone companies or in questionable places of amusement; (4) locomotives hereafter must be equipped with standard headlights.

Virginia.—(1) Factory-inspection law amended and strengthened so that more stringent provisions for ventilation and sanitation must be enforced; (2) all employers directed to establish a semimonthly pay day; (3) department of mines established, with authorized inspectors to enforce standard safety mining regulations; (4) a 10-hour-day law enacted governing employment of women and children; (5) railroad companies' liability law for injuries to employees act amended and strengthened by which most of the old common-law defenses are modified or abrogated.

DIGEST OF STATE LEGISLATIVE GAINS, 1912.

In conformity with my report of last year, under the head of "State legislative gains," I append herewith a digest of the laws enacted by the several legislatures during the session of 1912:

ACCIDENT REPORTS.

The States of California, Massachusetts, Michigan, New Jersey, and Rhode Island made it obligatory by law during the legislative session of 1912 for public-service corporations and other employers to report all accidents to their employees to responsible public officials.

ACTIONS FOR PERSONAL INJURIES OR DEATH.

The Arizona constitution forbids laws limiting damages recoverable for death or injury.

The Ohio constitution was amended to forbid the enactment of laws limiting damages recoverable for injury causing death.

BLACKLISTING.

Arizona enacted laws forbidding blacklisting, with a fine therefor.

New Mexico forbade the enactment of any measure preventing a discharged employee from obtaining work.

BUREAUS OF LABOR.

A bureau of labor was created for the island of Porto Rico.

The Massachusetts Legislature extended and strengthened the bureau of labor statistics by creating a new board under the title "State board of labor industries," consisting of five members, to promote industrial development, improve industrial conditions, enforce labor laws, inspect factories, etc., and report of industrial accidents to be filed with this board.

South Carolina provides for a department of agriculture, commerce, and immigration under a commissioner, who must have knowledge of agricultural, manufacturing, and general industries.

The New York statute was amended extending power of the commissioner as to education and training of aliens and their treatment in labor camps by employment agencies, etc.

In New Jersey the State department of labor law was amended and strengthened.

WORKMEN'S COMPENSATION FOR INJURIES.

Twenty States now have workmen's compensation laws. Those enacted during 1912 are as follows: Arizona, Maryland, Montana, and Nevada. The new State of Arizona has adopted constitutional provisions authorizing such statute.

Louisiana appointed a commission to look into the subject.

EMPLOYERS' LIABILITY.

While the greater attention of the legislatures of the different States in session last year (1912) was given to the subject of compensation legislation, some important laws were passed relative to that of employers' liability, the two subjects being to some extent considered simultaneously in the same legislation.

Arizona.—An employers' liability and workmen's compensation for injuries statute enacted.

Louisiana.—The old common-law defenses of "assumption of risk" and "fellow servant" doctrine, applicable to public-service corporations, was abrogated.

New Mexico.—The old common law of "fellow servant" abrogated and the defense of "contributory negligence" defined.

Massachusetts.—Employers' liability law amended by making sufficient as a form of notice any signed written communication giving information as to the fact of the injury, time, place, and cause. The statute relative to the liability of railroad companies was amended, making the minimum recovery for damages for death at \$500 and the maximum at \$10,000.

Mississippi.—Liability of railroads for injury was made broader in the interest of employees and passengers.

Virginia.—Liability for injury law amended and strengthened.

Maryland.—A cooperative insurance fund was established for miners, employer to pay at least one-half of the premiums of such insurance.

Michigan.—A workmen's compensation for injuries act was passed, including an industrial accident board, a State accident fund, and optional privilege of employees organizing "mutual insurance companies."

Rhode Island.—A workmen's compensation for injuries law was enacted, by which the old common-law defenses of "contributory negligence," "fellow-servant" doctrine, "assumption of risk," and "waiving of rights," were abrogated. Mutual insurance schemes may be established.

The California constitution provides for compulsory compensation systems, irrespective of fault, and for settling disputes by arbitration, by an industrial accident board or by courts.

The Ohio constitution authorizes compulsory contributions to a State fund for compensation for death, injuries or occupational diseases occasioned in course of employment, and their right of action in the courts for employees is left intact.

New York Legislature authorized the enactment of a compensation or insurance law, which shall be the exclusive remedy in cases of injuries to employees.

The national law granting compensation for injuries to Government employees was extended to employees in the Bureau of Mines, and the Forestry Service of the United States, lighthouse employees, and for employees on the Panama Canal and the Panama Railroad.

New York City had its charter amended by an act of the State legislature, allowing 30 days' leave of absence with pay to employees injured in employment.

Philippine Legislature passed a law to pay injured employees for 90 days during disability, if necessary; also cost of transportation and medical and hospital attendance. If injury proves fatal burial expenses and 90 days' wages to be paid to family of deceased employees.

COMMISSIONS APPOINTED.

The following commissions were appointed to investigate specified subjects and report:

A commission on industrial relations (an act by Congress).

An employers' liability commission by the State of Louisiana.

A commission on workmen's compensation provided for by the Federal Congress completed its report.

A factory commission in New York was given added power throughout the State, to investigate manufacturing conditions and conditions in mercantile establishments, and make report.

The Massachusetts Homestead Commission was authorized to continue its work and to make report.

New Jersey.—The legislature provided for two commissions—one to revise and codify mechanics' lien laws, and the other to propose plans for the employment of convicts in part, etc., in competition with free labor.

Maryland.—A commission to investigate the penal system and report to the legislature.

Mississippi.—Appointed a joint committee of the senate and house to investigate a strike at McComb City and Water Valley, and report.

The House of Representatives of the United States Congress requested the Secretary of Commerce and Labor to transmit information in his possession as to the strike in the bituminous coal mines in Westmoreland County, Pa., and directed the Secretary of Commerce and Labor to ascertain and report cost and profit in the "present high price of anthracite coal," and the benefits to miners from recent strike agreement, and why, how much, and by what means, the price of coal was at the same time increased.

The United States Senate passed a resolution requesting the Secretary of Commerce and Labor to obtain through the Bureau of Labor and report information as to wages and conditions of living of mill workers in Lawrence, Mass.

CONVICT LABOR.

The Ohio constitution was amended, requiring State employment for convicts and forbidding the farming, contracting, or giving away of any work, product, or profit of convict labor. Convict goods to be sold in the State to be marked "prison made."

Louisiana prohibits the use of convict labor for private purposes, and directs the prison officials to fix a code of rules, hours of labor, etc.

Massachusetts amended the existing law to extend the use of convict labor in the manufacture of goods for public use.

Virginia provided for the establishment of kilns for the production of lime from limestone or oyster shells for sale to consumers in the State at such prices as to pay the cost of production, interest on the investment, and a surplus of 10 per cent to cover wear and tear.

New Jersey provides for the employment of county convicts on highways, and authorizes counties to ask for State convicts for use on such work within their limits.

Kentucky amended the constitution so as to permit the State to employ convicts in improvements of public roads, building bridges, etc.

New Mexico directed that the net earnings of convicts should go to their families for their support, and forbade the leasing of convicts.

CONTRACT OF EMPLOYMENT.

The Arizona Legislature forbade anyone hiring labor to accept fees from workmen for employment and made punishment for false representation as to assets and failure to pay for labor subject to civil suit.

South Carolina required employers who require notice from their employees to give notice two weeks in advance to employees of intention to shut down, and length of time.

Massachusetts amended the act requiring employers advertising for labor to give notice of strike in existence, "until State board of conciliation and arbitration decides that conditions are normal." Also amended the labor law providing penalties for bribery, etc., of employees by increasing penalties where the offender is charged with the offense in connection with the employment of labor.

Mississippi forbade tipping; the penalty for employers who violate this law is double that of the giver of tips.

Laws were revised regulating bonds of employees of railroads or public utilities corporations by the Legislatures of Arizona, Louisiana, and Georgia.

Congress made provisions for payment of rewards to employees of the ordnance department for inventions, improvements, economies, etc., that may be devised; and for inventions of employees in the Post Office Department.

EMPLOYMENT OF WOMEN AND CHILDREN.

The Legislature of Arizona fixed the age limit of employment of children above ground at 14 years, underground at 16 years; eight hours as a maximum workday. Children under 18 not to be employed in places dangerous or in-

jurious to health. Seats to be furnished female employees. No female to be employed in or about any mine, quarry, or breaker.

Maryland repealed former law and enacted a detailed law, making the age employment limit for children 14 years; employment under 18 years of age forbidden in hazardous work, and under 21 in saloons. No female under 18 to be employed in any work in which she must stand constantly. Messengers and street trades also regulated. Eight inspectors appointed to carry out the law.

Minnesota redrafted its law; principal changes were the requirement of medical examination for all children before employment; exemption permitting employment of poor or dependent children was stricken out. Hours of labor under 16 years reduced to eight per day. The exemption as to prohibited night work at holiday time was stricken out. Messenger service forbidden to girls between the hours of 9 p. m. and 5 a. m.

New York required a physical examination and certificate in all cases even of legal age before an employment certificate is issued.

New Jersey forbade employment of children under 16 between 7 p. m. and 7 a. m. in bakeries.

Mississippi fixed the minimum age of employment for girls, 14 years; hours for boys under 16 and girls under 18, eight hours per day.

Louisiana forbade employment of minors under 17 in pool or billiard rooms, and prohibited the employment of children in questionable entertainments and dangerous occupations.

New Mexico prohibited the employment of children under 14 years in mines.

Rhode Island forbade messengers under 21 to deliver goods or messages between 10 p. m. and 5 a. m.

South Carolina forbade employment of children under 14 as messenger, and children under 18 to act as such between 10 p. m. and 5 a. m.

Arizona forbade employment of children under 16 years during school hours without a written permit from the board of trustees, unless such child is being otherwise taught or is excused for designated reasons.

Maryland enacted a law requiring school attendance between the age of 8 and 14, or until 16 years unless lawfully employed.

Massachusetts established a minimum wage commission of three persons to inquire into wages paid females. Wage boards may be appointed representing employers and female employees interested. Law was amended providing against employment of the same person in more than one establishment in such a manner as to evade the 54-hour law.

New York established a nine-hour day for males under 18 and females under 21.

New York prohibited the employment of women and children in barrooms.

Massachusetts ordered seats for female employees.

Kentucky limited employment of females to 10 hours per day and required that seats, wash rooms, etc., must be furnished.

Maryland established a 10-hour day and 8 hours as maximum night's work. Three inspectors appointed to enforce the law.

New Jersey enacted a 10-hour day and 8 hours as a maximum night's work. Three inspectors appointed to enforce the law.

New Jersey enacted a 10-hour day for females.

Massachusetts made the law regulating the employment of women in foundry core rooms more stringent.

New York made it unlawful to employ women within four weeks after childbirth. Suit-for-wages law by female workers in New York City amended by making the additional award of costs formerly provided discretionary with the court instead of mandatory.

INSPECTION AND REGULATION OF FACTORIES.

Massachusetts.—Guards for elevators and movable machinery, belting, shafting, etc., and bringing mechanical establishments, workshops, and mercantile establishments within the scope of the factory law. Improvement of work of inspection and force employed therefor. Fire prevention in factories law provided. Seats for operators of passenger elevators provided.

New Jersey.—Guards on dangerous machinery, ventilation, sanitation, etc. Factory inspectors increased.

New York.—Greater safety, health, and comfort to factory employees adopted by the legislature. Fire prevention laws established. Factory inspectors in-

creased. Ventilation, lights, etc., relative to work in compressed-air establishments improved.

Ohio.—Laws providing for the comfort, health, safety, and general welfare of all employees.

Virginia.—Statute requiring separate toilets amended, requiring more toilet conveniences where increased numbers are employed.

Louisiana.—Ventilation and sanitation in printing offices.

Kentucky.—Factory-inspection law enacted, providing two labor inspectors and two assistants.

Maryland.—Inspection of employment of children and hours of labor for women.

• HOURS OF SERVICE.

The constitutions of new States, Arizona and New Mexico, provide for an 8-hour day on public work. New Mexico provided for 16 hours for railroad employees. Arizona provided for 8 hours per day for hoisting engineers at mines and furnacemen at smelters. Certain employments declared injurious to life and limb, and provided an 8-hour day for such work.

Louisiana provided the 8-hour day for stationary firemen.

The Massachusetts Legislature provides that contracts for the State printing shall be awarded to shops that have prescribed an 8-hour day. Nine hours for employment on street railways. Extra pay allowed for over 9 hours. Every workman must have at least eight hours uninterrupted rest.

Mississippi made a 10-hour day applicable to all persons.

In New Jersey no employer may work his employees over 10 hours per day, except in emergency, when there shall be extra pay for overtime. Children under 16 may not be employed between the hours of 7 p. m. and 7 a. m.

The Ohio Constitution provides for an 8-hour day.

Ohio authorized the passing of laws fixing and regulating the hours of labor in employment generally.

Congress passed an 8-hour-day law to apply to laborers or mechanics doing work under contract with the United States or in any of its Territories or the District of Columbia. Contracts for certain cannon and carriages for the Government only let to those who have established the 8-hour day for all employees. Contracts for construction and repair of ships, machinery, armament, etc., for the Navy come within the 8-hour law. All supplies, unless bought in the open market, must be produced under the 8-hour law.

Hours of labor for letter carriers and clerks in post offices were fixed at eight, with overtime-pay in cases of emergency, and, if compelled to work Sunday, with time off on one of the six following days.

MINE REGULATIONS.

The new States of Arizona and New Mexico created a mine inspector's office.

The Virginia Legislature created a department of mines, in charge of a State mine inspector.

The Maryland Legislature appropriated \$25,000 for building a hospital for persons injured in accidents in mines.

OCCUPATIONAL DISEASES.

Maryland and New Jersey required all occupational diseases to be reported by physicians, and penalty of \$10 to be imposed for failure to report.

RAILROADS.

Arizona.—A corporation commission was provided by the new State of Arizona, to make and enforce rules for the convenience, comfort, safety, and health of employees of public service corporations and to investigate accidents. The use of defective locomotives which allow steam to escape so as to obstruct the view of the crew was forbidden. Electric headlights on locomotives were required. A full-crew law was enacted. Flagmen must have one year's experience of brakemen. The number of cars in a freight train limited to 70 and the number in a passenger train to 14. Engineers must have had three years' experience as firemen or engineers and conductors a similar term of experience as brakemen or freight conductors before taking full charge of trains. Telegraph and telephone operators whose duties relate to trains must be at least 18 years and have had one year's experience.

New Mexico.—A State corporation commission was provided to require safety appliances on railroads.

Louisiana.—The blocking of angles in frogs and crossings of railroads was required, so as to prevent the wedging of the feet.

Mississippi.—The law enacted requires electric headlights on locomotives. The State railroad commission was authorized to require shelters over repair tracks when necessary.

South Carolina.—The use of electric headlights on locomotives was made compulsory.

STREET RAILROADS.

Louisiana.—Seats must be provided on platforms for motormen and conductors, for use outside business districts of cities.

Mississippi.—Street railway cars must be equipped with inclosed vestibules.

RIGHTS OF EMPLOYEES.

Minnesota and New Mexico.—Employers are prohibited from using any threat intended or calculated to influence the political action of employees. New Mexico allowed two hours off duty for voting, without penalty, intimidation, threats, etc., and provided for the absence of railroad employees from home on election day.

California.—Two hours for voting without loss of wages was granted to employees.

Arizona.—Any act to prevent employment of a member of the national guard or to obstruct the business of the employer of such member was forbidden.

Massachusetts.—A similar provision, relating to the members of the militia and naval reserves was provided.

RETIREMENT FUNDS AND BENEFITS.

South Carolina.—The legislature authorized any corporation, doing business in the State, that desires to provide sick, accident, or death benefits to do so on paying a license fee graded according to the number of counties in which the corporation desires to do business.

Arizona.—The legislature forbade and declared void all rules of railroad-relief societies which require releases or waivers by employees of their rights under the statutes of the State.

Massachusetts.—The legislature provided for pensions for laborers employed by the cities and the towns accepting the act, and for the retirement, at the age of 60, of employees who have worked for 25 years in municipal service and who have become incapacitated, or who have worked for 15 years and who have become incapacitated by injury in the performance of duty. The pension rate is one-half the average annual compensation for the last two years of service. The statute providing for a retirement system for employees of the State was amended by restricting the definition of the word "employees" to "permanent and regular employees of the State."

III. National economic gains during 1912.

The summary herewith given briefly states the successes which have been officially recorded as the accomplishments for the year 1912 and which have accompanied the persistent endeavors of the trade-unions in the United States and in Canada, affiliated to the American Federation of Labor. It will be found that this text will verify in an extended form the specific data contained in the statistical tables from the international unions in the United States and Canada found elsewhere in this report.

In order that the economic value of the American trade-union movement may be better comprehended I feel it is my duty to lay special emphasis upon the fact that the successes recorded are largely the results of efforts through direct negotiations with the employers and generally not accompanied by stoppages in the industry. Where successes have been secured through stoppages of the work, they are duly referred to as the result of strikes.

Asbestos workers.—Net number of new unions, 3; membership increase during the year, 300; number of strikes during the year, 5; number won, 3; compromised, 1; pending, December 31, 1912, 1; number of persons involved in the strikes, 200; number benefitted, 200. Without strikes the wages were increased

50 cents per day for 75 men; hours were reduced one hour per day for 50 men; death benefits paid, \$500.

Bakers.—Net number of new unions, 14; gain in membership for year, 218; strikes won, 15; compromised, 2; pending, 8; number of persons involved in strikes, 2,000; number benefited, 1,900; resulting in an average gain of 10 per cent in wages and hours reduced one hour per day. Secured 10 per cent increase in wages in many instances without strikes and obtained improved ventilation and sanitary conditions in shops. Death benefits, \$3,230; death benefits paid to members' wives, \$800; sick benefits, \$30,000; donations to other unions, \$3,000; cost of strikes, \$22,500.

Barbers.—Net number of new unions, 12; gain in membership, 1,160; number of strikes, 2; number won, 2; number of persons involved, 21; number benefited, 21. As a result members received gain in wages of 20 cents per day and hours reduced one-half hour per day. Attempts were made in some localities to reduce wages; all were successfully resisted. Death benefits, \$25,000; sick benefits, \$47,000; donations to other unions, \$8,100; cost of strikes, \$343.

Blacksmiths.—Net number of new unions, 14; number of strikes, 1; number of persons involved, 3,800; number benefited, 3,400; a gain of wages of 12 cents per member per day with better ventilation and sanitary conditions of shops. All attempts to reduce wages during year were successfully resisted. As a result of persistent effort the wages of blacksmiths have been increased, hours of labor reduced, and better sanitary conditions of shops have been secured. Cost of strikes, \$55,000.

Boiler makers.—Net number of new unions, 33; number of strikes, 95; number of persons involved, 6,000; number immediately benefited, 3,000; hours of labor were reduced from nine to eight per day and many new contracts signed with employers by local lodges carrying higher and better working conditions without strikes. Death benefits, \$2,100; donations to other unions, \$1,000; cost of strikes, \$148,000. As a result of organization wages and conditions of work was constantly improving for boiler makers. The employers, as a rule, give a more wholesome respect for observance of our working contracts.

Bookbinders.—Net number of new unions, 8; number of strikes, 4; chiefly caused by employers trying to introduce the "open-shop" system. General increase of 10 per cent in wages secured without strikes. Death benefits, \$5,500; cost of strikes, \$3,100.

Boot and shoe workers.—Net number of new unions, 2; gain in membership, 1,200; strikes won, 2; pending, 1; lost, 1, because places were filled by hostile (independent) union; number of persons involved, 440; all benefited in addition to many other workers not involved in strikes. All attempts to reduce wages were successfully resisted. Death benefits, \$16,000; sick benefits, \$77,000; disability benefits, \$3,500; donations to other unions, \$15,000; cost of strikes, \$17,000. As a result of the efforts of the boot and shoe workers' organization a substantial reduction in the hours of labor has been gained in the factories where members are employed. At a conservative estimate and from the best data at hand a total increase of \$2,200,000 in wages was secured for the membership during the year 1912 by this organization.

Brewery workmen.—Number of strikes engaged in, 41; number won, 31; compromised, 3; pending, 3; lost, 4; number of persons involved, 2,000; number benefited, 1,900; as a result a gain of 25 cents per member per day was secured. The eight-hour day has been inaugurated wherever it was not already enforced; improved sanitary conditions have been established; men have been employed in place of boys; wages have been increased; hours have been reduced in many cities without strikes; all attempts to reduce wages or impose harsh conditions were successfully resisted. Cost of strikes, \$8,000; donations to other unions, \$2,800.

Brickmakers.—Net number of new unions, 7; number involved in strikes, 700; number benefited, 700, resulting in an increase of 15 per cent in wages; three union-shop agreements secured without strike, thereby gaining an increase in wages ranging from 15 cents to 65 cents per day; no reduction in wages during year; death benefits, \$150; cost of strike, \$2,000.

Bridge and structural ironworkers.—Net number of new unions, 3; gain in membership, 1,000; number of strikes, 4; won, 3; pending, 1; number of persons involved, 2,000; number benefited, 2,000, and as a result secured a gain in wages of from 5 cents to 10 cents per hour. Several attempts were made to reduce wages; all were successfully resisted. Death benefits, \$12,500; donations to other unions, \$3,000. The 8-hour day prevails in this trade; hours formerly worked under nonunion conditions, 10 or more per day.

Brush makers.—Secured an advance in wages of \$2 per member per week for many members as result of strike; hours of labor reduced from 59 to 55 per week without strike.

Carpenters.—Net gain in membership, 4,000; number of strikes, 15; number won, 10; compromised, 4; lost, 1; number of persons involved, 1,000; number benefited, 1,000. As a result of direct negotiations, without strikes and with strikes, wages were generally increased from 2½ cents to 5 cents per hour. The 8-hour day generally prevails in this trade, but in some cases where nine hours were still being worked the 8-hour day was gained. Several attempts were made to reduce wages; all were successfully resisted. Death benefits, \$260,000; death benefits for members' wives, \$37,000; cost of strikes, \$16,000.

Carriage and wagon workers.—Net number of new unions, 5; number of persons involved in strike, 200; number benefited, 200, resulting in an increase in wages of 25 cents per member per day. An increase in wages of 20 cents per member per day was secured for many members without strike. Several attempts were made to reduce wages; all were successfully resisted. Death benefits, \$1,100; cost of strike, \$600.

Carvers, wood.—Increase in wages of 2½ cents per hour per member secured for 100 members as result of strike, and hours of labor reduced from 50 to 44 per week. As a result of organization and without strikes, working hours in custom shops in the large centers have been set at 44 hours per week and wages have been increased an average of 2½ cents per hour. Death benefits, \$3,000; to insurance, \$150; cost of strike, \$90.

Cement workers.—Net number of new unions, 27; increased wages secured in many localities without strike; no reduction in wages effected.

Cigar makers.—Net number of new unions, 7; number of strikes, 55; number won, 35; compromised, 1; pending, 15; lost, 4; number persons involved, 2,873; number benefited, 2,831. All attempts to reduce wages were successfully resisted. The Cigarmakers' International Union established the 8-hour day May 1, 1886, and as a result the social, moral, and physical condition of the members of this trade has been vastly improved. In fact, since that time the average length of life of the members has been increased over 16 years in comparison with the length of life of those who followed the trade previous to the institution of the 8-hour workday. During 1912 traveling members received \$33,114 in benefits. To those on strike \$12,647 was paid, these two benefits costing \$0.084 per capita for the year. The sick benefit paid amounted to \$204,776, costing the members \$4.336 per capita. The death and total disability benefits amounted to \$261,910, costing the members \$5.405 per capita. The out-of-work benefits paid amounted to \$42,911, at a per capita cost of \$1.062. The total cost per member per year for all these benefits was \$11.11, the balance remaining in the cigar makers' treasury at the close of 1912 being \$339,475.

Cloth, hat, and cap makers.—Net gain in membership, 600; number of strikes, 19; number won, 15; pending, 2; lost, 2; number of persons involved, 190; number benefited, 190; hours of labor reduced one-half hour per day; also obtained free sewing machines and Saturday half holidays for many members without strikes. As a result of persistent endeavor by this organization the following benefits have been secured: In the period from 1902 to 1907 hours of labor have been reduced from an unlimited number formerly worked to 56 hours per week, 8 holidays during the year, and a general increase of 50 per cent in wages. In the period from 1907 to 1912 we have secured free thread, free electric power, free sewing machines, and a reduction in hours of labor from 56 to 50 hours per week, and a general increase for that period of 10 per cent in wages. Sick benefits, \$1,000; donations to other unions, \$2,500; cost of strikes, \$13,000.

Commercial telegraphers.—Net number of new unions, 2; average wage of 1,000 members increased from \$60 to \$66 per month; free typewriters are now furnished by the Western Union Telegraph Co., which saves a rental to the operators an average of \$2 per month for over 10,000 persons. Relief from this expense was one of the demands made by the commercial telegraphers in the strike of 1907.

Coopers.—Net number of new unions, 3; number of strikes, 14; number won, 5; compromised, 6; pending, 1; lost, 2; number of persons involved, 422; number benefited, 334, who received 35 cents per member per day increase in wages, and hours of labor reduced one-half hour per day. Many favorable new contracts were secured, and old ones renewed without strikes. All attempts to reduce wages were successfully resisted, and in some cases after an attempt

to reduce wages was made, a settlement was secured on the basis of an increase in wages. Death benefits, \$3,000; cost of strikes, \$8,000.

Cutting die and cutter makers.—Number of strikes, 3; number won, 2; pending, 1; number of persons involved, 170; number benefited, 160; as a result 10 per cent increase in wages was secured and hours reduced 2 per week. No reduction in wages during the past year. Death benefits, \$5,000; cost of strikes, \$8,000. This organization has succeeded in reducing the hours of labor for its members from 60 to 48 per week. The union shop has been established and higher wages are paid for the shorter week than were formerly paid for the longer week.

Diamond workers.—Secured slight increases in wages. Have established the union shop with a sliding scale of wages, running from \$28 to \$75 per week of 48 hours. Unemployed benefits, \$11,000; cost of strikes, \$9,000.

Electrical workers.—An increase in wages averaging 50 cents per day secured for 850 members, and an average increase of 25 cents per day secured for 3,700 members. Every attempt to reduce wages was successfully resisted. Death benefits, \$8,500; donations to other unions, \$12,000; sick benefits, \$8,000.

Elevator constructors.—Gain in membership, 170; secured an average increase of wages of 40 cents per day for all members. The eight-hour day and the union shop are established in this industry.

Engineers, stationary.—Net number of new unions, 26; gain in membership, 3,500; secured increase in wages and established eight-hour day in many localities; a large number of old agreements renewed and new ones secured without strike.

Firemen, stationary.—Net number of new unions, 27; gain in membership, 8,000; number of strikes, 5; number won, 4; pending, 1; persons involved, 148; number benefited, 128. All attempts to reduce wages were successfully resisted, and in one instance an increase in wages was secured in the settlement. Death benefits, \$3,700; death benefits to members' wives, \$800; sick benefits, \$1,200; donations to other unions, \$1,000; cost of strikes, \$1,200. As a result of the efforts of this organization, wages to stationary firemen have been increased 20 per cent; 1,400 have had their hours reduced from a 12-hour day to an 8-hour day; 2,200 have secured a six-day working week instead of a seven-day working week, and over 4,000 firemen have secured a week's vacation per year with pay.

Foundry employees.—Secured increases in wages without strikes; death benefits, \$400; sick benefits, \$400; donations to other unions, \$200.
